PROCEEDINGS AND DEBATES OF THE 95th CONGRESS, FIRST SESSION

HOUSE OF REPRESENTATIVES—*Tuesday, December 6, 1977*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Seek ye first the kingdom of God and his righteousness; and all these things shall be added unto you.—Matthew 6: 33.

Our Heavenly Father, who giveth to all life and breath and all things, we thank Thee for this moment of prayer when we lift our hearts unto Thee. Always art Thou with us and we pray that Thou wilt help us now to be aware of Thy presence.

When the days are dreary, comfort us. When the demands are excessive, hold us steady. When the pressures increase, let Thy peace calm our souls. When the burdens are overwhelming, be Thou our refuge and our strength. When the hours are long and our duties almost too much for us, give us the spirit to think clearly, to speak wisely, and to act courageously for the highest good of our beloved country.

Give us the will to do Thy will and to seek first Thy kingdom of righteousness and peace that only good may come to us, to our people, and to our world. Amen.

CALL OF THE HOUSE

Mr. ROUSSELOT. Mr. Speaker, under rule I, clause 1, of the rules of the House, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. WRIGHT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The call was taken by electronic device, and the following Members failed to respond:

[Roll No. 760]

Alexander
Ambro
Andrews, N.C.
Armstrong
Badillo
Beilenson
Boggs
Bolling
Broyhill
Burton, John
Burton, Phillip
Byron

Young, Alaska

The SPEAKER pro tempore (Mr. WAGGONNER). On this rollcall 331 Members have recorded their presence by electronic device, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

THE JOURNAL

The SPEAKER pro tempore. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of the clerks announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 9418) entitled "An act to amend the Public Health Service Act to require increases in the enrollment of third-year medical students as a condition to medical schools' receiving capitation grants under such act and for other purposes."

DISPENSING WITH CALL OF CONSENT CALENDAR TODAY

Mr. McKAY. Mr. Speaker, I ask unanimous consent to dispense with the call of the Consent Calendar today.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Utah?

There was no objection.

PRIVATE CALENDAR

The SPEAKER pro tempore. This is Private Calendar day. The Clerk will call the first individual bill on the Private Calendar.

JENNET JUANITA MILLER

The Clerk called the bill (H.R. 1405) for the relief of Jennet Juanita Miller.

There being no objection, the Clerk read the bill, as follows:

H.R. 1405

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Jennet Juanita Miller (also known as Jennet Juanita Flowers) shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper officer to deduct one number from the total number of immigrant visas and conditional entries which are made available to natives of the country of the alien's birth under paragraphs (1) through (8) of section 203(a) of the Immigration and Nationality Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CATHY GEE YUEN

The Clerk called the bill (H.R. 1777) for the relief of Cathy Gee Yuen.

There being no objection, the Clerk read the bill, as follows:

H.R. 1777

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Cathy Gee Yuen shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper officer to deduct one number from the total number of immigrant visas and conditional entries which are made available to natives of the country of the alien's birth under paragraphs (1) through (8) of section 203(a) of the Immigration and Nationality Act.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following:

That, in the administration of the Immigration and Nationality Act, Cathy Gee Yuen, the widow of a citizen of the United States, shall be held and considered to be within the purview of section 201(b) of that Act and the provisions of section 204 of such Act shall not be applicable in this case.

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

PAZ A. NORONA

The Clerk called the bill (H.R. 1787) for the relief of Paz A. Norona.

There being no objection, the Clerk read the bill, as follows:

H.R. 1787

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Paz A. Norona shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper officer to deduct one number from the total number of immigrant visas and conditional entries which are made available to natives of the country of the alien's birth under paragraphs (1) through (8) of section 203(a) of the Immigration and Nationality Act.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following:

That, the Attorney General is authorized and directed to cancel any outstanding orders and warrants of deportation, warrants of arrest, and bond, which may have issued in the case of Paz A. Norona. From and after the date of the enactment of this Act, the said Paz A. Norona shall not again be subject to deportation by reason of the same facts upon which such deportation proceedings were commenced or any such warrants and orders have issued.

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

KWONG LAM YUEN

The Clerk called the bill (H.R. 1798) for the relief of Kwong Lam Yuen.

Mr. ROUSSELOT. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

HILDEGARD G. BLAKELEY

The Clerk called the bill (H.R. 1450) for the relief of Hildegard G. Blakeley.

There being no objection, the Clerk read the bill, as follows:

H.R. 1450

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Hildegard G. Blakeley shall be held and considered to have been lawfully admitted to the United States for permanent residence as of the date of the enactment of this Act, upon payment of the required visa fee. Upon the granting of permanent residence to such alien as provided for in this Act, the Secretary of State shall instruct the proper officer to deduct one number from the total number of immigrant visas and conditional entries which are made available to natives of the country of the alien's birth under paragraphs (1) through (8) of section 203(a) of the Immigration and Nationality Act.

With the following committee amendment:

Strike out all after the enacting clause and insert in lieu thereof the following:

That, in the administration of the Immigration and Nationality Act, Hildegard G. Blakeley, the widow of a citizen of the United States, shall be deemed to be an immediate relative within the meaning of section 201(b) of such Act, and the provisions of section 204 of that Act shall not be applicable in this case.

The committee amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

M. SGT. GEORGE C. LEE, USAF

The Clerk called the bill (H.R. 8481) for the relief of Master Sergeant George C. Lee, United States Air Force.

There being no objection, the Clerk read the bill, as follows:

H.R. 8481

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Master Sergeant George C. Lee, United States Air Force (FR468-28-3659), of Brandon, Florida, is relieved of liability to the United States in the amount of $5,310, representing expenses incurred at the Army Landstuhl Hospital dur- the period from September 21, 1967, through January 17, 1968, for the medical treatment of a child, then the niece of the said Master Sergeant George C. Lee (now his adopted daughter). A hospital administrator advised the said Master Sergeant George C. Lee that he would have no liability for such expenses. In the audit and settlement of the accounts of any certifying or disbursing officer of the United States, credit shall be given for amounts for which liability is relieved by this section.

SEC. 2. (a) The Secretary of the Treasury is authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to the said Master Sergeant George C. Lee, the sum of any amounts received or withheld from him with respect to the indebtedness to the United States specified in the first section of this Act.

(b) No part of the amount appropriated in subsection (a) of this section in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this subsection shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

JOHN T. KNIGHT

The Clerk called the bill (H.R. 9071) to confer jurisdiction upon the United States Court of Claims to hear, determine, and render judgment upon the claim of John T. Knight.

There being no objection, the Clerk read the bill, as follows:

H.R. 9071

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding any statute of limitations, pertaining to suits against the United States, or any lapse of time, or bars of laches jurisdiction is hereby conferred upon the United States Court of Claims to hear, determine, and render judgment upon any claim of John T. Knight, of New Orleans, Louisiana, arising out of his claim against the United States for disability retirement pay for a disability allegedly incurred or aggravated while serving in the Armed Forces of the United States.

SEC. 2. Suit upon that claim may be instituted at any time within one year after the date of the enactment of this Act. Nothing in this Act shall be construed as an inference of liability on the part of the United States. Except as otherwise provided in this Act, proceedings for the determination of that claim and review and payment of any judgment or judgments on that claim shall be had in the same manner as in the case of claims over which that court has jurisdiction under section 1491 of title 28 of the United States Code.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CHARLES M. METOTT

The Clerk called the bill (H.R. 6760) for the relief of Charles M. Metott.

There being no objection, the Clerk read the bill, as follows:

H.R. 6760

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of section 71a (1) of title 31, United States Code, the Comptroller General is hereby authorized and directed to pay the sum of $1,227.17 to Charles M. Metott, of Williamstown, New York. This sum shall be in full final settlement of all his claims against the United States based upon his right to certain death gratuity benefits and back pay and allowances as a result of the death of his brother, Gerald P. Metott, while serving in the United States Marine Corps in Vietnam on November 6, 1965. There is appropriated out any money in the Treasury not otherwise appropriated the sum of $1,227.14 for payment of said claim.

SEC. 2. No part of the amount appropriated in this Act in excess of 10 per centum thereof shall be paid or delivered to or received by any agent or attorney on account of services rendered in connection with this claim, and the same shall be unlawful, any contract to the contrary notwithstanding. Any person violating the provisions of this Act shall be deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $1,000.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

DORIS MAURI COONRAD

The Clerk called the bill (H.R. 5466) for the relief of Doris Mauri Coonrad.

There being no objection, the Clerk read the bill, as follows:

H.R. 5466

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding the time limitation in section 2733(b)(1) of title 10, United States Code, the claim of Doris Mauri Coonrad of Woodside, California, against the United States for injuries she sustained in an accident of February 27, 1968, in Monrovia, Liberia, involving a motor vehicle driven by her and a motor vehicle owned by the United States Army and driven by a member of the 72nd Army Engineers Mapping Unit of the United States Army, shall be considered to be a timely claim for purposes of section 2733 of title 10, United States Code, if such claim is presented in writing not later than one hundred and eighty days after the date of the enactment of this Act.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

CHARLES P. BAILEY

The Clerk called the bill (H.R. 8212) for the relief of Charles P. Bailey.

There being no objection, the Clerk read the bill, as follows:

H.R. 8212

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury is hereby directed to redetermine the liability for tax (including interest, penalties, and other amounts) of Charles P. Bailey, of North Palm Beach, Florida, for the taxable year 1962. In such redetermination, the determination of whether or not the said Charles P. Bailey is relieved of liability under section 6013(e) of the Internal Revenue Code of 1954 shall be made without regard to any period of limitations and without regard to res judicata, or any similar rule of law. Any overpayment to tax by the said Charles P. Bailey for his taxable year 1962 resulting from the redetermination made under this Act shall be refunded to him.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. ROGERS. Mr. Speaker, I rise in support of H.R. 8212, a bill for the relief of C. P. Bailey, for a redetermination of his tax liability for taxable year 1962, and for refund of taxes which he was required to pay the Federal Government as a result of the embezzlement of substantial sums of money by his wife and her brother.

Although C. P. Bailey had no knowledge that his wife was embezzling some $41,000 from the bank where she worked, nor did he receive any benefit from the money whatsoever, the IRS held him liable for the embezzled amount as income, and assessed taxes and penalties against him.

As a direct result of Mr. Bailey's case, the Congress in 1971 passed the "Innocent Spouse Act" to provide an exception in embezzlement cases such as this, where one spouse is unaware that a substantial amount of money is omitted from a joint income tax return and that spouse establishes that he or she had no knowledge of the embezzlement nor benefited from the embezzled income. The Treasury Department decided that Mr. Bailey was ineligible for relief since his case had already been determined by the courts.

Thus, I introduced a private bill for his relief in the 93d Congress, which was passed by the House but there was not sufficient time for the Senate to act on the measure before adjournment. Again in the 94th Congress I introduced a bill for the relief of Mr. Bailey. In lieu of this private bill, we decided to add language to the Tax Reform Act of 1976 to grant relief to those innocent spouses like Mr. Bailey, who were assessed and penalized before the Innocent Spouse Act was passed.

Now, the Internal Revenue Service has determined that this provision is too broad and relief should not be granted to all innocent spouses who were penalized before 1971, as all of them may not have the clearly discernible merits of the C. P. Bailey case. However, in a letter to Senator LONG and myself, the IRS specifically states that it would be appropriate to grant relief to Mr. Bailey through private legislation.

As a matter of equity it is imperative that we grant relief to the individual whose tax assessment and penalties were so unfair that it moved Congress to enact the Innocent Spouse Act. On behalf of Mr. Bailey and myself, I would again like to thank all of you.

The letters follow:

U.S. SENATE,
Washington, D.C., July 18, 1977.

Hon. PAUL G. ROGERS,
Rayburn House Office Building,
Washington, D.C.

DEAR CONGRESSMAN ROGERS: In response to your request on behalf of Mr. Charles P. Bailey, enclosed is a copy of the report I received from the Internal Revenue Service.

I believe you will find this communication self-explanatory.

It was a pleasure to be of assistance to you in this matter.

With every good wish, I am

Sincerely yours,

RUSSELL LONG.

INTERNAL REVENUE SERVICE,
Washington, D.C., June 30, 1977.

Hon. RUSSELL B. LONG,
Chairman, Committee on Finance,
U.S. Senate,
Washington, D.C.

DEAR MR. CHAIRMAN: This responds to your request for our careful consideration of a request from Congressman Paul G. Rogers concerning Mr. Charles P. Bailey.

Mr. Bailey's Federal income tax problem began in 1962, when his wife embezzled approximately $40,000 which was not reported as income on their 1962 joint Federal income tax return. The Tax Court held that the embezzled funds were taxable income to the Baileys and that Mr. Bailey was liable for the additional tax plus penalties and interest. The Fifth Circuit affirmed the Tax Court decision.

In 1971 Congress enacted Code section 6013 (a) to provide relief for certain "innocent spouses". This relief provision is not applicable to Mr. Bailey because of the adverse, final Court decisions. Since 1973 several private bills for the relief of Mr. Bailey have been introduced, although none has been passed by the Congress. However, in 1976 section 2114 of the Tax Reform Act of 1976 ("Act") was enacted to provide relief "solely to a taxpayer to whom the application of the provisions of section 6013(e) . . . is prevented by operation of res judicata". Congressman Rogers has inquired concerning the unwillingness of the Internal Revenue Service to grant Mr. Bailey relief under Act section 2114.

In our opinion relief cannot be granted Mr. Bailey under Act section 2114 for two reasons. First, Act section 2114 does not expressly provide relief to a taxpayer, such as Mr. Bailey, whose claim for refund is barred by the period of limitations. Second, Mr. Bailey and the Internal Revenue Service executed an offer in compromise which conclusively settled all questions relating to the tax liability of Mr. Bailey and closed the 1962 tax year so that neither the Service nor Mr. Bailey may reopen the case.

It is our understanding that the Congressional Staff working on the legislation had no knowledge of the fact that the offer in compromise had been accepted and also, of course, that a partial payment had been made. When Treasury made its last bill report to the Congress it did not disclose the fact that the offer and compromise had been accepted. While this failure of communication was, of course, inadvertent it no doubt accounts for failure to draft the legislation in a manner which would have covered the Bailey case.

It should also be noted that Act section 2114 is a general relief provision, which is not limited in application only to Mr. Bailey. If the Service were to interpret the section to override the statute of limitations issue, we estimate that at least 500 court cases closed by trial and settlement between 1961 and 1971 may be reopened. The consistent application of Act section 2114 to these other cases would be costly and administratively burdensome.

We recognize that the Congress specifically discussed the problem of Mr. Bailey in its deliberations on Act section 2114. However, the specific language of the section and the circumstances of his case prevent the Service from affording Mr. Bailey relief. Nevertheless, we believe that the circumstances do provide sufficient justification to grant Mr. Bailey relief under a private bill. It is our understanding that the Department of the Treasury will no longer oppose such relief. In fact the Service and Treasury have agreed that language the same as that contained in H.R. 2562, 94th Congress would, if enacted, afford relief to Mr. Bailey.

If we may be of further assistance in this matter, we will be happy to assist you.

Sincerely,

(Signed) JEROME KURTZ,
Commissioner.

MORRIS AND LENKE GELB

The Clerk called the bill (H.R. 3084) for the relief of Morris and Lenke Gelb.

Mr. BAUMAN. Mr. Speaker, I ask unanimous consent that the bill be passed over without prejudice.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Maryland?

There was no objection.

GRANTING THE STATUS OF PERMANENT RESIDENCE TO CERTAIN ALIENS

The Clerk called the joint resolution (H.J. Res. 489) granting the status of permanent residence to certain aliens.

There being no objection, the Clerk read the joint resolution, as follows:

H.J. Res. 489

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That, in the case of each alien hereinafter named, in whose case deportation has been suspended by the Attorney General in accordance with the provisions of section 244(c) of the Immigration and Nationality Act, as amended (8 U.S.C. 1254(c)), the Attorney General is authorized and directed to cancel deportation proceedings and, in accordance with the provisions of section 244(d) of said Act (8 U.S.C. 1254 (d)), to record the alien's lawful admission for permanent residence:

AMENDMENTS OFFERED BY MR. EILBERG TO THE COMMITTEE AMENDMENT

Mr. EILBERG. Mr. Speaker, I offer amendments to the committee amendment.

The Clerk read as follows:

Amendments offered by Mr. Eilberg to the committee amendment: On page 5, line 11, strike out the number "A-14059539" and substitute the number "A-15059539".

On page 5, line 12, strike out the number "S-6303002" and substitute the number "A-6303002".

On page 5, line 14, after the name "Chang," strike out the names "Kwang Ah." and substitute the names "Ah Kwang."

The amendments to the committee amendment were agreed to.

The committee amendment, as amended, was agreed to.

AMENDMENTS OFFERED BY MR. EILBERG

Mr. EILBERG. Mr. Speaker, I offer two additional amendments.

The Clerk read as follows:

Amendments offered by Mr. Eilberg: On page 2, line 13, after the name "Chin," strike out the name "Goan" and substitute the name "Goon".

On page 4, line 3, after the name "Ma," strike out the name "Yin" and substitute the name "Yiu".

The amendments were agreed to.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

MARK CHARLES MIEIR AND LIANE MARIA MIEIR

Mr. EILBERG. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 3313) for the relief of Mark Charles Mieir and Liane Maria Mieir, with a Senate amendment thereto, and concur in the Senate amendment with an amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendment, as follows:

Strike out all after the enacting clause and insert: That, for the purposes of sections 203(a)(1) and 204 of the Immigration and Nationality Act, Mark Charles Mieir and Liane Maria Mieir shall be held and considered to be the natural-born alien son and alien daughter, respectively, of Mr. and Mrs. Charles Mieir, citizens of the United States.

The Clerk read the House amendment to the Senate amendment, as follows:

At the end of the Senate amendment, strike out "United States." and insert in lieu thereof the following: "United States: *Provided*, That the natural parents or brothers or sisters of the beneficiaries shall not, by virtue of such relationship, be accorded any right, privilege, or status under the Immigration and Nationality Act."

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

A motion to reconsider was laid on the table.

TO REFER H.R. 1429 TO THE CHIEF COMMISSIONER OF THE U.S. COURT OF CLAIMS

Mr. MICHEL. Mr. Speaker, I ask unanimous consent for the immediate consideration of the resolution (H. Res. 116) to refer H.R. 1429 to the Chief Commissioner of the United States Court of Claims.

The Clerk read the title of the resolution.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The Clerk read the resolution, as follows:

H. Res. 116

Resolved, That H.R. 1429 entitled "A bill for the relief of Cecilia L. P. Thieman", together with all the accompanying papers, is hereby referred to the Chief Commissioner of the United States Court of Claims and the Chief Commissioner shall proceed with the same in accordance with sections 1492 and 2509 of title 28, United States Code and report thereon to the House at the earliest practicable date, giving such findings of fact and conclusions thereon as shall be sufficient to inform the Congress of the nature and character of the demand as a claim, legal or equitable, against the United States or a gratuity and the amount, if any, legally or equitably due from the United States to the claimant.

The resolution was agreed to.

A motion to reconsider was laid on the table.

TO ASSURE QUALITY HEALTH CARE FOR POPULATIONS LOCATED IN RURAL AREAS

Mr. BEDELL. Mr. Speaker, I ask unanimous consent that the Committee on Interstate and Foreign Commerce and the Committee on Ways and Means be discharged from further consideration of the concurrent resolution (H. Con. Res. 432) to assure quality health care for populations located in rural areas, and ask for its immediate consideration in the House.

The Clerk read the title of the concurrent resolution.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

Mr. CARTER. Mr. Speaker, reserving the right to object, and I shall not object, I support the concurrent resolution. It is very necessary and I believe that it is a good resolution.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Iowa?

There was no objection.

The Clerk read the concurrent resolution, as follows:

H. CON. RES. 432

Whereas the Notice of Proposed Rulemaking regarding National Guidelines for Health Planning filed by the Secretary of Health, Education, and Welfare on September 23, 1977 (42 F. R. 48502–48505), has generated great public concern that the guidelines may impose unrealistic performance requirements upon small, rural hospitals;

Whereas many small rural hospitals provide local communities with medical care of a kind and a quality that are not readily available at less accessible metropolitan hospitals; and

Whereas quality health care at a reasonable cost for populations in rural areas is a priority of the Federal Government: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of Congress that the national health planning guidelines should include sufficient flexibility to allow a health systems agency to recognize special characteristics in rural areas and, on the basis of those special characteristics, to establish a health systems plan that varies from the national guidelines, in order to provide necessary health care services to rural residents.

The SPEAKER pro tempore. The Chair recognizes the gentleman from Iowa (Mr. BEDELL) for 1 hour.

Mr. BEDELL. Mr. Speaker, I yield myself such time as I may consume.

On September 23, 1977, the Department of Health, Education, and Welfare published some proposals for national health planning in the Federal Register. As currently drafted, only a few of the hospitals in my district could meet these standards, and it is my understanding that many hospitals in other areas of the country are in a similar position. This fact has caused grave grassroots concern that many community hospitals, which are unable to meet these guidelines in the future, will actually be forced to close down.

I share this concern, and I agree that the proposed guidelines are unrealistic for many communities. For example, the guidelines propose, among other things, a bed occupancy rate of at least 80 percent for all short-term hospitals in a community; at least 500 deliveries annually in any obstetrical unit in a community of less than 100,000 persons; and less than 4 short-term hospital beds per 1,000 persons in a community. These standards clearly do not conform to the realities of life in rural America, and, in my view, are contrary to our Nation's effort—as stated in the guidelines themselves—to provide equal access to quality health care at a reasonable cost for populations in rural areas.

In addition, I do not feel that these proposed guidelines adhere to the original intent of Congress. The objective of the National Health Planning and Resources Act of 1974 (Public Law 93–641), which these guidelines are supposed to implement, was to permit localities to devise their own health plans to meet their own special needs. The proposed HEW guidelines for health planning have reversed this situation by forcing localities to make their plans on the basis of a national standard. I, for one, think that we should stick with the original intent of Congress which was to allow local health systems agencies to develop health plans which are tailored to the particular needs of their communities.

Finally, Mr. Speaker, we are told that one of the purposes of these guidelines is to help control escalating health care costs. While I support this objective, I think that the basic issue at stake here cannot be restricted to cost considerations alone. It involves the ability of our health care system to provide access to high quality medical care for all Americans, including the residents of rural America. In my view, it is the responsibility of the Congress to insure that such guidelines do not impair this vital function of our health care system.

Even HEW officials have acknowledged that some revisions in their proposed hospital guidelines are necessary. However, it is important to note that they have given no assurance as to what those revisions will be. In light of this fact, I think that it is imperative that we reassure our constituents that the Congress will not allow the closing of small community hospitals which are so important to our society. I thus urge the House to send a message to HEW by passing House Concurrent Resolution 432 and making it clear to all that it is not the intent of Congress that the proposed HEW guidelines for health planning be used to close small community hospitals.

Mr. LUKEN. Mr. Speaker, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from Ohio.

Mr. LUKEN. Mr. Speaker, I am in sympathy with the request of the gentleman from Iowa (Mr. BEDELL) concerning the proposed concurrent resolution. I believe that it should be agreed to, but I would like to comment, in passing, that the same flexibility in the handling of these guidelines should eventually be extended to the urban areas and metropolitan areas. For instance, in the district I represent, there is a move on the part of the local HSA to take the existing hospitals and demolish them and not to replace them, doing so in the name of these guidelines. This is an instance of an urban hospital being maintained in a certain area, particularly an existing hospital, so that people do not have to cross town, and it is a big town, and there are no other hospitals available, and this represents an injury to the economic viability of the community.

It is an injury to the economic climate of the community, as well as being a detriment to the health care of the individuals, so I am in support of the gentleman from Iowa, and I wanted to introduce those remarks into the RECORD.

Mr. BEDELL. I appreciate the gentleman's remarks. Certainly this is a step toward trying to see that we continue to maintain those community hospitals, which have been built many times at great sacrifice and expense to the people therein, and which are of complete and tremendous importance to those communities in furnishing necessary health care services.

Mr. PRESSLER. Mr. Speaker, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from South Dakota.

Mr. PRESSLER. I thank the gentleman for yielding.

I want to commend the gentleman from Iowa. I strongly support rural hospitals. In South Dakota they are needed, and I think this resolution will reassure our rural hospitals and those they serve that service cutbacks will not be mandated. Let us remember that what is workable for New York City's giant hospitals does not apply to South Dakota's 20- or 30-bed hospitals.

Mr. BEDELL. I thank the gentleman for his remarks.

Mr. KAZEN. Mr. Speaker, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from Texas.

Mr. KAZEN. I thank the gentleman for yielding.

My understanding is that there is nothing before us to object to if we have already given unanimous consent, and the gentleman is now in debate on the bill.

Mr. BEDELL. That is correct.

Mr. KAZEN. I would commend the gentleman for his resolution. I would have liked to have seen different language in this resolution, for instance in the first whereas clause, at the end of that clause after the words "rural hospitals," which may force their closing, because this is what the people are worried about on these guidelines. These guidelines may force the closing of hospitals, so we want to be able to send a message downtown that it is the sense of the Congress that these guidelines do not close rural hospitals. Will the gentleman agree with me?

Mr. BEDELL. I appreciate the gentleman's bringing it up, because that is, indeed, the interest therein, and I want to thank the gentleman from Texas and the many other colleagues of his from Texas, for the help they have given in this particular matter.

Mr. KAZEN. I would hope that the discretion would lie with the health granting agencies locally to set the guidelines, because a lot of these hospitals cost local people a lot of money, and once we go out and vote bonds and build these hospitals, we come up with guidelines that say we can no longer use these hospitals, and that is not what this Congress intends to do. So I congratulate the gentleman for his resolution, and I hope that the HEW will never set up any guidelines that will force the closing of any hospitals in this country.

Mr. BEDELL. I want again to thank the gentleman and thank the entire delegation from Texas.

Mr. PERKINS. Mr. Speaker, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from Kentucky.

Mr. PERKINS. Let me thank the distinguished gentleman from Iowa for yielding. I certainly wish to compliment the gentleman from Iowa offering the resolution. It is a deserving resolution, and it should be approved.

Mr. YOUNG of Texas. Mr. Speaker, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from Texas.

Mr. YOUNG of Texas, Mr. Speaker, I thank the gentleman from Iowa for yielding at this time. I too, want to commend him on the efforts that he is making and the objectives that I know he has in mind in defending the hospital health care services that have been extended to the rural areas in this country.

In the 20 years I have been a Member of the Congress, the Congress and the Nation have funded well in excess of $200 billion to bring adequate health care to the Nation, particularly in the rural areas. What I fear here is some more gobbledygook, bureaucratic talk with a little shell game thrown in here that is going to result in a lot of appeasing and a lot of appeasement talk on the part of the Department of HEW that will ultimately result in a drastic curtailment, if not closure, of much of the health care services that have been and are being extended to our rural areas.

I would respectfully bring to the gentleman's attention that it is the intention of the House that not only involved here are the hospitals themselves, which are in themselves of great need in the rural areas, but also something that is distinguishable from the urban areas, and that is that we have a great deal of difficulty in getting doctors in the rural areas.

In many instances, without the hospitals we certainly would not have the doctors.

Without going further, I would say to the gentleman from Iowa that I have joined in his interest in this matter and I have introduced a resolution of my own directing the Committee on Interstate and Foreign Commerce to conduct an investigation of these health care guidelines. The parliamentary situation created by that resolution is simply this: that it will be backing up what the gentleman from Iowa is trying to do, and if we do not get results from his efforts, then it is my purpose to ask that my resolution, which goes to the Rules Committee on which I happen to serve, be given a full examination of its own, and we will have the Secretary and others down there to explain why, after all this funding with Federal money, they are about to take important health care services away from our rural areas.

I thank the gentleman from Iowa.

Mr. BEDELL. I thank the gentleman from Texas, and I thank him for all the support he has given, and he certainly makes the good point that these hospitals are important to the rural areas.

Mr. HAGEDORN. Mr. Speaker, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from Minnesota.

Mr. HAGEDORN. Mr. Speaker, I compliment the gentleman for presenting this House Concurrent Resolution 432. These rules, if they were allowed to take effect, would have a devastating effect on rural health care in rural America.

I compliment the gentleman from Florida (Mr. ROGERS), who serves on the Interstate and Foreign Commerce Committee, for planning to hold hearings shortly after the first of the year. I thank the gentleman from making that commitment to me and to the Congress.

Mr. Speaker, I rise in strong support of House Concurrent Resolution 432 which expresses the sense of Congress that HEW not include in their national health planning guidelines provisions that would promote the closing of small rural hospitals. While I have expressed myself in far greater length on this matter in a statement to HEW which was published in the RECORD of November 18, I would like to restate that the proposed guidelines, in my opinion, not only divert attention from the contributions to high health care costs made by the Federal Government, but they are based upon erroneous notions of rural hospital economics.

While there is no question that the cost of health care in this country has skyrocketed in the past decade, the HEW guidelines are more likely to threaten current levels of health care, particularly in rural America, than they are to do anything substantial to reduce levels of health care costs. The impact of the regulations will not only be felt through reduced levels of emergency care (the 45-minute maximum transportation time is likely to be of small comfort to rural Minnesotans unfortunate enough to be stricken during winter conditions), but also through reduced incentives for persons to obtain proper amounts of preventive medical care.

As a cosponsor of this resolution, I strongly urge its passage, at the same time that I regret its necessity. The HEW guidelines represent a sharp retreat from what I would have supposed have been some of the most basic political lessons of the past decade: the counterproductiveness of so many Federal regulatory efforts, and the difficulties of imposing uniform, inflexible Federal standards in as diverse and expansive country as the United States.

As I also noted in a discussion with the distinguished chairman of the Health and Environment Subcommittee of the House Interstate and Foreign Commerce Committee (Mr. ROGERS) on October 17, it is particularly ironic that HEW should be proposing these guidelines at the same time that Congress is working on legislation, the Rural Health Clinic Services Act Amendments, designed to facilitate the delivery of health care services to rural America.

Mr. VOLKMER. Mr. Speaker, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from Missouri.

Mr. VOLKMER. Mr. Speaker, I certainly concur with the gentleman from Iowa and compliment him for presenting this resolution and making us able to provide medical care for our citizenry.

It is alarming to me to have health planners in HEW to attempt to cut down or curtail the hospital costs and for doing so by providing no hospitalization. Certainly in my district we would not be able to have hospitals under the guidelines and, sure, it would cost us less to have health and hospital care because we would not be able to get it.

The gentleman has done a great service to the citizenry of this country.

Mr. ROGERS. Mr. Speaker, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from Florida.

Mr. ROGERS. Mr. Speaker, I did not object to the gentleman's resolution because I think it simply restates what the current law is and the intent of the subcommittee and this Congress was in passing the law. There is no authority in the law to close any hospital or any facility, but there is authority in the law to plan for the future, and I do not know any Members of the Congress who would not want that done properly.

The guidelines are simply to be helpful in bringing about that planning. They are not to be standards that cannot be varied from, but they are goals to be reached.

Now there are 240,000 beds in America that are not occupied in any one day. There are 240,000. Experts tell us the cost of maintaining those is almost $30,000 a year—$30,000 a year per bed. It is estimated that of the 240,000, 100,000 really are excess. They are just not used.

We are saying as we plan future health facilities, look at that. If we have got too many beds, we should not go out and build a lot of beds.

But let us have what is needed, and that is part of the purpose; so what the planning is doing is to be reasonable and the planning judgment is with local people, not with HEW. The guidelines are simply there to help guide them as to what ought to be a reasonable relationship, for instance, 4 beds per 1,000 people. In the State of Washington they are already down to 3.4 beds per 1,000 people, if the information that was distributed about guidelines, and I think it is part of HEW's fault the way the guidelines were discussed, did give the impression that they were just going to be ironclad rules, it was in error.

We have had discussions with the Secretary and the Department of HEW, so I think the resolution is very fair. I have no objection to this resolution. It does restate the law. It does restate the intention of the Congress and I think it is helpful to allow Members to know that. I have no objection to the resolution.

Mr. BEDELL. Mr. Speaker, I yield such time as he may consume to the gentleman from Colorado (Mr. JOHNSON).

Mr. JOHNSON of Colorado. Mr. Speaker, I think what the gentleman from Florida has said is absolutely correct and it confirms the letter that was sent to those of us who were concerned about this by Mr. Califano this last week. But the point must be made again and again for those who do not come from rural areas that the HEW has exhibited a tendency to ignore the problems of rural hospitals. These guidelines are the best example of bureaucratic stupidity that I have ever seen. If these guidelines had been followed, vast areas in the Rocky Mountains and in the high plains would have been left without obstetrical wards in their hospitals, and people would have to drive 3 or 4 or 5 hours to go have a baby. That is the kind of bureaucratic regulation those people have come up with. They have got to be made to understand they cannot propose absurd recommendations with impunity. We should not have to react to ridiculous propositions such as this latest outrage.

I suggest HEW be a little more responsive to the people of the country that they are supposed to be regulating and stop creating these kinds of stupid guidelines. These proposals resulted in thousands and thousands of pieces of mail inundating our offices and in mass meetings out in our small communities. One community had a mass meeting and obtained 12,000 signatures on a petition in a period of 2 days after these guidelines came out. This is an example of what the bureaucracy of HEW is doing and how willing they are to ignore the wishes of the people.

I congratulate the gentleman for this resolution. I would hope the Members of this body who come from city areas can realize what kind of bureaucratic regulations we in the rural areas are receiving.

Mr. BEDELL. Mr. Speaker, I yield such time as he may consume to the gentleman from Iowa (Mr. BLOUIN).

Mr. BLOUIN. Mr. Speaker, let me commend the gentleman for the gentleman's leadership in this area. I think this resolution is very well timed.

I share the concern over the pending regulations, not in the sense that hospitals will be closed as a result of them, but that future plans for some of those hospitals will be stifled directly by failure to comply with the regulations. I think that is the effect these goals can have. A hospital that would not be in compliance, to my understanding, would not be eligible for Federal assistance for expansion or additions within that hospital complex.

The effect that would have on the ability of a rural hospital to attract future medical talent would be devastating and the effect that would have on the availability of quality health care, which I think is an entitlement in this Nation, would also be devastating.

I think the goals are unrealistic as they apply to a rural area; 500 births at a hospital is just an incredibly stupid goal to have for a small rural hospital that may not have that many married couples in that community.

We are not talking about just, as has been pointed out, a problem of HEW ignoring rural areas, but having resounding ignorance toward the problems of rural areas, and that is much worse.

I think it is that ignorance that we are trying to treat in this kind of resolution.

I would ask the gentleman to make this entire debate, as soon as the vote is over, a part of the open record of HEW, as the response of this House formally to those regulations.

Mr. Speaker, I commend the gentleman.

Mr. BEDELL. I thank the gentleman.

Mr. GILMAN. Mr. Speaker, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from New York.

Mr. GILMAN. Mr. Speaker, I thank the gentleman for yielding and join my colleagues in commending the gentleman from Iowa (Mr. BEDELL) for bringing this important issue to the floor of the House at such an appropriate time, when so many hospitals are confronted with the results of this improvident HEW regulation. It is the tail wagging the dog, with fiats coming down from Washington imposing unrealistic planning on our rural areas prohibiting them from providing vital health services.

In the Hudson Valley of New York State, several of our hospitals are confronted with the adverse effects of HEW's regulation, which will result in the closing of their obstetrical services, some of which have newly constructed units that had been recently approved by the State health planning agency.

House Concurrent Resolution 432, which expresses the sense of the Congress regarding the proposed HEW rulemaking concerning national guidelines for health planning, seeks to assure equal access to quality health care for populations located in rural areas, and urges the Secretary of HEW to omit, from the emerging guidelines, any recommendations which would result in the closing of any small rural hospital or hospital service providing primary care to a local community.

Many of my colleagues representing rural areas are acutely aware of the crisis confronting the quality of health care in our rural areas. Adequate health care is a right, not a privilege, of all Americans, regardless of economic status or geographic location. Health care in America today is, unfortunately and tragically, becoming a luxury, available only to those who can afford to pay the astronomical costs incurred for hospital stays and for doctor visits. Our rural constituents, are faced with an added burden. Oftentimes, even if they can afford to pay the high cost of health care, the availability of health services is restricted, if not nonexistent. In many instances, the rural hospitals are the only available providers of health care. The new trend in health planning, emphasizing maximum utilization of existing facilities, is penalizing our rural hospitals; which, although they are the only providers of services, cannot meet the occupancy criteria set by the Federal and State health planning agencies. What is needed is a revision in the thinking of our planners when it comes to our rural hospitals; we cannot apply the same rigorous occupancy standards to our rural hospitals as we do to the hospitals and health facilities of our heavily populated areas.

In my own area, particularly in Orange County, N.Y., some of our hospital administrators, personnel, and patients are confronted with mandatory closing of hospital maternity wards, and perhaps eventually the closing of the hospitals themselves, because these health facilities are not meeting the impractical, arbitrary occupancy criteria handed down by the HEW officials in Washington.

It is obvious that our rural areas are not being viewed in a proper light. There is no comparison between hospitals in heavily populated areas and those in our rural areas; our rural constituents being forced to travel miles and miles to the next nearest hospital to obtain services which were once offered in their hometown hospitals. Nor can they understand HEW's rationale for closing these hospitals and terminating vital services when such services are being adequately offered by the primary providers in their areas.

A case in point is the recent decision handed down by the Hudson Valley Health Systems Agency (HVSA) recommending the closure of maternity units in two hospitals in Orange County because the number of births in the last several years had diminished, bringing the births in these hospitals below the guideline figures set by HEW. The HVSA's decision did not take into account the inaccessability of other area hospitals designated as alternate hospitals after the recommended closures were announced, nor did it recognize any necessity to take into account any consumer opinions in making its decision. eliminating the freedom of choice for consumers in obtaining quality health care. HVSA's recommendation will force many expectant mothers to travel long distances on treacherous, dangerous roads, in the winter months in order to deliver their children. These hospitals, Doctors Sunnyside, in Port Jervis, and St. Anthony's in Warwick, have provided quality maternity and obstetric services for many years to the residents of rural Orange County, N.Y. While I commend HEW for its efforts to cut costs and to stress the urgency for quality medical services, my constituents and I question the method that has been proposed to attain that end.

Through a concerted effort on the part of my constituents, hospital administrators, and concerned citizens, we were able to overturn the decisions handed down by both the obstetrical task force of the Hudson Valley HSA and the entire Hudson Valley HSA. The decision now rests with the New York State Hospital Review and Planning Council which will be meeting in mid-December to determine the fate of these obstetrical services. I understand that the council has agreed in one case (St. Anthony's Hospital) to keep these services in operation for a 1-year period while it studies this issue more carefully. We are grateful for this lead time, but we would like to see this situation made unnecessary by a wise and careful consideration of rural hospital services as separate and unique, not to be lumped together with all other hospitals in national planning guidelines.

Hospital administrators have expressed their deep concern with the "arbitrary" characteristics of national health planning. Thousands of my constituents, at the grassroots level, who are inconvenienced and distressed by the elimination of vital health services, have expressed their chagrin clearly, and with little hesitation. Permit me to share with my colleagues excerpts from a letter I received from one of my constituents, Lillian Cordero, who sums up the frustration and feeling of hopelessness that consumers and patients experience when they hear that their closest health facilities are slated for closing:

> Today, when the emphasis on our Health Care system is consumer-oriented, and (is) one which reflects consumer input—certainly (this) is not manifested in a proposal that deletes any consumer involvement, and which, in fact, denies the Consumer the right to determine where this service . . . is offered. . . . Should the consumer be inconvenienced and forced to travel a distance which far exceeds where the present facility offers the services he needs? . . . I say, let the citizens of the communities utilizing St. Anthony's Hospital Obstetrical Services have the options to determine their priorities. It should be the People's Choice that determine the Final Decision. Therefore, I protest the methodology and the rationale that you (The Federal Government) have proposed to discontinue a most valuable and needed service.

Accordingly, Mr. Speaker, I urge my colleagues to favorably consider Mr. Bedell's resolution, to help adopt realistic and realizable guidelines for our rural hospitals. Hopefully, we will convince HEW to be more practical in the future planning of our health services.

Mr. BEDELL. I thank the gentleman from New York.

Mr. AMMERMAN. Mr. Speaker, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from Pennsylvania.

Mr. AMMERMAN. Mr. Speaker, I wish to commend the gentleman in the well for his leadership in bringing this resolution before the House. I urge all my colleagues to support it.

Mr. BEDELL. Mr. Speaker, I do not want to shut off debate, but I think it would be well to have a rollcall so that Members could indicate their concern. We are short on time in the House. Everyone has an opportunity to revise and extend his or her remarks. I am not going to turn down an opportunity to talk with people, but I have had a request that if the remarks go on, we avoid the rollcall.

At least in my opinion, it would be beneficial to let HEW know the attitude of the Members of the House, and I would plead with the Members to enter their remarks in the Record.

Ms. OAKAR. Mr. Speaker, will the gentleman yield?

Mr. BEDELL. I yield to the gentlewoman from Ohio.

Ms. OAKAR. Mr. Speaker, I agree that we should cut down debate now. The only problem is, the gentleman's very important resolution does not apply to urban areas. There are a lot of small urban hospitals that really feel that this guideline is unrealistic also.

I am going to support this resolution, but I just want to say publicly that I think there are a lot of urban hospitals that face the same kinds of problems that the rural areas do.

Mr. BEDELL. I am glad the gentlewoman made that point. I think it is a point that should be made, and I certainly think that we need to concern ourselves—each other—with the problems of urban as well as rural areas.

Mr. CARTER. Mr. Speaker, will the gentleman yield?

Mr. BEDELL. I yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Speaker, in line with what the gentlewoman just mentioned, those hospitals in SMSA's of 100,000 or more must have 2,000 deliveries a year to continue. Of the 21 hospitals in Kentucky, only 6 would comply.

In rural areas, out of 71 hospitals, only 16 comply. So, I think the gentleman's resolution is timely, and I am happy to support it. A rural hospital by the HEW guidelines would be required to have 500 deliveries in order to maintain a maternity ward and delivery room.

Mr. Speaker, I am pleased to join as a sponsor of this concurrent resolution regarding the special characteristics of rural areas which should be allowed consideration under the national health planning guidelines.

And I commend my distinguished colleague, Mr. Bedell, for his leadership in bringing this matter to the floor of the House.

I, too, have been deeply concerned about HEW's proposed national health planning guidelines ever since their publication this fall in the Federal Register.

During our Health Subcommittee's oversight hearings on the guidelines this October I expressed great concern about both the process by which these standards were developed by HEW—which violated certain statutory requirements—and the inflexibility of the proposed health resource standards.

I am grateful for the many, many letters I have received from Kentuckians and citizens from other States who have pointed out the problems with these guidelines and the potentially detrimental impact of these standards on the health care resources of their areas.

It is clear to me that many of the proposed standards are too rigid to allow for consideration of the unique characteristics and legitimate health delivery needs of many communities across the country.

For example, consider the proposed obstetrical services standards in light of Kentucky's situation based on 1976 figures.

Of the 21 hospitals doing deliveries in the large standard metropolitan statistical areas in 1976—only 6 performed more than 2,000 deliveries. Thus only 6 out of 21 hospitals would meet the proposed standard for large SMSA's.

Of the 70 Kentucky hospitals which are outside the large SMSA's only 16 did more than 500 deliveries last year. Thus only 16 out of 70 hospitals would meet the non-SMSA standard.

While it can be argued that many of these hospitals might qualify for the travel-time exemption provided by the guidelines—it is clear that these statistics show how unrealistic the proposed obstetrical standards are.

Even urban areas may have difficulty meeting some of the guidelines.

For example, I have been informed that the University of Kentucky's Medical Center in Lexington cannot meet the proposed standards for cardiac catheterization units. Those standards are a minimum of 300 procedures annually for adult units—and a minimum of 150 procedures for a children's unit.

That is in a teaching hospital in a major metropolitan area!

In addition to my conern about the content of the guidelines—I am distressed that the thrust of these standards represents a significant departure from congressional intent.

As an author of Public Law 93–641—I recall that we designed the law to assure the integrity of local initiative and local responsibility for determining health care needs.

Such community-based efforts were to be the keystone of effective health planning.

I continue to support that philosophy and I continue to support the original goals of the health planning legislation.

Moreover, I believe that we do need national goals and guidelines to serve as models for local planners to make judgments about excess capacity and unnecessary equipment.

However, the guidelines should be just that—planning models which set forth the direction in which the Nation should head to provide equal access to quality health care—not mandatory controls imposed from the top—down—with virtually no room for variation based on local needs.

Finally, I have been distressed with the guidelines' emphasis on cost-containment—without a comparable appreciation of the need to assure access to quality health care for all our people.

While I share the concern to contain health care costs—and to allocate limited health dollars where they are most needed—I submit that we must not lose sight of the human side of the health care equation.

The goals of responsible cost-containment and equal access to health care must go hand in hand if we are to achieve and maintain an equitable health care delivery system.

Therefore, Mr. Speaker, I am pleased to join as a sponsor of this concurrent resolution which addresses many of the concerns I have mentioned.

First. This resolution recognizes the need for sufficient flexibility in the health planning guidelines. When such revisions in the guidelines are made—then the diversity of our health care system can be appropriately considered in the health planning process.

Second. This resolution reaffirms the legitimacy and importance of the local planning process and the community's responsibility to respond to local needs. Thus the resolution provides that the guidelines should allow a health systems agency to develop a plan which varies from the national guidelines in order to provide necessary health care services to rural residents.

Finally, this resolution calls attention to the special needs of rural residents which deserve full and fair consideration under any program.

Mr. Speaker, I trust that the Department of HEW will give careful consideration to this resolution and I look forward to reviewing the revised guidelines.

Mr. ABDNOR. Mr. Speaker, will the gentleman yield?

Mr. BEDELL. I yield very briefly to the gentleman from South Dakota.

Mr. ABDNOR. I thank the gentleman for yielding to me.

Mr. Speaker, I too want to commend the gentleman for what he is doing. I just want to add one other thought here. It was said that the alternative to closing down one of these rural hospitals may be a 3- or 4-hour trip down the road. At this time of year, it might be an all-day trip, and one that is impossible to make.

There is a great need for the 20- to 25-bed hospitals in rural areas. To expect them to try to meet the kind of regulations proposed is utterly ridiculous.

Again, I commend the gentleman.

Mr. BEDELL. I thank the gentleman.

Mr. THONE. Mr. Speaker, I rise to express my opposition to the proposed HEW guidelines for health planning.

As the Nebraska Medical Association pointed out in their statement to HEW, the intent of Public Law 93-641 "was to provide a framework for health planning for the orderly provision of health services and facilities on a regional and State level which encouraged efficiency, provided adequate access for all citizens, avoided duplication and contained cost."

This is a laudable goal, to be sure.

In my State of Nebraska—as well as in many other States where the population is spread out over vast geographic areas—the delivery of quality health care is a difficult challenge, but one that Nebraska has been working diligently to meet. In Nebraska the strategy has been to provide quality health care to Nebraska citizens as close to their places of residence as possible and to provide specialized services in the larger centers consistent with the demonstrated needs in each region.

We face a constant shortage of health professionals in Nebraska. Physicians are trained—as they should be—to utilize the latest in equipment and technology. If those facilities are not available in rural areas, the shortage of health professionals will grow consistently worse.

Guideline No. 1, on beds per thousand, will make it virtually impossible for many hospitals in rural America to continue to serve those areas. When hospitals close in rural areas, those areas generally lose their only physician, leaving the community with no health care at all.

Of the 104 hospitals in Nebraska, 87 have 100 beds or less, and only 6 outside of Lincoln and Omaha have more than 100 beds. Ordering a reduction in the number of beds in many of our hospitals will result in increased cost to meet the expenses of operating the hospital or, more likely, will result in the closing of the hospital entirely. As well, there is no reason to believe that simply reducing the number of available beds in a very small hospital will improve the quality of care.

The guidelines having to do with "delivery productivity" are simply unrealistic. There is only one hospital in Nebraska which has 2,000 or more deliveries a year and only five nonmetropolitan hospitals which have 500 or more deliveries per year. Is the Department of Health, Education, and Welfare suggesting that women in rural America should abandon the idea of childbirth, or that they should plan ahead so they have time to drive a distance that could be as high as 270 miles when it is time for them to deliver?

None of Nebraska's four hospitals with facilities to perform open heart surgery performed more than 200 procedures in 1976. Therefore, none of our hospitals would qualify, under these guidelines. The quality of care has been outstanding, though.

Mr. Speaker, it appears that the message from HEW is clear. If you live in a densely populated area, you are entitled to quality health care. However, if you have chosen a life in rural America, then you take your chances.

Rural America is, quite frankly, a little tired of paying first-class taxes and receiving second-class treatment. People in rural Nebraska are as entitled to quality health care as are people in Washington, D.C. or New York City, and I feel it is imperative that the Department of Health, Education, and Welfare take steps to recognize the fact that the quality of life in America should not be dependent on whether or not you choose life in a small town or on a farm rather than life in a big city.

Adopting regulations that would put quality health care out of reach of all of rural America is unconscionable, and I urge the Congress to reject any such proposal.

Mr. GRASSLEY. Mr. Speaker, the gentleman from Iowa (Mr. BEDELL) is to be commended for pushing this resolution and the resultant message to HEW to the floor.

That message is that the rural hospitals of America should not be closed by the HEW recently promulgated rules.

But, the resolution is of more significance than just the issue of keeping smalltown hospitals open. The resolution ought to serve as a general reminder to Members of Congress and bureaucrats in Washington that this country is so vast geographically and so heterogeneous in its population to be placed in one big mold formed in Washington, D.C.

The problems facing this Nation will never successfully be solved by such expansive policymaking.

In this case rules and regulations written to cover metropolitan hospitals cannot be equitably applied to the rural areas of America.

Let what I predict will be a lopsided vote in favor of this resolution be a reminder to all that all matters in America cannot be covered by one set of rules.

Mr. JOHN T. MYERS. Mr. Speaker, I thank the gentleman from Iowa for yielding to me and thank him for his work on this important problem. I am shocked that HEW would propose regulations to restrict or prohibit some smaller hospitals from performing certain services.

At a time when hospital costs are already soaring, it makes little sense to me to make it more difficult for hospitals to provide needed services just because they are performed in smaller hospitals or in rural areas. HEW must be given this notice that this House does object and will not stand still for this proposal.

Mr. STANGELAND. Mr. Speaker, I rise today in support of this resolution which places the House of Representatives on record as supporting the continuation of the operation of small community hospitals.

The Department of HEW recently published proposed guidelines for health planning purposes. The guidelines mandate several standards that a local Health Systems Agency must follow in preparing a health plan for its region. Although HEW allowed that modifications to these guidelines may be necessary to accommodate the particular needs of small, rural communities, no specific exemptions or exceptions were outlined.

It is imperative that we make our position known now and that we take all action necessary to assure that our small hospitals are protected, especially in view of the following fact. Although HEW has indicated that it has no means of enforcing the guidelines, this is less than accurate. After the effective date of the final guidelines, when a hospital wants to purchase needed equipment, the HSA could disapprove the purchase on the basis that the expenditure was not in compliance with HEW guidelines. If the hospital chose to purchase the equipment anyway, then HEW could withhold depreciation reimbursements, which come from medicare-medicaid funds, for that piece of equipment. Thus, no means of enforcement quickly becomes a very effective means of controlling expenditures and dictating to our hospitals.

Our resolution is simple and forthright and totally in keeping with the stated intention of the Department of HEW. It states that:

> It is the sense of Congress that the National Health Planning Guidelines should include sufficient flexibility to allow a Health Systems Agency to recognize special characteristics in rural areas and, on the basis of those special characteristics, to establish a health systems plan that varies from the national guidelines, in order to provide necessary health care services to rural residents.

This statement of position does not interfere with the implementation of health planning legislation, but it does state, and at the appropriate time, the Congress' intention to assure the continued delivery of necessary health care to our rural citizens. I think it is important that we go on record at this time since the hand that controls the purse usually exercises more than gentle persuasion. If reimbursement funds can be withheld, we had best confront the possibility and do everything that we can to avoid such a situation.

Mrs. SMITH of Nebraska. Mr. Speaker, I would like to state my support for the resolution now before us which recognizes the special characteristics of health care in our Nation's rural areas.

The National Guidelines for Health Planning as published in the Federal Register of September 23, 1977, are insensitive to the circumstances and conditions under which small rural hospitals must operate. They impose unrealistic requirements on local health planning agencies and place an intolerable burden on those who would be required to comply. They must be altered.

One of the failings of wide-sweeping, all-encompassing, inflexible regulations promulgated by the Federal Government is that there is no consideration given for the diversity of culture, population distribution, and geography in the United States. This resolution recognizes these differences in our country and urges the Federal Government to write regulations flexible enough to give rural health planners the capability to provide the best possible health care services for rural residents.

Mr. Speaker, my congressional district is primarily rural in nature. It encompasses about three-fourths of the land area of the State of Nebraska and has no urban center larger than about 60,000 people. There are many elements of the rules proposed by the Department of Health, Education, and Welfare that do not meet the needs of this rural area.

An example of the problems that the new guidelines would create for the rural areas is in the section on hospital bed population ratio.

The Greater Nebraska Health Systems Agency includes my entire congressional district and other portions of the State. It reports that it has a hospital bed-population ration of 5.19 beds for every 1,000 people. According to the proposed HEW guidelines, a 4.0 average bed per 1,000 ration will be expected. Even the 5.1 ratio, however, is inadequate to provide necessary services for persons living in rural areas. Medically underserved areas such as my congressional district are so vast that additional facilities are needed just to make hospital services geographically accessible to the spare population. There are 90,000 square miles in my district, for instance.

To give an example of the medical situation there, a person can travel 258 miles over Nebraska highways, passing through 14 towns and 8 counties, without visiting a town or county with a doctor's services. These are eight adjoining counties along the same stretch of highway. There are 16 counties out of the 61 in my district without a doctor, another 5 counties only have 1 doctor and 11 counties have only 2 doctors.

Another reason more hospital beds are needed is that a higher percentage of elderly live in rural areas. A total of 15.3 percent of all the people in rural Nebraska are considered elderly as compared to 10 percent nationally. This creates a greater demand on rural hospital services. These considerations also undermine the need for the 80-percent occupancy requirement outlined in the HEW guidelines. There must be beds available for the elderly when they are needed.

A total of 64 of the 67 hospitals in the greater Nebraska area had occupancy levels of less than 80 percent in 1976. This occupancy rate which was lower than that proposed in the regulations occurred because rural hospitals are small. The average size hospital in the great Nebraska area is 43 beds. These smaller hospitals can operate at a lower occupancy level and still be efficient.

The proposed guidelines pertaining to obstetrical services also call for "at least 500 deliveries annually in lower populated areas except in the case of a unit serving an area where normal traveltime exceeds 45 minutes." This is unacceptable for at least two reasons: With the great number of elderly living in rural areas, hospitals there cannot be expected to have numerous deliveries of babies; and even though the Greater Nebraska Health Systems Agency estimates that only 7 percent of the population travels in excess of 30 miles to a hospital, the area is subject to severe weather conditions throughout the year. These conditions greatly affect accessibility to the hospitals.

Mr. Speaker, only 5 of the 67 hospitals in the Greater Nebraska area had more than 500 deliveries in 1976. It is impossible for me to believe that 500 deliveries per year is a reasonable standard for rural hospitals.

These are just a few of the reasons that I believe the proposed guidelines for health planning are unreasonable for rural areas. There must be some consideration given to the unique situations found in places like my congressional district.

The resolution we are now considering expresses the sense of the Congress that these regulations be rewritten to reflect rural needs. I believe it is an action we must take to restore fairness to the health planning process.

I strongly urge all of my colleagues—those who represent urban districts as well as rural—to vote in favor of this resolution and help prevent rural America from being discriminated against once more.

GENERAL LEAVE

Mr. BEDELL. Mr. Speaker, I do not want to cut off debate, but there is a great deal to discuss in the House today.

Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the House Concurrent Resolution 432.

The **SPEAKER** pro tempore (Mr. NEDZI). Is there objection to the request of the gentleman from Iowa?

There was no objection.

The **SPEAKER** pro tempore. Without objection, the previous question is ordered on the concurrent resolution.

There was no objection.

The **SPEAKER** pro tempore. The question is on the concurrent resolution.

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. BLOUIN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The **SPEAKER** pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 357, nays 0, not voting 77, as follows:

Mr. Gammage with Mr. Skubitz.
Mr. Sebelius with Mr. Quillen.
Mr. Duncan of Tennessee with Mr. Sawyer.

So the concurrent resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

COMMENDING SECRETARY OF LABOR FOR DECISION TO ABOLISH ABOUT 1,100 OSHA REGULATIONS

(Mr. KREBS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KREBS. Mr. Speaker, I think it is appropriate, in light of the vote that we just took indicating our dissatisfaction, to put it mildly, with a rather asinine regulation promulgated by the Department of Health, Education, and Welfare, to take this opportunity to commend the Secretary of Labor for his leadership in announcing over the weekend that he is going to do away with approximately 1,100 regulations involving OSHA enforcement.

The Secretary of Labor has thus stood by his commitment to get away from nitpicking in the policing of OSHA regulations; I think the American public, as well as this House, has made it very clear that it sympathizes with this approach and that it wants OSHA regulations to be imposed only for the protection of the American worker rather than for the harassment of employers throughout this country.

THE DANGER OF A SLOW-GROWTH ECONOMIC COURSE

(Mr. REGULA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. REGULA. Mr. Speaker, I have become increasingly concerned that this country has embarked on a slow-growth economic course—perhaps a no-growth course—for the coming years. I am afraid that we have done so unwittingly, unaware that the sum of a multitude of discrete actions constitutes a radical reversal of our historic high-growth pattern. I am also afraid that once this course is set, then we will be "locked in," so to speak, and each successive year will see us levy a higher tribute on the shrinking growth part of our economy so we can pay the bill for the swelling nongrowth part of our economy. After all, that is what has happened in Great Britain, in Sweden, and in India, to name some other countries chronically afflicted with this problem, and I for one no longer believe people who say "it cannot happen here."

I think it is happening here, but I also think that it is at a reversible early stage and it still can be turned around before it reaches the lethal stage where, as in Sweden, taxes equal about 70 percent of GNP, inflation runs at over 15 percent, and economic growth is minus 7 percent.

But, and make no mistake, we are starting down that path and each further step we take will serve to drain more of the vitality from our economy and more of the liberty from our lives. Look at these disturbing trend lines:

In 1976, the Federal income tax took 11 cents of every dollar of taxable personal income; in 1978, it will take 13 cents; and in 1981, unless changed, it will take 16 cents.

From 1954 to 1976, personal income taxes plus social security taxes took a little more than 14 cents of every dollar of taxable personal income; by 1981, assuming no change in tax law and the passage of the House social security bill, the same combination of taxes will take 21 cents.

Rapidly growing personal tax burdens inevitably hinder economic growth because they stifle social growth by dampening the will to work, to invest, and to save. We had better start thinking about who pays the price of stifled social growth and whether we wish to exact that price, for it is obvious to me that in other nongrowth countries everyone pays the price.

PERSONAL EXPLANATION

(Mr. KASTEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KASTEN. Mr. Speaker, due to previous commitments in Wisconsin, I was absent from last week's sessions of the House. I wish to state for the record, therefore, how I would have voted had I been present for the rollcall votes that occurred during my absence.

"Yea" on the conference report to accompany H.R. 7, the Career Education Act.

"Yea" on House Resolution 749, the motion to disapprove of Reorganization Plan No. 2.

"Nay" on the motion to recede and accept the Senate compromise language on the Hyde antiabortion amendment to the Labor-HEW appropriations bill. I have previously been "paired" in opposition to the motion.

"Nay" on the motion to recommit the conference report on the supplemental appropriations bill with instructions to increase the Amtrak appropriation to $18 million.

"Nay" on the amendment to increase the Amtrak appropriation to $18 million.

"Yea" on the motion to order the previous question on the recommittal motion.

"Yea" on the motion to instruct conferees on the social security reform bill to insist on language providing for the liberalization and eventual repeal of the outside earnings limitation.

"Nay" on the motion to order the previous question on the motion to instruct conferees.

"Yea" on House Resolution 915 authorizing funds for the investigation of Korean-American relations being conducted by the Subcommittee on International Organizations.

OSHA PROGRAM

(Mr. DON H. CLAUSEN asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. DON H. CLAUSEN. Mr. Speaker, today's announcement that the Department of Labor has finally acceded to our requests to end unnecessary and unrealistic regulations under the OSHA program comes as good news.

I welcome Secretary Marshall's announcement which will be a step toward minimizing the harassment, redtape and nitpicking that have characterized the OSHA program to date and commend Assistant Secretary Eula Bingham for her work in this effort.

Many of us have been pressing the agency to take the action it has agreed to do and, in my judgment, this decision is welcome and helpful.

I remain concerned that it will take as long as 5 months to remove these regulations even after the decision has been made, but we welcome this strong evidence of cooperation and conciliation.

FURTHER CONTINUING APPROPRIATIONS, 1978

Mr. SISK. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 917 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. Res. 917

Resolved, That upon the adoption of this resolution it shall be in order, clause 2(1)(6) of rule XI to the contrary notwithstanding, to consider the joint resolution (H.J. Res. 662) making further continuing appropriations for the fiscal year 1978, and for other purposes, in the House. During such consideration it shall be in order, any rule of the House to the contrary notwithstanding for the Member calling up H.J. Res. 662 to offer an amendment printed in the Congressional Record by Representative Mahon.

The SPEAKER pro tempore (Mr. Nedzi). The gentleman from California (Mr. Sisk) is recognized for 1 hour.

Mr. SISK. Mr. Speaker, I yield 30 minutes to the gentleman from Mississippi (Mr. Lott), pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 917 provides for the consideration of House Joint Resolution 662 making further continuing appropriations for the fiscal year 1978. House Joint Resolution specifically provides funds for the District of Columbia on a continuing basis through September 30, 1978.

This continuing resolution is almost identical to a resolution adopted by the House on November 3, 1977, extending funding through November 30, 1977. The only differences are the date and a provision allowing the rate of operations for the disaster loan fund of the Small Business Administration contained in the act to be the rate as passed by the Senate.

The rule also contains a waiver of clause 2(L)(6) of rule XI or the 3-day rule. This waiver is something of a moot point now since the House was not able to take up the resolution last week as had been anticipated.

In addition, the rule makes in order an amendment printed in the Congressional Record by Mr. Mahon. All points of order are waived against the amendment. Mr. Mahon had such an amendment printed in yesterday's Record—December 5, 1977—on page 38345. The amendment provides for funding in the continuing resolution for the Departments of Labor and HEW at the rate contained in the conference report on H.R. 7555.

Mr. Mahon also stated on page 38339 of yesterday's Record that he plans to yield to Mr. Michel for an amendment to his amendment concerning language on the abortion issue.

Mr. Speaker, I will not go into the details of the continuing resolution or the amendments which may be offered to it as I am sure my colleagues from the Committee on Appropriations can explain this legislation quite fully.

I urge my colleagues to adopt House Resolution 917 so that we may proceed to the consideration of House Joint Resolution 662, authorizing continuing appropriations for fiscal year 1978.

Before I conclude, Mr. Speaker, I would like to take this opportunity to vigorously urge my colleagues to examine the issues. We have been battling over some issues here for a number of months. I understand and recognize the controversial nature of the issues at stake, but in the final analysis I think we have all through the years understood that one of the basic arts of good political maneuvering is the art of compromise. I do not mean the compromise of principles, but I mean a compromise with the methods to obtain the goals that I think are common to all of us. So I simply want to take this opportunity, Mr. Speaker, as I say, to urge that we proceed to conclude the business of this Congress this week in the hope that we may adjourn sine die and get out of here, and then get back, hopefully renewed, in January to take care of some of the other problems that face our country.

With that I urge the adoption of this resolution, and I reserve the balance of my time.

Mr. LOTT. Mr. Speaker, I yield myself such time as I may consume.

Mr. LOTT. Mr. Speaker, this rule makes in order the consideration in the House of House Joint Resolution 622, a measure making further continuing appropriations for the District of Columbia for fiscal year 1978. Clause 2(l)(6) of rule XI, the 3-day rule, is waived. The rule also permits the Member calling up House Joint Resolution 622 to offer, during its consideration, an amendment printed in the Congressional Record by Representative Mahon. The amendment may be offered notwithstanding any rule of the House to the contrary.

The Members will recall that the last continuing resolution for the District of Columbia has an expiration date of November 30, 1977. Since the final conference action still has not been concluded on the appropriation bill for fiscal year 1978, House Joint Resolution 662 is necessary to continue the programs contained in the legislation until the conference report is approved.

The joint resolution extends the funding levels of the last continuing resolution through September 30, 1978, or until the bill is enacted. When questioned as to the rationale for the new expiration date, the Chairman of the Appropriations

Committee responded that he thought a House-Senate compromise could be worked out by February 28 of next year, which, of course, would preempt the continuing resolution.

The second part of the rule will allow an amendment to be offered to the District of Columbia continuing resolution to include a continuing resolution for the Labor-HEW appropriation, if no agreement is reached by the conferees on this bill. At the time this request was made of the Rules Committee it was not known whether this would be necessary, but the Appropriations Committee wanted to have the option just in case. The funding level for Labor-HEW will be at the conference rate, which is the same as now permitted under the current continuing resolution.

On December 5 a statement was delivered by the chairman of the Appropriations Committee, and I am advised that the chairman does plan to offer the Labor-HEW amendment. It is my further understanding that he will yield to the gentleman from Illinois (Mr. MICHEL) for an amendment concerning the abortion issue at the proper time. That amendment language was printed in the December 5 CONGRESSIONAL RECORD. It is similar to that which the House voted on last week with the following exceptions:

First, it adds the word "forced" immediately preceding "rape or incest",

Second, it adds the word "promptly" when referring to reporting the incident to a law enforcement agency, and

Third, it strikes out "or its equivalent" immediately after "public health service".

Mr. Speaker, no opposition was expressed to the rule in the Rules Committee, although there is some concern for the September 30, 1978, expiration date. Perhaps that can be elaborated upon later.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. LOTT. I yield to the gentleman from California.

Mr. ROUSSELOT. I thank the gentleman for yielding.

Is it possible to have a better explanation of why we have to have this continuing resolution by extending the time to September of 1978? Does anybody want to explain that?

Mr. MAHON. Mr. Speaker, will the gentleman yield?

Mr. LOTT. I yield to the gentleman from Texas, the chairman of the committee.

Mr. MAHON. I thank the gentleman for yielding.

We are seeking to provide a vehicle for the settlement of the abortion issue for the fiscal year 1978 which ends on September 30, 1978. So this is our problem, to try to get this matter resolved for this session of Congress and for the current fiscal year.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. LOTT. I will be glad to yield to the gentleman.

Mr. ROUSSELOT. I thank the gentleman for yielding.

I appreciate that the chairman is anxious to settle the abortion issue, but why is it necessary, if our understanding is that we will probably have this issue resolved by February or March, to have the continuing resolution run clear until September?

Mr. MAHON. If the gentleman will yield, because the fiscal year runs until September 30, and we have not been able to resolve this issue. We are hoping that this will resolve the issue and that the Members of the House and the other body will go along with this proposal for the end of this fiscal year.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. LOTT. I yield to the gentleman.

Mr. ROUSSELOT. I do not really see why we need such a large "cushion" of time that is until September, 1978. I thought we were close to resolution. Why do we need so much extra time?

Mr. MAHON. If the gentleman will yield, we have been trying for 5 months to come to some resolution, and this is a resolution which we are hoping will be agreed to.

We are continuing the HEW appropriation level at the level agreed to in the conference, so this will resolve not only the continuing resolution but will resolve also the controversy over the amendment to the Labor-HEW appropriation bill.

Mr. ROUSSELOT. Mr. Speaker, I thank my colleague for yielding and our distinguished chairman for explaining.

I think it is an awfully big cushion of time and is unneeded. We are making a mockery of the "so-called" continuation process.

Mr. LOTT. Mr. Speaker, I have no further request for time.

Mr. SISK. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the resolution.

The question was taken; and the Speaker announced that the ayes appeared to have it.

Ms. HOLTZMAN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 331, nays 21, not voting 82, as follows:

Mr. Gammage with Mr. Fraser.

Mr. Giaimo with Mr. Danielson.

Mr. Ertel with Mr. Ford of Michigan.

Mr. Evans of Georgia with Mr. Young of Alaska.

Mr. ROSE changed his vote from "yea" to "nay."

So the resolution was agreed to.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

Mr. MAHON. Mr. Speaker, pursuant to the rule just adopted by the House, I call up the joint resolution (H.J. Res. 662) making further continuing appropriations for the fiscal year 1978, and for other purposes.

The Clerk read the joint resolution, as follows:

H.J. Res. 662

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the following sums are appropriated out of any money in the Treasury not otherwise appropriated, and out of applicable corporate or other revenues, receipts, and funds, for the several departments, agencies, corporations, and other organizational units of the Government for the fiscal year 1978, namely:

Sec. 101. Such amounts as may be necessary for continuing projects or activities which were conducted in the fiscal year 1977, and for which appropriations, funds, or other authority would be available in the District of Columbia Appropriations Act, 1978 (H.R. 9005) as passed the House of Representatives or the Senate, but at a rate of operations not in excess of the current rate: *Provided,* That the Advisory Neighborhood Commissions shall be continued at an annual rate of not to exceed $500,000: *Provided further,* That the rate of operations for the Disaster Loan Fund of the Small Business Administration contained in said Act shall be the rate as passed the Senate.

Sec. 102. Appropriations and funds made available and authority granted pursuant to this joint resolution shall be available from December 1, 1977, and shall remain available until (a) enactment into law of an appropriation for any project or activity provided for in this joint resolution, or (b) September 30, 1978, whichever first occurs.

Sec. 103. Appropriations and funds made available or authority granted pursuant to this joint resolution may be used without regard to the time limitations for submission and approval of apportionments set forth in 31 U.S.C. 665(d)(2), but nothing herein shall be construed to waive any other provision of law governing the apportionment of funds.

Sec. 104. Appropriations made and authority granted pursuant to this joint resolution shall cover all obligations or expenditures incurred for any project or activity during the period for which funds or authority for such project or activity are available under this joint resolution.

Sec. 105. Expenditures made pursuant to this joint resolution shall be charged to the applicable appropriation, fund, or authorization whenever a bill in which such applicable appropriation, fund, or authorization is contained is enacted into law.

Sec. 106. No appropriation or fund made available or authority granted pursuant to this joint resolution shall be used to initiate or resume any project or activity for which appropriations, funds, or other authority were not available during the fiscal year 1977.

Sec. 107. All obligations incurred in anticipation of the appropriations and authority provided in this joint resolution are hereby ratified and confirmed if otherwise in accordance with the provisions of this joint resolution.

The SPEAKER pro tempore. The gentleman from Texas (Mr. Mahon) is recognized for 1 hour.

Mr. MAHON. Mr. Speaker, I yield myself such time as I may consume and, Mr. Speaker, during the consideration of House Joint Resolution 662, I shall yield only for the purposes of debate, and not for amendment unless I specifically so indicate.

Mr. Speaker, on November 29, 1 week ago today, the Committee on Appropriations reported House Joint Resolution 662, a further continuing resolution for the District of Columbia for the fiscal year 1978. On that same day the Rules Committee filed the rule just adopted by the House.

Mr. Speaker, it is most important that Members understand what the situation is today and what is planned insofar as the consideration of this resolution.

This resolution—House Joint Resolution 662—as reported by the Appropriations Committee provides further continuing authority for the District of Columbia until September 30, 1978 or until the regular appropriation bill is signed into law, whichever first occurs. Spending authority for the District of Columbia expired at midnight last Wednesday, and in view of the fact that a D.C. conference agreement is not in sight, it is essential that further continuing authority be provided.

It is also essential to provide for the operations of the Departments of Labor and Health, Education, and Welfare and the other agencies which would be funded under H.R. 7555, which is the Labor-HEW bill for fiscal 1978. It is therefore my intention to proceed in the following manner.

First, under the provisions of the rule under which this District of Columbia continuing resolution is being considered, I will offer an amendment to provide continuing authority for the Departments of Labor and Health, Education, and Welfare. This amendment which appears on page 38345 of the Record of yesterday, December 5, reads as follows:

> Such amounts as may be necessary for projects or activities provided for in the Departments of Labor, and Health, Education, and Welfare, and Related Agencies Appropriation Act, 1978 (H R. 7555), at a rate of operations, and to the extent and in the manner, provided for in such Act as modified by the House of Representatives on August 2, 1977, notwithstanding the provisions of Sec. 106 of this joint resolution.

My amendment, as indicated, would continue programs under H.R. 7555 at the conference level. The language of the amendment is identical to the provision which was contained in the law applicable to the month of November.

Second, immediately after I offer my amendment, I will yield to the gentleman from Illinois (Mr. Michel), the ranking minority member of the Labor-HEW Subcommittee and the ranking minority conferee on that appropriation bill for an amendment on the abortion issue. The text of the amendment which will be offered by the gentleman from Illinois is as follows:

> Provided that none of the funds provided for in this paragraph shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term; or except for such medical procedures necessary for the victims of forced rape or incest, when such rape or incest has been reported promptly to a law enforcement agency or public health service; or except in those instances where severe and long-lasting physical health damage to the mother would result if the pregnancy were carried to term.
>
> Nor are payments prohibited for drugs or devices to prevent implantation of the fertilized ovum, or for medical procedures nec-

essary for the termination of an ectopic pregnancy.

The Secretary shall promptly issue regulations and establish procedures to ensure that the provisions of this section are rigorously enforced.

The language is similar to that which the House voted on last week but it adds the words "forced" and "promptly" and deletes the phrase "or its equivalent".

Mr. Speaker, everyone knows how difficult and controversial this issue has been, but it is high time for the Congress to resolve the matter. Other important issues are at stake involving the many Labor-HEW programs, and I would point out, Mr. Speaker, that the payroll for the Department of Labor was to be certified today. Tomorrow the payroll for the Department of Health, Education, and Welfare is to be certified. Obviously tens of thousands of people and their dependents are confronted with the distinct possibility of a short pay check and maybe payless pay days.

We are hopeful that this language will be acceptable to a majority of the House and that it can be reluctantly accepted by the other body in a spirit of compromise. But I must state, Mr. Speaker, that there is no agreement with the other body that this language will indeed be agreed to.

Mr. Speaker, I have an amendment at the desk.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield for a question?

Mr. MAHON. I yield for a question.

Mr. BAUMAN. Mr. Speaker, this inquiry is regarding the District of Columbia continuing appropriation.

Am I correct in the understanding conveyed to me by the staff of the Committee on Appropriations that by passage of this continuing resolution dealing with the District of Columbia we can be assured there are no funds contained in it for building of the so-called civic center? Am I correct in that statement?

Mr. MAHON. Yes; for the District of Columbia there are no funds provided for the so-called civic center. That matter has to be resolved between the subcommittee chaired by the gentleman from Kentucky (Mr. NATCHER) and the subcommittee on the other side of the Capitol.

Mr. BAUMAN. Mr. Speaker, I thank the gentleman.

AMENDMENT OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MAHON: On page 2, after line 9, insert the following:

Such amounts as may be necessary for projects or activities provided for in the Departments of Labor, and Health, Education, and Welfare, and Related Agencies Appropriation Act, 1978 (H.R. 7555), at a rate of operations, and to the extent and in the manner, provided for in such Act as modified by the House of Representatives on August 2, 1977, notwithstanding the provisions of section 106 of this joint resolution.

AMENDMENT OFFERED BY MR. MICHEL TO THE AMENDMENT OFFERED BY MR. MAHON

Mr. MICHEL. Mr. Speaker, I offer an amendment to the amendment.

The Clerk read as follows:

Amendment offered by Mr. MICHEL to the amendment offered by Mr. MAHON: At the end of the amendment of the gentleman from Texas strike the period, insert a semicolon, and add the following: "*Provided*, That none of the funds provided for in this paragraph shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term; or except for such medical procedures necessary for the victims of forced rape or incest, when such rape or incest has been reported promptly to a law enforcement agency or public health service; or except in those instances where severe and long-lasting physical health damage to the mother would result if the pregnancy were carried to term.

"Nor are payments prohibited for drugs or devices to prevent implantation of the fertilized ovum, or for medical procedures necessary for the termination of an ectopic pregnancy.

"The Secretary shall promptly issue regulations and establish procedures to ensure that the provisions of this section are rigorously enforced."

The SPEAKER pro tempore. The gentleman from Illinois (Mr. MICHEL) is recognized for 1 hour.

Mr. MICHEL. Mr. Speaker, I yield 30 minutes to the gentleman from Texas (Mr. MAHON), the chairman of our committee, pending which I yield myself such time as I may consume.

Mr. Speaker, the scenario that is being played out here is known to all.

While I was out of town, the distinguished chairman of the committee yesterday took the floor during our perfunctory session and laid out, which is recorded on the first page of yesterday's RECORD, exactly what was expected to happen today. I do not think there is any need to review the 3 or 4 months of conferences, meetings, votes up and down, and all the maneuvering which has brought us to this point.

It all boils down to getting agreement between the House's and the Senate's position on the issue of publicly funded abortions. All the line items and figures which total over $60 billion in the Labor-HEW appropriation bill have been agreed to. We have adopted that portion of the conference report.

The only remaining thing is the language about publicly funded abortions. We have progressed from the extreme positions of the Senate language with no prohibition and the original Hyde language. We have tried all kinds of phrases and words, exhausting the resources of the dictionary in an effort to get together.

Mr. Speaker, this just has to be the last effort on my part to get some agreement for this fiscal year.

With the addition of the words "forced" and "promptly" and the elimination of the words "or its equivalent" in the rape and incest sentence of the Senate language, this amendment makes a move back toward the House position from that language that was narrowly defeated last week.

Let me go very carefully through the language of this amendment. It has five sections in it. The first section the gentleman from Illinois (Mr. HYDE) can embrace lock, stock, and barrel:

None of the funds provided for in this paragraph shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term.

Now let me skip the next two sections and go to the bottom two:

Nor are payments prohibited for drugs or devices to prevent implantation of the fertilized ovum, or for medical procedures necessary for the termination of an ectopic pregnancy.

The Secretary shall promptly issue regulations and establish procedures to insure that the provisions of this section are rigorously enforced.

I believe that the gentleman from Illinois (Mr. HYDE) can also accept those two sections. Our point of difference is in the middle, the two middle sections. Let me take the third one first:

. . . or except in those instances where severe and long-lasting physical health damage to the mother would result if the pregnancy were carried to term.

We have argued this language extensively in the House-Senate conference, I do not know how many times. The other body wanted to put "mental health" in here, and it wanted wide open language. But the House conferees insisted on "physical health" and we have achieved that. And then we got down to whether or not it is permanent physical health, or is it severe or is it grave? The gentleman from Illinois (Mr. HYDE) and the gentleman from Maryland (Mr. BAUMAN) and others, would like to have it "permanent." I would like to have "permanent." But we were faced with the question "what do you get in place of the word permanent that will be acceptable to the other side in an effort to end this stalemate? The answer was the words "severe and long-lasting physical health damage."

Then we end up with the section having to do with rape and incest. Here I think there has to be a little bit of movement on the part of some of the Members, in the direction presented in this section:

. . . or except for such medical procedures necessary for the victims of forced rape or incest, when such rape or incest has been reported promptly to a law enforcement agency or public health service.

Remember a week ago, when we debated similar language, what we were talking about with respect to "or its equivalent." This phrase was too murky because we did not know clearly what it meant.

We are now talking only about a law enforcement agency or a public health service.

The folks who promulgate the rules and regulations downtown know exactly what we are talking about when we say a law enforcement agency or a public health service. And I think we ought to concede to those who objected to the use of "or its equivalent," because really no one knows what "its equivalent" is.

Now I did not write all of this language. No one individual wrote the language that now takes the form in what is called the Michel amendment. All I have done is add "forced" and add "promptly" and delete the three words "or its equivalent," as a means of trying to get an agreement. And I do not expect even with this tightening that our dear friend, the gentleman from Illinois (Mr. HYDE), the gentleman from Maryland (Mr. BAUMAN) or the gentleman from Pennsylvania (Mr. FLOOD) the distinguished chairman of our subcommittee, would find this be acceptable to them. But some other Members have got to give a little. I suspect there are a few, who have just as much objection as I do about the public funding of abortion but I happen to think that some abortions short of abortion on demand are all right. I have a real problem when it comes to public funding of abortions for social convenience as distinguished from private funding. But I realize we have got to give a little, and that is why we are offering the amendment.

Mr. VOLKMER. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Missouri.

Mr. VOLKMER. I thank the gentleman for yielding.

I would like to go over some of the provisions of this and perhaps clarify some language, because I think the Members here realize that this is a very serious matter and we should understand exactly what we are doing when we do it or do not do it. I would first direct the gentleman's attention to the first language which provides that no funds shall be provided to perform abortions. Then we go to the next, and we use there instead of the word "abortions" the term "medical procedures" for victims of incest or forced rape. By changing it and saying "medical procedures," we are not including abortions then; is that correct?

Mr. MICHEL. Excuse me?

Mr. VOLKMER. I will repeat the question. In the first sentence or the first phrase the word "abortion" is used providing that none of the funds be used except where the life of the mother would be endangered.

Then we say "or except for such medical procedures * * *" and there we use the term "medical procedures"; we do not use the word "abortion"; and, therefore, the word "abortion" is not included in "medical procedures"; is that correct?

Mr. MICHEL. That is correct.

Mr. VOLKMER. I would then like to direct the gentleman to the second phrase where we say "except in those instances where severe and long-lasting physical health damage * * *" We do not use the word "abortion" nor do we use the words "medical procedures." Since the last phrase pertained only to medical procedures, would this phrase, this new language, pertain only to medical procedures, this exception?

Mr. MICHEL. Yes.

Mr. VOLKMER. And those medical procedures do not include abortions?

Mr. MICHEL. That is correct.

Mr. VOLKMER. All right. Then the last question that I have is, does the gentleman feel that—and perhaps he does—this is basically the proper way to do it, or are we really voting here to provide tax funds or not provide tax funds? Is that the issue basically?

Mr. MICHEL. That is my particular problem. I recognize that we are going to have in here certain exceptions even though we have attempted to tightly draw up our language. We would expect that those who promulgate the rules and regulations downtown would follow the legislative history rather closely in making sure that we have not opened up floodgates here.

The reason for using the additional word "force" is to make it quite clear that we do not intend to have wholesale abortions for those under the age of consent who live in States with statutory rape laws.

Mr. VOLKMER. Is it the gentleman's intention in presenting this amendment to the House that the words "medical procedures" as used in here, and where reference obviously is made to them, does not include the word "abortion"; is that correct?

Mr. MICHEL. Yes.

Mr. VOLKMER. I thank the gentleman.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield for a question?

Mr. MICHEL. I will be happy to yield to the gentleman.

Mr. BAUMAN. I thank the gentleman for yielding.

The gentleman's language contains the phrase "severe and long-lasting physical health damage to the mother would result if the pregnancy were carried to term." The question I have is whether or not the gentleman means to describe by that language a pre-existing and verifiable physical condition, or would it be a condition that might occur in the future in a doctor's opinion if the pregnancy were allowed to go to term? Is it something that has to be pre-existing or existing at the time, and the doctor would have to assess that and so certify?

Mr. MICHEL. I know that we talked about specifically using those words. We get into a question of semantics. If those words are really too strong for the other body, then it seems to me we need not use those words specifically in our language. But that is my understanding of what is meant when I use "severe and long-lasting" as a condition that was pre-existing at the time of pregnancy. I just do not think that there is by any stretch of the imagination a situation where we can say that "having developed a series of migraine headaches, et cetera," is going to automatically qualify people for an abortion. This provision is not intended to be a loophole to permit abortion on demand.

Mr. BAUMAN. The interpretation that the gentleman places on this language is that the doctor could not say in his opinion some condition might result because of the pregnancy being allowed to continue and, therefore, an abortion would be in order?

Mr. MICHEL. That would surely run counter to this gentleman's understanding of what we have been talking about here and what should be the form of the rules and regulations promulgated by HEW.

Mr. BAUMAN. I thank the gentleman.

Mr. GARY A. MYERS. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Pennsylvania.

Mr. GARY A. MYERS. I thank the gentleman for yielding.

I ask this question on behalf of my colleague, the gentleman from Pennsylvania (Mr. GOODLING) who wanted it clearly understood as to the interpretation surrounding "prompt reporting." His concern was: Does the term "reported promptly" also mean promptly treated?

Mr. MICHEL. Yes. At least in this gentleman's mind it certainly does, and of course that prompt treatment is pretty much available today almost any place in the country. But "prompt" leaves itself open to a number of days. But let us face it. Pregnancy is a fact which cannot obviously be known until the raped victim has missed her first period. So it seems to me that "prompt" embraces a period that is at least in the 30-day range and still would be acceptable as prompt treatment and prompt reporting.

Mr. GARY A. MYERS. But the treatment would be regarded in the same time frame as reporting.

Mr. MICHEL. That is how I interpret what we intend by this language.

Mr. MILLER of California. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to my friend, the gentleman from California (Mr. MILLER)

Mr. MILLER of California. In regard to the language "forced rape or incest, when such rape or incest has been reported promptly to a law enforcement agency or public health service," could the gentleman outline for me what he expects the procedure to be, because as the gentleman's remarks said, the attempt is to stay away from wholesale abortions under the guise that one would admit that she had been raped, I would be interested in what the burden of proof would be in that reporting procedure in order to become eligible to have one's abortion taken care of.

Mr. MICHEL. I would assume that the rules and regulations promulgated by the HEW lawyers will be finely drawn. I cannot say I could include them all if I were to begin to list them. I am concerned that by virtue of making such a list, inference might be made downtown that this is only what I perceive them to be. But I think the fact that when we talk about promptly reporting to a law enforcement agency, something that is not easy to do for the victim of rape, HEW will know we want a tightly administered provision enforced.

Mr. MILLER of California. If the gentleman would continue to yield, let me ask him what happens to the young lady if the law enforcement agency says: "We do not believe you." Is that considered a reporting in this?

Mr. MICHEL. It is a reporting in my opinion if she promptly reported. And then I would expect that there would be some exchange or confirming of interrogation that would take place. But, at least it would be a publicly reported incident.

Mr. MILLER of California. So if this young lady who may be a victim of incest, if she went to the police department and reported she was a victim of incest, that would be a report whether or not the agency believed her?

Mr. MICHEL. Yes.

Mr. MILLER of California. She would not have to prove it? She would not have to bring in her father? She would not have to bring in her uncle?

Mr. MICHEL. I do not think we could make that kind of requirement.

Mr. MILLER of California. Let me ask the gentleman this. My concern is again how restrictive it can be, because it would appear from the language that if the committee is set and the House is set, by introducing the word "force" to stopping, as the gentleman said again, the wholesale abortions, my concern is that people are going to say: "How do we know this was a forcible rape? How do we know that this was a statutory rape? How do we know you did not consent to it?"

We know from records what happens in many police departments. What about the privacy for that young girl? There is a place where Mr. BIAGGI used to work, Fort Apache, where a young woman was gang raped and was told if she told it she would be killed, and that is what happened. Does that go into the newspapers? Is it a report if it is published? What if it is not taken down? What if the police sergeant fails to make a record of it?

Mr. MICHEL. I am not requiring anything beyond reporting to a law enforcement agency or public health service. I am not saying over and above that, that this must be duly reported in the newspaper. Of course not.

Mr. VOLKMER. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Missouri.

Mr. VOLKMER. Mr. Speaker, I would like to continue this discussion. As I read the amendment of the gentleman, I do not find any requirement in it that the young lady herself makes that report. I just find it needs to be reported, which to me, and tell me if this is right or not, it could be reported by anyone. It could be reported by a private family planning agency. It could be reported by a father, mother, sister, brother, friend, or anyone else, as I read the amendment; is that correct, first?

Mr. MICHEL. Well, there is a significant stigma, no matter who reports it. If a raped victim is singled out by name and address, and I do not care who reports it, there has to be some stigma attached to that.

Mr. VOLKMER. The language says only reported; it does not say by whom.

Mr. MICHEL. No, it does not.

Mr. VOLKMER. It could be anyone.

Mr. MICHEL. The Department of HEW may want to tie this down by rules, that could be done.

Mr. VOLKMER. Mr. Speaker, if the gentleman will yield further, what is the intention of the gentleman, as a proponent and sponsor of the amendment; what is the gentleman's intention in that regard?

Mr. MICHEL. I would not be one to force that particular victim as an individual to report. I think it would be more credible or reasonable to believe if that individual did it; but there may be some extenuating circumstances where it would be impossible. For example, in an aggravated case where they were hospitalized and could not do it personally some other responsible person could report. I would certainly take the mother or father's reporting as sufficient.

Mr. VOLKMER. What the gentleman is saying, the gentleman is going to leave it up to the guideline, the rule, and regulation writers, to make that decision and the gentleman is unwilling at this time to make that decision.

Mr. MICHEL. I have found many times it is just about impossible to draw everything up on this floor of the House, even as legislators are doing on the appropriations bill. I think that, frankly, ought to be decided on legislation written in a proper legislative committee.

Mr. VOLKMER. Mr. Speaker, I would like to ask one more question, if the gentleman will yield for one further question.

Mr. MICHEL. I yield.

Mr. VOLKMER. That is, what is a public health service? What does the gentleman mean by a public health service? Does that include family planning centers and others that could be referred to?

Mr. MICHEL. In my judgment, it is every public health center that is funded to any degree by Federal funds.

Mr. VOLKMER. To any degree by Federal funds?

Mr. MICHEL. Yes.

Mr. VOLKMER. What about State and local funds?

Mr. MICHEL. I am talking about federally funded centers. The gentleman and I well know that in Cook County or Peoria County today they are taking care of situations that we are prohibiting here, but they feel a need locally to do it and if there are no Federal funds, I have no voice in it. I am not about to eliminate or restrict what they are doing.

Mr. VOLKMER. But the receivers of the report can only be public health services that are partially or fully funded by the Federal Government?

Mr. MICHEL. Yes, sir.

Mr. VOLKMER. They could not receive a report from a Government agency if it is completely funded by funds coming from a taxpaying agency; is that correct?

The SPEAKER pro tempore. The gentleman from Illinois has consumed 20 minutes.

Mr. MICHEL. Mr. Speaker, I yield myself 2 additional minutes.

Mr. SMITH of Iowa. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Iowa.

Mr. SMITH of Iowa. Mr. Speaker, is it not true that most of these questions on reporting are totally irrelevant? What is going to happen, the girl or woman is going to go to her doctor. He is going to determine if she is a medicaid patient and if so his question is going to be, Will I be reimbursed? If it is in a State which reimburses, there is no question. If this occurs in a State where the State will not reimburse unless the Federal Government will pay, the doctor's question will be, Have you reported this? If so, to whom? Was the reporting prompt enough to qualify? And if she has not reported it, the doctor will have to report it if he wants to be paid.

Most of the questions that have been raised are attempts to find a reason to justify a preconceived position. HEW will have regulations to define what is "prompt" and under which conditions the doctor must call a health agency or law enforcement agency to find out whether it was reported. Most of these questions are just attempts to find an excuse to oppose the amendment and fog the issues.

Mr. MICHEL. Mr. Speaker, I dislike taking all the time, because I feel an obligation to yield to some of those that are not, frankly, in agreement with my position.

Mr. BONKER. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Washington.

Mr. BONKER. Mr. Speaker, in response to the question of the gentleman from Missouri, the language is explicit. It has to be reported promptly and that does not mean it can be done 3 or 4 or 5 weeks later and reported and thus qualify for a medicaid abortion.

It has to be reported promptly, and that is exactly the language Senator HELMS offered in the other body that was rejected.

Mr. MICHEL. I thank the gentleman for his very valuable contribution.

Mr. Speaker, at this juncture I will yield 2 minutes to the getleman from Illinois (Mr. HYDE), who obviously will not agree totally with what I have had to say here, but hopefully would have a mollifying view today from those previous periods when he has had some very pointed things to say about this issue.

Mr. HYDE. I thank the gentleman. I daresay the minority whip is echoing the sentiments of my dwindling circle of friends in what he has just said.

I must say that this is compromise language that is being put before us, but it is language that I cannot support because, when we get down to it, it is trading a life for a health condition. That is what it is. The long and short of it is, whatever is serious, whatever is long lasting, is up to the doctor to decide. It can be a migraine headache or it could be varicose veins; it could be any condition that, in the doctor's medical judgment, is serious and would be long lasting.

So, the trade is in what lawyers say, a "gross inadequacy of consideration." It is a life for a health condition. If the trade were life for life, or a condition that endangers the mother's life, which is the original amendment, then I could accept it, but since it is a trade of a life for a condition of health, however serious, it is not critical, it is not going to endanger the life of the mother, but is a serious health condition, it seems to me that the trade is unequal.

Let me simply say also that this is not an effort to impose somebody's religious beliefs on other people, which is the thrust of the editorial from the Miami Herald that was recently put in the RECORD, any more than those clergy that marched at Selma were trying to impose their religious belief in fighting for civil rights or any more than Jefferson when he wrote, "All men are created equal and are endowed by their Creator with certain unalienable rights" was an effort by him to impose his religious beliefs on anyone.

So, this is simply an effort to protect

the innocently inconvenient prenatal life from being considered socially expendable.

Mr. MAZZOLI. Mr. Speaker, will the gentleman yield?

Mr. HYDE. I yield to the gentleman from Kentucky.

Mr. MAZZOLI. I thank the gentleman for yielding to me, and join in his comments and sentiments. I do not think the gentleman's circle of friends has dwindled a bit. I think ultimately he has borne himself with dignity and handled himself at all times with poise.

Mr. HYDE. I thank the gentleman.

Mr. MICHEL. Mr. Speaker, I yield 2 minutes to the gentleman from Maryland (Mr. BAUMAN).

Mr. BAUMAN. Mr. Speaker, I urge a vote against the Michel amendment, with all due deference to the gentleman from Illinois, who has tried very hard throughout these many months to reach some sort of agreement, which has been very difficult to do.

But, the language now before us is opposed by all of the right to life groups; the National Right to Life Committee; the Ad Hoc Committee for Life; the March for Life; the thouands of people who will be here on the Capitol steps in just a few weeks once again to protest abortion. I dare say the amendment may well be opposed by Members of the other body. I refer Members to the debate in the other body which occurred on October 27, page 35522 of the RECORD. They can read at their leisure where almost identical language was offered and defeated by an overwhelming majority. I suspect the same thing may happen again.

So that, having voted nine times on this issue, it seems to me that we ought again to stand firm and let the other body realize that if certain payrolls and programs are not to be honored, the squarely placed blame is on their backs.

The language of the Hyde amendment, which is now the law of the land, has been upheld by the Supreme Court of the United States, and has been in effect and is still in effect. It is the language both bodies supported last year, and I think it is supported by a majority of the American people. I hope you will not now change your votes at this crucial hour. I hope we will vote once again, as we did the last time and on eight other occasions, to support an amendment that is reasonable and will preserve human life. That is what the whole argument is and has been about.

Mr. MAHON. Mr. Speaker, I yield 5 minutes to the gentleman from Pennsylvania (Mr. FLOOD), the chairman of the subcommittee.

Mr. FLOOD. Mr. Speaker, let us be certain that everyone knows what is going on here today. I think that everybody has a pretty good idea, by seeing the names and hearing what was said. The most recent Senate amendment on the use of Federal funds for abortions was rejected by the House on November 29. That was just last week. The vote was 183 to 205. That vote was on an amendment to the Labor-HEW appropriation bill. That is where we were last week.

The amendment now offered by my colleague, the gentleman from Illinois, applies to the continuing resolution. Nobody is mad about the continuing resolution, as such. Basically, I think that any new language on abortion should not be in here. The matter of appropriation for the funds for abortions should continue as a part of the Labor-HEW appropriation bill, and not be raised on the continuing resolution.

This continuing resolution as amended by the gentleman from Texas extends the necessary authority to meet Government payrolls. There would be no problem there. Nobody need worry about that. It would also allow the programs in the Labor-HEW bill to be supported at the levels agreed to by the Congress for fiscal year 1978. What is the matter with that? The language on the use of funds for abortions would be language agreed to by the House and the Senate last year and which has been in effect for the first 2 months of this year. I see no problem. That is what the amendment offered by the gentleman from Texas does. I support that.

But I cannot support this amendment offered by my friend, the gentleman from Illinois. I have the greatest respect for him. We sit together year after year after year. His amendment is an improvement, shall I say, upon the Senate amendment. My problem with his amendment is that it is still basically the Senate language we voted down nine times, with a change in inflection more than anything else. The amended language is less ambiguous, but it is still ambiguous to many Members here.

After debating the issue of funding for abortions for the past many months, I do not think that the House should agree on language which means nine different things to nine different people and which could destroy the whole intent of the House. It is just shading the language.

The amended language would allow the victim of rape or incest to report to a "public health service." That is a quotation. What in the world is that? Most Members know of an organization called the U.S. Public Health Service. Is that what is meant by this amendment? I cannot find out. Or does it mean that one could have a conversation with the public health nurse next door?

What about reporting to an abortion clinic in a neighborhood health center? One could not get an agreement on that. It may mean something else. Is that what is meant by public health service? The language of this amendment is wide open to interpretation. It could mean anything you want it to mean. That may be the idea. We went through this twice last week. It still includes that Senate language, "or except in those instances where severe and long-lasting physical health damage would result."

That same language is back again. This language was rejected because it is subject to a variety of interpretations. It is a loophole in restricting the use of Federal funds for abortions.

The SPEAKER pro tempore. The time of the gentleman from Pennsylvania (Mr. FLOOD) has expired.

Mr. MAHON. Mr. Speaker, I yield 1 additional minute to the gentleman from Pennsylvania (Mr. FLOOD).

Mr. FLOOD. Mr. Speaker, as I say, this language could be interpreted in many ways—varicose veins, stomach ulcers, bursitis. Sure, those are long-lasting health problems. But what in the world makes us think they alone could justify an abortion?

All through this long debate over the funding for abortions I have been trying day and night to uphold the position of the House. The House has made a number of compromises from its original position. We have compromised from the strict ban on the use of funds for abortions which is the position we first took; we have made several compromises.

The House has consistently rejected other amendments that were offered under the guise of compromise. We would not accept those.

The amendment that is now before us appears to be a compromise but, in my view, it is loosely constructed. It is wide open, and it would be subject to any kind of interpretation anyone wants to give it. It is not acceptable to me.

Mr. Speaker, again I urge the Members to defeat the Michel amendment.

Mr. MAHON. Mr. Speaker, I yield 3 minutes to the gentleman from Wisconsin (Mr. OBEY).

Mr. OBEY. Mr. Speaker, I am afraid that what is going to happen here today is that two opposites are going to coalesce. From what I gather, the Hyde supporters on one side—at least a number of them—and a number of Members who oppose the Hyde amendment on the other side are both intending to vote no. I would like to say a word to both sides.

The Senate has now voted some 16 times very clearly against the Hyde amendment—most of the time by a margin of about 2 to 1, as the gentleman from Illinois (Mr. MICHEL) has indicated.

I will repeat now what I said 2 weeks ago: that there is no way the Hyde supporters in this House can turn a minority into a majority in the Senate just by wishing. And to the Hyde opponents I would say the same thing: There is no way they can turn a minority into a majority by wishing.

It is true that the language proposed by the gentleman from Illinois (Mr. MICHEL) today is not as flexible as the language we considered here last week. I voted for the language last week, but we lost. We would lose again on the language, and no wishing can change that.

It is true that this language does not make an exception for teenage pregnancies. In conference committee I voted to exempt young women, those younger than 16; that failed. I voted to exempt those younger than 15; that failed. I voted to exempt those younger than 14; that failed. I voted to exempt those younger than 13; that failed. We lost, and we have to recognize that.

To those Members who are opponents of the Hyde amendment and who say there is no real difference between the Hyde amendment and this language, I simply want to make two points. It is true that the exemptions are very narrow. But they are real.

To those Members who want to remain consistent in opposition to the Hyde amendment—and they may want to do that for a lot of reasons—let me say that if they want to remain consistent and that consistency means more to them than giving a woman who has kidney disease an opportunity to have the medical procedure she needs, and if maintaining a consistent position means more to them than providing an exception for a woman who is forcibly raped, then they should go ahead and vote against the Michel amendment.

But if Members on both sides really want to do something to bring this issue to a conclusion, even though they may not be totally satisfied with the language, they should vote for the amendment. It may not be the right conclusion. I do not know that it is, but it is a reasonable conclusion, and I commend the gentleman from Illinois (Mr. Michel) for offering the language. I know how bothered the gentleman has been by this issue.

Mr. Speaker, I urge the Members to vote for the amendment.

Mr. MAHON. Mr. Speaker, I yield 3 minutes to the gentleman from Washington (Mr. Bonker).

Mr. BONKER. Mr. Speaker, after working almost a week full time on this issue, meeting with countless Members of this body, I am convinced the language that is before us is as close as we can come to a compromise.

What the gentleman from Illinois (Mr. Michel) has proposed offers improvements in several ways over the language that we voted on last week:

First of all, we have a better definition of rape. We have been fluctuating on a definitional problem more than anything else.

On the one hand, if we do not qualify "rape," then it means an automatic eligibility for many people regardless of the circumstances. However, if we allow "force" to go in and do not provide a further explanation, then we subject many victims to the humiliating experience of going down to a law enforcement agency and reporting this information, pressing charges, and going through an embarrassing process of court hearings. I do not think anyone wants to subject people to that sort of thing.

Mr. Speaker, what the gentleman from Illinois (Mr. Michel) has proposed is, I think, ideal; and that is that we use the words "forced rape," but we allow an alternative for the victim so that she can go down to a public health agency and report the information. That information is confidential, but it has to be reported promptly.

Mr. Speaker, that is the key in this language, that the fact of pregnancy has to be previously established before the person qualifies for any Government-sponsored abortion.

Finally, we have stricken from the earlier language the words "or its equivalent"; and that means that only those health agencies that have been designated by the Secretary as qualifying would be involved.

Mr. Speaker, I think it is important for those who argue that the proposed language on rape is too liberal to realize that Secretary Califano has issued the following ruling on the treatment of rape victims under the existing section 209—the Hyde language—which does not even mention rape: Here is what it says:

> Treatment for rape or incest is . . . limited for these purposes to prompt treatment before the fact of pregnancy is established.

That is in the existing regulations, but there has been no outcry against this. No statements have rung from the rafters in this Chamber about how terrible a loophole this is. But now, when we wish to clarify a little further, tighten the language just a bit, one side argues that we are opening the floodgates.

We are much closer to compromise than we realize. We cannot argue, then, on the basis of emotionalism or symbolic phrases. This is as close as we are going to come to a compromise, and I urge those Members who have been voting with the gentleman from Illinois (Mr. Hyde) to accept this language as being airtight and is the only opportunity we will have to resolve this issue before the end of the year.

Mr. Speaker, the conferees which gave us the existing section 209 stated in the conference report:

> Nor is it the intent of the Conferees to prohibit medical procedures necessary for the . . . treatment of rape or incest victims.

That has been accepted, evidently, by both bodies. So why the outcry now from those who oppose abortions when we try to add a little more legislative intent on their side?

What has been proposed by our colleague from Illinois is that we make clear that victims of rape means victims of forced rape, and that such rape should be reported. How can this be construed as "nullifying" the Hyde amendment? There is nothing here that tells Secretary Califano to modify his ruling on when treatment must occur. It merely adds a requirement about the reporting of rape and clarifies the definition of rape.

It is clear that the House will not accept the language on rape which does not contain some clarifying language. We have tried once to add a reporting requirement, but to make that reporting requirement reasonable through establishing that reports could be made to an agency other than a law enforcement agency. That was not enough. So we now take the next step in adding further restrictions.

Now, I believe it is clear that the Senate and many in the House may find this language objectionable because it is too restrictive. But we must all realize that rejection of this language will open up the entire issue again and prolong the search for a compromise. If we adopt this language we have at least further narrowed the issues which divide us, and that is essential. Nothing is to be gained by either side, by either body, from going back to ground zero. Indeed much is to be lost. That is as much the issue today as the substance of the amendment. I strongly urge adoption of the Michel amendment.

Mr. MAHON. Mr. Speaker, I yield 2 minutes to the gentleman from California (Mr. Miller).

Mr. MILLER of California. Mr. Speaker and Members of the House, I ask for a vote against this language today not because of consistency, but because we ought not to continue to participate in a procedure whereby we sit in this Chamber and set a purlieu for young women to go through before they can have control of their own body.

Mr. Speaker, I no longer want to participate in that sort of thing, and I doubt that many other Members want to participate in it any longer.

I think we have to fully understand what we are doing here. We are telling people, "If you are forcibly raped, you come under an exemption in the law."

Mr. Speaker, we know that there are women who have carried around with them for 20 to 30 years the fact that they were victims of incest or of rape, and today they cannot admit it, 25 years later. However, if they do not admit it, then they have to take to term the fetus because she cannot go down and admit promptly that she was the victim of rape or incest.

That is the loophole, Mr. Speaker. I do not think that is a loophole. I think it is a disgrace that we would sit here and suggest that we are going to control the body and the mind of a woman in making what ought to be a very private decision. It will no longer be private.

They will no longer be able to avail themselves of the protection of this law against a desk sergeant who says, "I don't believe it. Prove it, lady." She will have no protection if the rapist happens to be a member of her family or somebody who has theatened to kill her, because she must make the report promptly.

If that is what you want, then vote for this, I will not.

Mr. FRASER. Mr. Speaker, I hope that we can end the impasse over the Hyde amendment. I have opposed any version of the Hyde approach because it sets a different standard of health care for the poor. However, I have repeatedly voted for the Senate positions this summer and fall because they would hurt fewer people than the House versions. I vote for the Michel amendment only because of the risk that if it is defeated we will end up with the original Hyde amendment which I oppose.

What we are voting on today is the Senate language the House defeated on November 29 modified to require victims of forced rape or incest to report promptly to a law enforcement agency or public health service. The phrase "or its equivalent," which would allow rape and incest victims to report to human service agencies other than public health services and law enforcement agencies, would be deleted.

These changes are not minor. They are punitive and harsh additions to an already harsh and discriminatory measure. The phrase "forced rape or incest" excludes statutory rape victims—minors under the age of consent—from receiving abortions. The deletion of the phrase "or its equivalent" means that rape and incest victims may report only to law enforcement agencies or public health services for medical treatment. The phrases "reported promptly" and "public health service" will be defined very narrowly, as we are assured by the last sentence of the proposed language: "The Secretary shall promptly issue regulations and establish procedures to insure that the provisions of this section are rigorously enforced." Hence, we will ask a woman—or a child—whose person has been forcibly violated to report that violation to an institution that may seem particularly cold and impersonal at the time, in order to receive medical treatment. And what evidence will be necessary to prove that forced rape occurred?

We are beginning to humanize some public agencies that have in the past humiliated rape victims. The Michel language undermines those advances.

We are beginning to face the problem of incest. It has been largely unreported because incest victims feel guilt that keeps them silent for years or a lifetime. Now we would expect a 12-year-old child raped by her father to promptly walk in and document that attack to a police officer in order to receive an abortion.

Of course, the most punishing aspect of this amendment is its effect on poor women. Middle-class women who get pregnant are not punished. They make personal choices whether to bear a child or terminate a pregnancy. Poor women no longer have that choice, under this amendment.

Women, it seems, bear the responsibility for avoiding pregnancy. They must be punished if they do not. Yet avoiding pregnancy is not always possible; some contraceptives are ineffective and others entail risks, some minor, some major.

Avoiding pregnancy is even more difficult for victims. A new Center for Disease Control study not yet released shows that about 2.5 percent of rape victims do become pregnant.

At this time I would like to insert in the RECORD a letter I recently received from a law enforcement official who has much experience working with victims of rape and incest:

> OCTOBER 7, 1977.
>
> Congressman FRASER,
> *Rayburn House Office Building,*
> *Washington, D.C.*
>
> DEAR CONGRESSMAN FRASER: It has come to my attention that there has been considerable debate regarding recent abortion issues. As a police officer and member of the Ramsey County Child Abuse Team, the Minnesota Advisory Council on Child Abuse, the Minnesota Advisory Council on Battered Women, and the Executive Council of the Minnesota Program for Victims of Sexual Assault, I have become increasingly concerned about the question of abortion eligibility for victims of sexual assault and incest.
>
> Although there has been greater awareness of the problems with which the rape victim must deal, the prevalence of incest is just beginning to emerge. Statistics are inadequate because most cases are classified as Criminal Sexual Conduct rather than incest. During the past week, our department has investigated eight incest complaints, all involving long-term offenses of several years. In one of these cases, three daughters, ages 13, 12, and 10 years, were sexually molested by their father, the oldest of which is now pregnant by her father. This family receives public assistance and is financially unable to pay for an abortion, which is desired by the child.
>
> It is easy in dealing with statistics and abstract arguments to lose track of those victims who are suffering the consequences of someone else's actions. I hope the reality of those people out there will be considered in this issue.
>
> If we can provide specific information to clarify this concern, please do not hesitate to contact me.
>
> Sincerely,
>
> ——— ———.

Mr. MAHON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I have been sitting here in the Chamber wondering if the Members were listening to the debate and wondering whether or not the debate has any important impact on the way Members vote and I have decided that the Members are listening to the debate this afternoon on this important issue. I hope that they have been convinced that we have come as near as we possibly can to a resolution of this problem in regard to abortion.

It has been said by some that our public school children these days cannot read and, apparently, some of them cannot, but all of us can read, and we should not let our preconceived ideas prevent our reading what we are talking about here this afternoon. Let us not consider that we should be controlled by emotion. Let us be controlled by the realities of the situation. We have got to trust somebody with the administration of this legislation. We cannot enforce the law but we have written the language in such a way that it seems to me most of us should be able to accept it. Read it with me.

> That none of the funds provided for in this paragraph shall be used to perform abortions except where the life of the mother would be endangered if the fetus were carried to term; . . .

The gentleman from Illinois (Mr. HYDE) accepts that, where the life of the mother is in danger.

Who is going to tell if the life of the mother is endangered? A doctor. Do we have any faith in the integrity of the doctors of the nation? We have two in this body. All right, if the doctors will be honest, and most of them, I would assume, are, what is wrong with that provision? All right, let us go to the next provision:

> Or except for such medical procedures necessary for the victims of forced rape. . . .

It is not bad enough to have a forced rape and not have any opportunity to recover from the ordeal?

> . . . or except for such medical procedures necessary for the victims of forced rape or incest, when such rape or incest has been reported promptly. . . .

What is wrong with that? What constituent could compain of that?

> . . . when such rape or incest has been reported promptly to a law enforcement agency or public health service; . . .

What is a law enforcement agency or a public health service?

I would think that the Department of HEW through its cabinet officer would be able to have followed the history of this matter and be able to provide the rules, initiate and promulgate the rules which would handle that situation.

And then, here again,

> . . . or except in those instances where severe and long-lasting physical health damage—

Not mental, but physical health damage——

> . . . severe and long-lasting physical health damage to the mother would result if the pregnancy were carried to term.

Do we tell the poor woman that she cannot have an abortion when her doctor has said to her that if this pregnancy is carried to term she will have severe and long-lasting physical health damage, or do we help her?

I would hope that we would vote for the Michel amendment. If we do not, then we revert back to the Hyde amendment and go back to the Senate and the merry-go-round starts in motion again and we will be here debating this issue time and time again between now and Christmas.

There will be the bleakest holiday unless somebody gives a bit. I am asking the House to give a bit. The House has made very few compromises with respect to this matter in the past. So here we are tightening this thing up and making it more appropriate from the standpoint of the House. I would urge the Members to support the Michel amendment and provide, as it does provide, that the Secretary of HEW will establish and vigorously enforce regulations to carry this out. It seems to me it is an honest effort, that right-thinking people should be able to agree upon. This is an unwanted responsibility on my part. My problem is as chairman of the Committee on Appropriations and as a Member of this respectable body I just feel we ought to be able to do our job and not just set our feet in concrete and refuse to work out a compromise. I urge the Members to support the Michel amendment. Certainly it is a better alternative than the Hyde amendment from the standpoint of many Members of the House.

Mr. Speaker, how much time have I used?

The SPEAKER pro tempore. The gentleman has 10 minutes remaining.

Mr. MAHON. Has the gentleman from Illinois any further requests for time?

Mr. MICHEL. Yes, I do, but I was not prepared to yield further except to commend my Chairman for the comments he has made.

I think the gentleman from Wisconsin put his finger on another problem if the feeling is very prevalent as expressed by our friend, the gentleman from California (Mr. MILLER). I must confess that I can fully appreciate and understand his frustration in not having his way, and I by no means have gotten my way either—far from it. I would just hope that as we are winding this thing up that we are now not going to turn around and have defections the other way. We would then be exactly back where we started with no continuing resolution. It would be very 30 days that we would have to go through this charade. I just think it would be horrible if we did not bring it together now finally and resolve it. Let us face it, there are so many Members hard in concrete that there can only be a handful on either side who can shift their position, but that is assuming that we could hold the ranks that previously had supported a bit more liberal position a week ago.

Mr. MAHON. I would like to say that I commend the gentleman from Illinois for bringing this strengthened language before the House in order that we may undertake to resolve this matter.

Mr. ALLEN. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Tennessee.

Mr. ALLEN. I thank the gentleman for yielding.

I would like to ask the gentleman in the well, does the distinguished gentleman in the well have any indication at all that the Senate will be agreeable to this language?

Mr. MAHON. I have the indication from some Members of the Senate that they would be agreeable. I have an indication from other Members of the Senate that this would not be agreeable, that it goes too far, that it is not acceptable, that the forced rape language is too strong. But I am hoping that, in view of the pressures under which all of us are now operating, the other body would accept what we have done. We have gone a long way in an effort to compromise this issue.

Mr. SMITH of Iowa. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Iowa.

Mr. SMITH of Iowa. I thank the gentleman for yielding.

I think it has not been pointed out here and it is in direct response to the question just asked, that at one time the conferees had agreed on almost this identical language relating to Federal reimbursement for treatment of victims of rape. I am talking about the House and Senate conferees. We then left the question of rape and when the Senate voted, this agreed upon language was not presented to the Senate and then to the House. The fact of the matter is the gentleman from Pennsylvania himself proposed the language. It was accepted by the Senate conferees, and then we moved on to other questions, so as far as rape is concerned, this language is as close as the conferees felt it was possible to come to agreement on.

Mr. MICHEL. May I just make one comment on another thought that occurred to me. I can understand the gentleman from California (Mr. Miller) having expressed himself and having to vote that way. But those others Members who might have been similarly persuaded but have not said so, I hope they refrain from switching, because if my amendment is defeated, you will have last year's language.

I do not know how we can make it any more clear and plain that this is the best we can get after all these 4 months of arguing.

Mr. MAHON. If the gentleman will yield, it is not only the best we can get; it is a somewhat reasonable proposal, it seems to me, to the people who will come to grips with the real world.

Mr. MICHEL. I thank the gentleman.

Mr. MAHON. Mr. Speaker, I yield 5 minutes to the gentleman from Texas (Mr. Wright), the majority leader of the House of Representatives.

Mr. WRIGHT. Mr. Speaker, I want to express my gratitude to those Members on both sides of the aisle who have earnestly endeavored to work out this impasse and come to some language that this Congress could enact. I do not know whether this language under consideration represents such a compromise or not.

I hope that it does, because if it does not—if we do not enact this language today, or something very similar—extremely serious consequences will follow.

A very substantial part of the essential activities of the Government will be totally paralyzed.

As of last Wednesday night at midnight all appropriations expired for all the programs carried on through the Department of Health, Education, and Welfare and those carried on through the Department of Labor.

The other body has made it clear that it is not going to accept a continuing resolution without some modifying language in it.

It may sound very heroic for some Members to be able to sit here and say: "I did not yield one inch. I stood by my convictions."

It is equally heroic for those on the other side, and for those in the Senate to say: "I did not yield one inch. I stood on my convictions."

But so long as that obtains on both sides, there is no possibility of legislation. Unless we break this impasse, please understand what is going to happen. Members should be prepared to assume responsibility for the results of what we do here today.

Unless we break this impasse this week, 145,000 faithful employees of the Government will have a payless payday between now and Christmas.

Not only those employees of the Federal Government but also an additional 600,000 local and State employees whose salaries are funded through these programs will have payless paydays between now and Christmas.

But let me emphasize that it is not just for these public employees that I am making this plea.

For instance, some 475,000 Head Start students will have no money to fund their continuing education.

Eleven million aid-to-dependent-children recipients will be out of money between now and Christmas.

Are Members prepared to assume the responsibility for that?

Some 2 million SSI beneficiaries will be adversely affected.

Ten thousand hospitals will not receive Federal funds because there are no moneys for grants any more. It has run out. It is gone.

Five million recipients of title I elementary and secondary school education will likewise be adversely affected.

Four hundred and thirty-five thousand daily meals for older citizens will be terminated between now and Christmas. Do you want to assume responsibility for that?

Two million students receiving scholarship aid—basic oportunity grants for the most needy students—will go out the window unless we as a legislative body can resolve this controversy.

The money for 1.8 million recipients of rehabilitation services, and 450,000 black lung beneficiaries, has run out.

These figures came today from Secretary Califano. I called and asked him for them. There simply is no more money for grants.

If you want to sit intractably and inflexibly and insist that you have not yielded one inch from your convictions, if those in the Senate sit intractably and inflexibly and insist that they have not yielded one inch from their convictions, well, then, the legislative process will simply break down. The institution of the Congress will fail in its responsibility.

Mr. Speaker, let me finish and then I will be delighted to yield to the distinguished gentleman from Pennsylvania (Mr. Flood).

Then the institution of Congress can be subject to public ridicule and if that happens—if that happens, let me assure you that the public is not going to be impressed by our argument that it is the Senate's fault, nor will the public believe the Senate's argument that it was our fault. The blame will be upon us all. The rain will fall equally on the just and the unjust. Every Member of the Congress will suffer and the institution of Congress will suffer.

The SPEAKER pro tempore. The time of the gentleman from Texas has expired.

Mr. MAHON. Mr. Speaker, I yield 5 additional minutes to the distinguished majority leader.

Mr. WRIGHT. Mr. Speaker, I yield to my friend, the gentleman from Pennsylvania.

Mr. FLOOD. Mr. Speaker, my friend is very gracious. I am sure I do not misunderstand the gentleman. I know, there is no doubt that the gentleman understands me. Let us be very clear. We understand that the gentleman from Texas (Mr. Mahon) introduced the amendment. That amendment was then amended by the gentleman from Illinois (Mr. Michel). However you could defeat the Michel amendment and vote for the Mahon amendment. If you vote for the Mahon amendment, none of these terrible things will happen, at least as far as the House is concerned. If you vote for the Mahon amendment, you should have none of the troubles mentioned by the distinguished majority leader.

Mr. WRIGHT. Well, I understand what the distinguished gentleman is saying. The gentleman is saying, do what we have been doing and send it back to the Senate and wash our hands of it. I will say to the gentleman, we have been doing that for 5 months.

Mr. FLOOD. Mr. Speaker, I am trying to speak to the House. I ask the House to vote for the Mahon amendment and the other situation on abortion we will endeavor to deal with.

Mr. MAHON. Mr. Speaker, will the gentleman yield?

Mr. WRIGHT. I yield to the gentleman from Texas.

Mr. MAHON. Mr. Speaker, in conference with the other body and in conference with some of the members of the subcommittee, headed by the gentleman from Pennsylvania (Mr. FLOOD), it was agreed that we would handle the amendment in such a way that the ranking minority member of the Committee on Appropriations for HEW would offer that amendment. I am entirely and completely and totally in support of the amendment as the best agreement and compromise that can be achieved on the subject.

Mr. WRIGHT. Mr. Speaker, I thank the gentleman.

I want to say on behalf of the gentleman from Pennsylvania that the gentleman is one of the most eloquent and one of the most compassionate Members of this House. Last year we had these very same programs in jeopardy by a Presidential veto. I sat spellbound and listened as the gentleman from Pennsylvania extolled the absolute necessity for each of these programs.

Nurses, hospitals, schoolchildren, old folks—all these programs were in jeopardy—and I followed the gentleman. I followed the gentlemen from Pennsylvania to the brink, and over the brink to victory. An overwhelming majority of us in this House followed the gentleman from Pennsylvania; and we overrode the veto because we wanted more money for each of these programs.

Now, all of these programs right now are again gravely threatened. I plead with the gentleman from Pennsylvania to have the same compassion, the same understanding heart, and the same eloquence that he demonstrated last year in defense of the continuation of these programs.

Recipients of the aid-to-dependent-children program; black lung beneficiaries; old people who are not going to be fed; all these for whom the money has run out, are jeopardized.

It is not going to avail us much, either, to argue endlessly about whose fault it is. In the mind of the public, it is going to be the fault of this Congress for its failure to produce legislation.

When that happens, it is not going to make any difference whether we say it was the Senate's fault, or whether they say it was our fault. Each of us has a responsibility to try to work it out, and the only way I see that we can work it out now is to vote for this amendment.

If you do not, be prepared to face the responsibility and to accept the responsibility upon your shoulders for having voted to let these programs die.

Thank you, Mr. Speaker.

Ms. HOLTZMAN. Mr. Speaker, although, in order to reach a compromise, I have in the past reluctantly agreed to restrict the right of poor women to safe medical abortions, I today oppose the Michel amendment which would limit abortions for rape victims to situations where the rape was "forced" and reported "promptly" to a law enforcement agency or public health service.

Compromise should mean flexibility on both sides, and so far it has not. In an attempt to reach an accommodation, prochoice advocates have changed their position four times this year alone. Opponents have done so only once. A further concession of the magnitude involved in this amendment would be capitulation rather than compromise.

The amendment's most objectionable provision limits federally funded abortions for rape victims to cases where the rape was "forced." This would exclude statutory rape and raises questions of what evidence the victim must provide before she is entitled to an abortion.

The requirement that rape be "reported promptly" is also unreasonable. It ignores the fact that many rapes are never reported—because of fear publicity, because of shame, because of fear of reprisals, because the process is humiliating. It is unrealistic to require that all poor women overcome such feelings "promptly" or effectively forfeit their right to an abortion.

Mr. MICHEL. Mr. Speaker, I move the previous question on the amendments and the joint resolution.

The SPEAKER pro tempore. Without objection, the previous question is ordered.

There was no objection.

The SPEAKER pro tempore. The question is on the amendment offered by the gentleman from Illinois (Mr. MICHEL) to the amendment offered by the gentleman from Texas (Mr. MAHON).

The question was taken; and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. BAUMAN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The vote was taken by electronic device, and there were—yeas 170, nays 200, not voting 64, as follows:

[Roll No. 763]

Mr. Eckhardt for, with Mr. Young of Alaska against.

Mr. Moss for, with Mr. Symms against.

Mr. Meeds for, with Mr. Whalen against.

Mr. Hawkins for, with Mr. Fithian against.

Mr. Rosenthal for, with Mr. Hillis against.

Mr. Charles H. Wilson of California for, with Mr. Sebelius against.

Mr. Weaver for, with Mr. Crane against.

Mr. Wirth for, with Mr. Quillen against.

Mr. Bolling for, with Mr. Ruppe against.

Mr. Harkin for, with Mr. Goldwater against.

Until further notice:

Mr. Milford with Mr. Bob Wilson.

Mr. Broyhill with Mr. Phillip Burton.

Mr. McCloskey with Mr. Evans of Georgia.

Mr. Hollenbeck with Mr. Dent.

Mr. Railsback with Mr. Roncalio.

Messrs. PATTEN, ROBERTS, GOODLING, and RISENHOOVER changed their vote from "yea" to "nay."

Mr. RICHMOND and Mr. PURSELL changed their vote from "nay" to "yea."

So the amendment to the amendment was rejected.

The result of the vote was announced as above recorded.

The SPEAKER pro tempore. The question is on the amendment offered by the gentleman from Texas (Mr. MAHON).

The amendment was agreed to.

The joint resolution was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. MAHON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the joint resolution just agreed to.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

CONFERENCE REPORT ON H.R. 9375 MAKING SUPPLEMENTAL APPROPRIATIONS FOR THE FISCAL YEAR ENDING SEPTEMBER 30, 1978

Mr. MAHON. Mr. Speaker, I call up the conference report on the bill (H.R. 9375) making supplemental appropriations for the fiscal year ending September 30, 1978, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of December 1, 1977.)

Mr. MAHON. Mr. Speaker, I ask unanimous consent that the statement of the managers be considered as read.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

The SPEAKER pro tempore. The gentleman from Texas (Mr. MAHON) is recognized for 30 minutes, and the gentleman from Michigan (Mr. CEDERBERG) is recognized for 30 minutes.

The Chair recognizes the gentleman from Texas (Mr. MAHON).

Mr. MAHON. Mr. Speaker, we have before us today a conference report on the $7.6 billion supplemental appropriations bill. With the exception of additional funds added for AMTRAK as instructed by the House, this is the same bill that was in the House last Wednesday, November 30. I covered the highlights of the bill on that day and I will not repeat them here.

When the bill was before the House last week, a motion by the gentleman from Massachusetts (Mr. CONTE) as amended by the gentleman from Tennessee (Mr. GORE) to recommit the bill to conference was agreed to with instructions to the conferees. These instructions were to increase the funds for AMTRAK from the $8 million originally agreed to by the House-Senate conferees to the $18 million originally approved in the Senate bill.

The conferees met again on December 1 and carried out those instructions in consultation with the Senate. The conference agreement provides $18 million in funds to AMTRAK.

Mr. Speaker, we ought to be very careful in making appropriations to the National Railroad Passenger Corporation. We should insist there be good business discipline in the operation of our Nation's passenger lines. We must get a handle on this very complex transportation problem before it becomes completely out of control. We shouldn't commit millions upon millions to maintain unprofitable and unused rail transport just for the sake of keeping the trains running. The public expects efficiency and improved productivity from its railroad industry and AMTRAK should make that its first priority.

There will be considerable debate on both the B–1 rescission and on the $200 million for the winter fuel bills program.

The Senate added the rescission of B–1 production and the SRAM missile to the bill and the conferees agreed to these actions. We have come a long way in rejecting B–1 production and have had several hotly contested votes in the House on this matter. Each time the House has voted to eliminate B–1 bomber production, and these rescissions are just a further expression of that intent. At the appropriate time I shall offer motions to concur with the Senate in approving these rescissions.

The Senate bill contained $200,000,000 for the payment of winter fuel bills under the Community Services Administration. The Congress has never received a formal budget request for this item, and the House did not include any funds in the bill for this purpose. During the conference, the House conferees voted 7 to 2 against providing these funds. Therefore, at the appropriate time, I shall offer a motion to the House to insist on our disagreement with the Senate amendment which appropriates these funds.

Finally, Mr. Speaker, this bill contains $80,000,000 for the Clinch River breeder reactor. Since that amount was in both House and Senate bills, that subject is not before us today and there will not be a separate motion on the breeder.

Mr. Speaker, the supplemental now totals $7,599,898,000; which is $307,526,000 under the budget estimates, $417,296,000 over the House bill and $290,348,000 under the Senate bill.

At this point, I offer a summary table showing the agreement reached at the further conference compared with the budget estimates and the action on the bill by the House and Senate.

COMPARATIVE STATEMENT OF NEW BUDGET AUTHORITY—SUPPLEMENTAL APPROPRIATIONS BILL, 1978

Chapter	Subcommittee summary	New budget authority				Conference compared with—		
		Estimates, fiscal year 1978	House, fiscal year 1978	Senate, fiscal year 1978	Conference, fiscal year 1978	Fiscal year 1978 estimate	House bill	Senate bill
I	Agriculture—Rural Development:							
	New budget (obligational) authority	4,145,000	34,145,000	101,157,000	102,745,000	+98,600,000	+68,600,000	+1,588,000
	(Insured loans)			(100,000,000)				(−100,000,000)
	(Liquidation of contract authority)			(36,600,000)	(36,600,000)	(+36,600,000)	(+36,600,000)	
II	Housing and Urban Development—Independent Agencies:							
	New Budget (obligational) authority	4,625,000,000	4,630,500,000	4,779,947,000	4,638,047,000	+13,047,000	+7,547,000	−141,900,000
III	Interior and Related Agencies:							
	New budget (obligational) authority	1,303,792,000	466,363,000	757,249,000	746,813,000	−556,979,000	+280,450,000	−10,436,000

Mr. Speaker, I yield such time as he may require to the gentleman from Mississippi (Mr. WHITTEN).

Mr. WHITTEN. I thank the chairman.

Mr. Speaker, on November 30, 1977, on page 38141 of the CONGRESSIONAL RECORD I explained to the Congress the items having to do with agriculture in this conference report. At that time I also discussed a bill which had been introduced, which would compare the price received by those engaged in agriculture to that received by industry and labor.

Mr. Speaker, my friend, the gentleman from North Dakota (Mr. ANDREWS), the ranking member of our Appropriations Subcommittee for Agriculture, Rural Development, and Related Agencies, has joined in urging passage of a bill I introduced on October 17 on behalf of our subcommittee—H.R. 9608—which would amend the Agriculture Act of 1977, Public Law 95–113, by providing that both the target and loan provisions of the act be increased periodically to reflect the cost of living increases granted to individuals in the public and private sector or to reflect increases in the minimum wage.

The bill would further authorize the Secretary of Agriculture to utilize section 3 funds (30 percent of import duties) to maintain both adequate supplies and prices for perishable commodities; that section 32 purchases shall be used to maintain a price for perishable commodities that reflects cost-of-living increases granted to individuals in the public and private sector or increases in the minimum wage and further that all laws in conflict with these recommendations be modified as needed.

The effect of our bill would be to tie farm target prices and loans to actions by the Congress or by contract with wage rates received by labor, and prices charged by manufacturers, the net effect of which would leave the farmer or those engaged in agriculture pulling with industry and labor as against having to take issue with them in efforts to keep a proper balance.

Mr. Speaker, our subcommittee spends months each year in reviewing the overall agriculture budget request for the Department of Agriculture and in getting funds through Congress, and we feel the bill makes sense, would be in words which labor and industry and the consumer would understand, and would maintain a proper balance between the three—agriculture, industry, and labor.

Such a balance is absolutely necessary because history shows that if either of the three fails, it pulls down the other two.

Mr. Speaker, the provisions of our bill have been discussed with Secretary of Agriculture Bergland and he has assured us it will have his immediate attention.

Mr. Speaker, our approach would justify the Secretary, under existing law, to increase now both the target price and the loan rate in line with recent congressional action on increasing the minimum wage and in line with increased prices charged by industry.

For the future, again, our bill would maintain the balance essential to a sound economy, would help to maintain a prosperous nation, a nation of plenty instead of scarcity and would cause the three major elements—agriculture, industry, and labor—to operate in accord instead of clashing in a contest as each segment attempted to get a larger share of the consumer dollar by law, leaving less for the other two.

Mr. Speaker, we are hopeful the President and the Secretary of Agriculture will recommend this change to existing law. If not, we shall urge the legislative committee and the Congress to approve these changes.

Since this Congress and this calendar year are soon coming to an end, we would like to call to the attention of the House, H.R. 9608, which reads as follows:

> A bill to protect the economy of the United States; domestic agriculture, labor, and industry, by the maintenance of farm income and purchasing power
>
> *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That, notwithstanding any other provision of law, the loan rates and target prices for 1977 through 1981 set forth in the Food and Agriculture Act of 1977 (Public Law 95–113) for wheat, feed grains, upland cotton, rice, peanuts, soybeans, and sugar shall be increased periodically to reflect costs of living increases granted to individuals in the public and private sector or to reflect increases in the minimum wage.
>
> The Secretary of Agriculture is also hereby authorized and directed to utilize section 32 funds to maintain both adequate supplies and prices for perishable agricultural commodities. Section 32 purchases shall be used to maintain a price for perishable commodities that reflects costs of living increases granted to individuals in the public and private sector or increases in the minimum wage. All laws in conflict are hereby modified to conform to this provision.

Mr. MAHON. Mr. Speaker, I yield such time as he may consume to the gentleman from Massachusetts (Mr. BOLAND).

Mr. BOLAND. Mr. Speaker, chapter II of the 1978 supplemental conference agreement includes an appropriation of $4.5 billion to the Environmental Protection Agency for construction of sewage treatment facilities. At the time the conferees reached agreement on this item, no agreement had been reached on the water authorization bill (H.R. 3199). Lacking such an agreement, the Appropriations Committees adopted a distribution formula based on the 1976 "needs" survey and 1975 population estimates.

About 1 week after the conference on the supplemental appropriations bill was concluded, agreement was reached on the water authorization bill. At the proper time I shall offer a motion to substitute the authorization formula for the appropriation formula.

The bill also includes $44,200,000 for important EPA energy related research and development; $85,000,000 for abatement and control, including $69,000,000 for the section 208 areawide planning grants program and $16,000,000 for the toxic pollutants effluent guidelines program; $5,000,000 for new veterans' State extended care facilities; and $3,847,000 to continue development of a new medical school at Martinsburg, W. Va.

The conferees agreed to delay funding of a new veterans' hospital in Portland, Oreg., until the Veterans' Administration and the committee have had an opportunity to thoroughly digest and review the House committee's report conducted by the surveys and investigations staff. When the review has been completed, a recommendation to fund the new Portland VA Hospital will be made.

Thank you, Mr. Speaker.

Mr. MAHON. I yield such time as he may consume to the gentleman from California (Mr. McFALL), the chairman of the subcommittee handling this legislation.

Mr. McFALL. Mr. Speaker, pursuant to the instructions in the motion to recommit adopted by the House last week, the conference report before us today provides a total of $18 million in supplemental appropriations for Amtrak. I voted against the motion to recommit and I feel that the House's acceptance of the motion was most unwise. However, as I stated last week, I believe it is very important that the Department of Transportation undertake a comprehensive analysis of Amtrak's current route structure. This is provided for in the conference report.

Amtrak has been operating for nearly 7 years now and has cost the American taxpayer $3.4 billion. The Department's study should address the underlying reasons why the taxpayer must contribute nearly 70 percent of the cost of an Amtrak train while the users only pay 30 percent. Is it because the equipment and service are poor? Are there enough external benefits from energy conservation and environmental enhancement to justify this substantial public subsidy? Are there no other modes of transportation serving communities in sparsely populated areas of our Nation? I am hopeful that after the Department closely analyzes these issues and recommends a rational route structure for Amtrak, my colleagues, who spoke so favorably about this study, will see fit to support its recommendations.

Mr. Speaker, the Amtrak Improvement Act of 1975 provided for the Amtrak Board of Directors to make route and service decisions based on a set of economic, social, and environmental criteria. The conference agreement does not change the requirement to use the route and service criteria in making decisions nor does it suspend the implementation of the criteria.

Mr. CEDERBERG. Mr. Speaker, as far as the minority is concerned, we debated this before, prior to the motion to recommit, so we do not want to take any time but want to get into the substance of the amendments.

Mr. Speaker, I reserve the balance of my time.

Mr. FLOOD. Mr. Speaker, the Labor-HEW chapter of this supplemental appropriations bill as agreed to by the conferees provides appropriations totaling $150,689,000. This amount is $40,352,000 more than requested by the President, $5,000,000 more than provided by the Senate, and $121,419,000 above the amounts allowed by the House. The substantial increase over the House bill is due primarily to the funds provided for the Indochinese refugee assistance program which had not been authorized when the House acted, but for which $71.7 million had been requested by the President.

These amounts are exclusive of the Community Services Administration for which the Senate bill includes $200,000,000 for the emergency fuel assistance program. This item was reported in disagreement and will have to be resolved by the entire House and Senate.

I will now summarize the agreements reached by the conferees on the Labor-HEW items.

The Senate added language to the bill earmarking funds specifically for 82 new positions for the Department of Labor. Although the House conferees had no objection to the additional jobs, we felt it was unnecessary to include bill language to accomplish this. We agreed to include language in the joint explanatory statement for this purpose.

Another Senate amendment involved a technical matter affecting loan and loan guarantee funds for hospital construction. The Senate added language which extends the availability of funds appropriated in earlier years so that approved construction projects can be completed. These projects are already under way. No new funds are involved. The House conferees agreed to this extended availability.

With respect to construction of "model intercultural" facilities at Georgetown University in Washington, D.C. and Tufts University in Boston, the House provided $9.1 million for construction grants, $7.2 million in construction loans, and $2.9 million from unobligated balances in prior year appropriations for academic graduate facilities. The Senate had deleted these funds. The conferees agreed to only reduce the grant amount from $9.1 million to $5 million and to accept the House position on the balance of funding. The House conferees were convinced that this would provide sufficient funds to complete both of these centers which may then serve as models for similar programs across the country.

The conferees agreed with the Senate on funding for assistance to Indochinese refugees. The House had not acted on this item because the authorizing legislation had not then been enacted. Since the extension of the program has now been signed by the President, the House conferees agreed with the Senate on the amount of $124,000,000. These funds will continue both the reimbursement to States for welfare costs for refugees and $10,000,000 for special educational projects. Fiscal year 1978 is the first year of a 4-year phase-out provided for under the new legislation for this program.

The conferees also agreed to $1,719,000 included by the Senate for the settlement of legal claims arising between HEW and the State of Washington because of the transfer of the Tacoma Indian Hospital. This is a unique case and we believe this appropriation will produce a fair settlement of a claim which could have resulted in protracted legal costs to the Government.

Finally as mentioned earlier, there is one item which the conferees could not resolve and which is reported in disagreement. This is amendment No. 29—the emergency fuel assistance program. The House had not included funds for it. Most of the House conferees objected to this program. I want to make it clear that I do not agree with the majority of the House conferees on this item. I intend to support the Senate position when the motion is offered on amendment 29 after the adoption of the conference report.

Mr. DICKS. Mr. Speaker, I rise in support of the Senate amendment to the supplemental appropriation concerning the access of Tacoma, Wash., to the Interstate Highway System. Tacoma is the largest city in my district. It is the only city of its size in the Nation without an entrance or an exit to an interstate highway. A spur connecting Tacoma's central business district and the Port of Tacoma to Interstate 5 has been proposed. Interstate 5 is the major north-south highway between Canada and Mexico and connects Tacoma with Seattle and Portland. An application to add the Tacoma spur to the Interstate System has been accepted by the Department of Transportation. The need to construct the spur is apparent and the project meets the revised criteria for additions to the interstate that have been prepared by the Department of Transportation.

The Tacoma spur is unique among projects currently proposed for inclusion in the Interstate System. The spur not only provides access to the center of a city, but also provides access to the only deepwater port on the west coast. This port plays a vital role in the country's timber industry and in our vital role in the country's timber industry and in our growing trade with China and the Soviet Union. The port has also played a significant role in the construction of the Alaska pipeline. Failure to construct the Tacoma spur will hinder international trade, worsen the energy crisis, and raise the price of timber. The repercussions will affect not only the declining economy in Tacoma, but also the economy of the entire Nation. Construction of the Tacoma spur will avoid further deterioration of an economy that has a tremendous potential.

As a member of the House Appropriations Committee, I am well aware of the need to spend Federal dollars at the same time and place as other public and private investors. Piggy-backing increases the total impact on an economy. Money spent on the Tacoma spur will be in addition to funds provided by the city, county, port, and State for new business, industrial, and residential development. Additional capital is being actively sought and block grant money is being used to create jobs. Construction of the Tacoma spur will not only improve the national economy, it will increase the Nation's return on its investment dollar. I urge you to support the Senate's request.

Mr. MAHON. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the conference report.

The conference report was agreed to.

AMENDMENTS IN DISAGREEMENT

The SPEAKER. The Clerk will report the first amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 1: Page 2, after line 11, insert:

Agricultural Marketing Service

MARKETING SERVICES

For an additional amount to implement the Government-Wide Food Quality Assurance Program, $3,708,000.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. Mahon moves that the House recede from its disagreement to the amendment of the Senate numbered 1 and concur therein with an amendment, as follows: In lieu of the matter inserted by said amendment, insert the following:

Agricultural Marketing Service

MARKETING SERVICES

For an additional amount for the "Agricultural Marketing Service, Marketing Services", $2,000,000.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 2: Page 2, after line 15, insert:

Federal Crop Insurance Corporation

SUBSCRIPTION TO CAPITAL STOCK

To enable the Secretary of the Treasury to subscribe and pay for capital stock of the Federal Crop Insurance Corporation, as provided in section 504 of the Federal Crop Insurance Act (7 U.S.C. 1504), $30,000,000.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. Mahon moves that the House recede from its disagreement to the amendment of the Senate numbered 2 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 5: Page 2, after line 14, insert:

Agricultural Stabilization and Conservation Service

AGRICULTURAL CONSERVATION PROGRAM

For an additional amount to carry out the Agricultural Conservation Program, $36,600,000, to incur obligations for the period ending September 30, 1978, and to liquidate such obligations for soil and water conserving practices in major drought or flood damage areas as designated by the President or the Secretary of Agriculture: *Provided*, That not to exceed 5 per centum of the amount herein may be withheld with the approval of the State committee and allotted to the Soil Conservation Service for services of its technicians in the designated drought or flood damaged areas.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. Mahon moves that the House recede from its disageement to the amendment of the Senate numbered 5 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 7: Page 3, line 23, strike out all after "with" over to and including "Representatives" in line 2 on page 4 and insert: "the table on page 15 of Senate Report Numbered 95-564 in the absence of final congressional action on H.R. 3199 by November 15, 1977".

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. Mahon moves that the House recede from its disagreement to the amendment of the Senate numbered 7 and concur therein with an amendment, as follows: In lieu of the matter stricken and inserted by said amendment, insert the following: "the table on page 15 of the Senate Report Numbered 95-564".

Mr. MAHON. Mr. Speaker, I yield to the gentleman from Massachusetts (Mr. Boland).

AMENDMENT OFFERED BY MR. BOLAND TO THE MOTION OFFERED BY MR. MAHON

Mr. BOLAND. Mr. Speaker, I offer an amendment to the motion.

The Clerk read as follows:

Amendment offered by Mr. Boland to the motion offered by Mr. Mahon: In lieu of the matter proposed to be inserted by the motion, insert the following: "table 3 of committee print Numbered 95-30 of the Committee on Public Works and Transportation of the House of Representatives".

The Speaker pro tempore. The gentleman from Massachusetts (Mr. Boland) is recognized.

Mr. BOLAND. Mr. Speaker, I understand that the conference report on the amendments to the Federal Water Pollution Control Act will be filed today. That conference report will contain authorizations for waste water treatment plant construction grants from 1978 through 1982. The basis for the funding under this program is contained in table 3 of the committee print numbered 95-30 of the Committee on Public Works and Transportation. This table displays the allotment formula for construction grant funds, for municipal waste treatment facilities. Under these circumstances, it is appropriate that this formula should be used in the allocation of funds for the sewage treatment construction grant program funded in this supplemental appropriations bill.

The purpose of my amendment is simply to substitute the authorization formula for the formula agreed to in the supplemental appropriations bill.

Mr. Speaker, I will insert at this point a table showing the distribution of the $4.5 billion by State:

Alabama	$57,789,000
Alaska	19,057,500
Arizona	34,906,500
Arkansas	33,808,500
California	357,804,000
Colorado	41,341,500
Connecticut	49,824,000
Delaware	17,982,000
District of Columbia	14,368,500
Florida	172,647,000
Georgia	87,381,000
Hawaii	35,676,000
Idaho	22,284,000
Illinois	233,743,500
Indiana	124,551,000
Iowa	58,288,500
Kansas	39,613,500
Kentucky	65,781,000
Louisana	56,812,500
Maine	33,727,500
Maryland	124,996,500
Massachusetts	132,939,000
Michigan	185,877,000
Minnesota	84,109,500
Mississippi	43,470,000
Missouri	112,306,500
Montana	15,624,000
Nebraska	24,772,500
Nevada	18,621,000
New Hampshire	39,645,000
New Jersey	160,717,500
New Mexico	17,185,500
New York	477,940,500
North Carolina	89,136,000
North Dakota	13,981,500
Ohio	290,947,500
Oklahoma	41,755,500
Oregon	58,383,000
Pennsylvania	196,272,000
Rhode Island	23,634,000
South Carolina	52,947,000
South Dakota	16,798,500
Tennessee	69,687,000
Texas	196,353,000
Utah	20,056,500
Vermont	17,302,500
Virginia	88,209,000
Washington	79,596,000
West Virginia	80,563,500
Wisconsin	87,763,500
Wyoming	13,513,500
American Samoa	2,772,000
Guam	3,348,000
Puerto Rico	52,803,000
Trust Territory of Pacific Islands	6,885,000
Virgin Islands	1,701,000
Total	4,500,000,000

Mr. Speaker, I yield to the distinguished gentleman from California (Mr. Johnson), the chairman of the authorization Committee on Public Works and Transportation.

Mr. JOHNSON of California. Mr. Speaker, as chairman of the Committee on Public Works and Transportation and as one of the managers on the part of the House on the conference on the Federal Water Pollution Control Act amendment, I deeply appreciate the cooperation of the Appropriations Committee and in particular the assistance of the full committee, the gentleman from Texas (Mr. Mahon) chairman of the key subcommittee, the gentleman from Massachusetts (Mr. Boland) and the ranking minority member thereof, Mr. Cederberg of Michigan, in the assistance they have provided the conferees by their acceptance of the amendment offered by Mr. Boland which will for the next 5 years of the construction grant phase of the water pollution program provide for a uniform allocation formula to all of the States. This construction program is one of the key phases of the pollution program and the formula was worked out very carefully by the conferees. It is an equitable one and will provide for proper funding throughout the various States.

The SPEAKER pro tempore. The question is on the amendment offered by the gentleman from Massachusetts (Mr. Boland) to the motion offered by the gentleman from Texas (Mr. Mahon).

The amendment to the motion was agreed to.

The motion, as amended, was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 8: Page 5, after line 3, insert:

GENERAL SERVICES ADMINISTRATION

CONSUMER INFORMATION CENTER

For an additional amount for travel, from funds previously appropriated for the Consumer Information Center, $5,000.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 8 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 10: Page 5, line 18, after "1980" insert ": *Provided*, That all unobligated balances from prior appropriations made available for carrying out 38 U.S.C. 644 and 5031-5037 shall also be available for purposes authorized by Public Law 95-62".

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 10 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 15: Page 7, line 13, after "positions" insert ": *Provided further*, That section 201(b) of the Surface Mining Control and Reclamation Act of 1977 (91 Stat. 445) is amended to delete the roman numeral "IV" in the first sentence and substitute the roman numeral "V" in lieu thereof".

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 15 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 16: Page 7, line 20, strike out "$8,054,000" and insert "$7,224,000".

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 16 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment, insert "$8,374,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 22: Page 10, after line 22, insert:

ENERGY RESEARCH AND DEVELOPMENT ADMINISTRATION

OPERATING EXPENSES—FOSSIL FUELS

For an additional amount for "Operating expenses—fossil fuels", $5,000,000.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 22 and concur therein with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$1,000,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement

The Clerk read as follows:

Senate amendment No. 23: Page 11, after line 1, insert:

FEDERAL ENERGY ADMINISTRATION

SALARIES AND EXPENSES

For an additional amount for "Salaries and expenses", $276,344,000, of which $253,110,000 shall become available only upon enactment of authorizing legislation as follows: (1) for conservation grants for schools and health care facilities $200,000,000; for conservation grants for local government buildings, $25,000,000; for grants for financial assistance to utility regulatory commissions, $6,630,000; for solar heating and cooling installations in Federal buildings, $20,000,000; to remain available for obligation until September 30, 1979; and (2) for administration of grants for school and health care facilities, local government buildings, and utility rate reform, $1,480,000: *Provided*, That of the total amount of this appropriation not to exceed $6,000,000 shall remain available until expended for a reserve to cover any defaults from loan guarantees issued to develop underground coal mines as authorized by Public Law 94-163: *Provided further*, That the indebtedness guaranteed or committed to be guaranteed under said law shall not exceed the aggregate of $62,000,000.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 23 and concur therein with an amendment, as follows: In lieu of the matter proposed by said amendment, insert the following:

FEDERAL ENERGY ADMINISTRATION

SALARIES AND EXPENSES

For an additional amount for "Salaries and expenses", $273,194,000, of which $253,110,000 shall become available only upon enactment of authorizing legislation as follows: (1) for conservation grants for schools and health care facilities $200,000,000; for conservation grants for local government buildings, $25,000,000; for grants for financial assistance to utility regulatory commissions, $6,630,000; for solar heating and cooling installations in Federal buildings, $20,000,000; to remain available for obligation until September 30, 1979; and (2) for administration of grants for schools and health care facilities, local government buildings, and utility rate reform, $1,480,000: *Provided*, That of the total amount of this appropriation not to exceed $6,000,000 shall remain available until expended for a reserve to cover any defaults from loan guarantees issued to develop underground coal mines as authorized by Public Law 94-163: *Provided further*, That the indebtedness guaranteed or committed to be guaranteed under said law shall not exceed the aggregate of $62,000,000.

Mr. MAHON (during the reading). Mr. Speaker, I ask unanimous consent that the further reading of the amendment be dispensed with and that it be printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 25: Page 12, after line 18, insert:

HEALTH RESOURCES ADMINISTRATION

MEDICAL FACILITIES GUARANTEE AND LOAN FUND

Of the loan principal allotted under title VI of the Public Health Service Act for fiscal year 1973 which remained unobligated on September 30, 1976, not to exceed $2,000,000 shall be available to honor commitments made by the Secretary prior to October 1, 1976, to make or guarantee loans under such title VI.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 25 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 28: Page 13, after line 2, insert:

DEPARTMENTAL MANAGEMENT

GENERAL DEPARTMENTAL MANAGEMENT

For an additional amount for "General Departmental Management", $1,719,000 for compensating the State of Washington for losses it incurs in vacating and turning over to the United States the land and all improvements thereon which was formerly the site of the Tacoma Indian Hospital in Tacoma, Washington.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 28 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 29: Page 14, after line 5, insert:

RELATED AGENCIES

COMMUNITY SERVICES ADMINISTRATION

COMMUNITY SERVICES PROGRAM

For an additional amount for "Community services program", $200,000,000.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House insist on its disagreement to the amendment of the Senate numbered 29.

PREFERENTIAL MOTION OFFERED BY MR. ADDABBO

Mr. ADDABBO. Mr. Speaker, I offer a preferential motion.

The Clerk read as follows:

Mr. ADDABBO moves that the House recede and concur in the Senate amendment 29.

The SPEAKER pro tempore. The gentleman from Texas (Mr. MAHON) is recognized for 30 minutes.

Mr. MAHON. Mr. Speaker, I yield 5 minutes to the gentleman from New York (Mr. ADDABBO) at this time.

Mr. ADDABBO. Mr. Speaker, if my motion is agreed to then the Senate amendment including $200 million for aid to needy to pay fuel bills for the Community Services Administration is intended to, and will provide emergency assistance to low-income persons this winter, many of whom are senior citizens.

Through the continuation of this special crisis intervention program (SCIP), Congress will sustain its efforts to assist low-income Americans to pay fuel bills which they are simply unable to afford.

It is not a luxury to heat one's home—it is a necessity as essential as food or clothing. Congress has not hesitated in the past, and should not now hesitate to assist our low-income citizens obtain the necessities of life, of which they are deprived through no fault of their own. The energy crisis is real and all crises require sacrifice and the expenditure of resources to overcome. Can our low-income people be expected to suffer a sacrifice which they do not have the resources to fight? Instead of viewing $200 million as a mere expenditure—a debit on our national balance sheet—let us look to the consequences, of nonaction, of doing nothing to help these disadvantaged individuals.

I, for one, would not want to be responsible for such consequences. I would not want to face my needy constituents and merely offer sympathy for their plight, and be at a loss to explain why this body, to which the people elected me, has failed to respond to their needs. I could not explain to them why we subsidize big business and yet fail to subsidize the needy in their struggle for the necessities of life.

Last year, the SCIP program received a $200 million appropriation from the Congress, yet this assistance did not reach the local level until the summer, although nearly 2 million needy individuals were certified for SCIP payments and the States obligated 80 percent of their available allocations. In short, the program had limited success because the assistance came too late.

In addition, last year, there was a legal prohibition for using SCIP for program administration, which resulted in an administrative delay. But this deficiency will also be cured by the passage of today's supplemental, which does not contain any similar prohibition.

Let me describe how this winter's program will operate: $200 million will be appropriated to the Community Services Administration for use through the coming winter. The funds will not flow automatically to the States according to a set formula, as did last spring's appropriation. Rather they will be used to provide assistance to eligible persons faced with a specific emergency situation. The discretion to determine the circumstances which constitute an emergency is vested in the Administrator of CSA, after consultation with the Secretary of the Department of Energy.

The approach—of treating emergencies rather than simply providing assistance to all who qualify—was selected because we are putting this program on line and ready to operate before the winter begins. This broad authority will allow this program to be used to meet the variety of energy-related problems that are likely to arise this winter. The Administrator is urged to take into account such factors as temperatures, fuel costs, and unemployment. However, these are merely guidelines and do not offer specific thresholds or criteria for determining an emergency.

The Administrator must carefully monitor the situation within each State. She must take into account requests made by State and local officials. She must determine the existence of emergencies not only when they occur, but I encourage her to develop techniques to identify such emergencies before they occur.

It must be remembered that this $200 million supplemental is a stopgap measure only. The administration has proposed a permanent solution in September, but that measure is pending in the Congress and is not likely to be enacted before the severity of this winter is upon us. Therefore, the need for this temporary measure becomes all the more apparent.

The President supports this measure. It is supported by the National Governors Association, the National Council of Senior Citizens, the AFL–CIO, the Consumer Federation of America, and the League of Cities, I urge that my colleagues not fail in meeting the legitimate interests of their needy constituents. I urge you to meet this crisis for our disadvantaged citizens who do not have the means to fight this crisis alone.

I urge the House to accept the Senate provisions.

Mrs. FENWICK. Mr. Speaker, will the gentleman yield?

Mr. ADDABBO. I yield to the gentlewoman from New Jersey.

Mrs. FENWICK. I thank my colleague for yielding.

Mr. Speaker, I notice that in my colleague's remarks concerning the earlier legislation, one of the drawbacks was described as having a limitation on the administrative costs. I wondered whether there was any administrative costs limitation in this amendment offered by my colleague, and, if so, what it is.

Mr. ADDABBO. There is no limitation on administrative costs in this amendment.

Mrs. FENWICK. So that all of the money could be used, or a large portion, for administrative costs?

Mr. ADDABBO. It could, but it would be very unlikely, because CSA, which already has the appropriation for its department throughout the year, will be operating this program.

Mr. MOFFETT. Mr. Speaker, will the gentleman yield?

Mr. ADDABBO. I yield to the gentleman from Connecticut.

Mr. MOFFETT. I thank the gentleman for yielding.

Mr. Speaker, if I might be permitted to respond to the gentlewoman from New Jersey, we do have the figures here from the various States, all of the States, on what their administrative costs were last year, and I think the gentlewoman and my colleagues will be impressed with the small amount that was spent on administrative costs.

For example, in Florida they spent over $1.5 million, and they did that with $100,000 in administrative costs. In Tennessee, they spent $3.5 million, with $10,000 administrative costs.

The SPEAKER pro tempore. The time of the gentleman from New York (Mr. ADDABBO) has expired.

Mr. MAHON. Mr. Speaker, I yield 2 additional minutes to the gentleman from New York (Mr. ADDABBO).

Mr. MOFFETT. Mr. Speaker, will the gentleman yield further?

Mr. ADDABBO. I yield to the gentleman from Connecticut.

Mr. MOFFETT. Mr. Speaker, I would just like to add, if I might, that it was a situation, as the gentlewoman knows, where we voted on this in the midst of a crisis, so to speak, on March 16. The bill was not signed until May.

The CSA did a fairly good job, I think, in trying to figure out what the various State bureaucracies were, and those State bureaucracies got cranked up. We are not going to have to go through that this time, so the administrative costs will be lower.

Mrs. FENWICK. Mr. Speaker, the administrative costs, as I understand it, were limited, and that may account for the modest cost my colleague has been describing.

I understand that the last time some of this fuel went to the Virgin Islands and some of it went to Hawaii. I am sure that is not premeditated in this particular legislation.

Let me ask the gentleman, is that guarded against?

Mr. ADDABBO. Mr. Speaker, I can tell the gentlewoman that such funds for emergency fuel costs will be corrected to reflect need and not State allocations and an effort will be made to put the program in place with proper guidelines before the crisis occurs. In this way CSA can set the criteria and can work out the emergency measures and set all the guidelines so that this program will not be abused.

Mr. COTTER. Mr. Speaker, will the gentleman yield?

Mr. ADDABBO. I yield to the gentleman from Connecticut.

Mr. COTTER. Mr. Speaker, I applaud the gentleman from New York (Mr. ADDABBO) for taking the initiative and the lead in this area. This is very necessary in my own State of Connecticut where there are some 20,000 homes affected. There are some 27,000 homes which will be affected this winter by a shortage of fuel.

Mr. Speaker, I rise in support of the special crisis intervention program.

This $200 million program is designed to help the poor and the near poor pay their high heating bills when a crisis exists. We all know what this program meant to thousands of families last winter. In my own State, Connecticut, over 54,000 people in 20,000 homes were assisted by this program.

Mr. Speaker, I want to inform my colleagues that this Government effort in Connecticut was supplemented by private philanthropy through "Operation Fuel," which raised $300,000 to assist poor Connecticut families. This program was directed by Mike Dorsey and both Mike and Ned Coll, Governor Grasso's special assistant, have been very helpful in securing congressional support for the special crisis intervention program.

I know that some Members who supported the program last year said that they were doing it because it was a "one shot deal." However, I believe that the situation confronting poorer Americans requires an extension of this program. The Community Services Administration estimates that over 1,892,163 individuals face having their gas, electricity, or home heating oil shut off. The Carter administration recognized this need and proposed a more permanent program on September 21, but we do not have time to go through the long authorization process, since the winter is already here.

Therefore, I urge my colleagues to support the Addabbo motion to accept the Senate position on amendment 29.

Temperatures this year are expected to be 15 percent below normal throughout the United States.

Prices for natural gas, electricity, and home heating oil are skyrocketing. Heating oil is up 25 percent and natural gas over 62 percent. People in Connecticut are facing a winter fuel bill of between $800 and $1,000. This amount of money for the poor and the working poor presents an insurmountable obstacle.

I want to tell my colleagues that this money is already budgeted in the congressional budget resolution. The Carter administration supports this needed program, and many interest groups support it. It is vitally needed and should be supported. I urge a favorable vote on this program.

At this point, Mr. Speaker, I would like to insert in the Record several of the letters that were sent to our colleagues to urge their support, an analysis and supporting data from Governor Grasso's Washington office, the letter of approval from OMB, and an article and editorial that appeared in the Hartford Courant.

The letters follow:

House of Representatives,
Washington, D.C., November 30, 1977.

Dear Colleague: When the House considers the Conference Report on H.R. 9375, the Supplemental Appropriations Act, today or tomorrow, we hope that you will support the appropriation for a "Special Crisis Intervention Program" this year. Since the conference committee reported in disagreement on funding for the program, a motion will be made to recede and concur with the Senate language approving this appropriation.

This Spring, $160 million was allocated through the "Special Crisis Intervention Program" to help pay the fuel bills of almost a million and a half lower income families across the country who had difficulty meeting the cost of heating their homes during last year's winter crisis. We are heading for a similar crisis again this year with the continued escalation of fuel prices and the forecast of severe winter conditions adding up to what may be a very grim picture for the poor and near-poor in America.

The program approved by Congress this past Spring was a retroactive one, administered by the Community Services Administration, which especially benefitted individuals and families living on fixed incomes whose fuel bills nearly doubled in some cases during last year's unusually severe winter months. This time Congress would be acting before the onset of winter, and funds would not be committed on a state-by-state basis until an "emergency" situation develops. The Director of the Community Services Administration would be given the discretion to determine, in consultation with the Secretary of the Department of Energy, what constitutes such an "emergency" by considering factors like degree days, fuel costs, and unemployment. Once again, a maximum of $250 would be allotted to families and individuals with outstanding fuel oil, natural gas, and electricity accounts for home heating.

The Crisis Intervention Program has been widely labelled as a Northeastern project, but it must be emphasized that the program assists people in all regions throughout the country and not just the Northern states. For the winter of 1977 the regional breakdown of funding for the program, as listed below, demonstrates that the crisis facing the poorest members of our society extends beyond the boundaries of the Northeast.

Region, States included, and funds obligated:

1. Conn., Maine, Mass., N.H., R.I., Vt	$15,515,000
2. N.J., N.Y., P.R., V.I	22,390,000
3. Del., D.C., Md., Pa., Va., W. Va	24,148,352
4. Ala., Fla., Geo., Ky., Miss., N.C., S.C., Tenn	17,625,667
5. Ill., Ind., Mich., Ohio, Wisc	55,325,098
6. Ark., La., N.M., Okla., Texas	8,980,799
7. Iowa, Kan., Mo., Neb	11,604,000
8. Colo., Mont., N.D., S.D., Utah, Wyo	4,447,420
9. Ariz., Calif., Hawaii, Nev	857,228
10. Alaska, Idaho, Oreg., Wash	1,237,362

We urge our fellow Members to support the new appropriation for the Crisis Intervention Program that would do much to relieve the burdens that the working poor, the unemployed, and the elderly will face if they have no financial assistance during what may prove to be another long, cold winter.

Very Truly Yours,

Hon. William R. Cotter, Hon. James H. Quillen, Hon. Joel Pritchard, Hon. Christopher J. Dodd, Hon. John Brademas, Hon. Dan Rostenkowski, Hon. John H. Dent, Hon. Ray Thornton, Hon. Romano L. Mazzoli, Hon. William C. Wampler, Hon. Ted Risenhoover, Hon. Daniel J. Flood, Hon. Barbara Mikulski, Hon. Claude Pepper, Hon. Philip E. Ruppe, Hon. James C. Corman, Hon. Joseph P. Addabbo, Hon. Ken Holland, Hon. Carroll Hubbard, Jr.

Executive Office of the President, Office of Management and Budget,
Washington, D.C., October 27, 1977.

Honorable Warren G. Magnuson,
Chairman, Subcommittee on Labor and Health, Education and Welfare, Senate Committee on Appropriations, Washington, D.C.

Dear Senator Magnuson: I am writing to express my concern regarding the ability of the Federal Government to act quickly and effectively in response to the emergency energy needs that arise this coming winter.

We understand that the Senate Committee on Appropriations has under consideration the addition of $200 million to the Supplemental Appropriations bill for fiscal year 1978 to aid those seriously affected by potential energy emergencies this winter. The Administration strongly supports efforts to assure that needy American households do not suffer severe distress from extraordinary energy costs, and we believe that the proposal under consideration by the Committee can responsibly provide that assurance if that proposal contains certain essential provisions.

Last winter's severe weather pointed up the shortcomings of the present Emergency Assistance program of the Department of Health, Education, and Welfare and caused the Congress to add special funding for the Community Services Administration to aid those seriously affected. Unfortunately, the special assistance tended not to be targeted narrowly enough on those areas most in need since it was distributed as a formula grant, was diverted into activities that were not of an immediate crisis character (such as weatherization), and often was available to pay fuel bills well after the height of the emergency had passed.

The Administration's recent Emergency Assistance proposal, transmitted to the Congress in September, would correct the present law's deficiencies.

Because the Administration's bill has not yet progressed in the Congress, and other legislation is not likely to be enacted before possible energy emergencies may occur, we believe an interim contingency program is advisable.

Under the CSA authority previously used, contingency funding under the conditions noted below would provide a stop-gap basis for aiding people severely affected financially by an energy emergency:

No funds should be used for weatherization activities—these services can be provided by existing programs and funds.

The use of these funds should be contingent on the actual declaration of emergency by some authority, i.e., the Director of CSA after consultation with the Secretary of Energy. Funds should not simply be distributed to States and localities for whatever use they see fit. The money should instead be carefully targeted on those seriously affected by an energy emergency if one occurs.

Funds should only be expended as necessary, and should revert to the Treasury if not used.

The funds provided should be available for use in the Administration's proposed Emergency Assistance program when and if it is enacted.

If the amount to be made available for assistance to households to meet energy emergencies is obligated according to the above conditions, I believe it will effectively meet any energy emergencies which may occur this winter.

Sincerely,

James T. McIntyre, Jr.,
Acting Director.

Analysis by Governor Grasso's Office
Special Crisis Intervention Program

The Special Crisis Intervention Program was implemented last year by Congress in order to meet the crisis imposed due to the inability of so many Americans to meet their fuel bills. The Community Services Administration directed the program, providing funds to the states which then disbursed them through various social service and non-profit agencies. The program met with considerable success last year with 81.1 percent of the appropriated $200 million spent on fuel assistance. In Connecticut, a total of $3,020,000 was disbursed to 20,100 households enabling over 54,000 individuals to pay their heating bills and avoid having their heat shut off. In New York, over 17 million dollars was disbursed assisting over 168,200 individuals. In New Jersey 5,080,000 were distributed to 101,000 individuals. The funds unspent under last year's program went to grants for home insulation. Under the old program the eligibility of the individual was determined by income level, inability to pay bills which would result in the termination of fuel deliveries, and proof that up until the point of application that the individuals had been paying their bills. The program was greatly aided last year by voluntary "moratoriums" by the fuel companies. This provided that no individual who was eligible for assistance under the program would be shut off.

The program was delivered to Congress last year as a temporary program. This qualification is a stumbling block to passage of the measure this year. The bill itself was not passed until March 16, 1977. The Community Services Administration did not have the specific details of the measure available until June at which point Governors were informed as to how to apply for assistance. The actual money appropriated to each state was not available until late July/early August. Thus the fuel companies received money for bills outstanding from January and February in August. The fuel companies are reluctant at this point to extend credit to those who are facing shut-offs this winter. Some families in Connecticut and Massachusetts are now facing shut-offs because they could not afford to pay cash for the initial oil delivery and because their credit ratings dropped last year due to the inability to pay bills.

The Carter Administration has recommended to the Congress a permanent program to be administered by the Department of Health, Education and Welfare. The bill would expand an existing program under Title IV of the Social Security Act, by including those who are now eligible for assistance through the SCIP program. However, the Administration's proposal was not submitted to Congress until September 21, 1977 and Congress will not have the time to review it before the Spring.

According to meteorologists from both the public and private sectors, the temperature this winter will be 15 percent below normal. "Six pipelines reported that if the winter is ten percent colder than normal, they expect severe shortfalls in natural gas supplies." * In addition to expected shortfalls, the price of natural gas, home heating oil and electricity can be expected to rise. In Connecticut alone within a five year period from 1972–1977 the price of natural gas rose 51 percent, the price of electricity increased 61 percent and the price of home heating oil increased 142 percent. On the national scene in the period from January 1975 to July 1977 natural gas prices increased 62.1 percent. The following chart reflects prices of home heating oil by region for the period from January 1975 to July 1977.

Residential heating oil prices by region[1]

Region	January 1975	June 1977	Percent increase
New England	40.2	47.1	17.2

HOUSE OF REPRESENTATIVES,
Washington, D.C., November 29, 1977.

DEAR COLLEAGUE: We are writing to ask for your support of the "Special Crisis Intervention Program", which will soon be considered when the House takes up the Conference Report on the Supplemental Appropriations Act, H.R. 9375. As was the case last year, the program would appropriate $200 million to assist low income families in paying their rapidly escalating fuel bills.

The Special Crisis Intervention Program was instituted in the Spring of 1977 to deal with last winter's energy crisis. Over $160 million was distributed by the Community Services Administration (CSA) across the country, aiding one million families who were unable to pay their costly heating bills. This appropriation also helped to assure the survival of many small independent fuel dealers who were nearly forced out of business due to the non-payment of customer accounts.

Last year's enactment of the Special Crisis Intervention Program was intended for one year only. However, despite the diligent efforts of the Senate Governmental Affairs Committee, Administration assurances to replace the emergency funding with a permanent program within the Department of Health, Education and Welfare never came to fruition. The result is that the nation's heating oil consumers face the burdens of another long, cold winter with no means of financial assistance available.

Fortunately, the proposed extension of the Special Crisis Intervention Program will have the benefit of a prospective approach to home heating problems (as opposed to last year's retrospective attempts to assist consumers) and thus will not commit the funds until an "emergency situation" develops. The determination that an emergency exists will be left to the discretion of the

---

*Page 18. The Status of the Nation's Preparedness for the Winter of 1977–1978, prepared by the Subcommittee on Intergovernmental Relations.

Director of CSA who will, after consultation with the Secretary of the Department of Energy, "consider such factors as differences from normal temperatures, differences between local and national weather indicators, unemployment and fuel costs", as set out in the Senate committee report (95–564). Furthermore, in issuing financial relief to adversely affected states and localities the Director of CAS "shall design allocation criteria containing . . . safeguards" to prevent abuse of the program.

It must be emphasized that the program assists all regions throughout the country, not just the northern states. For the winter of 1977, for example, the regional breakdown of funding was as follows:

Region, States included, and funds obligated

1	Conn., Maine, Mass., N.H., R.I., Vt	$15,515,000
2	N.J., N.Y., P.R., V.I	22,390,000
3	Del., D.C., Md., Pa., Va., W. Va	24,148,352
4	Ala., Fla., Geo., Ky., Miss., N.C., S.C., Tenn	17,625,667
5	Ill., Ind., Mich., Ohio, Wisc	55,325,098
6	Ark., La., N.M., Okla., Texas	8,980,799
7	Iowa, Kan., Mo., Neb	11,604,000
8	Colo., Mont., N.D., S.D., Utah, Wyo	4,447,420
9	Ariz., Calif., Hawaii, Nev	857,228
10	Alaska, Idaho, Oreg., Wash	1,237,362

When the Supplemental Appropriations Conference Report is considered in the near future, the House will be asked to accept the Senate language recommending that a $200 million Crisis Intervention Program be funded again this year. The new program would take effect during the winter and be utilized by the Community Services Administration only when there is a demonstrated energy emergency. The maximum limit of $250 per household would be contained and unobligated funds will be returned to the Treasury.

The Administration, the National Council of Senior Citizens, the National League of Cities, the AFL–CIO, the Energy Policy Task Force of the Consumer Federation of America, the National Governors Association, and the Conference of Mayors have declared their support for the program in view of the critical energy needs which will be experienced by needy families during this coming winter.

We would like to urge our colleagues to support the continued funding of the Special Crisis Intervention Program when the Conference Report for H.R. 9375 is brought before the House.

Sincerely,

[From the Hartford (Conn.) Courant, Nov. 20, 1977]

ON BEING LEFT OUT IN THE COLD

(By Joel Lang)

A hard freeze has yet to come to Connecticut this fall and already the telephones are ringing in many of the 16 regional fuel banks where poor people go for help when the heat goes off.

But the cash drawers in the fuel banks are as empty as some of the callers' oil tanks. Fuel bank sponsors say only federal money or an abnormally mild winter will avert a crisis of cold for thousands of families who earn too much to qualify for welfare and too little to keep up with heating bills.

The executive committee of Operation Fuel, the umbrella organization created by the state and private groups in last winter's heating emergency to distribute money to fuel banks, last week voted to release $20,000 to be shared by the banks. That sum—which the committee admits its a pittance—is all, except for a few dollars in private donations, the money now available in Connecticut for emergency fuel aid.

The state Department of Community Affairs expects this week to begin the paperwork necessary to distribute another $127,000 to the fuel banks, but that won't be available to spend for another two or three weeks.

Also this week, the state legislature's Regulations Review Committee is expected to approve a plan to provide $1 million in emergency utility bills aid for persons receiving state welfare. A supplemental program for $500,000 more in aid will be reviewed later.

That combined $1.65 million becomes insignificant when compared with the nearly $3.5 million spent to help Connecticut residents pay last winter's fuel bills and the $14 million that Michael Dorsey, chairman of the Operation Fuel executive committee, estimates might be needed this winter.

How much actually will be needed depends on how cold the winter is and how high fuel prices climb. Long range forecasts call for colder than normal weather, although not as cold as last winter's deep freeze. Natural gas prices are expected to rise and the price of home heating oil probably will exceed 50 cents a gallon before spring arrives.

Dorsey and other fuel bank sponsors are pinning most of their hopes for the winter on a $200 million appropriation bill in Congress that would provide fuel aid to the states in an emergency. The bill's fate, however, is as uncertain as the weather—and the connection is not just rhetorical.

When Dorsey and Edward T. "Ned" Coll, the Revitalization Corps director who acts as unofficial chief of staff for Operation Fuel, led a delegation to Washington last Thursday to lobby for the bill, they were half hoping to arrive in a blizzard.

"The hardest problem . . . is trying to make people aware that there will be a crisis, that it will be cold this winter," said Coll before he left.

He and Dorsey say most of Connecticut's congressional delegation have pushed diligently for the $200 million appropriation, but face opposition from some Southerners who view the bill as a handout to the North and object to making emergency aid a regular payment. Congress approved $200 million in fuel aid last winter—with the understanding it was a one-time expense.

In addition, the bill has been separated from the $7 billion supplemental appropriations bill to which it was attached as a rider and now must survive votes in the House and the Senate on its own, says Jeffrey Leichtman, an assistant to Rep. Toby Moffett, D–6th District.

Leichtman believes the bill probably will not be voted on until after Congress acts on various segments of the Carter administration's energy program sometime early in December.

The bill would provide aid only in emergencies determined by the weather and states' economies. Connecticut got about $3 million last year and could get more or less this year, if the bill is passed.

If Congress provides no money, Dorsey and Coll think the state probably will have to reactivate Operation Fuel which last winter received $158,000 in private donations. The $20,000 sent to fuel banks last week came from $90,000 received last summer as part of Northeast Utilities settlement of a court challenge to its rate structure.

The remaining $70,000 will be used to staff Operation Fuel, if necessary, or will be sent to the fuel banks. Last year's toll free Operation Fuel telephone number remains connected, but no one answers it.

Coll says emergency fuel aid is needed most to help the working poor, the unemployed and the elderly. Persons receiving welfare can turn to the state Social Services Department for help. But the working poor qualify for no special aid.

Their budgets prove too tight to pay for the extra fuel burned during a winter cold snap, says Coll. The problem will be aggravated this year because some fuel oil dealers themselves are in financial trouble and cannot afford to let bills slide. More and more often dealers are demanding cash on delivery from customers with outstanding bills.

Though the fuel banks' clients commonly heat with oil, others use natural gas, electricity and even coal or wood. Connecticut Natural Gas will use the same discretion it used last year before shutting off service for delinquent accounts: termination notices are issued after 60 days and service will not be ended in extremely cold weather.

Northeast Utilities, which provides electricity and gas, is undecided about resuming the moratorium it declared last winter on service disconnections.

A week ago, during the first extended stretch of chilly fall weather, the Greater Hartford Emergency Fuel Bank received nearly 100 calls for help from persons with unpaid utility bills or who needed oil deliveries. They were told to wait.

Ralph Davis, director of energy for the Community Renewal Team which operates the bank, says fuel has become so expensive almost every day produces an emergency.

"If people are in trouble at the beginning of the fuel season, where are they going to be by the end of December or January?" Davis asks.

He insists people not only need financial help, but also need lessons in how to manage on a tight budget and to be prudent enough to check their fuel supply regularly so the tank doesn't run dry at night or on a weekend when deliveries are difficult to arrange, and sometimes more expensive.

Davis also hopes for a special kind of donation: the fuel bank needs to find a pump capable of emptying oil tanks.

Several times, the bank has had to turn down gifts of actual oil from homeowners who moved or switched to another type of heating system.

SUPPORT HEATING FUEL SUBSIDY

Connecticut's elected representatives to Congress should be unanimous in their support when the House votes today or tomorrow on a $200 million stand-by emergency fuel subsidy program to help low-income households pay heating bills in the event of a severe winter.

That Congressman Robert Giaimo of the 3rd District failed to give his unqualified co-sponsorship to the measure is incredible. New Haven was one of the cities that had great need for the funds raised last year by private and public agencies.

Mr. Giaimo has influence on conserative Democrats who look to him for leadership. The House has 77 co-sponsors of the proposal, a coalition of Northeast and Midwest legislators. But when the Senate-House conference committee met on the bill, the Senators accepted it while the House members rejected it 7–2.

Th funding is particularly important here because of the price of fuel oil. Senior citizens, the working poor and the unemployed—whose numbers have increased suddenly in recent weeks because of several massive layoffs—cannot afford the price. They must pay the oilman when the fuel is delivered or shortly thereafter.

The Governor's information bureau reports that it recently received 100 calls for help in a week's time. Some families cannot afford the first tankful of oil and have been without heat.

In Connecticut the mechanics of fund distribution are in place providing an avenue of aid that was the nation's most efficient last winter.

Last year, after a much-delayed start, the federal government appropriated $3 million for the state.

But the need was estimated at close to $15 million. This year's proposed bill would not earmark a specific amount but base distribution on three factors: weather, unemployment and fuel costs. If this state's combination of factors warrants it, more money would be available.

The obstacles to passage of the preliminary approval of the bill have been the attitude of lawmakers from southern states who think their constituents do not need help, and the fear that fuel aid might be the first phase of a new welfare program. The southern states, however, received $40 million last year when an aid program was hastily thrown together. The contingency clause based on factors of need cancels out the second fear.

But unless all of Connecticut's legislators stick together who could expect Sunbelt lawmakers to believe there is need?

Mr. MICHEL. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I wish to take this time to respond to the gentleman from New York (Mr. ADDABBO), who has offered the preferential motion. I wish to speak in opposition to that preferential motion and in support of the motion offered by the chairman of the committee to insist on our disagreement.

Last spring, when we were asked to approve the initial emergency fuel subsidy allocation, we were told in no uncertain terms that it was a one-shot appropriation only, proposed solely because of the severity of last winter.

In the words of the chairman of the Labor-HEW Appropriations Subcommittee (Mr. FLOOD), "There is no intention here to start a new program that will go on year after year. Not at all. This is a one-shot, one-time appropriation to deal with the effects of a very bad winter that we have just been through."

The chairman of the Budget Committee (Mr. GIAIMO) gave us similar assurances:

> It is temporary in nature. It is not permanent legislation. It is not designed, as I am told, to start us down this road before we have full congressional study, but it is temporary.

What are we to assume was the meaning of those assurances last spring, when we are now faced with a move to continue this program? Were we being sold a bill of goods? Were the sponsors of the program willing to promise anything, simply to achieve its adoption? I must say that things are reaching a sorry state in this body if we can no longer rely in good faith on the promises and assurances made on this floor.

The chairman of the Budget Committee said we should have "A full congressional study" before going in the direction of a permanent program. Well, we have not had 1 day of hearings here in the House on this issue. Time certainly is not a factor, because we have had over 7 months since the spring supplemental cleared Congress. There has been plenty of time to have held hearings and enacted authorizing legislation making this a permanent program, if that was the desire. But it was not done.

We hear statements to the effect that this appropriation is in line with the administration's wishes—that it will tide us over until the administration's proposal can be enacted. Well, the administration did submit a proposal in September, but to this date it has not been introduced in bill form. There are 435 Members in this body, but not even one thinks enough of the idea to agree to sponsor the bill.

This can only lead me to believe that no great sentiment exists for making fuel subsidies a continuing program, and I submit that there is thus no justification for going through the back door and in effect make the program permanent through the appropriations process when there has been an unwillingness to do so through the regular legislative process.

Too many unanswered questions exist for us to rush through a program of the potential magnitude of this one without any House hearings. Let me just go through some of the questions:

First. How did the program we funded last spring operate? What types of people received funds? Were they people whose fuel was cut off or just people with high outstanding bills? Was any step taken to consider the effort they had made to pay their own bills? Were people reimbursed for bills they had already paid? Were any payments made for air-conditioning bills? Was the conservation effort on the part of the recipients in any way taken into consideration?

Second. If the need for assistance was so great, why was some $40 million of the $200 million we allocated left unspent, despite an extension of the deadline? Last spring we were told the demand was so great that if only we would make the funds available there would be no problem in fully disbursing them. Yet the figures tell us that some of the coldest States spent the least. For instance, South Dakota was able to obligate only 15 percent of its allotment. For North Dakota, the figure was 30 percent, Montana—16 percent, Vermont—50 percent, Wyoming—19 percent, Ohio—68 percent, and Indiana—70 percent.

These figures appear to belie the real need factor, and this is reinforced by the solicitation efforts made in many areas.

For instance, in my home town of Peoria, the local community ACTION Agency ran a big quarter page newspaper ad announcing the availability of funds to pay fuel bills and urging people to apply. Here in the District of Columbia, application forms were mailed out to all D.C. addresses. These forms, incidentally, asked the race of the applicant, and I cannot help but wonder how that enters the picture as a criteria for eligibility. The form also suggested payment could be used as a credit toward future fuel costs, which leads one to wonder whether people in D.C. are receiving payments for air-conditioning their homes.

The point is that if such advertising and solicitation efforts are necessary to obtain applicants, the need certainly is not so great that the Federal Government must enter the picture with a special program.

Third. What will the impact be if we announce the availability of funds to pay fuel bills prior to the winter heating season? Will people be less diligent in paying their bills if they know there may be a subsidy? Will they be less inclined to conserve energy if they know fuel costs would not be as great? How many people will be eligible for assistance, all told? Will they all apply, if they receive advance word, and if so, what criteria will be used to pick and choose between the eligibles?

Fourth. According to the Senate report, the Director of the Community Services Administration will be given virtually carte blanche authority to design and operate the program. She is to determine what constitutes an emergency, how the funds are to be allocated among recipients, who is to administer the program, how it is to be administered, and the amount of funds which can be used for administration. We are in effect giving her a blank check and allowing her to take it from there. I think that is an abdication of our responsibility. I thought we had gotten beyond the stage where we simply give the executive branch free reign to do as it pleases.

How is the Director of CSA likely to use her authority? Well, we know from her testimony before the Senate that she favors raising the eligibility lid from 125 percent of poverty to 150 percent. How many more people will that make eligible?

She favors more broadly defining the program "to include other areas not directly related to utility costs." How far afield will she be going in this regard, and what kind of pressure will she be creating to provide even greater funding?

She favors a program of several years duration. Will she be developing the program in such a way that it will be, for practical purposes, impossible for us not to fund it in future years?

It is because we have so many outstanding questions such as these that I believe it imperative we go through the regular legislative hearing and drafting process. It would be a total dereliction of our responsibility for us to enact a program of this magnitude without any hearings and then give a blank check to the executive branch to administer it.

We have in the regular appropriation bill some $65 million which can be used for crisis intervention in cases of real emergencies. Such funds had been used for this purpose before we enacted the $200 million program last spring. This will give us time to more thoroughly consider what we should or should not be doing in this field and the specifics of how to do it. We have a supplemental appropriation bill early next year, and if the proper authorizing legislation has been adopted, we can always make additional funds available at that time.

So I urge that we vote to insist on our disagreement with the Senate amendment on this issue.

Mr. MOFFETT. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Connecticut.

Mr. MOFFETT. Mr. Speaker, I think the gentleman from Illinois (Mr. Michel) is certainly correct in asking these questions. I think it is good that he has framed most of his questions in the way he did.

I would say to the gentleman that we can raise questions, and we do on this floor, about a number of programs which attempt to deal with human misery. I do not want to sound overdramatic, but we know that there is human misery and deprivation out there. There are people who suffer through no fault of their own. We have a list of cutoffs of gas, for example. I do not happen to come from an area where there are large residential gas users, but in States like New York 366,000 have been cut off. In Michigan there have been 600,000 cutoffs. Those are people who did not pay their bills or tried to avoid payment and so forth; but we are also dealing here and asking our colleagues to try to take a look at a program which really attempts to deal with human misery.

The gentleman raises questions about the way the money is spent. Let me assure the gentleman that a number of these questions have been asked, whether before the Subcommittee on Energy and Power or before the Subcommittee on Oversight, or before the Ad Hoc Committee on Energy. Many of us have been asked such questions as was Grace Alvarez, of the Community Services Administration. There were members from Northeast States and very cold States like that from which the gentleman from Illinois (Mr. Michel) comes. They said they would not vote for the program last year because of the way in which it was constructed.

Earlier it was said that they had to rush this thing through last year. We passed it on March 16. It was signed in May.

When we really look at the number of States served and we look beyond that to see how that money was used, they did not do too badly. They did, in fact, get to this question of misery.

Mr. Speaker, I am in total agreement with the gentleman that we should not pass wasteful programs, but this is so improved that it goes to the question of need, which is a response to the gentlewoman's question earlier.

Mr. Speaker, I think the gentleman also raises questions about whether we can give more assurance that there is going to be some administrative accountability. Since the States have to show need, there has to be an energy emergency proved in that State. I am not saying that there is not going to be a possible problem in the sense that the gentleman can come back next year after we approve this program and say, "Look at the problems we have with this program."

Certainly we have had problems with the food stamp program and other programs. That does not mean that we should not attempt to act.

Mr. Speaker, there is nothing in the current energy bill, as the gentleman knows, that will do anything about the immediate crisis this winter. We are seeking to have this program improved and approved in the toughest possible form so that it gets to the question of human misery. I know the gentleman is concerned about that problem. Knowing the gentleman as I do, I cannot believe that he would want these people not to be filling their oil tanks and not to have gas delivered to their homes and being without heat during the winter.

Mr. MICHEL. Mr. Speaker, let me respond by saying that we have in the regular appropriation bill $65 million which can be used for crisis intervention in cases of real emergency, and such funds have been used for the same purpose for which we passed the bill containing the $200 million last year.

It just seems to me that, particularly in view of the gentleman's own interest in new energy legislation, and what the gentleman has been purported to have been saying, that this is not the proper forum in which to really devise this type of program. Whether we should have a permanent, long range one, or some sort of a subsidy for people's fuel bills, I do not know. But to do it in a supplemental money bill, is wrong and we ought not to do it.

This is particularly so since the need has not yet been demonstrated for this winter as was demonstrated for the last winter. To do it beforehand is just like putting the cart before the horse.

Mr. BAUMAN. Mr. Speaker, if the gentleman will yield, I listened to the gentleman from Connecticut make his statement as to the basis of need for this program, and I can only say that the way this program was administered in the State of Maryland. In the city of Baltimore the local government officials, when this program was thrust upon them with very few if any guidelines from Washington, simply set up tables in the 5th Regimental Armory in the city and opened their doors to any people who came in from the street. They paid out millions of dollars to them until the money ran out. There was no attempt made to ascertain whether they needed the money, whether they came up to the armory in a new Cadillac, they simply passed out the money, according to a number of articles in the papers. They reported that it was just a great big ripoff. Some of the people saying, "They didn't ask me to give any proof of need or anything." That was the way this program operated in one of the great cities of our Nation.

Mr. CEDERBERG. Mr. Speaker, if the gentleman will yield, I would like to associate myself with the remarks made by the gentleman from Illinois (Mr. Michel). Where we appropriated millions of dollars, and some of that money was sent out to the Virgin Islands, and we all know it is not very cold down there, or at least so they tell me, and to Hawaii, and to Puerto Rico, all in all it indicates to me that what we ought to do is wait until we see what kind of a winter we are going to have.

Let me add that I am not opposed to helping people out, but I believe what we ought to do is to hold the proper hearings on this problem.

Further, what is wrong with the States themselves putting up a little of their own money?

I have to confess that my Governor called me and indicated to me his concern, and we did get a substantial amount of money. I have constituents who are involved, as does everyone else. But I believe that we should decide whether an emergency exists in the State. The States ought to be able to pick up some of the tab. What is wrong with the State of New York, or the State of Michigan, or the State of Connecticut coming up with some of this money? My State has some financial problems and probably yours does also, but certainly there is nothing wrong with them matching the moneys instead of the Federal Government adding to its $60 billion deficit at the Federal level.

So, why go into a program such as this when we do not even know whether we are going to have any substantial need as we did last winter?

I do not want the record to indicate that I am not concerned about people who have a legitimate need getting some help, but I do not think it is a 100-percent Federal responsibility. I think the gentleman's State and my State have some responsibility too. But I do not see any of them coming forward and saying we will match you on a 50-50 basis, or something like that. That is what we ought to do in this kind of a situation.

We had assurances last year, when we had the bad winter, that this was simply a one-shot deal, and there would be no more.

The winter has not started yet, and it may be a very bad winter, but I do not understand why we should jump into this thing now. We are going to have to have another supplemental bill early next year, and if there should be a bad winter this coming year then I think we may want to go ahead and be of some help.

Mr. MICHEL. We in Illinois are in the same position. Both of our States are capitalized 100 percent on what our allocation has been, but both the gentleman's State and my State will contribute 1½ to 2 times in Federal revenues what we get in return. We have a need in our home States to meet, and we can get a much better dollar return by keeping our dollars home rather than sending it down here first, only to see it siphoned off to areas where there is no justifiable need.

Mr. ADDABBO. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from New York.

Mr. ADDABBO. I thank the gentleman for yielding.

I fully agree. New York State is in the same position as Illinois. We are paying more into the Federal Treasury than we are receiving. But we are not talking about States; we are talking about people. We are talking about a possible emergency program before the emergency.

Mr. MICHEL. Yes, but all of the things that I am reading about, with the gas available today as distinguished from last year and the kind of reserves being built up by the power companies today, there will not be that kind of shortage.

Mr. ADDABBO. If the gentleman will yield further, on this amendment if the $200 million is set aside, we will then set up guidelines. We will not be working after the fact when everyone will be voting, because there is an emergency. We can set the guidelines now. Further, if these moneys are not used, different from last year's moneys which could be used for other programs, if the funds are not used for this program, they revert back to the Treasury. They cannot be used for any other program.

Mr. MICHEL. Yes, I have heard that story before. All we need is the availability of money, and there will be all of these kinds of bureaucrats just anxious, as the gentleman from Maryland (Mr. BAUMAN) pointed out, to see how quickly they can shovel it out and make hay in some local community by that process. I cannot conceive of how the gentleman thinks this is going to conserve on energy or gas supplies, when one knows ahead of time that he is going to be able to get it picked up free from the Federal Government.

Mr. MAGUIRE. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from New Jersey.

Mr. MAGUIRE. I thank the gentleman for yielding.

I might just observe that if we want to minimize the amount of difficulty in a program, surely that is most likely to be accomplished where we do act in advance and set up specific criteria for what constitutes an emergency. It is only when we act in haste, as we had to last year, that the difficulties were maximized. This is the way to minimize them.

I might say the gentleman from Maryland recited the sorry spectacle that apparently occurred in his State as these funds were distributed, but in New Jersey, my State, it was done with considerable care, and New Jersey was cited as one of the best States in the country for the way their program was administered. We only actually gave families an average of a fourth or a fifth of what they requested, because we handled the funds carefully. But whether it was badly or well handled last year, this bill is carefully drawn so that the funds are retained, as the gentleman who sponsored the proposal pointed out, and they are not permitted to be dispersed by the States according to their own whims. That is a tremendous improvement.

I am sure that the gentleman knows full well that people have died in their homes when they have not been able to heat their homes. Fuel is cut off at times when people are not able to defend themselves.

Mr. MICHEL. I remember the story that was ballyhooed of the elderly lady in Pittsburgh who wrapped herself all up in carpets and newspapers and was found dead or dying, and they attributed it to the fact that the power company had cut off her fuel supply. In fact, when the facts were known, she had some $292,000 in the bank, or something like that. But the inference was that because we were so insensitive to the public need here by failing to vote out millions of dollars to subsidize people's fuel bills, this poor lady died. That is nonsense.

Mr. MAGUIRE. Will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from New Jersey.

Mr. MAGUIRE. The gentleman will, I am sure, recognize that that lady, if her account is correct, and I am sure it is, had other kinds of difficulties for which she needed help. But the fact remains many senior citizens and other persons not wealthy have had to face escalated fuel bills that have outrun their capacity to pay them. When those people do not pay their bills, the companies will on occasion cut off the fuel, and sometimes it is done at a moment when it cannot afford to be done if people in that residence are going to continue to live. It is that simple.

I think we desperately need this program for those people, and we cannot do it well after the fact. Either those people are dead, or it is because we cannot administer the program well. So let us do it in advance, and let us do it carefully.

Mr. MICHEL. I do not think we can do anything carefully in attempting to legislate in an appropriation bill, just as we are still wrestling with the problem of abortion on a continuing resolution. We have got to have thorough hearings before an appropriate authorizing committee so Members can ask these probing kinds of questions. We need to have a shot at this through authorizing legislation on the floor of this House, and be able to have something to say to the bureaucrats downtown who are going to administer what we conceive the program to do and the guidelines that ought to be followed.

We have not had that. We have simply had to trust that those downtown would administer this thing properly, and I think in many cases it has been badly administered.

Mr. REGULA. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Ohio.

Mr. REGULA. Mr. Speaker, do I understand the gentleman correctly, that the guidelines as to the disbursement would be left to the bureaucracy?

Mr. MICHEL. Yes; we obviously have not had a chance to develop any standards through authorizing legislation.

Mr. REGULA. As I understood the program last year, the money would go only to those who had not paid their bills, that those who had paid their bills would not receive the benefit.

Mr. MICHEL. Yes, and there is somewhat of a lack of uniformity with respect to that provision.

Mr. REGULA. The gentleman mentioned in his remarks that there would have to be an emergency to trigger these funds. Is there anything that defines what an emergency is?

Mr. MICHEL. No.

Mr. REGULA. So we are just supplying money and leaving it to chance.

Mr. MICHEL. Leaving it to chance.

Mr. COHEN. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Maine.

Mr. COHEN. Mr. Speaker, in response to the question of the gentleman from Ohio, the gentleman from Illinois responded that last year those persons who had paid their bills and still fell in the same economic classification were not entitled to reimbursement. As I understand we specifically provided in a measure that people who had paid their bills would be entitled to some credit since they paid their fuel bills by having had to sacrifice medical or other necessities and we felt it was an unfair practice to withhold from those who had paid their bills benefits that were given to those who had not paid their bills, that we would give them the same benefits since they fell into the same economic categories and they should be treated equally.

Mr. MOFFETT. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Connecticut.

Mr. MOFFETT. Mr. Speaker, that is also my understanding of the case and the report I have included these provisions, that those who had paid their fuel bills although at great economic sacrifice would receive benefits. The gentleman from Illinois has been very kind in yielding time and I appreciate it. The gentleman talked about the $65 million currently there. Is that not true that it is there for weatherization activities and cannot be used for this programs?

Mr. MICHEL. My understanding is that for crisis intervention they can use these funds and have in the past.

Mr. MOFFETT. My understanding is that funds from this program one could use for weatherization, but the reverse is not true.

Mr. MICHEL. That is not true. The funds can be used interchangeably, for weatherization or crisis intervention. It all falls under the same open-ended authorizing authority. Some 20 percent of the weatherization funds were used for crisis intervention, or fuel subsidies in other words, before we appropriated the $200 million last spring.

Mr. MOFFETT. The $65 million that is there is for weatherization activities. One improvement we have made this year is to say, no, if you do not show there is a need you do not get the money, but if you do show the need you must use the money for fuel bills and not for weatherization purposes.

I thank the gentleman for yielding.

Mr. FLORIO. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from New Jersey.

Mr. FLORIO. Mr. Speaker, there was some element in the representation by the gentleman from Ohio that this definition of what constitutes an emergency is left up in the air, but it is my understanding there is a rather substantive difference between this proposal and the proposal of last year which left it to the State's individuals to determine what it was that would trigger off the ability to make these payments.

This proposal provides for the State weather people to define the emergency, and of course they will determine it with hearings and input before the fact as opposed to last year where there were no such hearings and each State was left to its own definition, which may have contributed to the abuses the gentleman from Maryland mentioned before.

Is my understanding correct that the determination will be made by the appropriate State officials after appropriate hearings?

Mr. MICHEL. Will the gentleman tell me from where he is reading?

Mr. FLORIO. It was from a letter.

Mr. MICHEL. In other words, apparently it is the Director of Community Services Administration, following consultation with the Secretary of Energy, who shall determine what constitutes an emergency.

Mr. FLORIO. That is correct.

Mr. MICHEL. We did not have any voice in that, did we, and we will not have. I submit we should put first things first. We ought to make a determination in this House legislatively and through an authorizing committee before blindly appropriating again for what was originally represented to us by very responsible people on this floor, the gentleman from Pennsylvania (Mr. FLOOD) and the gentleman from Connecticut (Mr. GIAIMO), as a temporary and not a permanent program.

I am not about to come back the second year and say, it is permanent, when it was temporary, until I am afforded the hearings that every one of us are entitled to have to justify appropriating another $200 million.

Mrs. FENWICK. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentlewoman from New Jersey.

Mrs. FENWICK. Mr. Speaker, I would like to comment on the earlier remarks of my colleague from New Jersey. I do agree you must have a plan and that the only virtue of this is that it seems to have thought about something ahead of time; but on the other hand, with 7 months, how is it possible that nobody thought of it until we come to the floor? How is it possible there were no hearings? How is it possible there is no administrative limit so that the administrative expenses would not get out of hand?

Mr. MICHEL. Mr. Speaker, let me tell the gentlewoman, as I indicated in my initial remarks, that the administration submitted a proposal in September, but to this date it has not been introduced in bill form. There are 435 Members in this House and I do not know of one on the majority side yet that introduced a bill to implement the administration's program. That is the answer. The point is that it is one of those ill-conceived, ill-thought out programs that has changed signals two or three times and has not yet got in bill form. I do not know why we should appropriate the money before we know what it is going for.

Maybe somebody slipped one in the hopper last night that we do not know about, and if so, again that would be a flimflam operation.

Mr. MAGUIRE. Mr. Speaker will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from New Jersey.

Mr. MAGUIRE. Mr. Speaker, in response to the gentlewoman's comment, and perhaps we could yield also to the sponsor of the amendment; but I simply want to say in response to the gentlewoman that it is the same always when this or any other legislative body does not fully meet its commitments and its responsibilities on a time schedule that we would all like to see; but the fact of the matter remains that we have 1.8 million families in this country who will have their gas shut off unless we act today, if the Community Services Administration estimate is correct.

Mrs. FENWICK. Mr. Speaker, if the gentleman will yield further, I am not worried about the schedule. That does not bother me one bit. What I mind very much is that we are presented on the floor with undigested material. We are left to vote for the 1.8 million people. We are left to either vote against 1.8 million people, or else we do not give a darn about the people's money. That is what worries me. We act as though we do not think $200 million was anything, no limit on the administration for anything. This is the problem we are faced with when this is presented to the floor in this way.

Mr. SARASIN. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from Connecticut.

Mr. SARASIN. Mr. Speaker, with the winter of 1977–78 rapidly approaching we are once again considering a most important measure, the emergency crisis intervention program. This emergency assistance program was established in March by a substantial margin, and it is essential we approve this continued funding in advance of what may prove to be another severe winter.

The cost of heating oil has more than doubled since 1973, and the problem of continually rising utility rates has now reached the point where poor people are faced with paying as much as one-quarter of the frequently inadequate incomes for those essentials which many of us take for granted.

Last year, nearly 1 million families were unable to meet heating bills on time, and some of these bills are still outstanding, with more high fuels bills to come. In fact, in New England, many of last year's bills are still unpaid, and the prospect for poor families and elderly individuals receiving adequate fuel supplies this winter is bleak. The real tragedy for these families and individuals is that they are often the most conservative of energy consumers, yet they find that the small amount of gas and oil they do use is more and more difficult to afford, and the possibility of being cut-off becoming ever more real.

This year, the Senate has included in the supplemental appropriations bill, language which recommends that a $200 million crisis intervention program be funded again. This means we will be able to provide up to $250 per household for heating costs when an "emergency situation", determined by the Director of the Community Services Administration, in consultation with the Secretary of the Department of Energy, develops.

While agreement on the severity of the approaching winter is elusive, the prospect of a milder winter is little comfort to poor and elderly people whose purchasing power is limited, and, where energy needs are concerned, declining.

I would like to strongly urge my colleagues to lend their full support to this vital measure, and hope we will recognize the need to face the problem this year with understanding and foresight.

Mr. ADDABBO. Mr. Speaker, will the gentleman yield?

Mr. MICHEL. I yield to the gentleman from New York.

Mr. ADDABBO. Mr. Speaker, it is true there is no legislation pending. The administration did send up a message; in fact, are we going to let the needy of this Nation suffer because we have not placed a bill in the hopper. Right now facing this Nation is an expected extreme winter; why act after the fact?

Mr. MICHEL. It surely demonstrates that the people on the other side of the aisle have not been overly enthusiastic about the program. We are still looking for someone to introduce a piece of legislation to enact the administration's permanent program. To come up with one haphazardly through the administrative process is wrong. I do not think the gentleman's arguments are valid. They may be good for home consumption in Hartford or New York and a few other places; but I think the House will support the gentleman from Texas and support that position and we will rest our case on that.

GENERAL LEAVE

Mr. MAHON. Mr. Speaker, I ask unanimous consent that all Members may have permission to revise and extend their remarks at this point in the RECORD in connection with the matter now before the House.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. FRENZEL. Mr. Speaker, the "emergency" $200 million for utility bills for some people is an unwarranted expense of the taxpayers' money.

The money in many jurisdictions goes not necessarily to the needy, but rather to the first people to apply for it. It is a welfare supplement that is not uniformly based on need, and therefore it is just another extra expenditure.

We could just as well make payments for medical expenses, housing, food, or any other necessary purpose. This particular need is no stronger, and there is no special emergency, other than the compulsive enthusiasm of the House leadership to give away the taxpayers' money in random fashion.

Mr. HANNAFORD. Mr. Speaker, I rise in opposition to the motion offered by the gentleman from New York. The Senate provision to add $200 million for the Community Services Administration program for emergency fuel cost assistance is one that is unnecessary at this time. If this provision is approved, we will be appropriating funds by speculation—speculation that the Nation will be experiencing an extraordinarily cold winter. As I understand it, experts have stated that we will not be facing conditions similar to those during the winter of 1977.

Any move to institute this program as an ongoing function should be preceded by appropriate oversight hearings, by a thorough evaluation of the program conducted during the winter of 1977, and by a careful analysis of the formula to determine State allocations for such funds. At this time, we have insufficient information on which to go forward with the proposed $200 million appropriation. And, with a Federal budget deficit of $14.7 billion during the first month of fiscal year 1978—a deficit which exceeds the deficit for the same period in the previous year—I believe that it would be wise to reconsider funding for this program.

Mr. Speaker, it is never good policy to legislate hastily. In this instance, we can best act responsibly and with accountability by rejecting the additional $200 million for the Community Services Administration.

Mr. LUKEN. Mr. Speaker, I rise in support of the amendment which would allow for the operation of a special crisis intervention program to assist families with meeting the cost of their ever-escalating fuel bills.

I must point out that this program will not come into operation until an emergency situation warrants such action. Last year the Congress approved such a program retrospectively. This year, by acting before the crisis is upon us, we can be more assured of an efficient, well-planned, distribution of funds should the need arise.

Last year over $13,000,000 of the allocated funds for this program went to the State of Ohio, assisting over 30,000 households and 50,000 individuals. Last year, many Ohio residents were faced with a situation of either paying their fuel bills or their food bills. It should not be an either/or situation.

The high cost of fuel is a problem which is escalating in proportion. I am certainly not in favor of Federal assistance programs for every household item which is a victim of inflation. But I do not believe that it is excessive, or unwise, to offer some assistance, to those people who are forced to live on a fixed income, in payment of their fuel costs. I do not believe it is excessive to offer some relief to those who dread the oncoming winter due to the fact that they will not be able to meet the cost of that winter on an already strained budget.

This is not a handout. It is simply an offer to defray, if the situation warrants such action, the cost of excessive fuel bills for those, who because of limited incomes, find it increasingly difficult to get by in the winter months.

I might also add Mr. Speaker, that this is not a program only for the Northeast and Midwest States. The program which Congress approved last spring provided assistance to all regions of the country.

High cost for fuel is a universal problem facing this country. I do not think we should turn away from it. I urge my colleagues to concur with the Senate on this issue.

Mr. ANDERSON of Illinois. Mr. Speaker, I urge the House to recede from its disagreement with the other body and to concur in the extension of funding for the special crisis intervention program.

As a member of the Ad Hoc Committee on Energy, I have been observing firsthand the difficulties in constructing an effective, rational, and balanced national energy policy. Despite the enormity of that challenge, millions of Americans—the disadvantaged, the elderly, those on fixed incomes—face an even more immediate, more personal, and more perplexing task, the payment of ever-escalating fuel bills. While some here in this House consider the prospects for fashioning a national energy policy discouraging, it is even more discouraging for a family to face the prospect of no heat in their home because of their inability to pay their fuel bill.

Today, we have the opportunity to act with compassion, with foresight, and with discretion in funding the special crisis intervention program to help thousands of Americans keep their homes warm this winter should the need exist.

During this decade, the costs of basic goods and services have jumped alarmingly. Food, shelter, and health costs have risen at a rate greater than the corresponding capacity for millions of Americans to meet those costs. Increasingly, we are being shaken out of our slumber only to realize that the era of low fuel prices to which we were accustomed has ended dramatically. Yet, for most of us, these prices are just an irritant requiring us to perform some sleight of hand with our household budgets. For too many low-income Americans, that budgetary margin is nonexistent, and they are less able to find additional financial resources to meet these basic fuel costs. We must recognize this harsh and cold fact of life and act compassionately to provide them with some margin of safety.

The House also will exhibit some foresight in approving this funding. Too often, Congress is criticized for failing to head off a crisis and for merely reacting in the wake of one. Certainly, last winter's severe weather caught us off guard. By the time we were able to respond to the needs of Americans who were saddled with crushing energy bills, the winter was over. Additionally, when the program finally became operative, many State legislatures had adjourned or recessed and many Governors were hamstrung by the lack of legislative approval to implement the program and distribute the funds. In contrast, the proposal before us will establish the machinery to provide such assistance should the winter prove severe.

Finally, we are moving with discretion. In our hasty consideration of this issue last winter, we appropriated funding with little knowledge of how it would be or should have been best applied. This proposal, on the other hand, prohibits indiscriminate action. The funds would be released only should a genuine weather emergency occur, and then again, that funding would be directed only to those areas where conditions warrant such assistance. Thus, we are not promising carte blanche fuel assistance; rather, we are providing advance funding for a contingency program should the need arise. The taxpayers would approve of such fiscal caution.

Mr. Speaker, I understand some of the criticisms my colleagues have made about this program. I myself have some notable reservations. First, last March, we prohibited the utilization of any of these funds for administrative purposes. This made program implementation difficult for most of the Nation's Governors. To its credit, the Senate proposal would permit the utilization of a portion of these moneys for administrative funding but only on a limited and controlled basis.

Second, several States had little need for the allocation they received because their winters were mild, but still, the formula awarded them with more assistance than they could use. To prevent that situation from occurring again, the proposal before us would channel funds only to those areas where severe weather, economic conditions, and energy availability and cost combine to create a genuine crisis for low-income Americans and the elderly.

Thus, the other body's proposal treats many of the shortcomings in the previous program's operation. Yet, all my concerns have not been eliminated by the improvements made by the Senate.

As you may remember, when we voted on the appropriation for fiscal year 1977 on March 16, the gentleman from Maine (Mr. COHEN) and I made it clear that the Community Services Administration and the governors were to provide assistance to two categories of individuals: Category A, those who could not pay their energy bills; and category B, those who paid their bills only after undertaking significant personal sacrifices to do so.

I have been less than happy with CSA's assurances that this mandate was being carried out. In some cases, State agencies lacked the authority to make certain payment arrangements for category B. Yet, in other cases, especially in one New England State, it appears a conscious decision was made not to fund category B and to deprive thousands of people, particularly the elderly, of Federal assistance they were meant to receive.

I understand fully that CSA had to gear up quickly to oversee the program's administration. Nevertheless, I am chagrined that it failed to monitor fully and in timely fashion Congress mandate to fund both categories.

This leads me to another point. The Senate report shifts the responsibility for arranging the delivery of services from the governors to CSA. Having had experience with the prior program, our governors should be included in program development. I would hope, therefore, that the Director of CSA, should an emergency be declared, will consult with the governors in those States prior to designating the vehicle for service delivery.

Last, Mr. Speaker, although I support this appropriation, I regret that the House again is considering this initiative without the benefit of substantive hearings. I sympathize with my colleagues who raised this as an issue. Yet, I also sympathize with those Americans who potentially may lose their heat this winter. Because this program is contingency-based and because it cannot operate beyond this winter without specific legislative approval, I will endorse it. Yet, in the coming months, the appropriate committees of the Congress necessarily must investigate the alternative strategies for emergency fuel assistance.

In the meantime, I urge approval of this funding. It is but a bandaid solution to the more fundamental problem of energy costs and supplies. Still, Americans should not freeze in the short run while Congress works its legislative alchemy over the long haul.

Mr. FLOOD. Mr. Speaker, I rise in support of the $200 million added by the Senate for a crisis intervention program to assist low-income people who might be in danger of having their fuel cut off in the middle of winter.

This money would only be used on a contingency basis when there is a clear and demonstrated energy emergency. This money will not be given out to every State in the Union whether they need it or not.

The Director of the Community Services Administration, Mrs. Olivarez, in conjunction with the Secretary of Energy Mr. Schlesinger, will decide what constitutes an emergency and allocate the funds accordingly.

So the money would go only to those areas of the country that have a true emergency need. As the Members know, that is a change from last time when the funds were allocated on a formula basis to every State.

If the money is not needed, it will revert to the Treasury and not be spent. It is simply a contingency fund. It is there if it is needed; if it is not needed it would not be spent.

Further, the Senate committee report directs that no funds may be committed after May 1, 1978. So the money will not be available indefinitely.

The Senate report also directs that no payment on behalf of a single household may exceed $250.

This program is no boondoggle. This is to help the poorest of the poor. If they get in a bind with extraordinarily high fuel bills, many have no place to turn besides the Federal Government.

The administration clearly supports this program—no doubt about that. The Acting Director of the Office of Management and Budget wrote a 2-page letter to Senator Magnuson in support of this program. You can be sure that, if the Director of OMB is supporting this, the President also supports it. The Director of OMB is not known to be a wildeyed radical when it comes to spending money.

I will quote one sentence from his letter:

> The Administration strongly supports efforts to assure that needy American households do not suffer severe distress from extraordinary energy costs, and we believe that the proposal under consideration by the Committee can responsibly provide that assurance if that proposal contains certain essential provisions.

The Senate then proceeded to meet the concerns expressed in the Director's letter by limiting the scope of the program in its committee report.

So the administration clearly supports this $200 million, and I am simply agreeing with the administration.

The administration recently submitted proposed legislation to amend the current public assistance law to expand the present emergency assistance program to enable States to take care of hardships created by fuel shutoffs. But until that legislation is enacted, this is the only vehicle available to us to assist these needy people.

I do not think anybody intends to keep doing this year after year. The administration intends to make this part of the public assistance program. That would certainly be my preference.

The funds that we have made available to CSA for home weatherization activities are needed to insulate and patch up the homes of poor people. They should not be diverted to crisis intervention.

The weatherization program is a separate program, and it should remain that way.

I do not believe that Congress should wait for a crisis before we take action. We should exercise some foresight and act now. If the money is not needed, it will not be spent.

This program is to help the poorest of the poor who have no place else to turn.

I urge you to be compassionate and vote for this $200 million to help poor people avert fuel shutoffs.

Mr. PEPPER. Mr. Speaker, I am pleased to rise in support of the motion offered by the distinguished gentleman from New York (Mr. Addabbo), which would have the effect of retaining the $200 million in emergency fuel assistance contained in the Senate version of H.R. 9375.

It is self-evident that I am not a member of the Northeast-Midwest Caucus, Mr. Speaker. When temperatures dip below idyllic levels in Miami, Fla., it is front-page news.

However, I also have the honor of serving as chairman of the Select Committee on Aging, which concerns itself with the welfare of more than 22 million Americans over the age of 65. Hundreds of thousands of elderly persons in all areas of the country—even some in some parts of Florida—shivered through last winter's recordbreaking cold snaps and snow accumulation.

The situation for the coming winter is only slightly less bleak. A recent survey by the Institute of Gerontology at the University of Michigan predicted that one elderly person in every five will be forced to choose this winter between eating and paying utility bills. One out of five.

What is being proposed today is not a solution to that problem, or even to the problem of emergency fuel aid for low-income people. It is a stop-gap measure, designed to help get poor Americans of all ages through the ravages of the next few months. A more suitable permanent program will have to be devised between the Congress and the administration over the next year, but the proposed $200 million emergency appropriation is the only device at hand for us to use.

It is patterned, as most of my colleagues know, after the fiscal year 1977 program, which distributed a similar amount of money to States for energy and fuel assistance activities.

I believe, Mr. Speaker, we should keep the following points in mind as we consider the pending motion:

First. Having the funds already available will permit the Federal Government to respond to urgent needs in a matter of days, rather than in the weeks or months that were required last year.

Second. The money would become available only in an energy emergency. If predictions of a milder winter this year are well founded, much of this money may go unspent.

Third. The Carter administration, through the Office of Managment and Budget, supports the proposal.

Fourth. National aging organizations, including the National Council of Senior Citizens and the Natonal Council on the Aging have endorsed the proposal.

Our committee's hearings this year into Federal disaster assistance efforts spotlighted a number of gaps as those programs relate to the elderly. One of the most flagrant shortcomings related to the delay in providing assistance. Let us act prudently today and add this potential weapon to our arsenal against winter weather disasters, rather than waiting to respond in a crisis situation.

I believe the Addabbo motion to accept the Senate's emergency fuel provision deserves your vote, and I urge its approval.

Mrs. COLLINS of Illinois. Mr. Speaker, I rise in support of the motion to recede and concur to Senate amendment No. 29 which will provide $200 million in crisis intervention funds to help poor families pay the extraordinarily high costs of home heating should the coming winter result in an "emergency" situation such as occurred last year.

Last spring, my colleagues will recall, the Congress passed a similar measure, which was administered retroactively by the Community Services Administration on behalf of approximately 1.5 million elderly, handicapped, unemployed and otherwise deprived individuals. This year, the Congress has had the foresight to take the initiative and to consider appropriating these funds so as to make them available as they are needed rather than after the fact.

My colleague, Congressman ADDABBO, who is offering this motion, reminds us of the elderly couple who froze to death in Syracuse last winter. Must we wait for another such tragedy to occur before we respond to what is cleary our responsibility?

I urge my colleagues to join in support of the special crisis intervention program as part of the conference report on H.R. 9375.

Mr. MAHON. Mr. Speaker, I yield 2 minutes to the gentleman from New Jersey (Mr. MAGUIRE).

Mr. MAGUIRE. Mr. Speaker, I would like to address myself to the issue which is before us now, the crisis intervention program and the inability of so many Americans to meet their fuel bills today.

We have been laboring many months in order to produce an energy program which encourages production and conservation while at the same time is equitable to all segments of society. We have been wrestling with these problems for a long time, but the final form of this program has yet to be resolved. Whatever the outcome though, one thing is certain—the price for fuels will rise, and continue to rise, for quite some time.

Since 1975 the average retail price for natural gas used for residential heating has risen over 62 percent. In the same time period home heating oil has risen an average of 24 percent. This is not a regional phenomenon, it is nationwide, and consumers throughout the country are feeling its impact.

But I am especially worried about that group of people who now most bear this hardship. These are the people who have to sacrifice food or clothing in order to purchase heating oil, and many times must go without, because they are not receiving Federal assistance nor are they able to afford skyrocketing fuel costs.

It is for the working poor, the marginally poor, those on fixed incomes that this program is targeted. These are the same people who would be laid off when industrial gas supplies are curtailed.

This program would guarantee that these families need not have to endure a bitter cold winter without fuel assistance. The Community Services Administration estimates that 1.8 million families will have their gas shut off if help is not provided immediately.

Mr. Speaker, we have here an opportunity to prevent a situation which unfairly places the burden of energy production and conservation on families who at the most consume only a subsistance amount of fuel. I, therefore, strongly urge my colleagues to support a program which would effectively correct this inequity.

This proposal has been revised from last year to assure the effective use of funds on a contingency basis only where there is a clear and demonstrated energy emergency. Payments will now be made on a prospective basis and not after the height of the crisis has passed. Oil companies will be assured of prompt payments while many families will not have to endure dangerous fuel cutoffs.

This program is a temporary measure and every effort should be made to assure that by next winter we are prepared to assist the poor and their heating problems with an equitable and permanent program. Until then, this is their only protection from the hardships of a cold winter.

Mr. DODD. Mr. Speaker, will the gentleman yield?

Mr. MAGUIRE. I yield to the gentleman from Connecticut.

Mr. DODD. Mr. Speaker, I rise in support of the motion to include an appropriation for a "Special Crisis Intervention Program" in the Supplemental Appropriations Act, H.R. 9375. The program would provide $200 million to aid lower income families and individuals in paying their costly fuel bills this winter.

Once again we are facing the prospect of a severe winter during a time when utility, gas, and fuel oil prices continue to escalate. Last year the extreme temperatures and prohibitive price of home heating oil proved to be too much of a burden for the unemployed, working poor, and the elderly who found that they lacked the necessary funds to heat their homes properly.

This spring Congress appropriated $200 million for a "Special Crisis Intervention Program" to retroactively assist nearly 1 million households that were unable to meet their heating bills on time. Over 2½ million individuals all across the country were allotted a maximum of $250 to pay their outstanding accounts. Although the program was passed as a temporary measure to object to its reinstatement on the grounds that it was supposed to be for one-time-only, would be to deny the energy crisis that we are now facing.

There is a crucial need to continue the program for this winter. Temperatures across the country are predicted by meteriologists from both the public and private sectors to be 15 percent below normal this year. Two weeks ago, temperatures in the North Central area of the country were 25 degrees below normal. Fuel prices have been increasing steadily, and in the past 30 months the price of home heating oil has risen 22.2 percent while the price of natural gas increased 62.1 percent according to estimates by the Community Services Administration. In New England alone, the price of home heating oil will jump from 47 cents to over 50 cents per gallon, this year.

Much emphasis has been placed on the fact that the Northeastern States have been lobbying very strongly for passage of funding for this program, but the crisis facing the poorest members of our society extends beyond the boundaries of the Northeast. It is estimated by the Community Services Administration that almost 2 million households nationwide are presently in danger of having their gas supplies terminated, and only 17 percent of those people now anticipating shutoffs are located in the Northeastern portion of the United States. All 435 Members of Congress received a letter from my office that was cosigned by 18 of my fellow Congressmen, most of whom are from Southern and Western States, in support of the fuel assistance program.

Much of the criticism of the Community Services Administration's handling of the program this spring was directed toward the allocation of money on a State-by-State basis. The result of this policy was that some money went to "warm-weather" States where much of the funds were not spent. This year money will not be allocated to every State but is to be used on a contingency basis only in cases of emergency. The Director of the Community Services Administration would be given the discretion to determine, along with the Secretary of the Department of Energy, what constitutes such an "emergency" by considering factors like degree days, fuel costs, and unemployment. Any unobligated funds will be returned to the Treasury.

Most importantly, this time Congress will be acting before the onset of winter to insure that special crisis intervention program funds will be available during the coldest months of the year. By acting now, Congress can prevent the needless suffering that would be caused by a lack of financial assistance available to the poor and near-poor in our country during a time when temperatures are falling and fuel prices are rising at an equally rapid rate.

Decisive action by Congress on the special crisis intervention program could prevent the tragic consequences of leaving millions of poor and aged people without the means to pay for essential heating fuel. Each Member's vote will determine not only the fate of funding for this program but also the fate of people across the country who have found their diminishing purchasing power cannot possibly keep pace with the soaring prices of fuel.

Mr. MAGUIRE. Mr. Speaker, if I have any remaining time, I ask unanimous consent to yield the remainder of my time to the majority whip, the gentleman from Indiana (Mr. BRADEMAS).

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New Jersey?

Mr. MAHON. Mr. Speaker, what time is remaining?

The SPEAKER pro tempore. Ten seconds.

There was no objection.

Mr. MAHON. Mr. Speaker, I yield 3 minutes and 10 seconds to the gentleman from Indiana (Mr. BRADEMAS).

Mr. BRADEMAS. Mr. Speaker, I take this time to put some questions to one of the sponsors of the amendment, the gentleman from Connecticut (Mr. MOFFETT).

I would ask him, in view of the fact that there seems to be a good deal of concern on the part of many Members in this Chamber that the $200 million for the emergency fuel assistance program is really a measure to help the working poor, elderly on fixed incomes, and the unemployed, of certain regions of this country, to pay their home heating bills, if he has any information to refute the cries of regionalism?

Mr. MOFFETT. If the gentleman will yield, we have seen from the figures here that States such as Virginia have received over $3 million, and has used every penny. Alabama has received almost $2.5 million. Florida has recieved $1.5 million, and they have used this money. That does not mean that there has not been abuses, but the kinds of abuses that have been alleged here, I think, are relatively minor when we compare it to the number of people helped around the country. It just is one part.

Mr. BRADEMAS. Further, last year sponsors of this bill said that it would be a one-time program. Now, the gentleman is back for money again. Can he document the need again this year for the money, and what is the picture for the future?

Mr. MOFFETT. The gentleman from Illinois (Mr. MICHEL) raised this question several times about the one-time period, and how we thought it would be so. I do not think any of us realize—this is not just one Member's opinion, but I think many Members who have been out and around can vouch for the fact that indeed there is a great deal of misery genuinely on the part of people who fall in this income category.

The fact of the matter is that the President is developing a permanent program as part of another HEW program. They simply have not gotten there yet, and we have to do this immediately.

Mr. BRADEMAS. Further, if the $200 million were not appropriated for the emergency fuel assistance program, what implications would there be for small, independent fuel retailers across the country?

Mr. MOFFETT. From everything we have been able to gather from the Ad Hoc Committee on Energy and the conference committee, I conclude that on the basis of the future small fuel oil dealers and gas dealers will have tremendous problems.

They would be so great that they can, in so many cases, be an occasional problem. They must make their money to continue their business.

Mr. BRADEMAS. Are there any provisions, I would say to the gentleman, in the National Energy Act to help people who are in desperate need of help?

Mr. MOFFETT. There are no provisions to help people this winter at all, nor are there any provisions of this kind for the future.

Mr. BRADEMAS. Finally, I would say to the gentleman, can he tell us the view of the distinguished Speaker of the House on this particular amendment?

Mr. MOFFETT. I expect to be yielded some time by the distinguished chairman of the Committee on Appropriations. At that time I will read a letter, a portion of a letter, which shows that the Speaker is solidly behind this program, not, I might add, simply because he is from New England, but because he has also seen the national need.

Mr. BRADEMAS. I appreciate the comments of the gentleman from Connecticut.

Mr. Speaker, I know that in fiscal year 1977 the special crisis intervention program provided very valuable assistance to constituents in my own congressional district.

Although the special crisis intervention program last winter met the needs of many thousands of low income and elderly people to supplement their extraordinarily high fuel bills, that program was seen to have been too broadly based.

I am gratified that the program now proposed for this winter would be targeted to fuel assistance payments and then only in areas declared to be emergency areas by the Community Services Administration in consultation with the Department of Energy.

The program would thus be in place in time to meet emergency needs for additional fuel payments during any emergency that arises this winter rather than after the fact as was the case with the program last year.

Mr. Speaker, I am also gratified that the administration, through James T. McIntyre, Jr., Acting Director of the Office of Management and Budget, has given its full and complete support to this amendment offered by Mr. ADDABBO, and I ask unanimous consent to insert at this point in the RECORD the text of a letter from Mr. McIntyre to the Honorable WARREN G. MAGNUSON, the distinguished chairman of the Subcommittee on Labor and Health, Education, and Welfare of the Senate Committee on Appropriations.

EXECUTIVE OFFICE OF THE PRESIDENT, OFFICE OF MANAGEMENT AND BUDGET,
Washington, D.C., October 27, 1977.

Hon. WARREN G. MAGNUSON,
Chairman, Subcommittee on Labor and Health, Education, and Welfare, Senate Committee on Appropriations, Dirksen Building, Washington, D.C.

DEAR SENATOR MAGNUSON: I am writing to you to express my concern regarding the ability of the Federal Government to act quickly and effectively in response to the emergency energy needs that arise this coming winter.

We understand that the Senate Committee on Appropriations has under consideration the addition of $200 million to the Supplemental Appropriations bill for fiscal year 1978 to aid those seriously affected by potential energy emergencies this winter. The Administration strongly supports efforts to assure that needy American households do not suffer severe distress from extraordinary energy costs, and we believe that the proposal under consideration by the Committee can responsibly provide that assurance if that proposal contains certain essential provisions.

Last winter's severe weather pointed up the shortcomings of the present Emergency Assistance program of the Department of Health, Education, and Welfare and caused the Congress to add special funding for the Community Services Administration to aid those seriously affected. Unfortunately, the special assistance tended not to be targeted narrowly enough on those areas most in need since it was distributed as a formula grant, was diverted into activities that were not of an immediate crisis character (such as weatherization), and often was available to pay fuel bills well after the height of the emergency had passed.

The Administration's recent Emergency Assistance proposal, transmitted to the Congress in September, would correct the present law's deficiencies.

Because the Administration's bill has not yet progressed in the Congress, and other legislation is not likely to be enacted before possible energy emergencies may occur, we believe an interim contingency program is advisable.

Under the CSA authority previously used, contingency funding under the conditions noted below would provide a stop-gap basis for aiding people severely affected financially by an energy emergency:

No funds should be used for weatherization activities—these services can be provided by existing programs and funds.

The use of these funds should be contingent on the actual declaration of emergency by some authority, i.e., the Director of CSA after consultation with the Secretary of Energy. Funds should not simply be distributed to States and localities for whatever use they see fit. The money should instead be carefully targeted on those seriously affected by an energy emergency if one occurs.

Funds should only be expended as necessary, and should revert to the Treasury if not used.

The funds provided should be available for use in the Administration's proposed Emergency Assistance program when and if it is enacted.

If the amount to be made available for assistance to households to meet energy emergencies is obligated according to the above-conditions, I believe it will effectively meet any energy emergencies which may occur this winter.

Sincerely,

JAMES T. MCINTYRE, Jr.,
Acting Director.

Mr. Speaker, I should also point out that the second budget resolution for fiscal year 1978 included room for this program under the energy function 300.

Mr. Speaker, the forecasts are for an extremely difficult winter in the Midwest region of the country and I anticipate and concur in the judgment of the administration that this program will be necessary.

I hope the amendment will be strongly supported on both sides of the aisle.

Mr. MAHON. Mr. Speaker, I yield 2 minutes to the gentleman from Connecticut (Mr. MOFFETT).

Mr. MOFFETT. Mr. Speaker, I think that we have come a long way in trying to answer some of the questions which were legitimately posed by some people on the other side. Let us just hope that we do not exaggerate on either side. I think the example of the lady in Pittsburgh can be found in any Federal program. Hopefully, there is not a great number. Let us not allege that it is typical of this program. It certainly is not typical in Connecticut, New York, Pennsylvania, or any other State. That type of example should not be used to categorize this program. By the same token, we should not exaggerate and tell people who are on the borderline or who are against this program that there are going to be dying people by the tens of thousands if we do not enact it. The fact of the matter is that there might be some people who will die, some people who will be ill, and there will be some people making that choice, as they do in poverty, between food and energy. But in an era of less government, less Federal interference, do we still have the ability to respond to an emergency? This program is based on need. It is not a revenue sharing program, as it was last year. I think we have answered the questions of the gentlewoman concerning the administrative costs. The reason we had to be careful on administrative costs last year was because there was an allotment to the States. This year they have to show a need in advance. As my colleague said, the fuel banks in States are working marvelously. It is one of the best Federal investments of Federal dollars.

Mrs. FENWICK. Mr. Speaker, will the gentleman yield?

Mr. MOFFETT. I yield to the gentlewoman from New Jersey.

Mrs. FENWICK. I thank the gentleman for yielding.

Mr. Speaker, could we establish this as part of the legislative record, that the Community Services Administration is charged with the responsibility of seeing to it that the administrative costs, or any grants in any State, do not exceed a very, very small proportion of that money which will be allotted to them, 5 percent, 10 percent? Would the gentleman agree that some such prudent guide could be given?

The SPEAKER pro tempore. The time of the gentleman from Connecticut (Mr. MOFFETT) has expired.

Mr. MAHON. Mr. Speaker, I yield 5 minutes to the gentleman from Connecticut (Mr. GIAIMO).

Mr. GIAIMO. Mr. Speaker, I have given a great deal of thought to this program. I supported it last year because of the unusual winter we had. I supported a provision for it in the Budget Committee. But here, where I must determine for myself as one Member of Congress, I have to tell the Members that I cannot support this program. Never in all my years in Congress have I received so much persuasion and pressure from various groups back home: newspaper editorialists in favor of the program, citizen groups in favor of the program, religious groups in favor of the program, and people in our State government in favor of the program.

So, therefore, with all that kind of pressure and persuasive power, I really searched my soul and my conscience to try to find the right thing to do.

The right thing to do, in my opinion, is to not start a new Federal program when we have all we can do to fund existing programs.

I know there is suffering. I have a record during my 19 years in the Congress of concerning myself with the needs of poor people and of people with hardships. I know there is suffering, but I also know that the Federal Government cannot do everything at the same time that it is planning to cut taxes.

We cannot extend benefits and cut taxes constantly and ever expect to get out of this morass in which we find ourselves economically as a Nation. There are some things that the Federal Government must do, and there are things that the State and local governments must do. And, yes, there are things that non-Government groups must do. I suspect and feel that the provision of heat in the wintertime is something that could be done by those groups, and that our Federal moneys could be better spent in other areas than providing heat.

I would much prefer to see this money spent to help people get medicines. I would much prefer to see this money spent to help people get dentures and eyeglasses and many of the health services they need and do not get.

Be that as it may, what have we done here? Last year we passed an emergency bill to provide fuel assistance because we had a disaster in the land. That was a disaster resulting from the coldest winter we have had in, I believe, 50 years.

We have passed all kinds of bills providing programs to deal with disasters and emergencies. We have dealt with other kinds of disasters—floods, drought, hurricanes, and, yes, cold winters like the one we had last year. We have responded as a humane Federal Government, as we do in the case of all emergencies and disasters. We responded, and we enacted an emergency program.

But now, before the winter has even begun, we are being asked to take this emergency program and convert it into an annual entitlement program.

There may be another emergency this winter. We do not know yet what the weather will be. But I submit that if we have another winter like the one we had last year, we can then consider this on its merits as an emergency program. Let us not change this program from an emergency program into a regular entitlement program.

It also happens that we are raising social security taxes, and we are having a struggle doing that. If we ever get an energy program, there are going to be massive tax increases in that bill, particularly in the area of fuel and energy. It may well be that we are going to have to develop and devise a system under the new energy legislation of helping the poor people in some fashion to pay their fuel bills, particularly in view of the fact that we are going to have higher energy costs. There is legislation in the works sent up by the President which addresses itself to that problem.

We should address ourselves to this entire problem of energy costs and how they relate to poor people. We can do that if we do it in the proper way. Let us study the basic problem of increased energy costs in a deliberative fashion, but let us not be stampeded into doing it here today in this appropriation bill on the basis that we are faced with another emergency when we do not know yet whether there will be one. We cannot put aside funds for emergencies before they begin, much as we would like to do that.

Lastly, Mr. Speaker, we are running a deficit close to $60 billion. We are going to be reducing taxes. Mark my words, we will be in here within a couple of months with a massive tax reduction program.

We have all we can do to fund existing programs, as we well know, if we just look at the social security program. And yet here we are setting out to start a new program.

Where will it end? What will be next? This provides $200 million for fuel. Will we have $200 million for air-conditioning next summer? Will we have the necessary moneys for other needy purposes?

These are really needy purposes, but I submit that the States can carry part of this burden. This is a burden that I would like to see left with the States and with the local governments and with private agencies.

We in the Federal Government can well use this $200 million for those purposes which are truly Federal in nature and which will benefit our people, those whom we are trying to benefit, in a much better way than will this program.

Mr. MOFFETT. Mr. Speaker, will the gentleman yield?

Mr. GIAIMO. I yield to the gentleman from Connecticut.

Mr. MOFFETT. First of all, I would say to the gentleman that it is truly Federal in nature when we raise the price of energy, as we have done.

Mr. GIAIMO. I think I have stressed that point already.

Mr. MOFFETT. We need not debate why we have those high energy costs or why there have been termination of services and what our policy will be on such things.

The point is, there was an emergency last year; and yes, there is an emergency this year whether the winter is mild or severe. We have an emergency, and the gentleman knows that.

Mr. GIAIMO. I do not concede that there will be an emergency this winter. There may well be one, but there is not one now.

Mr. MAHON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, we cannot go on forever expanding old programs and creating new programs and cutting taxes if we want to survive fiscally. It is bad for the poor and the rich, everybody.

Of course, we all know that if one starts a temporary program, there are those who will undertake to perpetuate it forever.

Last year some of the Members said, "Pass this bill providing fuel funds. This is a temporary matter, and it will not be continued."

However, here we are being asked to provide $200 million this year. Next year it may be $300 million in order to help people pay fuel bills.

Mr. Speaker, I think it is most regrettable that at a time when we are providing vast sums to take care of the poor wherever we can, we should be called upon to provide this $200 million.

There is already $65 million left over in this program from the regular Labor/HEW appropriation bill, which is available; and there are other funds available.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Washington.

Mr. McCORMACK. Mr. Speaker, I thank the gentleman for yielding.

Do I understand that there is money available today, left over from last year's program, and that there is money available in the fiscal 1978 appropriations for emergency use if an emergency should develop between now and, let us say, the end of next January?

Mr. MAHON. This is the information that I have. There is about a $100 million-plus carryover from this year and last year. There is about $40 million left over from the $20 million appropriated in the spring supplemental and about $65 million in the current HEW bill which has been held up.

The point is that if an emergency develops, there are funds to partially take care of the situation.

Of course, everybody has problems. Grocery costs are high. Rents are high. Fuel bills are high. The Federal Government, with its dire deficits and tremendous level of public debt, is not able to go on spending forever and ever without some restraint.

It seems to me that it would be irresponsible for us to vote for this additional $200 million at this time and under these circumstances.

Mr. McCORMACK. Mr. Speaker, if the gentleman will yield further, I want to thank the chairman for making this clear.

I am certain all Members want to be certain that no person actually in dire circumstances as a result of cold weather or inability to pay for fuel is harmed. However, we will be back in session in January, and we will have an opportunity to enact emergency legislation then, if it is needed. In the meantime, existing funds will cover any contingency. I support the chairman in his opposition to the preferential motion.

Mr. MAHON. Mr. Speaker, I appreciate the gentleman's statement.

Another thing we can say is that if people's fuel bills are higher and they are in difficulty, then there is a possibility of their food stamps being increased thereby making additional funds available for fuel bills. We are doing all we can to prevent undue hardship.

I hope that what the gentleman from Connecticut (Mr. GIAIMO), the chairman of the Committee on the Budget, has said in connection with this matter and what the gentleman from Illinois (Mr. MICHEL) has said in connection with this program will be taken into account. This is a very poorly set up program. It has not been finalized. It is most ill-advised to provide this $200 million.

Mr. Speaker, I trust that the motion offered by the gentleman from New York (Mr. ADDABBO) will be voted down, and presently I shall move the previous question on it.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Speaker, I appreciate my chairman's yielding.

Our understanding, then, can be very clear that in voting down this motion, we are not providing that this emergency fund that was set up last year will be totally unfunded, are we? There are, in fact, as we learned in the Committee on the Budget, unobligated funds that have not been spent from this fund; is that not correct?

Mr. MAHON. The gentleman is correct.

Mr. ROUSSELOT. Therefore, the argument that we are somehow putting the poor and the hungry out in the cold is just not true.

Mr. ADDABBO. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield very briefly to the author of the preferential motion, the gentleman from New York (Mr. ADDABBO).

Mr. ADDABBO. Mr. Speaker, I thank the chairman, the gentleman from Texas (Mr. MAHON) for yielding to me. I would ask the gentleman, is it not true that those funds cannot be used for this purpose? None of the States will release those funds? That is the reason we are asking for the program before the fact, so that the funds can be used for this purpose, if not, they will revert back to the Treasury. They must be used for an emergency fuel program only. We cannot retrieve any part of last year's emergency funds of the $200 million. That is the reason we are requesting these funds. These funds will have different guidelines. If they are not used for the purposes delineated then they will revert back to the Treasury and they must be committed no later than May 1, 1978.

Mr. MAHON. Mr. Speaker, if it is true that funds are available then we should not appropriate further funds especially since the program has not been thought out. Further there is no budget request from the President for this $200 million.

I would urge the Members of the House to vote down the preferential motion offered by the gentleman from New York (Mr. ADDABBO) so that we can save this $200 million, and vote with the gentleman from Connecticut (Mr. GIAIMO).

Mr. Speaker, I move the previous question on the preferential motion.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the preferential motion offered by the gentleman from New York (Mr. ADDABBO).

The question was taken; and the Speaker pro tempore announced that the noes appeared to have it.

Mr. ADDABBO. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 182, nays 181, not voting 72, as follows:

The Clerk announced the following pairs:

On this vote:

Mr. Gammage for, with Mr. Kelly against.

Ms. Chisholm for, with Mr. McCloskey against.

Mr. Ford of Michigan for, with Mr. Sebelius against.

Mr. Young of Alaska for, with Mr. Symms against.

Mr. Waxman for, with Mr. Marriott against.

Mr. Koch for, with Mr. Goldwater against.

Mr. Ford of Tennessee for, with Mr. Crane against.

Ms. Mikulski for, with Mr. Hall against.

Until further notice:

Mr. Badillo with Mr. Dent.

Mr. Clay with Mr. Railsback.

Mr. Yates with Mr. Broyhill.

Mr. Beilenson with Mr. Forsythe.

Mr. Downey with Mr. Madigan.

Mr. Conyers with Mr. Cunningham.

Mr. Tucker with Mr. Mattox.

Mr. Phillip Burton with Mr. Hillis.

Mr. Milford with Mr. Quayle.

Mr. Rosenthal with Mr. Ruppe.

Mr. Moss with Mr. Whalen.

Mr. Hawkins with Mr. Quie.

Mr. John Burton with Mr. Erlenborn.

Mr. Ertel with Mr. Stockman.

Mr. Cornwell with Mr. Mathis.

Mr. Harkin with Mr. Lent.

Mr. Danielson with Mr. Quillen.

Mr. Wright with Mr. Steers.

Mr. Evans of Georgia with Mr. Wirth.

Mr. Fithian with Mr. Murphy of New York.

Mr. Howard with Mr. Whitehurst.

Mr. Krueger with Mr. Patterson of California.

Mr. Lundine with Mr. Pritchard.

Mr. Charles H. Wilson of California with Mr. Bob Wilson.

Mr. Weaver with Mr. Meeds.

Mr. Russo with Mr. Sawyer.

Mr. Roncalio with Mr. Blanchard.

Mrs. COLLINS of Illinois, Messrs. WALKER and ABDNOR changed their vóte from "nay" to "yea."

Messrs. ULLMAN, FINDLEY, KREBS, BROWN of Michigan, FOLEY, DICKS, and ABDNOR changed their vote from "yea" to "nay."

So the preferential motion was agreed to.

The result of the vote was announced as above recorded.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 31: Page 14, line 17, strike out "Project; and of which not to exceed $17,000,000 is" and insert "Project.".

Not to exceed $17,000,000 of the funds appropriated for "Operating expenses" in the Public Works for Water and Power Development and Energy Research Appropriation Acts for fiscal year 1976 (Public Law 94–180) and 1977 (Public Law 94–355).

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 31 and concur therein.

Mr. BURGENER. Mr. Speaker, will the gentleman yield for a question on amendment 31?

Mr. MAHON. I yield for the purposes of debate only.

Mr. BURGENER. Mr. Speaker, if the chairman would be kind enough to yield to the gentleman from Alabama (Mr. BEVILL), I would like to ask him a question, if I may.

Mr. BEVILL. Mr. Speaker, will the chairman yield?

Mr. MAHON. Yes, I yield to the gentleman from Alabama (Mr. BEVILL).

Mr. BEVILL. I thank the chairman for yielding.

Mr. BURGENER. Mr. Speaker, this matter of the $17 million for the move for the new Department of Energy was considered in our subcommittee. The House worked its will. We provided new money. It is my understanding the Senate bill included language to reprogram existing funds for the move. The conferees agreed with the Senate position. So my question to the chairman is: From what source will the money come, and will it jeopardize any program we acted on earlier?

Mr. BEVILL. There is $50 million left from the 1977 appropriation that was not used by ERDA. This money would have been used and was appropriated for the purpose of paying the TVA for its power bill to Oak Ridge, Tenn., at the uranium enrichment plant located there. But due to the very cold winter, TVA could not furnish this power to Oak Ridge and the money was never spent. The money was appropriated to remain available until expended. The $50 million is still there and available for reprograming.

Mr. BURGENER. I thank the gentleman for that explanation.

Mr. JOHN T. MYERS. Mr. Speaker, will the gentleman yield?

Mr. BEVILL. Mr. Speaker, the gentleman from Texas (Mr. MAHON) has the floor.

Mr. MAHON. Mr. Speaker, I yield such time as he may require to the gentleman from Alabama (Mr. BEVILL).

Mr. JOHN T. MYERS. Mr. Speaker, will the gentleman yield?

Mr BEVILL. I yield to the gentleman from Indiana.

Mr. JOHN T. MYERS. Mr. Speaker, I am confused, because this money was appropriated to ERDA originally to purchase power from TVA, and TVA was unable to supply the power to ERDA.

Did not ERDA have to buy the power from someone else, then, in order to enrich the fuel?

Mr. BEVILL. The power was not available. This was because of the unusual weather last winter. The power was not available. Oak Ridge had to do without for this particular operation.

Mr. JOHN T. MYERS. Then ERDA did not enrich as much fuel last year as they had anticipated they could?

Mr. BEVILL. This is correct, because they did not have the power.

Mr. JOHN T. MYERS. Mr. Speaker, I have one more question.

Then this limitation now limits it to just $17 million. Can they spend more than $17 million from those unallocated funds or unspent funds for this move?

Mr. BEVILL. In order to spend the balance of $33 million, as the gentleman knows, they would have to come back before the four committees in Congress, and it would take the agreement of the four committees in order for them to do so.

Mr. JOHN T. MYERS. In other words, this limitation is $17 million, and anything that might be required from DOE above that, they would have to come back and reprogram?

Mr. BEVILL. That is correct.

Mr. JOHN T. MYERS. This was the original program that DOE wanted. They wanted to reprogram lands for the move?

Mr. BEVILL. This is correct. And if they want to spend more than $17 million they would have to come back to the Senate Appropriations Committee, the House Appropriations Committee, and then the two authorization committees in order to reprogram it.

Mr. JOHN T. MYERS. I thank the gentleman.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Texas (Mr. MAHON).

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 32: Page 15, after line 7, insert:

ALASKA HYDROELECTRIC POWER DEVELOPMENT FUND

For the purpose of carrying out the provisions of section 203 of the Water Resources Development Act of 1976 (Public Law 94–587), $5,450,000, to remain available until expended: *Provided*, That no part of this appropriation or any other amount in this fund shall be available to guarantee any obligations in excess of the amount appropriated herein.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 32 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 35: Page 16, after line 6 insert:

UPPER COLORADO RIVER STORAGE PROJECT
(TRANSFER OF FUNDS)

For an additional amount for "Upper Colorado River Storage Project", for construction of recreational and fish and wildlife facilities authorized by section 8 of the Act of April 11, 1956, as amended, $875,000, to be derived by transfer from "Construction and Rehabilitation".

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 35 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 37: Page 18, after line 1, insert:

OFFICE OF THE SPECIAL REPRESENTATIVE FOR TRADE NEGOTIATIONS

SALARIES AND EXPENSES

Not to exceed $20,250 of the funds appropriated under this heading in the Departments of State, Justice, and Commerce, the Judiciary, and Related Agencies Appropriation Act, 1978, shall be available for official reception and representation expenses.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 37 and concur therein with an amendment, as follows: In lieu of the sum named in said amendment, insert "$15,000"

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 43: Page 20, after line 10, insert: Appropriations provided under this heading in the Department of Defense Appropriation Act, 1977, are rescinded in the amount of $462,000,000.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 43 and concur therein.

The SPEAKER pro tempore. The gentleman from Texas (Mr. MAHON) and the gentleman from Michigan (Mr. CEDERBERG) will each be recognized for 30 minutes.

The Chair recognizes the gentleman from Texas (Mr. MAHON).

Mr. MAHON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I call the attention of the House to the fact that this is the issue of a rescission of the B–1 bomber. I understand that several Members would like to have a few minutes to speak on the issue.

Mr. BURKE of Massachusetts. Mr. Speaker, will the gentleman yield for a question?

Mr. MAHON. I yield to the gentleman from Massachusetts.

Mr. BURKE of Massachusetts. Mr. Speaker, on page 15 of the conference report, in the lower part of the page there is a heading, "Other Procurement, Navy."

The conferees agreed with the Senate position that AN/SSQ–7 sonobuoys could be procured by the Navy through its "Other Procurement, Navy" program, if the initial testing results and the potential savings justify such a purchase.

The conferees also stated, however, that payment for such a purchase should be made from "Research and Development" appropriations, if such funds are available.

Is it the intent of the conferees that the Navy have the option of using either appropriation category? In other words, can the Navy decide to use available "Other Procurement, Navy" funds if there are no "Research and Development" funds available?

Mr. MAHON. Mr. Speaker, with regard to the question which has been raised by my friend, the gentleman from Massachusetts (Mr. BURKE), as to the sonobuoy program, the conference report language would permit the program to proceed if the Navy feels that the testing is sufficiently complete that procurement should proceed. The program can be funded under the usual programing procedure. The conference report states that only research and development funds should be used prior to approval for service use.

Mr. BURKE of Massachusetts. Mr. Speaker, I thank the chairman of the committee.

Mr. MAHON. Mr. Speaker, I yield 4 minutes to the gentleman from Florida (Mr. CHAPPELL).

Mr. CHAPPELL. Mr. Speaker, I thank the committee chairman for yielding this time to me.

Mr. Speaker, most of us know what the issue is here; but I would like to point out two or three matters in clarification.

First of all, when this supplemental appropriation bill passed the House, it was totally silent with reference to moneys for the B–1. This bill went to the Senate, and the Senate put a nongermane amendment on the bill. That nongermane amendment is the subject of the controversy now before us.

The amendment does not affect one dollar in this particular bill, but it goes back to that which we did more than a year ago in another appropriation bill, in which we included money for the completion of the research and development program on the B–1.

I rise in opposition to the motion offered by the gentleman from Texas (Mr. MAHON). I would state that from my standpoint, what we ought to do here today is to retain the moneys for the research and development in this program on which we agreed more than a year ago, and that we should not accept this nongermane amendment.

Mr. Speaker, if we take the action proposed by the chairman of this committee, we will take out some $462 million and then go out and spend another $750 million in canceling contracts. For a total of $990 million—moneys which have already been appropriated—we can obtain aircrafts five and six and complete this vital research program.

Some of the most important research yet to be done is assigned to these airplanes 5 and 6.

Mr. Speaker, I urge the Members to vote "no" on this motion.

Let me say one further thing quickly. We have been asked to substitute for the manned penetrating bomber the cruise missile. Nobody supports the cruise missile more than I do, but our representatives at SALT have already agreed, before they got to SALT, to limit the range of the cruise missile to 1,500 miles. When we limit the range of the cruise missile to 1,500 miles, we make absolutely essential a manned penetrating bomber.

Most of us know that the Soviets can throw a barrier 800 to 1,200 miles beyond its territorial limits. If we take that amount off the 1,500 miles for penetration, we make the effective or efficient penetration less than 700 miles.

Therefore, if we want a balanced and viable strategic program; if we want to leave this line open; if we want to leave an option open for the President of the United States in the SALT talks; if we want to leave open an option for us to have a manned penetrator from which to launch the cruise missile; then we will vote "no" on this motion.

Mr. Speaker, I ask that the Members vote down this motion to recede and concur.

Mr. LUKEN. Mr. Speaker, will the gentleman yield?

Mr. CHAPPELL. I yield to the gentleman from Ohio.

Mr. LUKEN. Mr. Speaker, I would like to associate myself with the remarks of the gentleman from Florida (Mr. CHAPPELL).

Mr. Speaker, I rise today in opposition to Mr. MAHON'S motion to recede and concur in the Senate amendment to rescind $463.4 million appropriated for the continuation of the B–1 bomber program.

It is obvious that we in Congress have been contradicting ourselves on the B–1 issue. We cannot rescind funds for the B–1 program, and at the same time, believe that an updated strategic manned penetrator can be produced in the future.

We must all realize that the information obtained from the B–1 research and development program is important to the development of many future U.S. military aircraft. The refinements incorporated into B–1 bombers 5 and 6 are vital to updating our aircraft technology.

We realize, too, the uncertainties surrounding the cruise missile program. We simply do not know the capabilities of this weaponry, nor do we know what limits will be placed on its capabilities through SALT negotiations. Continuation of the B-1 program would provide for the needed technical base in the event that alternative systems, such as the cruise missile, run into difficulty.

Furthermore, the SALT negotiations are not going smoothly. Everyday we read in the newspapers that the negotiations are not sound for the United States. We should not further jeopardize our position in the SALT talks by discontinuing the B-1 program. Also, the Soviet Union has relied heavily on the Backfire bomber in the SALT negotiations. the B-1, even in the event of necessity. force to this Soviet manned penetrator.

Finally, we must recognize that we have made a promise to the American people to provide ample national defense systems. Without the B-1, this promise is impossible to keep.

Therefore, if we vote today to rescind funds for the B-1 bomber program, we will be making a serious mistake. To concur in the Senate amendment would make it virtually impossible to produce the B-1, even in the event of necessity.

We in Congress should not make this mistake. We cannot afford to jeopardize our defense efforts and our SALT talk efforts. A vote against the B-1 would create an even larger breach of trust between the Congress and the American people.

I urge you to consider these and other arguments in favor of the B-1, and to vote against Mr. MAHON's motion to recede and concur in the Senate amendment.

Mr. ROUSSELOT. Mr. Speaker, will the gentleman yield?

Mr. CHAPPELL. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Speaker, I appreciate my colleague for yielding. It is my understanding that the House accepts the position of the Senate, it will really cost more to cancel this program out because in canceling out we also lose out on the amounts of research and development money already spent. Is that not right?

Mr. CHAPPELL. It will cost $750 million just to cancel it, and for a little over $975 million we can finish up the program and get the airplane. Therefore, it is ridiculous, in my view, for us to cancel out this program or a good portion of it just before we complete it. Also, the cruise missile has not yet been proven. We are just in the beginning stages of proving it.

Mr. CEDERBERG. Mr. Speaker, I yield 5 minutes to the gentleman from Virginia (Mr. ROBINSON).

Mr. ROBINSON. Mr. Speaker, we have been hearing from various of our colleagues that the B-1 is dead. Then I ask, if it is dead, what are we doing here talking about it again?

The B-1 is nothing more than dormant. It is dormant because DOD refused to go along with what this House said it should do almost a year ago when the appropriation was made to go through with the R. & D. on the B-1.

Mr. Speaker, how are things different as compared to the last time we voted on this issue? Why revive the B-1 from dormancy?

Mr. Speaker, I will tell the Members why: because it is in our best national interests to do so.

Since then, Mr. Speaker, a great deal of additional information has become available. No. 1, we found out that the Russian Backfire bomber exists in substantially greater numbers and has a longer range than what had been originally predicted for it. Therefore, it is a threat to us, both as far as the Navy and the Air Force are concerned.

We have reiterated our triad concept, and we still maintain that we want a manned penetrating bomber.

Yet, what do we have as a substitute for the B-1? We have the FB-111A, a stretched out, worn model of an airplane that has been in the inventory for a number of years with B-1 components in terms of engines and avionics.

Again, why should we revive it? Because the SALT talks are in trouble. Have we not just in the last few days seen our own negotiators are in disagreement with regard to the SALT talks? They cannot agree among themselves as to which way we are going. Consequently, how can we expect to be considered in a favorable position in terms of the SALT talks?

Again, why revive the B-1's dormancy? Because of the mounting uncertainty with respect to our military aircraft policy in the future, as reflected by what the DOD and the Navy are doing. They cannot decide now whether they are going to build the F-18, on which we had so much debate last year, or whether to go back to the A-7 and build it with two engines.

So, even they do not know which direction they are going with regard to armament that might be added in the future.

Why should we revive it from dormancy? As the gentleman from Florida (Mr. CHAPPELL) says, because it makes good sense fiscally speaking. It is going to cost us $745 million, based on one estimate, if we simply phase out the B-1 and we do not get anything more for the money we have put in it. If we complete planes Nos. 5 and 6 it will cost $965 million, or $220 million more. Which would you rather have, a mountain of paper and a couple of warehouses of spare parts, or two additional airplanes, the best manned penetrating bombers in the world today that we can use to complete the research and development on our program that we have been working on for so long?

Mr. CHAPPELL. Mr. Speaker, will the gentleman yield?

Mr. ROBINSON. I yield to the gentleman from Florida.

Mr. CHAPPELL. Mr. Speaker, I wonder if the gentleman will tell us the status of development of the cruise missile?

Mr. ROBINSON. As far the cruise missile is concerned, it has never been any place but on paper. It is not flying. We do not know what it can do except what the technology of the art says it can do. Further, it is placed on the table on the SALT negotiations in a very questionable situation.

Mr. CHAPPELL. Mr. Speaker, will the gentleman yield further for one more question?

Mr. ROBINSON. I yield further to the gentleman from Florida.

Mr. CHAPPELL. Mr. Speaker, will the gentleman agree that more than half of the triad, and the responsibility of the third leg of the triad now rests on the manned penetrating bomber?

Mr. ROBINSON. I certainly would agree that we have to have a delivery platform so that we can get the cruise missile close enough so that it can penetrate to the heart of what might be enemy territory, and all that we have now to do that are the B-52's that cannot do the job, the huge, slow flying big radar profiles of wide-bodied jets. Or we can go for the FB-111H which is also an airplane already in inventory to which they would have to add many refinements before it could be used—and then could not compare with the B-1.

The best penetrating bomber in the world today is the B-1. It has proven itself in every test it has been flown through. This is our last chance to provide the option of a manned penetrating bomber that can get the job done and make sure that when we go to the SALT talks we have the best argument that can be made in the best manned penetrating bomber that can be built.

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. CEDERBERG. Mr. Speaker, I yield 1 additional minute to the gentleman from Virginia.

Mr. ROBINSON. Mr. Speaker, I thank the gentleman for yielding me the additional time.

Mr. CEDERBERG. Mr. Speaker, I want to associate myself with the remarks made by the gentleman from Virginia (Mr. ROBINSON). I would ask the gentleman to tell us how much we have already spent, total, on the B-1? Is it $3 billion?

Mr. ROBINSON. Three billion dollars, of course, is the generally accepted figure of what we have already put into it and none of which we will recover if we phase out the program.

Mr. CEDERBERG. We can complete the research and development and bombers Nos. 5 and 6 for how much?

Mr. ROBINSON. We can phase out the program for $745 million, or finish the research and development program by building planes Nos. 5 and 6 for $965 million, which means an extra cost of $220 million, to give us the best bomber that man has ever built.

Mr. CEDERBERG. Mr. Speaker, I think it would be most unfortunate for the House to take the position we should not go ahead and finish planes Nos. 5 and 6 and complete the research and development on this manned bomber. Everyone recognizes, and certainly the Air Force recognizes, the necessity for a manned bomber. The mere idea of reviving the FB111-H is a clear indication that this type is needed.

The SPEAKER pro tempore. The time of the gentleman has again expired.

Mr. CEDERBERG. I yield 2 additional minutes to the gentleman from Virginia (Mr. ROBINSON).

Mr. Speaker, there is, indeed, a need

for this manned bomber. For us to scrap everything we have done, and your $3 billion plus down the drain with nothing to show for it just does not make much sense to me. I cannot understand why we should not go ahead and complete the financing and then we can make the other decision as to how much further we want to go down the road. I happen to think the whole B–1 cancellation has been a mistake from the beginning. We should not have cancelled it. The President should not have cancelled it. We were ready to go into production on the finest manned bomber in the world that is essential for the security of this country, and now we take this kind of a position.

So, Mr. Speaker, I just want to thank the gentleman and to say that I believe he has made a very fine statement and I want to associate myself with it.

Mr. ROBINSON. Mr. Speaker, the only way to maintain a viable triad concept is by voting no on the motion which is before the House.

Mr. Speaker, I thank the gentleman from Michigan (Mr. CEDERBERG) for his supporting remarks.

Mr. SCHULZE. Mr. Speaker, we in the House are about to cast a very important vote, one which may effect our national security posture well into the future. That vote, of course, is whether or not to continue the production of the fifth and sixth B–1 bombers.

Over the past several months, we have been bombarded with all the pros and cons of the B–1. But while these arguments have been very eloquently and persuasively put forth by persons with much more expertise than myself, I would like to offer some of my own observations on this issue.

It has recently been reported that the Defense Department has begun a major review of the Nation's overall strategic doctrine. The focus of this study, as I understand it, will be whether the concept of the triad defense system is viable today and whether it will continue to be so in the future.

As my colleagues know, the triad concept states that the United States will maintain three independent, but interdependent, strategic nuclear forces. Those forces are the land-based intercontinental ballistic missiles, the submarine-launched ballistic missiles, and the heavy, manned bomber.

Mr. Speaker, I realize that there is no hard and fast rule which dictates that a triad of forces must exist. Some experts suggest that the strategic force, like a man, can stand on two feet and still hold its own. Others have argued that four legs or five or six, would be infinitely better and would offer our military planners greater flexibility.

No one can really determine for sure what kind of force or combination of forces will offer the most security for the citizens of this Nation as we approach the 21st century. It is my hope that this new Pentagon study will attempt to give us a better insight into the future requirements of our defense strategy.

Yet, I feel uneasy about this new study. Certainly, many will argue that this type of study is long overdue. But, I question the real motivation behind the administration's desire to conduct such a reassessment.

Preliminary reports from the Pentagon indicate that the fiscal year 1979 defense budget will be approximately $130 billion. This will be an extremely difficult lump to swallow by an administration which made campaign promises to cut the size of the defense budget.

These campaign promises are precisely the reason for my uneasiness over the strategic review. If we analyze the items which require the largest expenditures, I am sure it will be seen that aside from personnel costs, the most expensive weapons systems are our strategic weapons—the Minuteman III, the MX missile, and the Trident submarine. I would honestly hope, that the real effort behind the Pentagon study of strategic concepts is to improve our force posture and not to find ways to cut the defense budget by eliminating legs of the triad or by scrapping the concept altogether.

Mr. Speaker, the United States is truly at a crossroads with respect to national defense. The facts bear this out.

Experts have warned us that our Minuteman missile force is becoming increasingly vulnerable to ever-improving Soviet first-strike capabilities. But the replacement for the Minuteman, the MX missile, is years away from production and will be extremely costly.

The second leg of the present triad, the submarine-launched ballistic missile has run into problems. Recently, it was reported that delivery of the first of our Trident submarines will be delayed until 1981 and that this ship has already experienced a $400 million cost overrun.

The third leg of the triad, the manned bomber, is about to have the lid of its coffin nailed even tighter if this measure to cut off funds for the fifth and sixth bombers is accepted.

In the light of this new Pentagon study, and the many questions unanswered about the future of our total strategic posture, I urge my colleagues to seriously consider the implications of the step they are about to take.

Not too long ago, during the vote on the social security financing bill, the distinguished gentleman from Virginia (Mr. FISHER) offered an amendment to exclude Federal employees from social security until a full-scale study could be made of the feasibility of a merger of the Federal retirement system and the social security system. Most House Members believed that it was better to wait for the results of the study than to make that decision now and then hope that study would support their action.

Now, we are again faced with the same dilemma. Is it too much to ask that we keep our bomber production option open a little longer until we see the recommendations of the Pentagon review? Or for that matter, until we see the provisions of the SALT II accords now being negotiated? I submit that since the national security of our Nation and its citizens will be affected by what we are about to do, a little more time and a lot more thought can do no one any harm.

If we deny funds for these fifth and sixth B–1 bombers, we may be seriously limiting our strategic options for the immediate future. Would it not be ironic if, after the strategic study was completed, the conclusions of that study indicated that our actions today were premature?

Mr. MAHON. I yield 4 minutes to the gentleman from New York (Mr. ADDABBO).

Mr. ADDABBO. Mr. Speaker, what brings us here this afternoon is not the revival of the B–1. What brings us here this afternoon is the fact that in the 1978 appropriation the Congress, both House and Senate, agreed to do away with the production funds for the B–1. In 1977 we had appropriated $1 billion to build three B–1 production planes. We have already developed three planes and an additional plane is under construction in R. & D. There was $1 billion to build three production planes, however, we have stopped production by our action in 1978. The Congress has stopped production. So what we are asking today is to save $462 million. What is being asked by the opponents is to build two planes for $1 billion—$500 million a plane.

Just 15 minutes ago we were worrying about setting aside $200 million to take care of people, but now we are being asked to waste $500 million a plane—$1 billion for two planes which are useless.

It was testified to by Mr. Hello, president of North American, the division that developed the B–1, that all the R. & D. can be done by planes 1, 2, 3, and 4. We have appropriated, and there is available, almost a half billion dollars to continue the R. & D. in fiscal year 1978. All we are asking today is to rescind the 1977 funds for three production planes. There is no need for them. The Air Force—everyone—agrees that we cannot fight a war with six B–1's.

Mr. MAHON. Mr. Speaker, will the gentleman yield?

Mr. ADDABBO. I yield to the gentleman from Texas.

Mr. MAHON. I thank the gentleman for yielding.

It would not be 6 B–1's. There are four B–1's that are R. & D. models, so there would be only two production B–1's.

Mr. ADDABBO. We would end up with two production B–1's, and the gentleman is correct we cannot fight a war with two production B–1's. So we are asking to save $462 million. The $611 million that will be used to cancel production is not all wasted. We are buying material and parts that can be used on the four planes that we do have in R. & D. We are not killing the B–1 program. Altogether, we are fulfilling the President's promise to continue R. & D., because we do have, as I said before, appropriated, and it is available, close to a half billion dollars for the R. & D. program.

So today we are being asked to end the production line, continue with the R. & D. but end the production line—save—save $492 million. Save that money for the taxpayers. Use that money in other defense programs. Proceed ahead with the R. & D., and with buying better, more cost-effective weaponry. If in the future we find that the plane is cost effective and it can be used, then we can proceed. But to build two B-1 planes at this time, after we have canceled all production in 1978, at a cost of $500 million each, or $1 billion, that is a complete waste—a complete waste of the taxpayers' money.

Mr. ROBINSON. Mr. Speaker, will the gentleman yield?

Mr. ADDABBO. I yield to the gentleman from Virginia.

Mr. ROBINSON. Mr. Speaker, the gentleman in his remarks indicated there was some value in the parts remaining as spare parts. May I ask him what good they would be if we do not have the planes in the first place? If we do not build the planes, what good would the parts be?

Mr. ADDABBO. We are building some planes for research and development and the spare parts could be used for those planes.

Mr. CEDERBERG. Mr. Speaker, I yield 5 minutes to the gentleman from California (Mr. DORNAN).

Mr. DORNAN. Mr. Speaker, one of the great Democratic Speakers of this House, John McCormack, used to end his speeches on defense with the words: "If I err, let me err on the side of strength."

Please consider that excellent statement today December 6, 1977.

I have at the leadership desk here petitions which were signed last Friday by 3,400 aerospace workers at Rockwell International. I called in to my district that Friday morning and asked for such a petition. It simply states: "We are on the job. The B-1 production line is open."

There are 7,000 workers who will be fired by Christmas including those 3,400 signers if we do not build planes No. 5 and No. 6. Rockwell's B-1 is not a public works project. And Rockwell, of course, is a free enterprise corporation with stockholders to whom it must answer. Those workers will have to be fired by Christmas if you vote yes on this rescission and you can understand how difficult that will be at this time of the year particularly. So I can assure you I am proud to say I have yet to have one Rockwell B-1 worker say to me: "Save my job." They still today to the last man or woman talk about our Nation's strength and the defense of this country. Of course, they do not want to be fired at Christmastime or at any other time, but they are more interested in what they are building for the defense of our civilization. Do not treat their lives lightly.

But I must give my fellow Members concrete reasons why we should complete aircraft Nos. 5 and 6 other than just saving California aerospace. B-1's Nos. 5 and 6 are totally different research aircraft than the first four B-1's. They are not hand-molded prototypes loaded with test instrumentation. They are production aircraft designed to work out weapons delivery problems. No. 5 is the first aircraft in the history of aviation to be electronically hardened against EMP. The electromagnetic pulse phenomenon was discovered during the Bikini and Eniwitok nuclear tests where, thousands of miles away from the explosions, commercial aircraft had all of their navigation equipment fail.

This problem was considered during the design of 5 and 6 together with other secret problems which were declassified only this last summer. For example, "Operation Trestle." I have seen at Kirtland AFB this two-thirds completed, massive, wooden, railroad-type trestle upon which the Air Force plans to place aircraft No. 5 to find out the effects of radiation on ECM navigation and bombing electronic systems.

The second advanced B-1, No. 6, has great commercial application possibilities for business jets and the airlines. It utilizes composite materials that are stronger than aluminum. Only titanium is stronger than the exotic materials which are being prepared for these two planes.

The R. & D. reasons for 5 and 6 go on and on. And we are not talking about $462 million.

We are talking about $220 million. That low figure for two B-1's would be a research bonanza. It would be getting these airplanes at less cost per plane than if we had gone into full production of 244 B-1's.

I do not know if we will ever turn around the Senate or this President on full or partial production, but what we are talking about now is research and development, and keeping open the capacity for B-1 production while the SALT II talks have our Nation and our President up against the wall. The Soviet Union is continuing to make its SS-18, and the other SS series of massive, heavy megaton, city-killing, silo-killing weapons, and I see no reason to preemptively concede anything to the U.S.S.R. by closing down production on the best aircraft ever made, crippling our Triad, and firing 7,000 of the world's best defense workers. What is President Carter's defense philosophy, speak softly and carry a broken stick?

I ask my colleagues, if you are unsure in making this decision, if you think you might err in either direction, then I say err on the side of strength.

Vote no on this rescission demand of the other body.

I yield back the balance of my time.

Mr. MAHON. Mr. Speaker, I yield 4 minutes to the gentleman from Florida (Mr. SIKES).

Mr. SIKES. Mr. Speaker, in the conference report on H.R. 9375, supplemental appropriations for fiscal year 1978, which is now before us, amendment 43 is reported in technical disagreement. The Senate amendment proposes deappropriation of $462,000,000 of the $1,073,000,000 appropriated in fiscal year 1977 for production of B-1 aircraft Nos. 5 and 6. A rescission of these funds was proposed by the President on July 19, 1977. The House Appropriations Committee refused the rescission. No House action was necessary. Today's motion is the Senate answer to the refusal of the House to approve the rescission. We had hoped the House conferees would insist on sustaining the action of the House committee. Instead, the conferees approved the Senate action. This cutback in funds would delete uncommitted funds for B-1 aircraft which are advanced R. & D. models, and allow for termination costs. With this cutback, B-1 aircraft production would be terminated after fabrication of aircraft No. 4, the last of the research and development aircraft already in production. These are not the advanced, more sophisticated models.

The advanced R. & D. aircraft, Nos. 5 and 6, which the conferees propose to eliminate would provide the final information needed for the production of the complete combat model B-1 aircraft. With this information we could go immediately into production should world conditions require it. To stop the research and development programs without completing Nos. 5 and 6 would leave us far short of the information goals established; would mean crippling delays during a world emergency. Included in the new R. & D. programs are advanced electronics equipment, weapons systems, vital electromagnetic tests, and tests of the effect of nuclear blasts from an aggressor force on the skin and systems of the B-1 aircraft.

Now let me clarify some of the statements which have been made on this subject. It has been said the B-1 production program has stopped, and it thus serves no useful purpose to spend more R. & D. money. That is simply not the case. North American Rockwell tells me that there are 2,000 active employees in their Los Angeles plant still working on the B-1 and that there are 5,000 subcontractor workers still producing parts for the B-1's in production.

If the fiscal year 1977 money remains available, the number of workers in the Los Angeles plant will be increased by 1,000. The total number of employees will be 8,000. If the funds are rescinded, the total number of workers in all categories will drop immediately to 2,000. That means 6,000 jobs are dependent upon House action on this ill-advised Senate amendment, 6,000 more to be on unemployment compensaton. There are few jobs available in the aircraft industry.

Aside from the employment picture, to stop work now on the B-1 without completing the R. & D. program means it will be necessary to gear up again and complete the R. & D. program if at some time in the future it is decided that the B-1 is essential. Plane No. 4 is about 75 percent completed. Planes 5 and 6 are 25-percent completed. If funds for the completion of the R. & D. program are approved now, the aircraft will not be completed until calendar years 1979 and 1980. I am saying approval of the rescission now before us means a 2-year delay in completion of the R. & D. program. Research and development are essential before full-scale procurement could be undertaken. A delay of this magnitude on an essential military program could be fatal to this country.

We have spent or obligated $3.7 billion on the B-1. To stop now without spending another $462 million would mean that you are washing down the drain much of the money expended and much of the work already done on this aircraft. I do not want to be a party to throwing away that much progress and that much money. The B-1 is still the best option open to this Nation for a manned penetrating bomber. The Department of Defense position remains that a manned penetrating bomber is a necessary requirement. It is in the national interest to have at least the capability to vote "no" on the amendment.

A "Dear Colleague" letter says that the "Senate Appropriations Committee voted unanimously to rescind the $462 million." The letter never mentions that the House Appropriations Committee voted 34 to 21 against this rescission because we had not been given the full story on the direction the administration is taking on the B–1, the FB–111H, the cruise missile, SALT negotiations, and defense spending in general.

The Congress has gone full circle on funding the B–1 bomber. America's defense needs have not changed. One military expert after another has stated that America needs a manned penetrating bomber. We do not have a modern bomber to fill that requirement. The B–1, the most advanced bomber in the world, was developed to cope with the sophisticated defense problems of the 1980's and subsequent years. The President does not favor the B–1. He made a campaign commitment against it. Whether or not he had all the facts that he needed for his decision in continuing to oppose the B–1 is debatable. We know that the Joint Chiefs of Staff urged a continuation of the B–1 program, until the day it was rejected by the President.

The Russians have a Backfire bomber which is more modern than any other now in production. They are building an impressive bomber fleet while we continue to rely on the aging B–52. The effectiveness of the B–52, which is distinctly limited in modern warfare, will be further curtailed if concessions are made to the Russians on range of cruise missiles in the forthcoming SALT talks.

We know the B–1 is expensive—the most expensive aircraft in the world. I believe the American people want a strong America, with defenses that are adequate for our country's protection and that of the free world. The defense requirements of our country have been hotly debated. No doubt should remain that America's military strength is slipping far below that of the Russians. I believe there is no question but that our citizens are very much aware of this situation and they are becoming increasingly concerned about it.

Today I urge this body to provide the funds for continuing the B–1 R. & D. program. We in Congress have an obligation to provide this insurance for our national defense. A vote for this cut is another step toward the second-best defense. Just remember the following facts:

The Department of Defense position remains that a manned penetrating bomber is a hard requirement.

The B–1 could be a vital bargaining chip in the SALT negotiations.

In the very near future the B–52 will not do the job asked of a manned bomber.

DOD witnesses have all testified that the B–1 program has been sound and successful by any standard.

The B–1 is the best option open to this Nation for a manned penetrating bomber.

It would be well to remember that the original Senate version of the supplemental appropriations bill for Defense contained a provision to fund a study of the role of manned penetrating bombers in our Nation's strategic forces after the aging B–52's are retired. This study was deleted in conference. Eventually the Defense Establishment is going to have to come to grips with this problem. The data today indicates that we may not have enough information to determine whether we can rely on the cruise missile to do the job formerly given to the bomber. This being the case, we must take action which will leave the option open. The money which the supplemental would delete is insurance for an option which most certainly will be needed.

There are many serious questions which revolve around the B–1 issue. The distinguished chairman of the House Armed Services Committee, MEL PRICE, has gone so far as to contact the President. I should like to quote from that communication:

> Mr. President: I am writing to express my deep concern over recent administration decisions which, in my judgment, could seriously impair the strategic defense posture of the United States.
>
> As you can appreciate, I personally found it difficult to accept your recommendation of June 30, 1977, to terminate production of the B–1 aircraft. As a long-term member of the Armed Services Committee I have observed the United States' effort over the past 16 years to build a follow-on to the B–52 strategic bomber. I have listened to many Defense witnesses, military and civilian, restate over the years the need for an advanced manned strategic aircraft. To this very day, the Department of Defense still believes in the firm requirement for a manned penetrating bomber through the 1980's and beyond and is at present exploring such options as the FB–111H to replace the B–52.
>
> The Committee on Armed Services has heard Department of Defense witnesses and other experts and reviewed Department of Defense reports, past and present, to consider not only additional funds requested for the cruise missile in connection with the cancellation of the B–1, but to examine the general state of our strategic Triad as well.
>
> Regrettably, Mr. President, I must inform you that to date the presentations before our committee have demonstrated a lack of adequate correlation between the stated requirements and the changes that will be made to our strategic posture by recent Administration decisions.
>
> MELVIN PRICE,
> *September 15, 1977.*

Finally, listen to the results of three recent surveys done by colleagues which included questions concerning defense. BENJAMIN GILMAN recently surveyed the 26th District of New York. When asked about defense spending, 72 percent of his constituents replied that they felt it should be maintained at current levels or increased; only 29 percent felt it should be decreased. On the B–1 in particular, 54 percent support funding, while 46 percent do not. In a survey which JOHN ASHBROOK made of the 17th District of Ohio, 54 percent of those responding felt that defense spending should be increased; only 5 percent indicated that defense spending should be reduced. Another survey, recently completed in Connecticut's Fourth District by our colleague STEWART MCKINNEY, indicated that 38.4 percent of his constituents feel that defense spending needs to be increased while 18.3 percent feel it should be reduced. Given the opportunity to survey their districts during this recent congressional break, many of us have found that this feeling of concern for the direction our defense planning is taking pervades this Nation.

The B–1 is needed to help insure the survival of our country. We are confronted with an ominous and a mounting superiority in Russian military power. Opponents of the B–1 amendment tell us that we already possess the capability to kill everybody everywhere behind enemy lines at least once, maybe twice. They do not stress the fact that historically it has been American policy not to strike the first blow. If an enemy can kill off much of the American populace and most of our military capability with a single blow, there would be little point in retaliating with what is left. It could mean capitulation. That is an ugly thought but it is basic. That is what the enemy is counting on. America is playing out the second-best poker hand to its inevitable conclusion. We ask today that you give our country a better chance to avoid a crippling first strike against us. Let us not be architects of disaster. Acquiring the B–1 aircraft will be a signal to Russia and to our allies that we are not sleeping while Russia arms.

Mr. CEDERBERG. Mr. Speaker, I yield 3 minutes to the gentleman from Delaware (Mr. EVANS).

Mr. EVANS of Delaware. Mr. Speaker, I rise in opposition to the motion to recede and concur in the Senate language deleting all funds for B–1 research.

As many of my colleagues know, I am one of only 21 Republicans who have opposed full production-line funding of the B–1 bomber. I have taken this position in the past, and still stick to this position, because, based on the information I have now, the cruise missile appears to offer a more effective strategic defense capability at a lower cost to the taxpayer than does the B–1.

But, Mr. Speaker, I want to emphasize the phrase "based on the information I have now." I cannot, and neither can anyone else in this body, foreclose the possibility that facts may change in the not-too-distant future.

For instance, we do not know what provisions a SALT agreement might contain, or even if there will be a SALT agreement at all.

We do not know if the cruise missile will perform up to its alleged capacity.

We do not know what type of defense the Soviets might come up with in the future against either the cruise missile or the manned bomber.

And we do not know what capabilities the Soviets have or will have to knock out our ballistic missile silos, and thus negate completely one leg of the three-legged triad defense. I might add, Mr. Speaker, that a New York Times article of December 4, 1977, expressed concern over this very situation and indicated that Secretary of Defense Brown was considering a "hair-trigger" response—that is, fire the missile before the Soviet attack reaches us—as an answer to that threat. Given the fact that our early warning systems have previously mistaken Canadian geese for Soviet ICBM's, I submit that this kind of "hair-trigger" response is the scariest tactic I have yet heard in the strategic arms debate.

In short, we simply do not know what will happen to the strategic balance of power in the next several years. For that reason, I would like to have on the shelf ready to go the most up-to-date technology available in case the situation changes.

If this Congress is to err, let it err on the side of freedom. If we appropriate this money, and history finds at some future date that it wasn't needed, then we will have lost some money. But if we do not appropriate this amount for continued research, and it turns out the B-1 was needed, then there may be no history

Mr. CEDERBERG. Mr. Speaker, I yield 4 minutes to the gentleman from California (Mr. KETCHUM).

Mr. KETCHUM. Mr. Speaker and Members, you have heard all the arguments about the B-1 bomber up and down the Hill. I listened with great interest just a few weeks ago to the distinguished chairman of the Appropriations Committee stand in this well and tell us how many dollars of appropriations he has supported for the defense of this country, and it was commendable. But, I also heard the chairman tell me and tell you that if you think the next war is not going to be fought with pushbuttons, that we are all crazy. Well, I do not believe anything could be further from the truth. God help us if that is indeed a prediction that may come true.

I listened to my friend, Mr. ADDABBO, say, "Well, this is just on the pad. We are just going to keep this warm, and if we need it, we can jump right in and get it."

I ask you, ladies and gentlemen, where are we going to get the employees, the technicians, who have spent all the years developing the technology to build the world's greatest intercontinental bomber?

I will not go into the cruise missile. I think it is fine, and I support the cruise missile, but it is no substitute for the B-1 bomber. With the SALT talks approaching, we do not know what agreements are going to be made, but let me tell you this: I have stood in this House for the last 5 years and watched this House vote billions and billions and billions of dollars to spread weaponry all over this world. We have become the greatest arms merchant and giveaway specialists in the world, yet we are worried about spending approximately a billion dollars more for our own defense.

Cannot you remember that we have spent almost $3 billion supporting Ethiopia, and what did that get us? I do not think there is anyone in this House who would vote a dime for Ethiopia today. How much have we given that murderer, Idi Amin? We have spent our time and effort and treasure in arming almost all of Central Africa rather than helping them develop technology for communications and education and health, choosing instead to teach them the ways of war.

You were willing to spend those dollars, and you are not willing to spend a billion dollars on the defense of your own country. You ought to be ashamed.

Mr. MAHON. Mr. Speaker, I yield 2 minutes to the gentleman from California (Mr. LLOYD).

Mr. LLOYD of California. Mr. Speaker, I am not coming down here to the well of the House to tell the Members what my position is. They already know that. And I am not going to regale the Members with the idea that I am an expert in the area of aircraft weaponry and that the Members must all listen to me. I have a good background, and it is my considered opinion that this weapons system is the one that we do indeed need, and we need it now. We have heard all of the facts and figures from my colleagues who have spoken in favor, and I happen to concur with each and every one of them. Their points are well made. I would ask the Members to think about it. I am not under the erroneous impression that most of the Members, if not all of them, have not already made up their minds about it, but if they have not, I would ask them to think about this: I think it is the right weapons system. I would remind my colleagues that it was never an option of the cruise missile or the B-1, and whoever said that was in error.

I would like to make one other point. They said the line is closed, there is no point in opening it.

The line is not closed. The people who built No. 4 will be the people who build 5 and 6. They are there. Let us not close that capability. Remember, it is not $1 billion we are talking about. It is $220 million. If we do not put this into effect, we must spend $750 million to close the line down. I think the economics demand that we go forward. Most importantly, it does give us maneuvering room. It gives us the option of time so that we can indeed say that the cruise missile is indeed the absolute right way and the only way to go.

Mr. McFALL. Mr. Speaker, will the gentleman yield?

Mr. LLOYD of California. I yield to the gentleman from California.

Mr. McFALL. I thank the gentleman for yielding.

Mr. Speaker. I think the gentleman has made a very fine statement. I join him in opposing this recission. I do not think we ought to throw away these two planes just for $220 million.

Mr. LLOYD of California. I thank the gentleman for his remarks.

Mr. DORNAN. Mr. Speaker, will the gentleman yield?

Mr. LLOYD of California. I yield to the gentleman from California.

Mr. DORNAN. I thank the gentleman for yielding.

If we were to vote "yes" on this and reject these last two airplanes, would we then in fact save the $220 million, given the unemployment situation?

Mr. LLOYD of California. Not really. We would lose the $750 million.

Mr. CEDERBERG. Mr. Speaker, I yield 4 minutes to the gentleman from California (Mr. BADHAM).

Mr. BADHAM. Mr. Speaker, I, like my good friend and colleague, the gentleman from California (Mr. LLOYD), and others, do not pretend to stand here and present anything terribly new, but perhaps to remind the Members of some of the things that have gone on in this vastly important issue that is before us, the B-1 bomber. It has many facets to it, the decision we are to make today. The option, of course, that has been well gone into. It is not a public works project, on the one hand, but it has merit to it so far as our economy is concerned.

Two, the money aspect. The $750 million that we will spend if we do absolutely nothing, we will have nothing to show for it. On the other hand, $900 million will be spent if we spend it for spare parts.

Three, the political ramifications. The political ramification we have before us is simply this: When this House, when this Congress, put in the ability to rescind, with the Impoundment Funds Act that was directed against a previous President, there was at that time created a specter which would hold itself over this House for some time to come. If we vote for this rescission today we will abdicate the responsibility of a legislative body by saying to the President of the United States, of whatever party, "Go ahead, if you do not like what the Congress has done, if you do not like what the previous Presidents have done, what the defense establishment has done, go ahead and rescind it and we will follow along like lame dogs behind you."

But the fourth aspect concerns me most deeply, and that is the strategic aspect. We have a broken three-legged Triad, and it contains the submarine-launched ballistic missile. We are building that missile. The other day in the press that leg of the Triad was criticized as taking too long to build, having been stretched out, and that there are cost overruns. We are building massive facilities to house this thing in the State of Washington. We are building up around that Member's district to house the folk who will be working on that. Now we are saying that it is costing too much and it is taking too long. Will the decision next year be to rescind the Triad and the Trident?

The second leg, the ground-siloed ballistic missile, the Minuteman-II, the Minuteman-III, and the Trident—will those be rescinded one of these days, because even those sites are not hardened sufficiently to protect us in the face of the newly claimed accuracy of the Soviet ICBM?

That leaves us with the third leg of the triad, the B-52.

I visited the Boeing plant last week, and the people there are hardly the producers of the B-1 bomber. They have nothing to gain by this except perhaps strategic safety by the production of the B-1. They produce one of the leading candidates for our cruise missile, the Alcan, and they say that the cruise missile is not perfected. They say that the B-1 is a must. They say we should not be messing around with destroying the

R. & D. and the production line of the B–1.

This is a competitor of the folks who bring us the B–1 bomber.

I hope the Members will consider these matters, because our Trident program and the submarine-launched ballistic program are in trouble. The ground-based ballistic missile program is also in trouble because of our inability to harden the sites.

Mr. Speaker, let us at least continue with the one item that we have ready to put in production. That is the B–1.

Mr. MAHON. Mr. Speaker, I yield 2 minutes to the gentleman from Oklahoma (Mr. WATKINS).

Mr. WATKINS. Mr. Speaker, I rise to ask the Members to continue the B–1 program to build planes Nos. 5 and 6.

I stand here and speak to the Members because of my concern for this program. Because of this concern, I went to Edwards Air Force Base during Thanksgiving for 2 days to review the B–1. After returning, I wrote to our President and Commander in Chief and expressed my concern.

I know there is not much new substance or perhaps not many new facts to relate, but I would like to point out one thing that is new. It is new with me, and it may be new with the Members.

If we do not have the B–1 bomber, we will have to rely on the slow, cumbersome B–52. The B–52 is twice as slow as the B–1. The B–52 can be tracked by radar a lot quicker, and it can be intercepted by fighters more quickly. The enemy fighters can move in a lot quicker against the B–52.

The B–52's would have to release much earlier the cruise missiles, which have not actually been perfected and whose reliability has not been proven. They are not yet proven with a moving launch pad such as the B–52.

The fact that I discovered, the one I would like to share with the Members, is this: With our enemy being able to intercept the B–52 probably within 1,200 to 1,500 miles from its target, and with the B–52 having to release the cruise missiles that can travel at 350 knots, that means our President and our Commander in Chief will have to make his decision 4 hours earlier to release the cruise missiles in order that those missiles may be able to get to the target. He would have to make the decision to release those cruise missiles 4 hours before they would be able to reach their target.

These missiles are unmanned, and they cannot be recalled.

President Truman in World War II had the option of recalling those bombers in the last few moments, but here our Commander in Chief would have the responsibility of making his final decision 4 hours before the cruise missiles could reach their target. With the sophistication of the radar that we have on board and will soon develop, we may be able to detect every move of the enemy. If we should find that the enemy is willing to withdraw or negotiate during that 4-hour period, it would be a disaster and a tremendous tragedy since our Commander in Chief would not be able to recall the cruise missiles. I ask we continue the B–1 bomber to give us the strongest national defense and the national security of our country.

Mr. CEDERBERG. Mr. Speaker, may I inquire, how much time do I have remaining?

The SPEAKER pro tempore. The gentleman from Michigan (Mr. CEDERBERG) has 7 minutes remaining, and the gentleman from Texas (Mr. MAHON) has 12 minutes remaining.

Mr. CEDERBERG. Mr. Speaker, I yield 2 minutes to the gentleman from Missouri (Mr. ICHORD).

Mr. ICHORD. Mr. Speaker, I thank the gentleman for yielding me this time.

Mr. Speaker and Members of the House, the Subcommittee on Research and Development has followed the B–1 manned penetrating bomber from its very inception. Of course, an overwhelming majority of the members of the Subcommittee on Research and Development have always been in favor of the B–1 bomber and also favor the continuation of the building of airplanes 5 and 6.

This issue, Mr. Speaker has bothered me considerably. I called in the staff of the Subcommittee on Research and Development on the issue of planes 5 and 6 because I did not want to throw good money after bad. After a full explanation of the issue in the light of the Presidential cancellation of the production program and all subsequent developments, I came to the conclusion that it is in the best interest of the Nation to build planes 5 and 6. Five and 6 are much more important than the retention of research and development money, if we do desire to retain the B–1 as a viable option.

Mr. Speaker, the administration has expressed an interest in maintaining the option of a manned penetrating bomber, and we cannot do it with R. & D. money alone. The building of planes 5 and 6 is the only way to get the EMP technology that we need so vitally.

Very little money will be saved by the cancellation of 5 and 6 because of the costs we will have to bear because of contract cancellation. Mr. Speaker, I urge the Members of the House to vote for the continuation of airplanes 5 and 6.

Mr. CEDERBERG. Mr. Speaker, will the gentleman yield?

Mr. ICHORD. I yield to the gentleman from Michigan.

Mr. CEDERBERG. Mr. Speaker, I think it is quite interesting that we have here the chairman of the Subcommittee on Research and Development of the House Committee on Armed Services who indicates that the overwhelming number of members on his committee feel that we ought to go ahead with this research and development and with airplanes 5 and 6.

We probably ought to remind the House again what happened in the Committee on Appropriations.

The SPEAKER pro tempore. The time of the gentleman from Missouri (Mr. ICHORD) has expired.

Mr. CEDERBERG. Mr. Speaker, I yield 2 additional minutes to the gentleman from Missouri.

Mr. Speaker, will the gentleman yield?

Mr. ICHORD. I yield to the gentleman from Michigan.

Mr. CEDERBERG. To continue, Mr. Speaker, we had the Subcommittee on Defense of the House Committee on Appropriations go into this matter fully. What did we do? We turned down the rescission, so then we had to go to the full Committee on Appropriations of the House. After a very strong debate and a careful and, I thought, one of the best debates that we had had in a long time, the full Committee on Appropriations turned down the rescission.

Mr. Speaker, that ought to carry a little weight, I would think. The Committee on Armed Services and the Committee on Appropriations, those committees having responsibility for this matter, decided that we should not rescind it. That is what happened.

Then, of course, the administration, bent on the idea that they were going to rescind it, went over to the other body and used the vehicle of the supplemental appropriation to take out the 1977 money. This is the 1978 supplemental.

Mr. Speaker, what has happened? I think everyone understands what has happened, but the people who have the responsibility in this House and who have lived with it all the time came to the conclusion that it was not in the best interests of the country to agree with this rescission because of the fact that it will save practically no money.

Mr. ICHORD. Mr. Speaker, I would say to the gentleman from Michigan (Mr. CEDERBERG) that the administration itself has acknowledged the need for maintaining the option of a manned penetrator with its position on the FB–111A and with its position on research and development; but the important money is in airplanes 5 and 6, not in development. Personally, that is what I would like to see.

Mr. ADDABBO. Mr. Speaker, will the gentleman yield?

Mr. ICHORD. I yield to the gentleman from New York.

Mr. ADDABBO. Mr. Speaker, I would also point out to the ranking minority member of the full Committee on Appropriations that the Subcommittee on Defense of the Committe on Appropriations heard all the testimony.

The SPEAKER pro tempore. The time of the gentleman from Missouri (Mr. ICHORD) has expired.

Mr. CEDERBERG. Mr. Speaker, I yield 2 additional minutes to the gentleman from Missouri.

Mr. ADDABBO. Mr. Speaker, will the gentleman yield further?

Mr. ICHORD. I yield to the gentleman from New York.

Mr. ADDABBO. Mr. Speaker, both the chairman of the full committee, the gentleman from Texas (Mr. MAHON), and the ranking minority member, the gentleman from Alabama (Mr. EDWARDS), agreed that airplanes 5 and 6 not be built. Moreover, we do not save only $200 million. The rescission here is for $400 million-plus. That is what we are saving, plus the fact that we had appropriated $1 billion for airplanes 5, 6, and 7. Now we are being asked to build only 5 and 6 for that same $1 billion.

Mr. CEDERBERG. Mr. Speaker, will the gentleman yield?

Mr. ICHORD. I yield to the gentleman from Michigan.

Mr. CEDERBERG. Mr. Speaker, I can understand the position of the chairman of the full committee. I understand the position of the administration downtown, too.

The gentleman from Texas (Mr. MAHON) has always been, up until lately—and I understand the reason—a supporter of the B-1. The gentleman from Alabama (Mr. EDWARDS) supported the B-1 as well.

I have to admit that the gentleman from New York (Mr. ADDABBO) has never supported the B-1.

However, let me just say this: I recall when the President made his decision as to what he was going to do with the B-1. Last year, in the fall, he said it was an easy decision. He said, "We do not need the B-1." But when the time came to make the real decision, he said, "This is one of the most difficult decisions I have ever had to make."

It is understandable, having to make that decision. I happen to believe that it was a bad decision, bad for the long range defense of this country. It is not going to save the taxpayers really anything. We are going to have a manned bomber, do not forget, they are going to stretch the FB111-H, or they will do something. And for us, for the money involved here, to deny us the opportunity to go ahead with the research and development and complete planes numbers 5 and 6 I think is a very serious mistake financially and a very serious mistake as far as the defense of our country is concerned.

Mr. MAHON. Mr. Speaker, I yield 2 minutes to the gentleman from Arkansas (Mr. ALEXANDER).

Mr. ALEXANDER. Mr. Speaker, I thank the gentleman from Texas (Mr. MAHON) for yielding to me.

Mr. Speaker, I have risen today to differ with my chairman. I am here to tell you why. During the recess I had the opportunity to go to Omaha to visit the SAC headquarters. I found our Air Force personnel there to be well trained, to possess high morale and they are provided with superb plans and they have the best technology. I am convinced, as I stand here before you today that our Air Force is ready, is willing and is almost able to carry out its mission but the equipment of our Air Force is wearing out. The B-52 is 25 years old and must be replaced. The gentleman from Delaware said a moment ago something that I think every Member of this body should be advised of, he said that the cruise missile promises to be a less expensive alternative than the manned bomber. But there is no assurance that we can replace the manned bomber with a cruise missile. There is no confidence that the cruise missile can be either relied upon to do the job to carry out the mission of the Air Force.

I ask the men and women of this body that, while the cruise missile is in the development stage, let us not gamble on defense, let us not play politics with national security. Let us continue the research and development that is necessary to produce a manned bomber should the cruise missile fail to produce the results that are desired.

Mr. ALEXANDER. Mr. Speaker, for more than a decade we have lived with the painful consciousness of the probability of armed conflict in the Middle East and of its all too likely worldwide consequences. The strong and actively hostile reactions to the good faith efforts of the leaders of Egypt and Israel to move closer to a peaceful solution to the Arab-Israeli dispute can only serve as a depressing reminder of the explosiveness of that tense situation.

We have only to consider the armed civil and guerrilla wars that have been tearing at the fabric of the African nations of Ethiopia, Rhodesia, and South Africa during the past year to find deadly reminders of the effect of failure to reach peaceful resolution of strife between peoples and nations.

Within our own Western Hemisphere we are not free of dangerous tension between and within nations. It is here, with the Panama Canal Zone controversy, that our own Nation is most directly involved in a dispute filled with a nerve-straining situation loaded with potential for armed conflict.

Peace-loving nations are trying to promote peaceful solutions in turbulent regions such as those I have listed. Russia is promoting tension, confrontation, and conflict.

Many thoughtful and knowledgeable men and women outside our Government are deeply concerned about what these conflicts signal for the future of our world.

Two of the most eminent of these, Will and Ariel Durant, talked to a reporter about their conviction that the world is in danger of a social decline and pagan license. The Durants have spent more than 60 years studying, writing, and thinking about the causes and implications of the rise and fall of civilizations.

During the news interview Will Durant said:

> I believe that life depends upon an adjustment of order and liberty, a mutual collaboration between them, and any emphasis on one or the other is destructive.

Consideration of the demands that would be made on our national security system by the uncontrolled spread of the cancer of a war springing up in any one or more of these troubled spots is sobering indeed. We must continually examine whether we as leaders of our Government are making the right and necessary decisions to insure that our national defense system is powerful enough to force the enemies of peace and freedom to draw back from the temptation to help spread the wildfire of armed conflict.

That is what this debate today over the development of a long-range, manned, penetrating bomber is about. The world tension that is draining the vitality and determination of ourselves and our neighbors is a threat to the peace, security, and freedom of our Nation and world.

We, Americans, being a freedom-loving nation, must have courage enough not to drop our guard. As much as we would like to, and need to, strengthen our domestic programs to help people help themselves, we simply cannot afford to siphon off the dollars urgently needed for national defense.

During the debate on the need to provide our Nation with a modern, long-range, manned, penetrating bomber we have heard a great deal about the cost of such weapons system. Sure it would be expensive. All weapon systems are too expensive. But, the price of defeat through national weakness is far, far higher.

I hate war, but I love freedom and liberty enough to fight for them. I would far rather the battle be fought by spending dollars to buy my country a defense system strong enough to put its enemies' concentration, permanently, on finding ways to achieve a lasting and just peace.

That is why I intend to continue to oppose proposals that allow our enemies the luxury of concentrating on offensive weapons while they chuckle gleefully at our shortsighted preoccupation with expensive, highly vulnerable, nonreuseable weapons systems that are, as yet, largely a paper dream. The cruise missile is such a weapon. The modern, long-range manned, penetrating bomber replacement for the B-52 is a flying reality.

I have spent much time and study on the question of whether the relatively inflexible cruise missile is an appropriate and adequate substitute for a modern manned penetrating bomber. It is my conviction that it is not.

I am convinced that the President's action in, and the Congress support of, discontinuing funding for the B-1-manned penetrating bomber after 1978 is a catastrophic mistake that may well be paid for in human lives and loss of American freedom. I intend to oppose this latest proposal to further cut back our long-range manned, penetrating bomber program and undermine our ability to make the needed modernization of our ability to defend our right to existence as a free nation.

We have heard and read many discussions of why we need a manned, penetrating bomber and what such a defense system can do. One of the best of these, I believe, is contained in a response I have just received to my recent letter to Gen. Russell E. Dougherty, who retired in October as commander in chief of the U.S. Air Force's Strategic Air Command. The following is taken from that letter:

> . . . if deterrence of attempted coercion, intimidation, or direct attack on the sovereignty of the United States (and those allies we choose to associate with our vital national interests) is to remain the basic tenet of our national security policy, U.S. authorities must continue to have the assurance of a panoply of relevant and diversified military capabilities that can support them in any and all actions necessary to preserve that sovereignty . . . no matter what the circumstances of confrontation.
>
> A hardened, long-range, manned penetrating bomber offers a uniquely capable and dependable strategic delivery system that spreads itself reliably and capably across the broadest possible spectrum of those required military capabilities. When completely mod-

> ernized and manned with skilled, ingenious military crews, such a penetrating bomber offers the United States an overall flexibility of choice and application that is unmatched by any other weapons system. . . ."
>
> * * * * *
>
> We know what we can do with a manned delivery system. With a modernized, manned, penetrating delivery system in our mix of major strategic weapons systems, we can be confident of our ability to continue to provide our National Authorities assurance of a viable deterrent posture, under all circumstances of threat or attack. Without it, I do not think we can be confident that we can provide such assurances in the future. . . .

Among the assets of a long-range, manned, penetrating bomber are these, which General Dougherty noted in his reply to my letter. It can:

> Carry a larger number of weapons (conventional or nuclear) than any other strategic delivery system—to any fixed targets, anywhere, under a wide variety of circumstances.
>
> Achieve unequalled accuracies in long-range delivery under all circumstances; and, through self-contained sensors, offers our only long-range capability against mobile or imprecisely located targets.
>
> Provide a highly visible deterrent force, one that can be used as a recognizable expression of national determination and resolve in either preplanned or ad hoc contingency situations.
>
> Accommodate (or readily be adapted to) the delivery of multiple types of conventional and nuclear weapons—highly accurate gravity delivered, standoff-launched cruise, ballistic, semi-ballistic or defensive weapons—in large quantities, for multiple or selective delivery.
>
> Through designed growth characteristics, adapt rapidly in tactics and/or avionics to negate or avoid unanticipated defenses and other threats.
>
> Drive an enemy requirement for extensive diversion of his resources to defensive (vice offensive) systems—but still can be designed with the flexibility to penetrate those defenses if penetration is required for assurance.
>
> Provide us the most effective and economical way to redress the already serious (and worsening) imbalance in deliverable megatonnage vis-a-vis the Soviet Union.
>
> Provide a simultaneous capability for long-range, real (or near real) time strike assessment deep within enemy territory with the flexibility of striking alternate planned targets or withholding unnecessary attacks and retaining weapons.
>
> Be launched as a visible expression of active deterrence, yet be recalled without expenditure of ordnance, even after launch, should the deterrent objectives be achieved.
>
> Provide our nation an assured capability to extract severe penalties on an enemy society, regardless of any unexpected degradation or blunting of our SLBM, ICBM or, in time, our cruise missile forces; thus providing insurance against unexpected defenses or failure of any aspect of our strategic ballistic or cruise missile systems.
>
> Be used repeatedly. Depending on the nature of conflict, substantial recovery can be anticipated—thus enabling remaining and reuse for any required strategic purpose in subsequent warfighting or war terminating activities.
>
> Exploit superior U.S. technology and capability; for we can build, maintain and operate a flexible, modern delivery system of this type better than any potential adversary.
>
> Be applied across the spectrum of military capabilities—and is uniquely useful for an infinite number of lesser contingency missions; without loss of ultimate capability as a major delivery system for large nuclear payloads.
>
> Survive blunting attacks and reliably be protected from destruction on the ground through tried, proven launch procedures of Strategic Air Command adapted to reasonable expectations of our modern detection and warning systems.

The issue before us today is literally whether we are willing to get our priorities straight and do the best we are capable of doing in defense of our national security, or whether we are willing to take a sugar pill, put on blinders, cross our fingers and hope our enemies will be transformed into good little boys and girls who will not take our open invitation to foreign aggression.

I am not willing to depend on hope when we can do more to help ourselves. I believe a long-range, manned, penetrating bomber is essential to our national security and will continue to support efforts to provide our Nation with such a weapon.

B-1 RESEARCH AND DEVELOPMENT AIRCRAFT NOS. 5 AND 6

Aircraft Nos. 5 and 6 represent an essential link in the B-1 development cycle. These aircraft have always been planned as an integral part of the test program for the purpose of verification testing of design changes identified to date; cost reduction improvements; as well as validating operational requirements.

Verification of cost reduction structural changes—

Flutter checks verify simplified one-piece wing design and composite horizontal stabilizer.

Vibration checks validate forward fuselage structure which incorporates a redesigned crew compartment and reconfigured equipment bays.

Verification of operational requirements—

Validate weapon accuracy at various speeds and altitudes and additional drops to provide statistical base.

Verify aircraft/weapon environment over full aircraft range of performance.

Verify weapon accuracy performance in degraded avionics modes as well as primary modes.

Demonstrate aircraft electromagnetics pulse (EMP)—

Only aircraft designed to withstand EMP effects. Without EMP protection aircraft can be rendered useless in nuclear environment.

Conduct full scale trestle test of aircraft to validate "designed in" EMP capability.

Demonstrate current technology to survive EMP events (applicable to many weapons and weapon systems).

Support advanced weapons/munitions—

Provides aircraft-avionics validation with new weapons including cruise missiles (ALCM, TALCM, ASALM, others).

Provides validation of technology for expendable countermeasures against a wide range of threats.

Advanced materials evaluation—

Evaluate the performance of composite structural elements in a flight environment (strength, stiffness, durability).

Evaluate the weight (and cost) benefits realized by new fabrication technologies (diffusion bonding and super plastic forming).

Verification of cost reduction system changes—

Validate integration of 11 subsystems which have been redesigned to improve producibility and reduce costs.

Verify performance of these redesigned systems.

B-1 PROGRAM STATUS

1. On Thursday, November 10, 1977, aircraft No. 3 flew its 53d mission for 6 hours and 36 minutes. While flying over the Western Test Range over the Pacific Ocean near Vandenberg Air Force Base, Calif., a short-range attack missile (SRAM) was successfully launched from the aircraft at 1,000 feet altitude at a speed of 0.85 Mach.

2. A flight summary of the three aircraft is as follows:

Aircraft No. 1 has flown 288 hours and 25 minutes during 56 missions.

Aircraft No. 2 has flown 170 hours and 46 minutes during 35 missions.

Aircraft No. 3 has flown 352 hours and 34 minutes during 53 missions.

Total time: 811 hours and 50 minutes.

Total missions: 144.

Total supersonic time: 25 hours and 26 minutes.

3. Aircraft No. 4 is approximately 65 percent complete. It is tentatively planned to fly in February 1979. The aircraft will serve as the defensive avionics test bed. The manufacturing work is being accomplished at Air Force plant 42 located at Palmdale, Calif.

4. On November 10, 1977, the full-up escape system sled test was successfully run at 150 knots at Holloman Air Force Base, N. Mex. This was the first in a series of tests of all four crew station ejection seats to be conducted at Holloman through the summer of 1978. The test was designed to check the sequencing, divergence, and safety implications of the seats. The ejection seats are advanced concept ejection seats (ACES) produced by McDonnell Douglas. Aircraft No. 4 will have the seats installed after the testing has been completed.

5. Fatigue testing on the aft fuselage test article being conducted at Rockwell's Structural Test Laboratory in El Segundo, Calif., is nearing completion. Now that the test article has been tested to three lifetimes of simulated service, additional loads will be applied to the test article until it fails. The purpose of this final test will be to gather additional information on crack propagation and material toughness. A lengthy teardown and inspection will follow after the test article completes the test.

Mr. MAHON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, my able colleague, the gentleman from Arkansas (Mr. ALEXANDER) in his last words said "Let us continue the research and development on the B-1."

That is what we are doing. In our regular bill for the current fiscal year we provided for $442 million to carry on additional B-1 research and development. The Air Force never did ask for more than four research and development planes. They have been provided for. We built three, and we are building the fourth one. That is all the Air Force or anybody else I know of ever asked for the R. & D. planes. Now it is proposed that we go from the R. & D. aircraft into the production models that would be used in combat. We do not need additional money for research and development. These R. & D. planes would not be of any value in combat. The problem here is do we want to finance a fleet of two B–1 bombers? That would seem utterly and completely absurd. So we have here a very interesting question to present and to consider. Yes, many of us have been for the B–1 in the past. As long as it was tenable and made sense to be for the B–1, we were for it, but months ago the fiscal year 1978 production funds for the B–1 were denied by Congress. The money was not appropriated. There is no B–1 production money in the current appropriation bill, the bill for fiscal year 1978.

The question is do we want to pour down the drain $462 million in fiscal year 1977 B–1 production money? It is just that simple. We provided $200 million a short time ago this afternoon to pay fuel bills. Now we are confronted with how we shall vote on this issue.

I have moved that we agree with the Senate on the following language, which is amendment 43: Appropriations provided under this heading in the Department of Defense Appropriation Act, 1977—as appropriated last year—are recinded in the amount of $462 million.

The President has asked us to let him save $462 million. It is just that simple. The Congress has voted to terminate the production of the B–1 for fiscal year 1978, and the President has asked us to let him save $462 million of fiscal year 1977 B–1 production money. Do we want to pour it down the drain, or do we want to save the money? It is just that simple. It seems to me that regardless of what one's position was in the past, which is like the gentleman from Alabama (Mr. EDWARDS) and the gentleman from Texas (Mr. MAHON)—they supported the B–1 as long as it was sensible and tenable to support it. But now Mr. EDWARDS and Mr. MAHON, the ranking minority and ranking majority members of the subcommittee, wrote to its members and said, Please save the $462 million. It makes no point to fritter away this money. So the gentleman from Alabama (Mr. EDWARDS) joins me in this appeal to the members.

Again, I say we are not rescinding R. & D. money. We are just rescinding production money for two planes, money that would provide only a fleet of two planes. This just boggles the mind that we would be willing, in the face of tremendously increasing costs, rising taxes, and increasing deficits, and all the problems that we have, to spend money for just two planes. There is no assembly line for B–1 production models. There was an assembly line for the R. & D. models. I will read to the Members here the latest word as of today from the Air Force:

POINT PAPER ON B-1 PRODUCTION PROGRAM

B–1 aircraft 1, 2, and 3 were produced with R.D.T. & E. funds and R.D.T. & E. employees using development tooling. This "soft" tooling would not be used in a production environment.

B–1 aircraft 4 is being produced in a similar manner with the exception of the forward fuselage. This part of the aircraft was redesigned for aircraft 4 and is being built on production tooling.

B–1 aircraft 5 and 6 were to be built on production tooling and some of the fiscal year 1977 procurement funds would have been used to purchase that tooling. In view of the elimination of funding for the 1978 B–1 aircraft buy, this tooling will not be purchased.

Aircraft 5 and 6, if bought, will be produced in the same way as aircraft 4.

On June 30, 1977, there were about 19,500 individuals employed at the four prime B–1 contractors—Rockwell, Boeing, General Electric, and AIL. Of these people about 7,900 were working on the production program—lot I aircraft 5, 6, 7 and long lead for lot II—and about 11,600 on the R.D.T. & E. program. At the end of November 1977, only about 9,500 individuals were employed at the prime contractors on the B–1. Approximately 550 of these were production program employees. The remaining 8,950 were engaged in the R.D.T. & E. program, which includes the manufacture and mate of aircraft 4, the development and integration of the defensive avionics, and the engines for aircraft 4.

Thus, while a large number of people are still working on the B–1, the people who were building up the "production line" capability have essentially been let go.

So some 550 production employees would lose their jobs, or presently will lose their jobs, because of the cancellation of B–1 production in fiscal year 1977.

It would seem to me that we should save this $462 million. We should go ahead with the B–1 research and development. We should support the Senate position. I do not think the Senate is going to modify its position with respect to this important matter. So I just really hope that the House will not refuse to agree to save $462 million as requested by the President.

I hope Members will realize, regardless of their previous position, that at one time it was logical to support the B–1, but today it is absolutely illogical to support the B–1 except for R. & D.

Mr. ALLEN. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the gentleman from Tennessee.

Mr. ALLEN. Mr. Speaker, what I am trying to do is to get these figures straight in my mind. On the one hand I am informed that the cancellation of these contracts is going to cost the Federal Government something in the neighborhood of five or six or seven hundred millions of dollars.

Mr. MAHON. Or maybe $300 million in termination charges, something like that.

Mr. ALLEN. And that if we carry out the program and get the two additional planes it would cost $900-and-some million or $220 million more than we are going to have to spend anyhow in order to cancel out the contract.

Mr. MAHON. The contractor wants to keep his employees engaged as well as he can as he undertakes to get other contracts on this and other types of programs. We can understand the contractors and the people who represent the contractors. I am not complaining about them.

The gentleman wants me to get the figures straight. Here are the figures. On page 20 of the bill today we have provided that appropriations made available under this heading in the bill for Department of Defense Appropriation Act are rescinded in the amount of $462 million. That is what we are going to save, regardless of how much these additional production model planes cost, whether it is $200 million or $300 million. That is somewhat beside the point. The point is, we are voting on whether or not to rescind and deny the expenditure of $462 million.

Mr. ALLEN. Mr. Speaker, by doing that, are we going to subject the Federal Government to penalties for canceling the contracts in excess of that amount?

Mr. MAHON. There are always penalties for cancellations and there are funds available for cancellations.

Mr. ALLEN. Does that amount to more than $400 million?

Mr. MAHON. The termination charges will be about $300 million, and another $300 million have been expended. But do we want to save the $462 million or do we not want to do it? It seems to me we have no reasonable alternative other than to do it.

Of course, I do not want to play down the bomber program.

The bomber is more specifically a clean-up weapon. The great wave of the future, as I said before, is with our ICBM's, including the ship-launched ICBM's, and the cruise missiles. As we work through this difficult period, we do not know exactly where we are coming out, but at this time let us save the $462 million.

Mr. Speaker, I would like to say that the Air Force has not budgeted for R. & D. funds other than for the four B–1's and we have got $442 million in the 1978 bill to provide for the B–1 R. & D. program.

Now the gentlemen from California (Mr. KETCHUM) had indicated earlier that when we debated the B–1 issue last October 20, I had said something about the next war being a pushbutton war. I would like to insert in the RECORD at this point my actual remarks at that time because I do not feel that I was quoted accurately:

> I have pretty good credentials when it comes to being for a strong defense. For 28 years I have piloted through the House more than $2 trillion in funds for our national defense, and the success of that effort speaks for itself.
>
> I do not see now why the emphasis is all being put on looking at national defense through a little knothole as though the bomber was everything that was going to save us from war or win the war if war should come. Are people thinking about the past—World War II—when the bomber was the primary weapon? Does not everybody in this House know that the primary weapon of the future is the intercontinental ballistic missile? Do we not know that if war comes there will be an exchange of intercontinental ballistic missiles? Do we not know that those

missiles that we have that will be launched from submarines will be able to destroy the Soviet Union several times over?

Do we not know that the only purpose of a bomber is to do the cleanup job? And after the atomic exchange, we could probably do the cleanup job in an ox cart.

We are not relying upon the B–1 bomber or the F–111 or any other aircraft as a primary strategic weapon of this Nation. It is true that the Cruise missile is the wave of the future. Developments have come about recently that make it the wave of the future, that make it a weapon that if launched from hundreds of miles away, hundreds of Cruise missiles could destroy the Soviet Union if it had not already been destroyed by ICBM's and ship-launched ballistic missiles. So it seems to me we should not bury our head in the sand and ignore the facts of life. Remember, that the only purpose of the B–1 bomber is as a cleanup weapon, and there will not be much to clean up if that war comes. So that, it seems to me, is the major thing that we need to be considering at this time.

Mr. FRENZEL. Mr. Speaker, I supported deletion of the $462 million earmarked for construction of prototypes five and six of the now defunct B–1 bomber program.

While I am sympathetic to the argument of those who maintain that we should keep this program going until the results of the SALT II negotiations are announced, and voted that way myself, the fact remains that Congress has voted to terminate all B–1 production funds and this decision is not about to be reversed.

Both the chairman and ranking minority member of the Appropriations Committee who were supporters of the B–1 program have assured us that these two additional planes are not needed to complete the testing program. Under the circumstances these funds should be reprogramed to fulfill other defense requirements.

While my vote is in support of the administration's position, it should be pointed out that the President deserves no gold medals for his handling of the supersonic bomber issue. We have been subjected to a welter of conflicting and contradictory statements which has led me to doubt whether the administration really knows if a supersonic bomber will be needed.

The signals are not reassuring. First we are told that deployment of cruise missiles will eliminate the need for the B–1. Now we are told that the administration supports funds to evaluate the F–111H supersonic bomber which today is no more than a gleam in a defense contractor's eye. If we need a manned bomber, it should be the best, the B–1, not some jury-rigged substitute.

The administration's proposals to restrict severely the numbers and range of air launched cruise missiles coupled with recent reports of deep divisions within the ranks of our SALT negotiating team are further cause for concern.

To build or not to build two more B–1 prototypes is not the crucial issue. The fundamental concerns continues to be whether or not the emerging SALT II agreement will allow us to maintain an adequate defense capability without a supersonic bomber.

On this issue, the signals from the White House are very confusing. The President has a duty to come forward and clearly state his position. Instead of leadership we have had obfuscation.

Mr. MAHON. Mr. Speaker, I move the previous question on the motion.

The previous question was ordered.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Texas (Mr. MAHON).

The question was taken; and the Speaker pro tempore announced that the noes appeared to have it.

Mr. ADDABBO. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 166, nays 191, answered "present" 3, not voting 74, as follows:

Mr. Moss for, with Mr. Quie against.
Mr. Fithian for, with Mr. Ruppe against.

Until further notice:

Mr. Phillip Burton with Mr. Broyhill.
Mr. Railsback with Mr. Evans of Georgia.
Mr. Pritchard with Mr. Lederer.
Mr. Forsythe with Mr. Mathis.
Mr. Roncalio with Mr. Michael O. Myers.
Mr. McCloskey with Mr. Charles Wilson of Texas.

Messrs. COLEMAN, MOLLOHAN, and DICKS changed their vote from "yea" to "nay."

Mr. GINN changed his vote from "nay" to "yea."

Mr. VAN DEERLIN. Mr. Speaker, I have a live pair with the gentleman from Alabama (Mr. NICHOLS). If he were present he would have voted "nay." I voted "yea." I withdraw my vote and vote "present."

Mr. RYAN. Mr. Speaker, I have a live pair with the gentleman from California (Mr. PATTERSON). If he were present he would have voted "nay." I voted "yea." I withdraw my vote and vote "present."

Mr. VAN DEERLIN and Mr. RYAN changed their vote from "yea" to "present."

Mr. DICKS. Mr. Speaker, I have a live pair with the gentleman from Alabama (Mr. EDWARDS). If he were present he would have voted "yea." I voted "nay." I withdraw my vote and vote "present."

Mr. DICKS changed his vote from "nay" to "present."

So the motion was rejected.

The result of the vote was announced as above recorded.

MOTION OFFERED BY MR. SIKES

Mr. SIKES. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. SIKES moves that the House insist on its disagreement to Senate Amendment No. 43.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 44: Page 20, after line 17, insert: Appropriations provided under this heading in the Department of Defense Appropriation Act, 1977, are rescinded in the amount of $1,400,000.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 44 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 48: Page 24, after line 1 insert: SEC. 205. Effective October 1, 1977, section 106(a)(8) of the Legislative Branch Appropriation Act, 1963 (2 U.S.C. 60j (a)(8)), is amended by inserting "Deputy Chief Guide," after "Chief Guide,".

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 48 and concur therein.

The motion was agreed to.

Mr. MAHON. Mr. Speaker, inasmuch as amendments Nos. 49 through 51 relate solely to housekeeping operations of the other body in which, by practice, the House concurs without intervention, I ask unanimous consent that Senate amendments Nos. 49 through 51 be considered as read, printed in the RECORD, and that they be considered en bloc.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

The SPEAKER pro tempore. The Clerk will report the next three Senate amendments in disagreement.

The Clerk read as follows:

Senate amendment No. 49: Page 24, after line 1, insert:

SEC. 206. Effective October 1, 1977, section 111 of the Legislative Branch Appropriation Act, 1978, is amended—

(1) by striking out "an amount equal to three times the amount referred to in section 105(e)(1) of such Act, as amended and modified" in subsection (a) and inserting in lieu thereof "$149,286"; and

(2) by striking out "the amount referred to in section 105(e)(1) of the Legislative Branch Appropriation Act, 1968, as amended and modified," each place it appears in subsection (b) and inserting in lieu thereof "$49,762".

Senate Amendment No. 50: Page 16, after line 18, insert:

SEC. 207. Section 114 of the Legislative Branch Appropriation Act, 1978, is amended by striking out "each of which is in the office of a Senator and the pay for which is disbursed by the Secretary of the Senate" and inserting in lieu thereof "the pay for each of which is disbursed by the Secretary of the Senate out of an appropriation under the heading 'SALARIES, OFFICERS AND EMPLOYEES'.".

Senate Amendment No. 51: Page 16, after line 18, insert:

SEC. 208. Effective August 5, 1977, the last sentence of section 506(e) of the Supplemental Appropriations Act, 1973 (2 U.S.C. 58 (e)) is amended by inserting after "Office of the" the following: "President pro tempore, Deputy President pro tempore,".

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendments of the Senate numbered 49 through 51 inclusive and concur therein.

The motion was agreed to.

The SPEAKER. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 52: Page 25, line 3, insert:

SEC. 209. (a) The Secretary of Transportation shall, not later than 60 days after the date of enactment of this Act, designate on the National System of Interstate and Defense Highways, in accordance with the provisions of sections 103(e)(1) and (f) of title 23 of the United States Code, routes or portions thereof equal in total mileage (or as near thereto as practicable) to the total mileage withdrawn prior to such date from such System pursuant to section 103(e)(4) of such title 23 and not redesignated on such System.

(b) On and after the date of enactment of this Act the Secretary shall so designate on such System, in accordance with the provisions of sections 103(e)(1) and (f) of title 23 of the United States Code, routes or portions thereof equal in total mileage (or as near thereto as practicable) to mileage withdrawn from such System pursuant to such section 103(e)(4) not later than 60 days after such withdrawal.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 52 and concur therein with an amendment, as follows: In lieu of the matter inserted by said amendment, insert the following:

SEC. 209. The Secretary of Transportation shall, not later than 60 days after the date of enactment of this Act, designate as a route on the National System of Interstate and Defense Highways, from mileage withdrawn from such System before the date of enactment of this Act under authority of 23 U.S.C. 103(e), and which is available for such a designation, 1.5 miles in the State of Washington for a connection with Interstate Route 5 and the City of Tacoma, Washington.

The motion was agreed to.

The SPEAKER. The Clerk will report the last amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 53: Page 25, line 19, insert:

SEC. 210. Any export license referred to in Section 11 of Public Law 95–92 which is issued initially on or before September 30, 1978 may from time to time thereafter be renewed, reissued or modified (or in the event of lapse of such license, replacement licenses may be issued), provided that any such renewal, reissuance or modification (or any such replacement license) does not change significantly any such license as initially issued.

MOTION OFFERED BY MR. MAHON

Mr. MAHON. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. MAHON moves that the House recede from its disagreement to the amendment of the Senate numbered 53 and concur therein.

The motion was agreed to.

A motion to reconsider the votes by which action was taken on the conference report and the several motions was laid on the table.

GENERAL LEAVE

Mr. MAHON. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks and include extraneous material on the conference report and the amendments reported in disagreement on the bill (H.R. 9375) making supplemental appropriations for the fiscal year ending September 30, 1978, and for other purposes, and that I may include extraneous material and certain tables.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Texas?

There was no objection.

HOUR OF MEETING TOMORROW

Mr. BRADEMAS. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet at 10 a.m. tomorrow.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Indiana?

Mr. BAUMAN. Reserving the right to object, Mr. Speaker, I yield to the distinguished minority leader, the gentleman from Arizona (Mr. RHODES).

Mr. RHODES. Mr. Speaker, it was my purpose to inquire of the distinguished acting majority leader as to the program for the rest of the week.

Mr. BRADEMAS. If the gentleman from Maryland (Mr. BAUMAN) will yield, Mr. Speaker, I would say to the distinguished minority leader that tomorrow we shall vote on the conference report on H.R. 9418, the Public Health Service Act amendment, capitation grants for third-year medical students.

Next, we shall take up the conference report on H.R. 6666, the Legal Services Corporation Amendments Act of 1977.

S. 1340, the Energy Research and Development Administration Authorization Act of 1978.

Possibly, in the event that the other body has acted on the continuing resolution on the appropriations for the Departments of Labor-HEW, we will consider that measure.

Mr. RHODES. Mr. Speaker, if the gentleman will yield still further, could the distinguished acting majority leader tell the House as to about how long we should expect to be in session tomorrow? Will there be any time set for adjournment tomorrow?

Mr. BRADEMAS. Not so far as I am aware of, I may say to the minority leader.

Mr. RHODES. Will the vote on the continuing resolution probably be the last vote that we will have?

Mr. BRADEMAS. Not necessarily. Rather it is likely to be scheduled as soon as it comes over from the other body.

Mr. RHODES. I thank the gentleman.

Mr. BAUMAN. Mr. Speaker, further reserving the right to object, I wonder if the gentleman can tell us, as a courtesy to the Members, whether we can expect pro forma sessions will continue the rest of the month or whether further legislation is going to be scheduled before Christmas? Also whether there is any truth to the rumors that we will remain in session through the end of this month, and they will be continued the first week of January, instead of having any recess at all.

Mr. BRADEMAS. Will the gentleman yield?

Mr. BAUMAN. I certainly do yield to the gentleman.

Mr. BRADEMAS. Mr. Speaker, I know of no plan on the part of the leadership to schedule any other legislation other than the ones that I have just listed.

Mr. BAUMAN. So there will be no further legislation scheduled after Thursday if we complete the continuing resolution?

Mr. BRADEMAS. There is, of course, still the energy bill which is in conference but, as the gentleman knows, it is not possible to say with any assurance whether the conferees will come to agreement on that issue. Then there is also the social security financing which as the gentleman knows is in conference, and it is not possible to say with assurances when the conferees will come to agreement on that bill, and in the event the conferees were to agree on both of those bills in a timely fashion it would be possible for us to vote on them.

Mr. BAUMAN. Further reserving the right to object, assuming that both of those are unlikely to come up by the remainder of this year is there a plan to have some recess between the sessions?

Mr. BRADEMAS. It is not possible to answer the gentleman's question with the degree of certainty that the majority whip would himself like to be able to give the gentleman. We will have, I hope, a better idea tomorrow after we have seen how the other body disposes the Labor-HEW appropriations bill.

Mr. BAUMAN. I thank the gentleman.

Mr. RHODES. Mr. Speaker, will the gentleman yield further?

Mr. BAUMAN. I yield further to the gentleman from Arizona.

Mr. RHODES. Mr. Speaker, would it be the purpose of the majority to have a pro forma session on Thursday and then go over until Monday noon?

Mr. BRADEMAS. Yes, I think this would be the present arrangement of the leadership on this side.

Mr. RHODES. I thank the gentleman.

Mr. BAUMAN. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Indiana?

There was no objection.

CONFERENCE REPORT ON H.R. 3199, WATER POLLUTION CONTROL ACT AMENDMENTS OF 1977

Mr. JOHNSON of California submitted the following conference report and statement on the bill (H.R. 3199) to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes:

CONFERENCE REPORT (H. REPT NO. 95–830)

The committee of conference of the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 3199) to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the Senate amendment insert the following:

That this Act may be cited as the "Clean Water Act of 1977".

SHORT TITLE

SEC. 2. Section 518 of the Federal Water Pollution Control Act is amended to read as follows:

"SHORT TITLE

"SEC. 518. This Act may be cited as the 'Federal Water Pollution Control Act' (commonly referred to as the Clean Water Act).".

AUTHORIZATION APPROVAL

SEC. 3. Funds appropriated before the date of enactment of this Act for expenditure during the fiscal year ending June 30, 1976, the transition quarter ending September 30, 1976, and the fiscal year ending September 30, 1977, under authority of the Federal Water Pollution Control Act, are hereby authorized for those purposes for which appropriated.

AUTHORIZATION EXTENSION

SEC. 4. (a) Section 104(u)(2) of the Federal Water Pollution Control Act is amended by striking out "1975" and inserting in lieu thereof "1975, $2,000,000 for fiscal year 1977, $3,000,000 for fiscal year 1978, $3,000,000 for fiscal year 1979, and $3,000,000 for fiscal year 1980.".

(b) Section 104(u)(3) of the Federal Water Pollution Control Act is amended by striking out ""1975" and inserting in lieu thereof "1975, $1,000,000 for fiscal year 1977, $1,500,000 for fiscal year 1978, $1,500,000 for fiscal year 1979, and $1,500,000 for fiscal year 1980,".

(c) Section 106(a)(2) of the Federal Water Pollution Control Act is amended by striking out "and the fiscal year ending June 30, 1975;" and inserting in lieu thereof "and the fiscal year ending June 30, 1975, $100,000,000 per fiscal year for the fiscal years 1977, 1978, 1979, and 1980;".

(d) Section 112(c) of the Federal Water Pollution Control Act is amended by inserting "$6,000,000 for the fiscal year ending September 30, 1977, $7,000,000 for the fiscal year ending September 30, 1978, $7,000,000 for the fiscal year ending September 30, 1979, and $7,000,000 for the fiscal year ending September 30, 1980," immediately after "June 30, 1975,".

(e) Section 208(f)(3) of the Federal Water Pollution Control Act is amended by striking out "and not to exceed $150,000,000 for the fiscal year ending June 30, 1975." and inserting in lieu thereof "and not to exceed $150,000,000 per fiscal year for the fiscal years ending June 30, 1975, September 30, 1977, September 30, 1978, September 30, 1979, and September 30, 1980.".

(f) Section 314(c)(2) of the Federal Water Pollution Control Act is amended by striking out "and $150,000,000 for the fiscal year 1975" and inserting in lieu thereof "$150,000,000 for the fiscal year 1975, $50,000,000 for fiscal year 1977, $60,000,000 for fiscal year 1978, $60,000,000 for fiscal year 1979, and $60,000,000 for fiscal year 1980".

(g) Section 517 of the Federal Water Pollution Control Act is amended by striking out "and $350,000,000 for the fiscal year ending June 30, 1975," and inserting in lieu thereof "$350,000,000 for the fiscal year ending June 30, 1975, $100,000,000 for the fiscal year ending September 30, 1977, $150,000,000 for the fiscal year ending September 30, 1978, $150,000,000 for the fiscal year ending September 30, 1979, and $150,000,000 for the fiscal year ending September 30, 1980.".

STATE JURISDICTION

SEC. 5. (a) Section 101 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(g) It is the policy of Congress that the authority of each State to allocate quantities of water within its jurisdiction shall not be superseded, abrogated or otherwise impaired by this Act. It is the further policy of Congress that nothing in this Act shall be construed to supersede or abrogate rights to quantities of water which have been established by any State. Federal agencies shall co-operate with State and local agencies to develop comprehensive solutions to prevent, reduce and eliminate pollution in concert with programs for managing water resources.".

(b) Section 102 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(d) The Administrator, after consultation with the States, and River Basin Commissions established under the Water Resources Planning Act, shall submit a report to Congress on or before July 1, 1978, which analyzes the relationship between programs under this Act, and the programs by which State and Federal agencies allocate quantities of water. Such report shall include recommendations concerning the policy in section 101(g) of the Act to improve coordination of efforts to reduce and eliminate pollution in concert with programs for managing water resources.".

ESTUARINE STUDY

SEC. 6. Section 104(n)(3) of the Federal Water Pollution Control Act is amended by striking out "any three year period" and inserting in lieu thereof "any six-year period".

CLEARINGHOUSE FOR ALTERNATIVE TREATMENT INFORMATION

SEC. 7. Section 104(q) of the Federal Water Pollution Control Act is amended by adding at the end thereof the following:

"(2) The Administrator shall establish, either within the Environmental Protection Agency, or through contract with an appropriate public or private non-profit organization, a national clearinghouse which shall (A) receive reports and information resulting from research, demonstrations, and other projects funded under this Act related to paragraph (1) of this subsection and to subsection (e)(2) of section 105; (B) coordinate and disseminate such reports and information for use by Federal and State agencies, municipalities, institutions, and persons in developing new and improved methods pursuant to this subsection; and (C) provide for the collection and dissemination of reports and information relevant to this subsection from other Federal and State agencies, institutions, universities, and persons.".

ASSISTANCE FOR RESEARCH AND DEMONSTRATION PROJECTS

SEC. 8. Section 105 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(i) The Administrator is authorized to make grants to a municipality to assist in the costs of operating and maintaining a project which received a grant under this section, section 104, or section 113 of this Act prior to the date of enactment of this subsection so as to reduce the operation and maintenance costs borne by the recipients of services from such project to costs comparable to those for projects assisted under title II of this Act.".

ASSISTANCE FOR RECYCLE, REUSE, AND LAND TREATMENT PROJECTS

SEC. 9. Section 105 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(j) The Administrator is authorized to make a grant to any grantee who received an increased grant pursuant to section 202(a)(2) of this Act. Such grant may pay up to 100 per centum of the costs of technical evaluation of the operation of the treatment works, costs of training of persons (other than employees of the grantee), and costs of disseminating technical information on the operation of the treatment works.".

TRAINING GRANTS

SEC. 10. (a) Section 109(b)(3) of the Federal Water Pollution Control Act is amended by striking "$250,000" and inserting in lieu thereof "$500,000".

(b) Section 109(b) of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new paragraph:

"(4) The Administrator may exempt a grant under this section from any requirement under section 204(a)(3) of this Act. Any grantee who received a grant under this section prior to enactment of the Clean Water Act of 1977 shall be eligible to have its grant increased by funds made available under such Act.".

(c) Section 109(b)(1) of the Federal Water Pollution Control Act is amended by inserting before the period the following: "and for the costs of other State treatment works operator training programs, including mobile training units, classroom rental, specialized instructors, and instructional material".

(d) Section 109(b)(1) of the Federal Water Pollution Control Act is amended by striking out "construction of a treatment works" and inserting in lieu thereof: "construction of treatment works".

(e) Section 109(b)(2) of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new sentence: "In any case where a grant is made to serve two or more States, the Administrator is authorized to make an additional grant for a supplemental facility in each such State.".

RURAL VILLAGE STUDY

SEC. 11. (a) Section 113 of the Federal Water Pollution Control Act is amended by adding new subsections (e), (f), and (g) as follows:

"(e) The Administrator is authorized to coordinate with the Secretary of the Department of Health, Education, and Welfare, the Secretary of the Department of Housing and Urban Development, the Secretary of the Department of the Interior, the Secretary of the Department of Agriculture, and the heads of any other departments or agencies he may deem appropriate to conduct a joint study with representatives of the State of Alaska and the appropriate Native organizations (as defined in Public Law 92–203) to develop a comprehensive program for achieving adequate sanitation services in Alaska villages. This study shall be coordinated with the programs and projects authorized by sections 104(q) and 105(e)(2) of this Act. The Administrator shall submit a report of the results of the study, together with appropriate supporting data and such recommendations as he deems desirable, to the Committee on Environment and Public Works of the Senate and to the Committee on Public Works and Transportation of the House of Representatives not later than December 31, 1979. The Administrator shall also submit recommended administrative actions, procedures, and any proposed legislation necessary to implement the recommendations of the study no later than June 30, 1980.

"(f) The Administrator is authorized to provide technical, financial and management assistance for operation and maintenance of the demonstration projects constructed under this section, until such time as the recommendations of subsection (e) are implemented.

"(g) For the purpose of this section, the term 'village' shall mean an incorporated or unincorporated community with a population of ten to six hundred people living within a two-mile radius. The term 'sanitation services' shall mean water supply, sewage disposal, solid waste disposal and other services necessary to maintain generally accepted standards of personal hygiene and public health.".

(b) Subsection (d) of section 113 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following: "In addition, there is authorized to be appropriated to carry out this section not to exceed $200,000 for the fiscal year ending September 30, 1978, and $220,000 for the fiscal year ending September 30, 1979."

GRANT APPLICATION REVIEW

Sec. 12. Section 201(g) of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new paragraph:

"(5) The Administrator shall not make grants from funds authorized for any fiscal year beginning after September 30, 1978, to any State, municipality, or intermunicipal or interstate agency for the erection, building, acquisition, alteration, remodeling, improvement, or extension of treatment works unless the grant applicant has satisfactorily demonstrated to the Administrator that innovative and alternative wastewater treatment processes and techniques which provide for the reclaiming and reuse of water, otherwise eliminate the discharge of pollutants, and utilize recycling techniques, land treatment, new or improved methods of waste treatment management for municipal and industrial waste (discharged into municipal systems) and the confined disposal of pollutants, so that pollutants will not migrate to cause water or other environmental pollution, have been fully studied and evaluated by the applicant taking into account section 201(d) of this Act and taking into account and allowing to the extent practicable the more efficient use of energy and resources.".

RECREATION AND OPEN SPACE

Sec. 13. Section 201(g) of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new paragraph:

"(6) The Administrator shall not make grants from funds authorized for any fiscal year beginning after September 30, 1978, to any State, municipality, or intermunicipal or interstate agency for the erection, building, acquisition, alteration, remodeling, improvement, or extension of treatment works unless the grant applicant has satisfactorily demonstrated to the Administrator that the applicant has analyzed the potential recreation and open space opportunities in the planning of the proposed treatment works.".

INDIVIDUAL SYSTEMS

SEC. 14. Section 201 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(h) A grant may be made under this section to construct a privately owned treatment works serving one or more principal residences or small commercial establishments constructed prior to, and inhabited on, the date of enactment of this subsection where the Administrator finds that—

"(1) a public body otherwise eligible for a grant under subsection (g) of this section has applied on behalf of a number of such units and certified that public ownership of such works is not feasible;

"(2) such public body has entered into an agreement with the Administrator which guarantees that such treatment works will be properly operated and maintained and will comply with all other requirements of section 204 of this Act and includes a system of charges to assure that each recipient of waste treatment services under such a grant will pay its proportionate share of the cost of operation and maintenance (including replacement); and

"(3) the total cost and environmental impact of providing waste treatment services to such residences or commercial establishments will be less than the cost of providing a system of collection and central treatment of such wastes.

In the case of any treatment works assisted under this subsection serving commercial users, any such agreement under paragraph (2) shall make provision for the payment to the United States by the commercial users of the treatment works of that portion of the cost of construction of such works which is applicable to the treatment of commercial wastes to the extent attributable to the Federal share of the cost of construction.".

ENERGY REQUIREMENTS

SEC. 15. Section 201 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(i) The Administrator shall encourage waste treatment management methods, processes, and techniques which will reduce total energy requirements.".

COST EFFECTIVENESS

SEC. 16. Section 201 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(j) The Administrator is authorized to make a grant for any treatment works utilizing processes and techniques meeting the guidelines promulgated under section 304(d) (3) of this Act, if the Administrator determines it is in the public interest and if in the cost effectiveness study made of the construction grant application for the purpose of evaluating alternative treatment works, the life cycle cost of the treatment works for which the grant is to be made does not exceed the life cycle cost of the most cost effective alternative by more than 15 per centum.".

FEDERAL GRANT SHARE

SEC. 17. Subsection (a) of section 202 of the Federal Water Pollution Control Act is amended by inserting "(1)" immediately after "(a)" and by inserting at the end thereof the following new paragraphs:

"(2) The amount of any grant made after September 30, 1978, and before October 1, 1981, for any eligible treatment works or significant portion thereof utilizing innovative or alternative wastewater treatment processes and techniques referred to in section 201(g)(5) shall be 85 per centum of the cost of construction thereof. No grant shall be made under this paragraph for construction of a treatment works in any State unless the proportion of the State contribution to the non-Federal share of construction costs for all treatment works in such State receiving a grant under this paragraph is the same as or greater than the proportion of the State contribution (if any) to the non-Federal share of construction costs for all treatment works receiving grants in such State under paragraph (1) of this subsection.

"(3) In addition to any grant made pursuant to paragraph (2) of this subsection, the Administrator is authorized to make a grant to fund all of the costs of the modification or replacement of any facilities constructed with a grant made pursuant to paragraph (2) if the Administrator finds that such facilities have not met design performance specifications unless such failure is attributable to negligence on the part of any person and if such failure has significantly increased capital or operating and maintenance expenditures.

"(4) For the purposes of this section, the term 'eligible treatment works' means those treatment works in each State which meet the requirements of section 201(g)(5) of this Act and which can be fully funded from funds available for such purpose in such State in the fiscal years ending September 30, 1979, September 30, 1980, and September 30, 1981. Such term does not include collector sewers, interceptors, storm or sanitary sewers or the separation thereof, or major sewer rehabilitation.".

COMBINED GRANTS

SEC. 18. Section 203(a) of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new sentences: "In the case of a treatment works that has an estimated total cost of $2,000,000 or less (as determined by the Administrator), and the population of the applicant municipality is twenty-five thousand or less (according to the most recent United States census), upon completion of an approved facility plan, a single grant may be awarded for the combined Federal share of the cost of preparing construction plans and specifications, and the building and erection of the treatment works. If any State is found by the Administrator to have unusually high costs of construction, the Administrator may authorize a single grant under the preceding sentence where the estimated total cost of the treatment works does not exceed $3,000,000.".

CONTRACT ENFORCEMENT

SEC. 19. Section 203 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(e) At the request of a grantee under this title, the Administrator is authorized to provide technical and legal assistance in the administration and enforcement of any contract in connection with treatment works assisted under this title, and to intervene in any civil action involving the enforcement of such a contract.".

PRIORITY

SEC. 20. Section 204(a)(3) of the Federal Water Pollution Control Act is amended by inserting immediately after the word "Act" the following: ", except that any priority list developed pursuant to section 303(e)(3) (H) may be modified by such State in accordance with regulations promulgated by the Administrator to give higher priority for grants for the Federal share of the cost of preparing construction drawings and specifications for any treatment works utilizing processes and techniques meeting the guidelines promulgated under section 304(d)(3) of this Act and for grants for the combined Federal share of the cost of preparing construction drawings and specifications and the building and erection of any treatment works meeting the requirements of the next to the last sentence of section 203(a) of this Act which utilizes processes and techniques meeting the guidelines promulgated under section 304(d)(3) of this Act.".

RESERVE CAPACITY

SEC. 21. Section 204(a)(5) of the Federal Water Pollution Control Act is amended by striking out the semicolon at the end thereof and inserting in lieu thereof a comma and the following: "after taking into account, in accordance with regulations promulgated by the Administrator, efforts to reduce total flow of sewage and unnecessary water consumption. The amount of reserve capacity eligible for a grant under this title shall be determined by the Administrator taking into account the projected population and associated commercial and industrial establishments within the jurisdication of the applicant to be served by such treatment works as identified in an approved facilities plan, an areawide plan under section 208, or an applicable municipal master plan of development. For the purpose of this paragraph, section 208, and any such plan, projected population shall be determined on the basis of the latest information available from the United States Department of Commerce or from the States as the Administrator, by regulation, determines appropriate.".

USER CHARGES

SEC. 22. (a) Paragraph (1) of subsection (b) of section 204 of the Federal Water Pollution Control Act is amended—

(1) by striking out in clause (A) "proportionate share" and inserting in lieu thereof "proportionate share (except as otherwise provided in this paragraph)"; and

(2) by adding at the end of such paragraph (1) the following: "In any case where an applicant which, as of the date of enactment of this sentence, uses a system of dedicated ad valorem taxes and the Administrator determines that the applicant has a system of charges which results in the distribution of operation and maintenance costs for treatment works within the applicant's jurisdiction, to each user class, in proportion to the contribution to the total cost of operation and maintenance of such works by each user class (taking into account total waste water loading of such works, the constituent elements of the wastes, and other appropriate factors), and such applicant is otherwise in compliance with clause (A) of this paragraph with respect to each industrial user, then such dedicated ad valorem tax system shall be deemed to be the user charge system meeting the requirements of clause (A) of this paragraph for the residential user class and such small non-residential user classes as defined by the Administrator. In defining small non-residential users, the Administrator shall consider the volume of wastes discharged into the treatment works by such users and the constituent elements of such wastes as well as such other factors as he deems appropriate."

(b) Subsection (b) of section 204 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new paragraph:

"(5) A system of charges which meets the requirement of clause (A) of paragraph (1) of this subsection may be based on something other than metering the sewage or water supply flow of residential recipients of waste treatment services, including ad valorem taxes. If the system of charges is based on something other than metering the Administrator shall require (A) the applicant to establish a system by which the necessary funds will be available for the proper operation and maintenance of the treatment works; and (B) the applicant to establish a procedure under which the residential user will be notified as to that portion of his total payment which will be allocated to the cost of the waste treatment services.".

WATER CONSERVATION

SEC. 23. Section 204(b)(3) of the Federal Water Pollution Control Act is amended by adding at the end thereof the following: "Notwithstanding paragraph (1)(B) of this subsection, subject to the approval of the Administrator, a grantee that received a grant prior to the enactment of the Clean Water Act of 1977 may reduce the amounts required to be paid to such grantee by any industrial user of waste treatment services under such paragraph, if such grantee requires such industrial user to adopt other means of reducing the demand for waste treatment services through reduction in the total flow of sewage or unnecessary water consumption, in proportion to such reduction as determined in accordance with regulations promulgated by the Administrator.".

INDUSTRIAL COST RECOVERY

SEC. 24. (a) Section 204(b)(3)(B) of the Federal Water Pollution Control Act is amended by inserting after "necessary for" the following: "the administrative costs associated with the requirement of paragraph (1)(B) of this subsection and".

(b) Section 204(b) of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new paragraph:

"(6) The Administrator is authorized to exempt from the requirement of paragraph (1)(B) of this subsection any industrial user with a flow into such treatment works per day equivalent to twenty-five thousand gallons or less per day of sanitary waste, if such industrial user does not introduce into such treatment works any pollutant which interferes or is incompatible with, or contaminates or reduces the utility of the sludge of such works.".

(c) Sestion 204(b)(1)(B) of the Federal Water Pollution Control Act is amended by inserting before the semicolon the following: "(which such portion, in the discretion of the applicant, may be recovered from industrial users of the total waste treatment system as distinguished from the treatment works for which the grant is made)".

ALLOTMENT

Sec. 25. (a) The first sentence of subsection (a) of section 205 of the Federal Water Pollution Control Act is amended by striking out "June 30, 1972," and inserting in lieu thereof "June 30, 1972, and before September 30, 1977,".

(b) Such section 205 is further amended by adding at the end thereof the following new subsections:

"(c) Sums authorized to be appropriated pursuant to section 207 for the fiscal years during the period beginning October 1, 1977, and ending September 30, 1981, shall be allotted for each such year by the Administrator not later than the tenth day which begins after the date of enactment of the Clean Water Act of 1977. Notwithstanding any other provision of law, sums authorized for the fiscal years ending September 30, 1978, September 30, 1979, September 30, 1980, and September 30, 1981, shall be allotted in accordance with table 3 of Committee Print Numbered 95-30 of the Committee on Public Works and Transportation of the House of Representatives.

"(d) Sums allotted to the States for a fiscal year shall remain available for obligation for the fiscal year for which authorized and for the period of the next succeeding twelve months. The amount of any allotment not obligated by the end of such twenty-four-month period shall be immediately reallotted by the Administrator on the basis of the same ratio as applicable to sums allotted for the then current fiscal year, except that none of the funds reallotted by the Administrator for fiscal year 1978 and for fiscal years thereafter shall be allotted to any State which failed to obligate any of the funds being reallotted. Any sum made available to a State by reallotment under this subsection shall be in addition to any funds otherwise allotted to such State for grants under this title during any fiscal year.

"(e) For the fiscal years 1978, 1979, 1980, and 1981, no State shall receive less than one-half of 1 per centum of the total allotment under subsection (c) of this section, except that in the case of Guam, Virgin Islands, American Samoa, and the Trust Territories not more than thirty-three one-hundredths of 1 per centum in the aggregate shall be allotted to all four of these jurisdictions. For the purpose of carrying out this subsection there are authorized to be appropriated, subject to such amounts as are provided in appropriation Acts, not to exceed $75,000,000 for each of fiscal years 1978, 1979, 1980, and 1981. If for any fiscal year the amount appropriated under authority of this subsection is less than the amount necessary to carry out this subsection, the amount each State receives under this subsection for such year shall bear the same ratio to the amount such State would have received under this subsection in such year if the amount necessary to carry it out had been appropriated as the amount appropriated for such year bears to the amount necessary to carry out this subsection for such year.

"(f) Notwithstanding any other provision of this section, sums made available between January 1, 1975, and March 1, 1975, by the Administrator for obligation shall be available for obligation until September 30, 1978.".

STATE MANAGEMENT ASSISTANCE

Sec. 26. (a) Section 205 of the Federal Water Pollution Control Act is amended by adding after new subsection (f) the following new subsection:

"(g)(1) The Administrator is authorized to reserve each fiscal year not to exceed 2 per centum of the allotment made to each State under this section on or after October 1, 1977, or $400,000 whichever amount is the greater. Sums so reserved shall be available for making grants to such State under paragraph (2) of this subsection for the same period as sums are available from such allotment under subsection (d) of this section, and any such grant shall be available for obligation only during such period. Any grant made from sums reserved under this subsection which has not been obligated by the end of the period for which available shall be added to the amount last allotted to such State under this section and shall be immediately available for obligation in the same manner and to the same extent as such last allotment.

"(2) The Administrator is authorized to grant to any State from amounts reserved to such State under this subsection, the reasonable costs of administering any aspects of sections 201, 203, 204, and 212 of this Act the responsibility for administration of which the Administrator has delegated to such State. The Administrator may increase such grant to take into account the reasonable costs of administering an approved program under section 402 or 404, administering a statewide waste treatment management planning program under section 208(b)(4), and managing waste treatment construction grants for small communities.".

(b) Section 101(b) of Federal Water Pollution Control Act is amended by inserting immediately after the first sentence the following new sentence: "It is the policy of Congress that the States manage the construction grant program under this Act and implement the permit programs under sections 402 and 404 of this Act.".

SET ASIDE FOR ALTERNATIVE SYSTEMS FOR SMALL COMMUNITIES

Sec. 27. Section 205 of Federal Water Pollution Control Act is amended by adding after new subsection (g) a new subsection as follows:

"(h) The Administrator shall set aside from funds authorized for each fiscal year beginning on or after October 1, 1978, four per centum of the sums allotted to any State with a rural population of 25 per centum or more of the total population of such State, as determined by the Bureau of the Census. The Administrator may set aside no more than four per centum of the sums allotted to any other State for which the Governor requests such action. Such sums shall be available only for alternatives to conventional sewage treatment works for municipalities having a population of three thousand five hundred or less, or for the highly dispersed sections of larger municipalities, as defined by the Administrator.".

FUNDING

Sec. 28. Section 205 of the Federal Water Pollution Control Act is further amended by adding at the end thereof the following new subsection:

"(i) Not less than one-half of one per centum of funds allotted to a State for each of the fiscal years ending September 30, 1979, September 30, 1980, and September 30, 1981, under subsection (a) of this section shall be expended only for increasing the Federal share of grants for construction of treatment works utilizing innovative processes and techniques from 75 per centum to 85 per centum pursuant to section 202(a)(2) of this Act. Including the expenditures authorized by the preceding sentence, a total of two per centum of the funds allotted to a State for each of the fiscal years ending September 30, 1979, and September 30, 1980, and 3 per centum of the funds allotted to a State for the fiscal year ending September 30, 1981, under subsection (a) of this section shall be expended only for increasing grants for construction of treatment works from 75 per centum to 85 per centum pursuant to section 202(a)(2) of this Act.".

REIMBURSEMENT AND ADVANCED CONSTRUCTION

Sec. 29. (a) Subsection (a) of section 206 of the Federal Water Pollution Control Act is amended by striking out "July 1, 1972," and inserting in lieu thereof "July 1, 1973,".

(b) Notwithstanding section 206(c) of the Federal Water Pollution Control Act and section 2 of Public Law 93-207, in the case of publicly owned treatment works for which a grant was made under the Federal Water Pollution Control Act, as amended by the Water Pollution Control Act Amendments of 1956 (Public Law 660, 84th Congress) before July 1, 1972, and on which construction was initiated before July 1, 1973, applications for assistance under such section 206 shall be filed not later than the ninetieth day after the date of enactment of the Clean Water Act of 1977.

CONSTRUCTION GRANT AUTHORIZATIONS

Sec. 30. Section 207 of the Federal Water Pollution Control Act is amended by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "and, subject to such amounts as are provided in appropriation Acts, for the fiscal year ending September 30, 1977, $1,000,000,000 for the fiscal year ending September 30, 1978, $4,500,000,000 and for the fiscal years ending September 30, 1979, September 30, 1980, September 30, 1981, and September 30, 1982, not to exceed $5,000,000,000 per fiscal year.".

AREAWIDE PLANNING

Sec. 31. (a) Section 208(b)(1) of the Federal Water Pollution Control Act is amended by inserting "(A)" after "(b)(1)" and by adding at the end thereof the following new subparagraph:

"(B) For any agency designated after 1975 under subsection (a) of this section and for all portions of a State for which the State is required to act as the planning agency in accordance with subsection (a)(6), the initial plan prepared in accordance with such process shall be certified by the Governor and submitted to the Administrator not later than three years after the receipt of the initial grant award authorized under subsection (f) of this section.".

(b) Section 208(f)(2) of the Federal Water Pollution Control Act is amended to read as follows:

"(2) For the two-year period beginning on the date the first grant is made under paragraph (1) of this subsection to an agency, if such first grant is made before October 1, 1977, the amount of each such grant to such agency shall be 100 per centum of the costs of developing and operating a continuing areawide waste treatment management planning process under subsection (b) of this section, and thereafter the amount granted to such agency shall not exceed 75 per centum of such costs in each succeeding one-year period. In the case of any other grant made to an agency under such paragraph (1) of this subsection, the amount of such grant shall not exceed 75 per centum of the costs of developing and operating a continuing areawide waste treatment management planning process in any year.".

(c) The second sentence of section 208(f)(3) of the Federal Water Pollution Control Act is amended by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "subject to such amounts as are provided in appropriation Acts.".

AREAWIDE WASTE TREATMENT MANAGEMENT

SEC. 32. Section 208(b)(2)(A) of the Federal Water Pollution Control Act is amended by inserting before the semicolon a comma and the following: "and an identification of open space and recreation opportunities that can be expected to result from improved water quality, including consideration of potential use of lands associated with treatment works and increased access to water-based recreation".

IRRIGATION RETURN FLOWS

SEC. 33. (a) Section 208(b)(2)(F) of the Federal Water Pollution Control Act is amended by adding after "sources of pollution, including" the following: "return flows from irrigated agriculture, and their cumulative effects,".

(b) Section 502(14) of the Federal Water Pollution Control Act is amended by adding at the end thereof the following: "This term does not include return flows from irrigated agriculture.".

(c) Section 402 of the Federal Water Pollution Control Act is amended by adding at the end thereof a new subsection as follows:

"(l) The Administrator shall not require a permit under this section for discharges composed entirely of return flows from irrigated agiculture, nor shall the Administrator directly or indirectly, require any State to require such a permit.".

STATE BEST MANAGEMENT PRACTICES PROGRAM

SEC. 34. (a) Paragraph (4) of subsection (b) of section 208 of the Federal Water Pollution Control Act is amended—

(1) by inserting "(A)" immediately after "(4)";

(2) by striking out "to the Administrator for application to all regions within such State." and inserting in lieu thereof "to the Administrator for approval for application to a class or category of activity througout such State."; and

(3) by inserting at the end thereof the following new subparagraphs:

"(B) Any program submitted under subparagraph (A) of this paragraph which, in whole or in part, is to control the discharge or other placement of dredged or fill material into the navigable water shall include the following:

"(i) A consultation process which includes the State agency with primary jurisdiction over fish and wildlife resources.

"(ii) A process to identify and manage the discharge or other placement of dredged or fill material which adversely affects navigable waters, which shall complement and be coordinated with a State program under section 404 conducted pursuant to this Act.

"(iii) A process to assure that any activity conducted pursuant to a best management practice will comply with the guidelines established under section 404(b)(1), and sections 307 and 403 of this Act.

"(iv) A process to assure that any activity conducted pursuant to a best management practice can be terminated or modified for cause including, but not limited to, the following:

"(I) violation of any condition of the best management practice;

"(II) change in any activity that requires either a temporary or permanent reduction or elimination of the discharge pursuant to the best management practice.

"(v) A process to assure continued coordination with Federal and Federal-State water-related planning and reviewing processes, including the National Wetlands Inventory.

"(C) If the Governor of a State obtains approval from the Administrator of a statewide regulatory program which meets the requirements of subparagraph (B) of this paragraph and if such State is administering a permit program under section 404 of this Act, no person shall be required to obtain an individual permit pursuant to such section, or to comply with a general permit issued pursuant to such section, with respect to any appropriate activity within such State for which a best management practice has been approved by the Administrator under the program approved by the Administrator pursuant to this paragraph.

"(D)(i) Whenever the Administrator determines after public hearing that a State is not administering a program approved under this section in accordance with the requirements of this section, the Administrator shall so notify the State, and if appropriate corrective action is not taken within a reasonable time, not to exceed ninety days, the Administrator shall withdraw approval of such program. The Administrator shall not withdraw approval of any such program unless he shall first have notified the State, and made public, in writing, the reasons for such withdrawal.

"(ii) In the case of a State with a program submitted and approved under this paragraph, the Administrator shall withdraw approval of such program under this subparagraph only for a substantial failure of the State to administer its program in accordance with the requirements of this paragraph.".

(b) Section 208 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(i)(1) The Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service, shall, upon request of the Governor of a State, and without reimbursement, provide technical assistance to such State in developing a statewide program for submission to the Administrator under subsection (b)(4)(B) of this section and in implementing such program after its approval.

"(2) There is authorized to be appropriated to the Secretary of the Interior $6,000,000 to complete the National Wetlands Inventory of the United States, by December 31, 1981, and to provide information from such Inventory to States as it becomes available to assist such States in the development and operation of programs under this Act.".

AGRICULTURAL COST SHARING

SEC. 35. Section 208 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(j)(1) The Secretary of Agriculture, with the concurrence of the Administrator, and acting through the Soil Conservation Service and such other agencies of the Department of Agriculture as the Secretary may designate, is authorized and directed to establish and administer a program to enter into contracts of not less than five years nor more than ten years with owners and operators having control of rural land for the purpose of installing and maintaining measures incorporating best management practices to control nonpoint source pollution for improved water quality in those States or areas for which the Administrator has approved a plan under subsection (b) of this section where the practices to which the contracts apply are certified by the management agency designated under subsection (c)(1) of this section to be consistent with such plans and will result in improved water quality. Such contracts may be entered into during the period ending not later than September 31, 1988. Under such contracts the land owner or operator shall agree—

"(i) to effectuate a plan approved by a soil conservation district, where one exists, under this section for his farm, ranch, or other land substantially in accordance with the schedule outlined therein unless any requirement thereof is waived or modified by the Secretary;

"(ii) to forfeit all rights to further payments or grants under the contract and refund to the United States all payments and grants received thereunder, with interest, upon his violation of the contract at any stage during the time he has control of the land if the Secretary, after considering the recommendations of the soil conservation district, where one exists, and the Administrator, determines that such violation is of such a nature as to warrant termination of the contract, or to make refunds or accept such payment adjustments as the Secretary may deem appropriate if he determines that the violation by the owner or operator does not warrant termintaion of the contract;

"(iii) upon transfer of his right and interest in the farm, ranch, or other land during the contract period to forfeit all rights to further payments or grants under the contract and refund to the United States all payments or grants received thereunder, with interest, unless the transferee of any such land agrees with the Secretary to assume all obligations of the contract;

"(iv) not to adopt any practice specified by the Secretary on the advice of the Administrator in the contract as a practice which would tend to defeat the purposes of the contract;

"(v) to such additional provisions as the Secretary determines are desirable and includes in the contract to effectuate the purposes of the program or to facilitate the practical administration of the program.

"(2) In return for such agreement by the landowner or operator the Secretary shall agree to provide technical assistance and share the cost of carrying out those conservation practices and measures set forth in the contract for which he determines that cost sharing is appropriate and in the public interest and which are approved for cost sharing by the agency designated to implement the plan developed under subsection (b) of this section. The portion of such cost (including labor) to be shared shall be that part which the Secretary determines is necessary and appropriate to effectuate the installation of the water quality management practices and measures under the contract but not to exceed 50 per centum of the total cost of the measures set forth in the contract; except the Secretary may increase the matching cost share where he determines that (1) the main benefits to be derived from the measures are related to improving offsite water quality, and (2) the matching share requirement would place a burden on the landowner which would probably prevent him from participating in the program.

"(3) The Secretary may terminate any contract with a landowner or operator by mutual agreement with the owner or operator if the Secretary determines that such termination would be in the public interest, and may agree to such modification of contracts previously entered into as he may determine to be desirable to carry out the purposes of the program or facilitate the practical administration thereof or to accomplish equitable treatment with respect to other conservation, land use, or water quality programs.

"(4) In providing assistance under this subsection the Secretary will give priority to those areas and sources that have the most significant effect upon water quality. Additional investigations or plans may be made, where necessary, to supplement approved water quality management plans, in order to determine priorities.

"(5) The Secretary shall, where practicable, enter into agreements with soil conservation districts, State soil and water conservation agencies, or State water quality agencies to administer all or part of the program established in this subsection under regulations developed by the Secretary. Such agreements shall provide for the submission of such reports as the Secretary deems necessary, and for payment by the United States of such portion of the costs incurred in the administration of the program as the Secretary may deem appropriate.

"(6) The contracts under this subsection shall be entered into only in areas where the management agency designated under subsection (c)(1) of this section assures an adequate level of participation by owners and operators having control of rural land in such areas. Within such areas the local soil conservation district, where one exists, together with the Secretary of Agriculture, will determine the priority of assistance among individual land owners and operators to assure that the most critical water quality problems are addressed.

"(7) The Secretary, in consultation with the Administrator and subject to section 304 (k) of this Act, shall, not later than September 30, 1978, promulgate regulations for carrying out this subsection and for support and cooperation with other Federal and non-Federal agencies for implementation of this subsection.

"(8) This program shall not be used to authorize or finance projects that would otherwise be eligible for assistance under the terms of Public Law 83-566.

"(9) There are hereby authorized to be appropriated to the Secretary of Agriculture $200,000,000 for fiscal year 1979 and $400,000,000 for fiscal year 1980, to carry out this subsection. The program authorized under this subsection shall be in addition to, and not in substitution of, other programs in such area authorized by this or any other public law.".

GRANT ELIGIBLE CATEGORIES

SEC. 36. Section 211 of the Federal Water Pollution Control Act is amended by inserting "(a)" immediately after "Sec. 211." and by adding at the end thereof of the following new subsections:

"(b) If the Administrator uses population density as a test for determining the eligibility of a collector sewer for assistance it shall be only for the purpose of evaluating alternatives and determining the needs for such system in relation to ground or surface water quality impact.

"(c) No grant shall be made under this title from funds authorized for any fiscal year during the period beginning October 1, 1977, and ending September 30, 1982, for treatment works for control of pollutant discharges from separate storm sewer systems.".

WASTEWATER STORAGE

SEC. 37. Section 212(2)(A) of the Federal Water Pollution Control Act is amended by inserting "(including land used for the storage of treated wastewater in land treatment systems prior to land application)" after the word "process".

PUBLIC INFORMATION PROGRAM

SEC. 38. Title II of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new section:

"PUBLIC INFORMATION

"SEC. 214. The Administrator shall develop and operate within one year of the date of enactment of this section, a continuing program of public information and education on recycling and reuse of wastewater (including sludge), the use of land treatment, and methods for the reduction of wastewater volume.".

BUY AMERICAN

SEC. 39. Title II of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new section:

"REQUIREMENTS FOR AMERICAN MATERIALS

"SEC. 215. Notwithstanding any other provision of law, no grant for which application is made after February 1, 1978, shall be made under this title for any treatment works unless only such unmanufactured articles, materials, and supplies as have been mined or produced in the United States, and only such manufactured articles, materials, and supplies as have been manufactured in the United States, substantially all from articles, materials, or supplies mined, produced, or manufactured, as the case may be, in the United States will be used in such treatment works. This section shall not apply in any case where the Administrator determines, based upon those factors the Administrator deems relevant, including the available resources of the agency, it to be inconsistent with the public interest (including multilateral government procurement agreements) or the cost to be unreasonable, or if articles, materials, or supplies of the class or kind to be used or the articles, materials, or supplies from which they are manufactured are not mined, produced, or manufactured, as the case may be, in the United States in sufficint and reasonably available commercial quantities and of a satisfactory quality.".

DETERMINATION OF PRIORITY

SEC. 40. Title II of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new section:

"DETERMINATION OF PRIORITY

"SEC. 216. Notwithstanding any other provision of this Act, the determination of the priority to be given each category of projects for construction of publicly owned treatment works within each State shall be made solely by that State, except that if the Administrator, after a public hearing, determines that a specific project will not result in compliance with the enforceable requirements of this Act, such project shall be removed from the State's priority list and such State shall submit a revised priority list. These categories shall include, but not be limited to (A) secondary treatment, (B) more stringent treatment, (C) infiltration-in-flow correction, (D) major sewer system rehabilitation, (E) new collector sewers and appurtenances, (F) new interceptors and appurtenances, and (G) correction of combined sewer overflows. Not less than 25 per centum of funds allocated to a State in any fiscal year under this title for construction of publicly owned treatment works in such State shall be obligated for those types of projects referred to in clauses (D), (E), (F), and (G) of this section, if such projects are on such State's priority list for that year and are otherwise eligible for funding in that fiscal year.".

COST-EFFECTIVENESS GUIDELINES

SEC. 41. Title II of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new section:

"COST-EFFECTIVENESS GUIDELINES

"SEC. 217. Any guidelines for cost-effectiveness analysis published by the Administrator under this title shall provide for the identification and selection of cost effective alternatives to comply with the objective and goals of this Act and sections 201(b), 201(d), 201(g)(2)(A), and 301(b)(2)(B) of this Act.".

TIME LIMITATIONS

SEC. 42. (a) Paragraph (2) of subsection (b) of section 301 of the Federal Water Pollution Control Act is amended—

(1) in subparagraph (A), by striking out "; and" and inserting in lieu thereof a semicolon;

(2) in subparagraph (B), by striking out the period and inserting in lieu thereof a semicolon; and

(3) by adding at the end thereof the following new subparagraphs:

"(C) not later than July 1, 1984, with respect to all toxic pollutants referred to in table 1 of Committee Print Numbered 95-30 of the Committee on Public Works and Transportation of the House of Representatives compliance with effluent limitations in accordance with subparagraph (A) of this paragraph;

"(D) for all toxic pollutants listed under paragraph (1) of subsection (a) of section 307 of this Act which are not referred to in subparagraph (C) of this paragraph compliance with effluent limitations in accordance with subparagraph (A) of this paragraph not later than three years after the date such limitations are established;

"(E) not later than July 1, 1984, effluent limitations for categories and classes of point sources, other than publicly owned treatment works, which in the case of pollutants identified pursuant to section 304(a)(4) of this Act shall require application of the best conventional pollutant control technology as determined in accordance with regulations issued by the Administrator pursuant to section 304(b)(4) of this Act; and

"(F) for all pollutants (other than those subject to subparagraphs (C), (D), or (E) of this paragraph) compliance with effluent limitations in accordance with subparagraph (A) of this paragraph not later than 3 years after the date such limitations are established, or not later than July 1, 1984, whichever is later, but in no case later than July 1, 1987.".

(b) Paragraph (2)(A) of section 301(b) of the Federal Water Pollution Control Act is amended by striking out "not later than July 1, 1983," and inserting in lieu thereof "for pollutants identified in subparagraphs (C), (D), and (F) of this paragraph,".

WAIVER FOR CERTAIN POLLUTANTS

SEC. 43. Section 301 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(g)(1) The Administrator, with the concurrence of the State, shall modify the requirements of subsection (b)(2)(A) of this section with respect to the discharge of any pollutant (other than pollutants identified pursuant to section 304(a)(4) of this Act, toxic pollutants subject to section 307(a) of this Act, and the thermal component of discharges) from any point source upon a showing by the owner or operator of such point source satisfactory to the Administrator that—

"(A) such modified requirements will result at a minimum in compliance with the requirements of subsection (b)(1) (A) or (C) of this section, whichever is applicable;

"(B) such modified requirements will not result in any additional requirements on any other point or nonpoint source; and

"(C) such modification will not interfere with the attainment or maintenance of that water quality which shall assure protection of public water supplies, and the protection and propagation of a balanced population of shellfish, fish, and wildlife, and allow recreational activities, in and on the water and such modification will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity (including carcinogenicity, mutagenicity or teratogenicity), or synergistic propensities.

"(2) If an owner or operator of a point source applies for a modification under this subsection with respect to the discharge of any pollutant, such owner or operator shall be eligible to apply for modification under subsection (c) of this section with respect to such pollutant only during the same time period as he is eligible to apply for a modification under this subsection.".

MODIFICATION OF SECONDARY TREATMENT REQUIREMENT

SEC. 44. Section 301 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(h) The Administrator, with the concurrence of the State, may issue a permit under section 402 which modifies the requirements of subsection (b)(1)(B) of this section with respect to the discharge of any pollutant in an existing discharge from a publicly owned treatment works into marine waters, if the applicant demonstrates to the satisfaction of the Administrator that—

"(1) there is an applicable water quality standard specific to the pollutant for which the modification is requested, which has been identified under section 304(a)(6) of this Act;

"(2) such modified requirements will not interfere with the attainment or maintenance of that water quality which assures protection of public water supplies and the protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife, and allows recreational activities, in and on the water;

"(3) the applicant has established a system for monitoring the impact of such discharge on a representative sample of aquatic biota, to the extent practicable;

"(4) such modified requirements will not result in any additional requirements on any other point or nonpoint source;

"(5) all applicable pretreatment requirements for sources introducing waste into such treatment works will be enforced;

"(6) to the extent practicable, the applicant has established a schedule of activities designed to eliminate the entrance of toxic pollutants from nonindustrial sources into such treatment works;

"(7) there will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit;

"(8) any funds available to the owner of such treatment works under title II of this Act will be used to achieve the degree of effluent reduction required by section 201(b) and (g)(2)(A) or to carry out the requirements of this subsection.

For the purposes of this subsection the phrase 'the discharge of any pollutant into marine waters' refers to a discharge into deep waters of the territorial sea or the waters of the contiguous zone, or into saline estuarine waters where there is strong tidal movement and other hydrological and geological characteristics which the Administrator determines necessary to allow compliance with paragraph (2) of this subsection, and section, and section 101(a)(2) of this Act.".

MUNICIPAL TIME EXTENSIONS

SEC. 45. Section 301 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(i)(1) Where construction is required in order for a planned or existing publicly owned treatment works to achieve limitations under subsection (b)(1)(B) or (b)(1)(C) of this section, but (A) construction cannot be completed within the time required in such subsection, or (B) the United States has failed to make financial assistance under this Act available in time to achieve such limitations by the time specified in such subsection, the owner or operator of such treatment works may request the Administrator (or if appropriate the State) to issue a permit pursuant to section 402 of this Act or to modify a permit issued pursuant to that section to extend such time for compliance. Any such request shall be filed with the Administrator (or if appropriate the State) within 180 days after the date of enactment of this subsection. The Administrator (or if appropriate the State) may grant such request and issue or modify such a permit, which shall contain a schedule of compliance for the publicly owned treatment works based on the earliest date by which such financial assistance will be available from the United States and construction can be completed, but in no event later than July 1, 1983, and shall contain such other terms and conditions, including those necessary to carry out subsections (b) through (g) of section 201 of this Act, section 307 of this Act, and such interim effluent limitations applicable to that treatment works as the Administrator determines are necessary to carry out the provisions of this Act.

"(2)(A) Where a point source (other than a publicly owned treatment works) will not achieve the requirements of subsections (b)(1)(A) and (b)(1)(C) of this section and—

"(i) if a permit issued prior to July 1, 1977, to such point source is based upon a discharge into a publicly owned treatment works; or

"(ii) if such point source (other than a publicly owned treatment works) had before July 1, 1977, a contract (enforceable against such point source) to discharge into a publicly owned treatment works; or

"(iii) if either an application made before July 1, 1977, for a construction grant under this Act for a publicly owned treatment works, or engineering or architectural plans or working drawings made before July 1, 1977, for a publicly owned treatment works, show that such point source was to discharge into such publicly owned treatment works,

and such publicly owned treatment works is presently unable to accept such discharge without construction, and in the case of a discharge to an existing publicly owned treatment works, such treatment works has an extension pursuant to paragraph (1) of this subsection, the owner or operator of such point source may request the Administrator (or if appropriate the State) to issue or modify such a permit pursuant to such section 402 to extend such time for compliance. Any such request shall be filed with the Administrator (or if appropriate the State) within 180 days after the date of enactment of this subsection or the filing of a request by the appropriate publicly owned treatment works under paragraph (1) of this subsection, whichever is later. If the Administrator (or if appropriate the State) finds that the owner or operator of such point source has acted in good faith, he may grant such request and issue or modify such a permit, which shall contain a schedule of compliance for the point source to achieve the requirements of subsections (b)(1)(A) and (C) of this section and shall contain such other terms and conditions, including pretreatment and interim effluent limitations and water conservation requirements applicable to that point source, as the Administrator determines are necessary to carry out the provisions of this Act.

"(B) No time modification granted by the Administrator (or if appropriate the State) pursuant to paragraph (2)(A) of this subsection shall extend beyond the earliest date practicable for compliance or beyond the date of any extension granted to the appropriate publicly owned treatment works pursuant to paragraph (1) of this subsection, but in no event shall it extend beyond July 1, 1983; and no such time modification shall be granted unless (i) the publicly owned treatment works will be in operation and available to the point source before July 1, 1983, and will meet the requirements of subsections (b)(1) (B) and (C) of this section after receiving the discharge from that point source; and (ii) the point source and the publicly owned treatment works have entered into an enforceable contract requiring the point source to discharge into the publicly owned treatment works, the owner or operator of such point source to pay the costs required under section 204 of this Act, and the publicly owned treatment works to accept the discharge from the point source; and (iii) the permit for such point source requires that point source to meet all requirements under section 307 (a) and (b) during the period of such time modification.".

PROCEDURE FOR MODIFICATIONS

SEC. 46. Section 301 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(j)(1) Any application filed under this section for a modification of the provisions of—

"(A) subsection (b)(1)(B) under subsection (h) of this section shall be filed not later than 270 days after the date of enactment of the Clean Water Act of 1977;

"(B) subsection (b)(2)(A) as it applies to pollutants identified in subsection (b)(2)(F) shall be filed not later than 270 days after the date of promulgation of an applicable effluent guideline under section 304 or not later than 270 days after the date of enactment of the Clean Water Act of 1977, whichever is later.

"(2) Any application for a modification filed under subsection (g) of this section shall not operate to stay any requirement under this Act, unless in the judgment of the Administrator such a stay or the modification sought will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity (including carcinogenicity, mutagenicity or teratogenicity), or synergistic propensities, and that there is a substantial likelihood that the applicant will succeed on the merits of such application. In the case of an application filed under subsection (g) of this section, the Administrator may condition any stay granted under this paragraph on requiring the filing of a bond or other appropriate security to assure timely compliance with the requirements from which a modification is sought.".

INNOVATIVE TECHNOLOGY

SEC. 47. Section 301 of the Federal Water Pollution Control Act is amended by adding at the end thereof a new subsection as follows:

"(k) In the case of any facility subject to a permit under section 402 which proposes to comply with the requirements of subsection (b)(2)(A) of this section by replacing existing production capacity with an innovative production process which will result in an effluent reduction significantly greater than that required by the limitation otherwise applicable to such facility and moves toward the national goal of eliminating the discharge of all pollutants, or with the installation of an innovative control technique that has a substantial likelihood for enabling the facility to comply with the applicable effluent limitation by achieving a significantly greater effluent reduction than that required by the applicable effluent limitation and moves toward the national goal of eliminating the discharge of all pollutants, or by achieving the required reduction with an innovative system that has the potential for significantly lower costs than the systems which have been determined by the Administrator to be economically achievable, the Administrator (or the State with an approved program under section 402, in consultation with the Administrator) may establish a date for compliance under subsection (b)(2)(A) of this section no later than July 1, 1987, if it is also determined that such innovative system has the potential for industrywide application.".

INFORMATION AND GUIDELINES

SEC. 48. (a) Section 304(a) of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new paragraphs:

"(4) The Administrator shall, within 90 days after the date of enactment of the Clean Water Act of 1977 and from time to time thereafter, publish and revise as appropriate information identifying conventional pollutants, including but not limited to, pollutants classified as biological oxygen demanding, suspended solids, fecal coliform, and pH. The thermal component of any discharge shall not be identified as a conventional pollutant under this paragraph.

"(5) (A) The Administrator, to the extent practicable before consideration of any request under section 301(g) of this Act and within six months after the date of enactment of the Clean Water Act of 1977, shall develop and publish information on the factors necessary for the protection of public water supplies, and the protection and propagation of a balanced population of shellfish, fish and wildlife, and to allow recreational activities, in and on the water.

"(B) The Administrator, to the extent practicable before consideration of any application under section 301(h) of this Act and within six months after the date of enactment of the Clean Water Act of 1977, shall develop and publish information on the factors necessary for the protection of public water supplies, and the protection and propagation of a balanced indigenous population of shellfish, fish and wildlife, and to allow recreational activities, in and on the water.

"(6) The Administrator shall, within three months after enactment of the Clean Water Act of 1977 and annualy thereafter, for purposes of section 301(h) of this Act publish and revise as appropriate information identifying each water quality standard in effect under this Act or State law, the specific pollutants associated with such water quality standard, and the particular waters to which such water quality standard applies.".

(b) Section 304(b) of the Federal Water Pollution Control Act is amended—

(1) in paragraph (2) (B), by striking out "; and" and inserting in lieu thereof a semicolon;

(2) in paragraph (3), by striking out the period at the end thereof and inserting in lieu thereof "; and"; and

(3) by adding at the end thereof the following new paragraph:

"(4) (A) identify, in terms of amounts of constituents and chemical, physical, and biological characteristics of pollutants, the degree of effluent reduction attainable through the application of the best conventional pollutant control technology (including measures and practices) for classes and categories of point sources (other than publicly owned treatment works); and

"(B) specify factors to be taken into account in determining the best conventional pollutant control technology measures and practices to comply with section 301(b) (2) (E) of this Act to be applicable to any point source (other than publicly owned treatment workers) within such categories or classes. Factors relating to the assessment of best conventional pollutant control technology (including measures and practices) shall include consideration of the reasonableness of the relationship between the costs of attaining a reduction in effluents and the effluent reduction benefits derived, and the comparison of the cost and level of reduction of such pollutants from the discharge from publicly owned treatment works to the cost and level of reduction of such pollutants from a class or category of industrial sources, and shall take into account the age of equipment and facilities involved, the process employed, the engineering aspects of the application of various types of control techniques, process changes, non-water quality environmental impact (including energy requirements), and other factors as the Administrator deems appropriate.".

IDENTIFICATION AND EVALUATION GUIDELINES

Sec. 49. Subsection (d) of section 304 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new paragraph:

"(3) The Administrator, after consultation with appropriate Federal and State agencies and other interested persons, shall promulgate within one hundred and eighty days after the date of enactment of this subsection guidelines for identifying and evaluating innovative and alternative wastewater treatment processes and techniques referred to in section 201(g) (5) of this Act.".

BEST MANAGEMENT PRACTICES FOR INDUSTRY

Sec. 50. Section 304 of the Federal Water Pollution Control Act is amended by inserting immediately after subsection (d) the following new subsection and by redesignating succeeding subsections, including reference thereto, accordingly:

"(e) The Administrator, after consultation with appropriate Federal and State agencies and other interested persons, may publish regulations, supplemental to any effluent limitations specified under subsections (b) and (c) of this section for a class or category of point sources, for any specific pollutant which the Administrator is charged with a duty to regulate as a toxic or hazardous pollutant under section 307(a) (1) or 311 of this Act, to control plant site runoff, spillage or leaks, sludge or waste disposal, and drainage from raw material storage which the Administrator determines are associated with or ancillary to the industrial manufacturing or treatment process within such class or category of point sources and many contribute significant amounts of such pollutants to navigable waters. Any applicable controls established under this subsection shall be included as a requirement for the purposes of section 301, 302, 306, 307, or 403, as the case may be, in any permit issued to a point source pursuant to section 402 of this Act.".

INTERAGENCY AGREEMENTS

Sec. 51. Section 304(k) of the Federal Water Pollution Control Act as redesignated by this Act is amended to read as follows:

"(k) (1) The Administrator shall enter into agreements with the Secretary of Agriculture, the Secretary of the Army, and the Secretary of the Interior, and the heads of such other departments, agencies, and instrumentalities of the United States as the Administrator determines, to provide for the maximum utilization of other Federal laws and programs for the purpose of achieving and maintaining water quality through appropriate implementation of plans approved under section 208 of this Act.

"(2) The Administrator is authorized to transfer to the Secretary of Agriculture, the Secretary of the Army, and the Secretary of the Interior and the heads of such other departments, agencies, and instrumentalities of the United States as the Administrator determines, any funds appropriated under paragraph (3) of this subsection to supplement funds otherwise appropriated to programs authorized pursuant to any agreement under paragraph (1).

"(3) There is authorized to be appropriated to carry out the provisions of this subsection, $100,000,000 per fiscal year for the fiscal years 1979 through 1983.".

STATE REPORTS

Sec. 52. Subsection (b) of section 305 of the Federal Water Pollution Control Act is amended—

(1) by striking out "January 1, 1975, and shall bring up to date each year thereafter," in paragraph (1) and inserting in lieu thereof "April 1, 1975, and shall bring up to date by April 1, 1976, and biennially thereafter,"; and

(2) by striking out "annually" in paragraph (2) and inserting in lieu thereof the following: "October 1, 1976, and biennially".

TOXIC POLLUTANTS

Sec. 53. (a) Paragraphs (1), (2), and (3) of section 307(a) of the Federal Water Pollution Control Act are amended to read as follows:

"(a) (1) On and after the date of enactment of the Clean Water Act of 1977, the list of toxic pollutants or combination of pollutants subject to this Act shall consist of those toxic pollutants listed in table 1 of Committee Print Numbered 95–30 of the Committee on Public Works and Transportation of the House of Representatives, and the Administrator shall publish, not later than the thirtieth day after the date of enactment of the Clean Water Act of 1977, that list. From time to time thereafter, the Administrator may revise such list and the Administrator is authorized to add to or remove from such list any pollutant. The Administrator in publishing any revised list, including the addition or removal of any pollutant from such list, shall take into account the toxicity of the pollutant, its persistence, degradability, the usual or potential presence of the affected organisms in any waters, the importance of the affected organisms, and the nature and extent of the effect of the toxic pollutant on such organisms. A determination of the Administrator under this paragraph shall be final except that if, on judicial review, such determination was based on arbitrary and capricious action of the Administrator, the Administrator shall make a redetermination.

"(2) Each toxic pollutant listed in accordance with paragraph (1) of this subsection shall be subject to effluent limitations resulting from the application of the best available technology economically achievable for the applicable category or class of point sources established in accordance with sections 301 (b) (2) (A) and 304(b) (2) of this Act. The Administrator, in his discretion, may publish in the Federal Register a proposed effluent standard (which may include a prohibition) establishing requirements for a toxic pollutant which, if an effluent limitation is applicable to a class or category of point sources, shall be applicable to such category or class only if such standard imposes more stringent requirements. Such published effluent standard (or prohibition) shall take into account the toxicity of the pollutant, its persistence, degradability, the usual or potential presence of the affected organisms in any waters, the importance of the affected organisms and the nature and extent of the effect of the toxic pollutant on such organisms, and the extent to which effective control is being or may be achieved under other regulatory authority. The Administrator shall allow a period of not less than sixty days following publication of any such proposed effluent standard (or prohibition) for written comment by interested persons on such proposed standard. In addition, if within thirty days of publication of any such proposed effluent standard (or prohibition) any interested person so requests, the Administrator shall hold a public hearing in connection therewith. Such a public hearing shall provide an opportunity for oral and written presentations, such cross-examination as the Administrator determines is appropriate on disputed issues of material fact, and the transcription of a verbatim record which shall be available to the public. After consideration of such comments and any information and material presented at any public hearing held on such proposed standard or prohibition, the Administrator shall promulgate such standard (or prohibition) with such modifications as the Administrator finds are justified. Such promulgation by the Administrator shall be made within two hundred and seventy days after publication of proposed standard (or probihition). Such standard (or prohibition) shall be final except that if, on judicial review, such standard was not based on substantial evidence, the Administrator shall promulgate a revised standard. Effluent limitations shall be established in accordance with sections 301(b) (2) (A) and 304(b) (2) for every toxic pollutant referred to in table 1 of Committee Print Numbered 95–30 of the Committee on Public

Works and Transportation of the House of Representatives as soon as practicable after the date of enactment of the Clean Water Act of 1977, but no later than July 1, 1980. Such effluent limitations or effluent standards (or prohibitions) shall be established for every other toxic pollutant listed under paragraph (1) of this subsection as soon as practicable after it is so listed.

"(3) Each such effluent standard (or prohibition) shall be reviewed and, if appropriate, revised at least every three years.".

(b) Paragraph (6) of section 307(a) of the Federal Water Pollution Control Act is amended to read as follows:

"(6) Any effluent standard (or prohibition) established pursuant to this section shall take effect on such date or dates as specified in the order promulgating such standard, but in no case, more than one year from the date of such promulgation. If the Administrator determines that compliance within one year from the date of promulgation is technologically infeasible for a category of sources, the Administrator may establish the effective date of the effluent standard (or prohibition) for such category at the earliest date upon which compliance can be feasibly attained by sources within such category, but in no event more than three years after the date of such promulgation.".

(c) Section 301 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(l) The Administrator may not modify any requirement of this section as it applies to any specific pollutant which is on the toxic pollutant list under section 307(a)(1) of this Act.".

PRETREATMENT

SEC. 54. (a) Section 307(b)(1) of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new sentence: "If, in the case of any toxic pollutant under subsection (a) of this section introduced by a source into a publicly owned treatment works, the treatment by such works removes all or any part of such toxic pollutant and the discharge from such works does not violate that effluent limitation or standard which would be applicable to such toxic pollutant if it were discharged by such source other than through a publicly owned treatment works, and does not prevent sludge use or disposal by such works in accordance with section 405 of this Act, then the pretreatment requirements for the sources actually discharging such toxic pollutant into such publicly owned treatment works may be revised by the owner or operator of such works to reflect the removal of such toxic pollutant by such works.".

(b) Section 309 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

"(f) Whenever, on the basis of any information available to him, the Administrator finds that an owner or operator of any source is introducing a pollutant into a treatment works in violation of subsection (d) of section 307, the Administrator may notify the owner or operator of such treatment works and the State of such violation. If the owner or operator of the treatment works does not commence appropriate enforcement action within 30 days of the date of such notification, the Administrator may commence a civil action for appropriate relief, including but not limited to, a permanent or temporary injunction, against the owner or operator of such treatment works. In any such civil action the Administrator shall join the owner or operator of such source as a party to the action. Such action shall be brought in the district court of the United States in the district in which the treatment works is located. Such court shall have jurisdiction to restrain such violation and to require the owner or operator of the treatment works and the owner or operator of the source to take such action as may be necessary to come into compliance with this Act. Notice of commencement of any such action shall be given to the State. Nothing in this subsection shall be construed to limit or prohibit any other authority the Administrator may have under this Act.".

(c)(1) Section 402(b)(8) of the Federal Water Pollution Control Act is amended by inserting after "includes conditions to require" the following: "the identification in terms of character and volume of pollutants of any significant source introducing pollutants subject to pretreatment standards under section 307(b) of this Act into such works and a program to assure compliance with such pretreatment standards by each such source, in addition to".

(2) Any State permit program approved under section 402 of the Federal Water Pollution Control Act before the date of enactment of the Clean Water Act of 1977, which requires modification to conform to the amendment made by paragraph (1) of this subsection, shall not be required to be modified before the end of the one year period which begins on the date of enactment of the Clean Water Act of 1977 unless in order to make the required modification a State must amend or enact a law in which case such modification shall not be required for such State before the end of the two year period which begins on such date of enactment.

(d) Section 405 of the Federal Water Pollution Control Act is amended (1) by striking out in subsection (b) thereof "subject to this section" and inserting in lieu thereof "subject to subsection (a) of this section", (2) by striking out in subsection (c) thereof "sewage sludge" and inserting in lieu thereof "sewage sludge subject to subsection (a) of this section", and (3) by adding at the end thereof the following new subsections:

"(d) The Administrator, after consultation with appropriate Federal and State agencies and other interested persons, shall develop and publish, within one year after the date of enactment of this subsection and from time to time therafter, regulations providing guidelines for the disposal of sludge and the utilization of sludge for various purposes. Such regulations shall—

"(1) identify uses for sludge, including disposal;

"(2) specify factors to be taken into account in determining the measures and practices applicable to each such use or disposal (including publication of information on costs);

"(3) identify concentrations of pollutants which interfere with each such use or disposal.

The Administration is authorized to revise any regulation issued under this subsection.

"(e) The determination of the manner of disposal or use of sludge is a local determination except that it shall be unlawful for the owner or operator of any publicly owned treatment works to dispose of sludge from such works for any use for which guidelines have been established pursuant to subsection (d) of this section, except in accordance with such guidelines.".

TECHNICAL AND CONFORMING AMENDMENTS

SEC. 55. (a) Paragraph (1) of subsection (a) of section 309 of the Federal Water Pollution Control Act is amended by striking "or 308" in the first sentence thereof and inserting in lieu thereof "308, 318, or 405".

(b) Paragraph (3) of subsection (a) of section 309 of the Federal Water Pollution Control Act is amended by striking "or 308" in the first sentence thereof and inserting in lieu thereof "308, 318, or 405".

(c) Subsection (d) of section 309 of the Federal Water Pollution Control Act is amended by striking "or 308" in the first sentence thereof and inserting in lieu thereof "308, 318, or 405".

1977 DEADLINES

SEC. 56. (a) The third sentence of section 308(a)(2) of the Federal Water Pollution Control Act is amended by striking out "the Administrator shall" and by inserting in lieu thereof the following: "except where an extension has been granted under paragraph (5)(B) of this subsection, the Administrator shall".

(b) Section 309(a)(4) of the Federal Water Pollution Control Act is amended by striking out the second sentence thereof.

(c) Section 309(a) of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new paragraphs:

"(5)(A) Any order issued under this subsection shall be by personal service, shall state with reasonable specificity the nature of the violation, and shall specify a time for compliance not to exceed thirty days in the case of a violation of an interim compliance schedule or operation and maintenance requirement and not to exceed a time the Administrator determines to be reasonable in the case of a violation of a final deadline, taking into account the seriousness of the violation and any good faith efforts to comply with applicable requirements.

"(B) The Administrator may, if he determines (i) that any person who is a violator of, or any person who is otherwise not in compliance with, the time requirements under this Act or in any permit issued under this Act, has acted in good faith, and has made a commitment (in the form of contracts or other securities) of necessary resources to achieve compliance by the earliest possible date after July 1, 1977, but not later than April 1, 1979; (ii) that any extension under this provision will not result in the imposition of any additional controls on any other point or nonpoint source; (iii) that an application for a permit under section 402 of this Act was filed for such person prior to December 31, 1974; and (iv) that the facilities necessary for compliance with such requirements are under construction, grant an extension of the date referred to in section 302(b)(1)(A) to a date which will achieve compliance at the earliest time possible but not later than April 1, 1979.

"(6) Whenever, on the basis of information available to him, the Administrator finds (A) that any person is in violation of section 301(b)(1)(A) or (C) of this Act, (B) that such person cannot meet the requirements for a time extension under section 301(i)(2) of this Act, and (C) that the most expeditious and appropriate means of compliance with this Act by such person is to discharge into a publicly owned treatment works, then, upon request of such person, the Administrator may issue an order requiring such person to comply with this Act at the earliest date practicable, but not later than July 1, 1983, by discharging into a publicly owned treatment works if such works concur with such order. Such order shall include a schedule of compliance.".

MITIGATION COSTS

SEC. 57. Subsection (b) of section 311 of the Federal Water Pollution Control Act is amended by adding a new clause (v) to paragraph (2)(B) as follows:

"(v) In addition to establishing a penalty for the discharge of a hazardous substance determined not to be removable pursuant to clauses (ii) through (iv) of this subparagraph, the Administrator may act to mitigate the damage to the public health or welfare caused by such discharge. The cost of such mitigation shall be deemed a cost incurred under subsection (c) of this section for the removal of such substance by the United States Government.".

OILSPILL LIABILITY

SEC. 58. (a)(1) Section 311(b))(1) of the Federal Water Pollution Control Act is amended by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "or in connection with activities under the Outer Continental Shelf Lands Act or the Deepwater Port Act of 1974, or which may affect natural resources belonging to, appertaining to, or under the exclusive management authority of the United States (including resources under the Fishery Conservation and Management Act of 1976).".

(2) Section 311(b)(2)(A) of the Federal Water Pollution Control Act is amended by inserting after "the contiguous zone" the following: "or in connection with activities under the Outer Continental Shelf Lands Act or the Deepwater Port Act of 1974, or which may affect natural resources belonging to, appertaining to, or under the exclusive management authority of the United States (including resources under the Fishery Conservation and Management Act of 1976)".

(3) Section 311(b)(3) of the Federal Water Pollution Control Act is amended by inserting "(i)" immediately after "The discharge of oil or hazardous substances" and by inserting after the phrase "into or upon the waters of the contiguous zone" a comma and the following: "or (ii) in connection with activities under the Outer Continental Shelf Lands Act or the Deepwater Port Act of 1974, or which may affect natural resources belonging to, appertaining to, or under the exclusive management authority of the United States (including resources under the Fishery Conservation and Management Act of 1976),".

(4) Section 311(b)(3)(A) of the Federal Water Pollution Control Act is amended by inserting "or which may affect natural resources belonging to, appertaining to, or under the exclusive management authority of the United States (including resources under the Fishery Conservation and Management Act of 1976)" immediately after "waters of the contiguous zone", and by striking out "article IV of".

(5) Section 311(b)(4) of the Federal Water Pollution Control Act is amended by striking all after "beaches" and inserting a period.

(6) Section 311(b)(5) of the Federal Water Pollution Control Act is amended by inserting after "Any such person" in the second sentence "(A) in charge of a vessel from which oil or a hazardous substance is discharged in violation of paragraph (3)(i) of this subsection, or (B) in charge of a vessel from which oil or a hazardous substance is discharged in violation of paragraph (3)(ii) of this subsection and who is otherwise subject to the jurisdiction of the United States, or (C) in charge of an onshore facility or an offshore facility,".

(7) The first sentence of section 311(b)(6) of the Federal Water Pollution Control Act is amended by striking out "Any owner or operator of any vessel, onshore facility," and inserting in lieu thereof "Any owner, operator, or person in charge of any onshore facility".

(8) Section 311(b)(6) of the Federal Water Pollution Control Act is amended by inserting immediately after the first sentence thereof the following: "Any owner, operator, or person in charge of any vessel from which oil or a hazardous substance is discharged in violation of paragraph (3)(i) of this subsection, and any owner, operator, or person in charge of a vessel from which oil or a hazardous substance is discharged in violation of paragraph (3)(ii) who is otherwise subject to the jurisdiction of the United States, shall be assessed a civil penalty by the Secretary of the department in which the Coast Guard is operating of not more than $5,000 for each offense.".

(b) Section 311(c)(1) of the Federal Water Pollution Control Act is amended by inserting after "discharged," the following: "or there is a substantial threat of such discharge,".

(c)(1) Section 311(c)(1) of the Federal Water Pollution Control Act is further amended by inserting after "contiguous zone," the following: "or in connection with activities under the Outer Continental Shelf Lands Act or the Deepwater Port Act of 1974, or which may affect natural resources belonging to, appertaining to, or under the exclusive management authority of the United States (including resources under the Fishery Conservation and Management Act of 1976)".

(2) The last sentence of section 311(d) of the Federal Water Pollution Control Act is amended by inserting after "under this subsection" the following: "or under the Intervention on the High Seas Act (or the convention defined in section 2(3) thereof)".

(3) Section 311(j)(2) of the Federal Water Pollution Control Act is amended by inserting immediately after the first sentence the following: "This paragraph shall not apply to any owner or operator of any vessel from which oil or a hazardous substance is discharged in violation of paragraph (3)(ii) of subsection (b) unless such owner, operator, or person in charge is otherwise subject to the jurisdiction of the United States.".

(d)(1) Section 311(a) of the Federal Water Pollution Control Act is amended by striking out the period at the end thereof and inserting in lieu thereof a semicolon and by adding at the end thereof the following new paragraphs:

"(15) 'inland oil barge' means a non-self-propelled vessel carrying oil in bulk as cargo and certificated to operate only in the inland waters of the United States, while operating in such waters;

"(16) 'inland waters of the United States' means those waters of the United States lying inside the baseline from which the territorial sea is measured and those waters outside such baseline which are a part of the Gulf Intracoastal Waterway.".

(2) Section 311(f)(1) of the Federal Water Pollution Control Act is amended by striking out "$100 per gross ton of such vessel or $14,000,000, whichever is lesser," and inserting in lieu thereof the following: ", in the case of an inland oil barge $125 per gross ton of such barge, or $125,000, whichever is greater, and in the case of any other vessel, $150 per gross ton of such vessel (or, for a vessel carrying oil or hazardous substances as cargo, $250,000), whichever is greater,".

(3) Section 311(g) of the Federal Water Pollution Control Act is amended by striking out "$100 per gross ton of such vessel or $14,000,000, whichever is the lesser." and inserting in lieu thereof the following: ", in the case of an inland oil barge $125 per gross ton of such barge, or $125,000, whichever is greater, and in the case of any other vessel, $150 per gross ton of such vessel (or, for a vessel carrying oil or hazardous substances as cargo, $250,000), whichever is greater.".

(4) Section 311(p)(1) of the Federal Water Pollution Control Act is amended by striking out "$100 per gross ton, or $14,000,000 whichever is the lesser," and inserting in lieu thereof the following: ", in the case of an inland oil barge $125 per gross ton of such barge, or $125,000, whichever is greater, and in the case of any other vessel, $150 per gross ton of such vessel (or, for a vessel carrying oil or hazardous substances as cargo, $250,000), whichever is greater,".

(5) Section 311(f)(2) of the Federal Water Pollution Control Act is amended by striking out "$8,000,000" and inserting in lieu thereof "$50,000,000.".

(6) Section 311(f)(3) of the Federal Water Pollution Control Act is amended by striking out "$8,000,000" and inserting in lieu thereof "$50,000,000.".

(e) Section 311(c)(2)(D) of the Federal Water Pollution Control Act is amended by striking out "to the appropriate Federal agency;" and inserting in lieu thereof "and imminent threats of such discharges to the appropriate State and Federal agencies;".

(f) Section 311(g) of the Federal Water Pollution Control Act is amended by inserting after "(g)" the following: "Where the owner or operator of a vessel (other than an inland oil barge) carrying oil or hazardous substances as cargo or an onshore or offshore facility which handles or stores oil or hazardous substances in bulk, from which oil or a hazardous substance is discharged in violation of subsection (b) of this section, alleges that such discharge was caused solely by an act or omission of a third party, such owner or operator shall pay to the United States Government the actual costs incurred under subsection (c) for removal of such oil or substance and shall be entitled by subrogation to all rights of the United States Government to recover such costs from such third party under this subsection.".

(g) Section 311(f) of the Federal Water Pollution Control Act is amended by adding the following new paragraphs:

"(4) The costs of removal of oil or a hazardous substance for which the owner or operator of a vessel or onshore or offshore facility is liable under subsection (f) of this section shall include any costs or expenses incurred by the Federal Government or any State government in the restoration or replacement of natural resources damaged or destroyed as a result of a discharge of oil or a hazardous substance in violation of subsection (b) of this section.

"(5) The President, or the authorized representative of any State, shall act on behalf of the public as trustee of the natural resources to recover for the costs of replacing or restoring such resources. Sums recovered shall be used to restore, rehabilitate, or acquire the equivalent of such natural resources by the appropriate agencies of the Federal Government, or the State government.".

(h) The amendments made by paragraphs (5) and (6) of subsection (d) of this section shall take effect 180 days after the date of enactment of the Clean Water Act of 1977.

(i) Section 311 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsections:

"(q) The President is authorized to establish, with respect to any class or category of onshore or offshore facilities, a maximum limit of liability under subsections (f)(2) and (3) of this section of less than $50,000,000, but not less than $8,000,000.

"(r) Nothing in this section shall be construed to impose, or authorize the imposition of, any limitation on liability under the Outer Continental Shelf Lands Act or the Deepwater Port Act of 1974.".

(j) No vessel subject to the increased amounts which result from the amendments made by subsections (d)(2), (d)(3), and (d)(4) of this section shall be required to establish any evidence of financial responsibility under section 311(p) of the Federal Water Pollution Control Act for such increased amounts before October 1, 1978.

(k) Section 311(a)(11) of the Federal Water Pollution Control Act is amended by inserting immediately after "United States" a comma and the following: "and any facility of any kind which is subject to the jurisdiction of the United States and is located in, on, or under any other waters,".

(l) The first sentence of section 311(k) of the Federal Water Pollution Control Act is amended by striking out "not to exceed" and inserting in lieu thereof the following: "such sums as may be necessary to maintain such fund at a level of".

(m) Section 311(i)(2) of the Federal Water Pollution Control Act is amended by striking out the period at the end thereof and inserting in lieu thereof a comma and the following: "or the Deepwater Port Act of 1974.".

MARINE SANITATION DEVICES

SEC. 59. (a) Section 312(a)(6) of the Federal Water Pollution Control Act is amended by adding before the semicolon at the end thereof the following: "except that, with respect to commercial vessels on the Great Lakes, such term shall include graywater".

(b) Section 312(a) of the Federal Water Pollution Control Act is amended by striking out the period at the end thereof and inserting in lieu thereof a semicolon and the following:

"(10) 'commercial vessels' means those vessels used in the business of transporting property for compensation or hire, or in transporting property in the business of the owner, lessee, or operator of the vessel;

"(11) 'graywater' means galley, bath, and shower water.".

"(c) The next to the last sentence of section 31(b)(1) of the Federal Water Pollution Control Act is amended by inserting immediately after "Such standards" the following: "and standards established under subsection (c)(1)(B) of this section". The last sentence of such section 312(b)(1) is amended by inserting immediately after "subsection" the following: "and subsection (c) of this section".

(d) Section 312(c)(1) of the Federal Water Pollution Control Act is amended by inserting "(A)" after "(1)" and by adding at the end thereof a new subparagraph (B) as follows:

"(B) The Administrator shall, with respect to commercial vessels on the Great Lakes, establish standards which require at a minimum the equivalent of secondary treatment as defined under section 304(d) of this Act. Such standards and regulations shall take effect for existing vessels after such time as the Administrator determines to be reasonable for the upgrading of marine sanitation devices to attain such standard.".

(e) Section 312(f)(4) of the Federal Water Pollution Control Act is amended by inserting "(A)" after "(4)" and by adding at the end thereof a new subparagraph (B) as follows:

"(B) Upon application by a State, the Administrator shall, by regulation, establish a drinking water intake zone in any waters within such State and prohibit the discharge of sewage from vessels within that zone.".

FEDERAL FACILITIES

Sec. 60. Section 313 of the Federal Water Pollution Control Act is amended by inserting "(a)" immediately after "Sec. 313," and by adding at the end thereof the following new subsection:

"(b)(1) The Administrator shall coordinate with the head of each department, agency, or instrumentality of the Federal Government having jurisdiction over any property or facility utilizing federally owned wastewater facilities to develop a program of cooperation for utilizing wastewater control systems utilizing those innovative treatment processes and techniques for which guidelines have been promulgated under section 304(d)(3). Such program shall include an inventory of property and facilities which could utilize such processes and techniques.

"(2) Construction shall not be initiated for facilities for treatment of wastewater at any Federal property or facility after September 30, 1979, if alternative methods for wastewater treatment at such property or facility utilizing innovative treatment processes and techniques, including but not limited to methods utilizing recycle and reuse techniques and land treatment are not utilized, unless the life cycle cost of the alternative treatment works exceeds the life cycle cost of the most cost effective alternative by more than 15 per centum. The Administrator may waive the application of this paragraph in any case where the Administrator determines it to be in the public interest, or that compliance with this paragraph would interfere with the orderly compliance with conditions of a permit issued pursuant to section 402 of this Act.".

FEDERAL FACILITY COMPLIANCE

Sec. 61. (a) Subsection (a) of section 313 of the Federal Water Pollution Control Act is amended (1) by striking in the first sentence thereof the words "shall comply with Federal, State, interstate, and local requirements respecting control and abatement of pollution to the same extent that any person is subject to such requirements, including the payment of reasonable service charges." and inserting in lieu thereof a comma and the words "and each officer, agent, or employee thereof in the performance of his official duties, shall be subject to, and comply with, all Federal, State, interstate, and local requirements, administrative authority, and process and sanctions respecting the control and abatement of water pollution in the same manner, and to the same extent as any nongovernmental entity including the payment of reasonable service charges. The preceding sentence shall apply (A) to any requirement whether substantive or procedural (including any recordkeeping or reporting requirement, any requirement respecting permits and any other requirement, whatsoever), (B) to the exercise of any Federal, State, or local administrative authority, and (C) to any process and sanction, whether enforced in Federal, State, or local courts or in any other manner. This subsection shall apply notwithstanding any immunity of such agencies, officers, agents, or employees under any law or rule of law. Nothing in this section shall be construed to prevent any department, agency, or instrumentality of the Federal Government, or any officer, agent, or employee thereof in the performance of his official duties, from removing to the appropriate Federal district court any proceeding to which the department, agency, or instrumentality or officer, agent, or employee thereof is subject pursuant to this section, and any such proceeding may be removed in accordance with 28 U.S.C. 144 et seq. No officer, agent, or employee of the United States shall be personally liable for any civil penalty arising from the performance of his official duties, for which he is not otherwise liable, and the United States shall be liable only for those civil penalties arising under Federal law or imposed by a State or local court to enforce an order or the process of such court."; and (2) by adding at the end of such subsection the following: "In addition to any such exemption of a particular effluent source, the President may, if he determines it to be in the paramount interest of the United States to do so, issue regulations exempting from compliance with the requirements of this section any weaponry, equipment, aircraft, vessels, vehicles, or other classes or categories of property, and access to such property, which are owned or operated by the Armed Forces of the United States (including the Coast Guard) or by the National Guard of any State and which are uniquely military in nature. The President shall reconsider the need for such regulations at three-year intervals.".

(b) Section 401(a) of the Federal Water Pollution Control Act is amended by striking paragraph (6) and renumbering the succeeding paragraph accordingly.

CLEAN LAKES

Sec. 62. (a) Section 314(b) of the Federal Water Pollution Control Act is amended by adding at the end thereof the following: "The Administrator shall provide financial assistance to States to prepare the identification and classification surveys required in subsection (a)(1) of this section.".

(b) The first sentence of section 304(j) of the Federal Water Pollution Control Act as redesignated by this Act, is amended to read as follows: "The Administrator shall issue information biennially on methods, procedures and processes as may be appropriate to restore and enhance the quality of the Nation's publicly owned freshwater lakes.".

AQUACULTURE

Sec. 63. Section 318 of the Federal Water Pollution Control Act is amended to read as follows:

"AQUACULTURE

"Sec. 318 (a) The Administrator is authorized, after public hearings, to permit the discharge of a specific pollutant or pollutants under controlled conditions associated with an approved aquaculture project under Federal or State supervision pursuant to section 402 of this Act.

"(b) The Administrator shall by regulation establish any procedures and guidelines which the Administrator deems necessary to carry out this section. Such regulations shall require the application to such discharge of each criterion, factor, procedure, and requirement applicable to a permit issued under section 402 of this title, as the Administrator determines necessary to carry out the objective of this Act.

"(c) Each State desiring to administer its own permit program within its jurisdiction for discharge of a specific pollutant or pollutants under controlled conditions associated with an approved aquaculture project may do so if upon submission of such program the Administrator determines such program is adequate to carry out the objective of this Act.".

COMPLIANCE WITH STATE REQUIREMENTS

Sec. 64. Section 401 of the Federal Water Pollution Control Act is amended by inserting "303," after "302," in the phrase "sections 301, 302, 306, and 307 of this Act", and in the phrase "section 301, 302, 306, or 307 of this Act", each time these phrases appear.

ENVIRONMENTAL PROTECTION AGENCY ISSUANCE OF PERMITS

Sec. 65. (a) Section 402(d) of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new paragraph:

"(4) In any case where, after the date of enactment of this paragraph, the Administrator, pursuant to paragraph (2) of this subsection, objects to the issuance of a permit, on request of the State, a public hearing shall be held by the Administrator on such objection. If the State does not resubmit such permit revised to meet such objection within 30 days after completion of the hearing, or, if no hearing is requested within 90 days after the date of such objection, the Administrator may issue the permit pursuant to subsection (a) of this section for such source in accordance with the guidelines and requirements of this Act.".

(b) Section 402(d)(2) of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new sentence: "Whenever the Administrator objects to the issuance of a permit under this paragraph such written objection shall contain a statement of the reasons for such objection and the effluent limitations and conditions which such permit would include if it were issued by the Administrator.".

ENFORCEMENT OF MUNICIPAL PERMITS

Sec. 66. Section 402(h) of the Federal Water Pollution Control Act is amended by striking out the comma after "is approved" and inserting the following: "or where the Administrator determines pursuant to section 309(a) of this Act that a State with an approved program has not commenced appropriate enforcement action with respect to such permit,".

PERMITS FOR DREDGED OR FILL MATERIAL

Sec. 67. (a)(1) Subsection (a) of section 404 of the Federal Water Pollution Control Act is amended by striking out "The Secretary of the Army, acting through the Chief of Engineers," and inserting in lieu thereof "The Secretary" and by inserting at the end thereof the following new sentence: "Not later than the fifteenth day after the date an applicant submits all the information required to complete an application for a permit under this subsection, the Secretary shall publish the notice required by this subsection.".

(2) Subsections (b) and (c) of such section 404 are amended by striking out "The Secretary of the Army" each place it appears and inserting in lieu thereof in each such place "the Secretary".

(b) Such section 404 is further amended by adding at the end thereof the following new subsections:

"(d) The term 'Secretary' as used in this section means the Secretary of the Army, acting through the Chief of Engineers.

"(e)(1) In carrying out his functions relating to the discharge of dredged or fill material under this section, the Secretary may, after notice and opportunity for public hearing, issue general permits on a State, regional, or nationwide basis for any category of activities involving discharges of dredged or fill material if the Secretary determines that the activities in such category are similar in nature, will cause only minimal adverse environmental effects when performed separately, and will have only minimal cumulative adverse effect on the environment. Any general permit issued under this subsection shall (A) be based on the guidelines described in subsection (b)(1) of this section, and (B) set forth the requirements and standards which shall apply to any activity authorized by such general permit.

"(2) No general permit issued under this subsection shall be for a period of more than five years after the date of its issuance and such general permit may be revoked or modified by the Secretary if, after opportunity for public hearing, the Secretary determines that the activities authorized by such general permit have an adverse impact on the environment or such activities are more appropriately authorized by individual permits.

"(f)(1) Except as provided in paragraph (2) of this subsection, the discharge of dredged or fill material—

"(A) from normal farming, silviculture, and ranching activities such as plowing, seeding, cultivating, minor drainage, harvesting for the production of food, fiber, and forest products, or upland soil and water conservation practices;

"(B) for the purpose of maintenance, including emergency reconstruction of recently damaged parts, of currently serviceable structures such as dikes, dams, levees, groins, riprap, breakwaters, causeways, and bridge abutments or approaches, and transportation structures;

"(C) for the purpose of construction or maintenance of farm or stock ponds or irrigation ditches, or the maintenance of drainage ditches;

"(D) for the purpose of construction of temporary sedimentation basins on a construction site which does not include placement of fill material into the navigable waters;

"(E) for the purpose of construction or maintenance of farm roads or forest roads, or temporary roads for moving mining equipment, where such roads are constructed and maintained, in accordance with best management practices, to assure that flow and circulation patterns and chemical and biological characteristics of the navigable waters are not impaired, that the reach of the navigable waters is not reduced, and that any adverse effect on the aquatic environment will be otherwise minimized;

"(F) resulting from any activity with respect to which a State has an approved program under section 208(b)(4) which meets the requirements of subparagraphs (B) and (C) of such section,

is not prohibited by or otherwise subject to regulation under this section or section 301 (a) or 402 of this Act (except for effluent standards or prohibitions under section 307).

"(2) Any discharge of dredged or fill material into the navigable waters incidental to any activity having as its purpose bringing an area of the navigable waters into a use to which it was not previously subject, where the flow or circulation of navigable waters may be impaired or the reach of such waters be reduced, shall be required to have a permit under this section.

"(g)(1) The Governor of any State desiring to administer its own individual and general permit program for the discharge of dredged or fill material into the navigable waters (other than those waters which are presently used, or are susceptible to use in their natural condition or by reasonable improvement as a means to transport interstate or foreign commerce shoreward to their ordinary high water mark, including all waters which are subject to the ebb and flow of the tide shoreward to their mean high water mark, or mean higher high water mark on the west coast, including wetlands adjacent thereto) within its jurisdiction may submit to the Administrator a full and complete description of the program it proposes to establish and administer under State law or under an interstate compact. In addition, such State shall submit a statement from the attorney general (or the attorney for those State agencies which have independent legal counsel), or from the chief legal officer in the case of an interstate agency, that the laws of such State, or the interstate compact, as the case may be, provide adequate authority to carry out the described program.

"(2) Not later than the tenth day after the date of the receipt of the program and statement submitted by any State under paragraph (1) of this subsection, the Administrator shall provide copies of such program and statement to the Secretary and the Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service.

"(3) Not later than the ninetieth day after the date of the receipt by the Administrator of the program and statement submitted by any State, under paragraph (1) of this subsection, the Secretary and the Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service, shall submit any comments with respect to such program and statement to the Administrator in writing.

"(h)(1) Not later than the one-hundred-twentieth day after the date of the receipt by the Administrator of a program and statement submitted by any State under paragraph (1) of this subsection, the Administrator shall determine, taking into account any comments submitted by the Secretary and the Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service, pursuant to subsection (g) of this section, whether such State has the following authority with respect to the issuance of permits pursuant to such program:

"(A) To issue permits which—

"(i) apply, and assure compliance with, any applicable requirements of this section, including, but not limited to, the guidelines established under subsection (b)(1) of this section, and sections 307 and 403 of this Act;

"(ii) are for fixed terms not exceeding five years; and

"(iii) can be terminated or modified for cause including but not limited to, the following:

"(I) violation of any condition of the permit;

"(II) obtaining a permit by misrepresentation, or failure to disclose fully all relevant facts;

"(III) change in any condition that requires either a temporary or permanent reduction or elimination of the permitted discharge.

"(B) To issue permits which apply, and assure compliance with, all applicable requirements of section 308 of this Act, or to inspect, monitor, enter, and require reports to at least the same extent as required in section 308 of this Act.

"(C) To assure that the public, and any other State the waters of which may be affected, receive notice of each application for a permit and to provide an opportunity for public hearing before a ruling on each such application.

"(D) To assure that the Administrator receives notice of each application (including a copy thereof) for a permit.

"(E) To assure that any State (other than the permitting State), whose waters may be affected by the issuance of a permit may submit written recommendations to the permitting State (and the Administrator) with respect to any permit application and, if any part of such written recommendations are not accepted by the permitting State, that the permitting State will notify such affected State (and the Administrator) in writing of its failure to so accept such recommendations together with its reasons for so doing.

"(F) To assure that no permit will be issued if, in the judgment of the Secretary, after consultation with the Secretary of the department in which the Coast Guard is operating, anchorage and navigation of any of the navigable waters would be substantially impaired thereby.

"(G) To abate violations of the permit or the permit program, including civil and criminal penalties and other ways and means of enforcement.

"(H) To assure continued coordination with Federal and Federal-State water-related planning and review processes.

"(2) If, with respect to a State program submitted under subsection (g)(1) of this section, the Administrator determines that such State—

"(A) has the authority set forth in paragraph (1) of this subsection, the Administrator shall approve the program and so notify (i) such State, and (ii) the Secretary, who upon subsequent notification from such State that it is administering such program, shall suspend the issuance of permits under subsections (a) and (e) of this section for activities with respect to which a permit may be issued pursuant to such State program; or

"(B) does not have the authority set forth in paragraph (1) of this subsection, the Administrator shall so notify such State, which notification shall also describe the revisions or modifications necessary so that such State may resubmit such program for a determination by the Administrator under this subsection.

"(3) If the Administrator fails to make a determination with respect to any program submitted by a State under subsection (g) (1) of this section within one-hundred-twenty days after the date of the receipt of such program, such program shall be deemed approved pursuant to paragraph (2)(A) of this subsection and the Administrator shall so notify such State and the Secretary who, upon subsequent notification from such State that it is administering such program, shall suspend the issuance of permits under subsection (a) and (e) of this section for activities with respect to which a permit may be issued by such State.

"(4) After the Secretary receives notification from the Administrator under paragraph (2) or (3) of this subsection that a State permit program has been approved, the Secretary shall transfer any applications for permits pending before the Secretary for activities with respect to which a permit may be issued pursuant to such State program to such State for appropriate action.

"(5) Upon notification from a State with a permit program approved under this subsection that such State intends to administer and enforce the terms and conditions of a general permit issued by the Secretary under subsection (e) of this section with respect to activities in such State to which such general permit applies, the Secretary shall suspend the administration and enforcement of such general permit with respect to such activities.

"(i) Whenever the Administrator determines after public hearing that a State is not administering a program approved under section (h)(2)(A) of this section, in accordance with this section, including, but not limited to, the guidelines established under subsection (b)(1) of this section, the Administrator shall so notify the State, and, if appropriate corrective action is not taken within a reasonable time, not to exceed ninety days after the date of the receipt of such notification, the Administrator shall (1) withdraw approval of such program until the Administrator determines such corrective action has been taken, and (2) notify the Secretary that the Secretary shall resume the program for the issuance of permits under subsections (a) and (e) of this section for activities with respect to which the State was issuing permits and that such authority of the Secretary shall continue in effect until such time as the Administrator makes the determination described in clause (1) of this subsection and such State again has an approved program.

"(j) Each State which is administering a permit program pursuant to this section shall transmit to the Administrator (1) a copy of each permit application received by such State and provide notice to the Administrator of every action related to the consideration of such permit application, including each permit proposed to be issued by such State, and (2) a copy of each proposed general permit which such State intends to issue. Not later than the tenth day after the date of the receipt of such permit application or such proposed general permit, the Administrator shall provide copies of such permit application or such proposed general permit to the Secretary and the Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service. If the Administrator intends to provide written comments to such State with respect to such permit application or such proposed general permit, he shall so notify such State not later than the thirtieth day after the date of the receipt of such application or such proposed general permit and provide such written comments to such State, after consideration of any comments made in writing with respect to such application or such proposed general permit by the Secretary and the Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service, not later than the ninetieth day after the date of such receipt. If such State is so notified by the Administrator, it shall not issue the proposed permit until after the receipt of such comments from the Administrator, or after such ninetieth day, whichever first occurs. Such State shall not issue such proposed permit after such ninetieth day if it has received such written comments in which the Administrator objects (A) to the issuance of such proposed permit and such proposed permit is one that has been submitted to the Administrator pursuant to subsection (h)(1)(E), or (B) to the issuance of such proposed permit as being ouside the requirements of this section, including, but not limited to, the guidelines developed under subsection (b)(1) of this section unless it modifies such proposed permit in accordance with such comments. Whenever the Administrator objects to the issuance of a permit under the preceding sentence such written objection shall contain a statement of the reasons for such objection and the conditions which such permit would include if it were issued by the Administrator. In any case where the Administrator objects to the issuance of a permit, on request of the State, a public hearing shall be held by the Administrator on such objection. If the State does not resubmit such permit revised to meet such objection within 30 days after completion of the hearing or, if no hearing is requested within 90 days after the date of such objection, the Secretary may issue the permit pursuant to subsection (a) or (e) of this section, as the case may be, for such source in accordance with the guidelines and requirements of this Act.

"(k) In accordance with guidelines promulgated pursuant to subsection (i)(2) of section 304 of this Act, the Administrator is authorized to waive the requirements of subsection (j) of this section at the time of the approval of a program pursuant to subsection (h)(2)(A) of this section for any category (including any class, type, or size within such category) of discharge within the State submitting such program.

"(l) The Administrator shall promulgate regulations establishing categories of discharges which he determines shall not be subject to the requirements of subsection (j) of this section in any State with a program approved pursuant to subsection (h)(2)(A) of this section. The Administrator may distinguish among classes, types, and sizes within any category of discharges.

"(m) Not later than the ninetieth day after the date on which the Secretary notifies the Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service that (1) an application for a permit under subsection (a) of this section has been received by the Secretary, or (2) the Secretary proposes to issue a general permit under subsection (e) of this section, the Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service, shall submit any comments with respect to such application or such proposed general permit in writing to the Secretary.

"(n) Nothing in this section shall be construed to limit the authority of the Administrator to take action pursuant to section 309 of this Act.

"(o) A copy of each permit application and each permit issued under this section shall be available to the public. Such permit application or portion thereof, shall further be available on request for the purpose of reproduction.

"(p) Compliance with a permit issued pursuant to this section, including any activity carried out pursuant to a general permit issued under this section, shall be deemed compliance, for purposes of sections 309 and 505, with sections 301, 307, and 403.

"(q) Not later than the one-hundred-eightieth day after the date of enactment of this subsection, the Secretary shall enter into agreements with the Administrator, the Secretaries of the Departments of Agriculture, Commerce, Interior, and Transportation, and the heads of other appropriate Federal agencies to minimize, to the maximum extent practicable, duplication, needless paperwork, and delays in the issuance of permits under this section. Such agreements shall be developed to assure that, to the maximum extent practicable, a decision with respect to an application for a permit under subsection (a) of this section will be made not later than the ninetieth day after the date the notice for such application is published under subsection (a) of this section.

"(r) The discharge of dredged or fill material as part of the construction of a Federal project specifically authorized by Congress, whether prior to or on or after the date of enactment of this subsection, is not prohibited by or otherwise subject to regulation under this section, or a State program approved under this section, or section 301(a) or 402 of the Act (except for effluent standards or prohibitions under section 307), if information on the effects of such discharge, including consideration of the guidelines developed under subsection (b)(1) of this section, is included in an environmental impact statement for such project pursuant to the National Environmental Policy Act of 1969 and such environmental impact statement has been submitted to Congress before the actual discharge of dredged or fill material in connection with the construction of such project and prior to either authorization of such project or an appropriation of funds for such construction.

"(s)(1) Whenever on the basis of any information available to him the Secretary finds that any person is in violation of any condition or limitation set forth in a permit issued by the Secretary under this section, the Secretary shall issue an order requiring such person to comply with such condition or limitation, or the Secretary shall bring a civil action in accordance with paragraph (3) of this subsection.

"(2) A copy of any order issued under this subsection shall be sent immediately by the Secretary to the State in which the violation occurs and other affected States. Any order issued under this subsection shall be by personal service and shall state with reasonable specificity the nature of the violation, specify a time for compliance, not to exceed thirty days, which the Secretary determines is reasonable, taking into account the seriousness of the violation and any good faith efforts to comply with applicable requirements. In any case in which an order under this subsection is issued to a corporation, a copy of such order shall be served on any appropriate corporate officers.

"(3) The Secretary is authorized to commence a civil action for appropriate relief, including a permanent or temporary injunction for any violation for which he is authorized to issue a compliance order under paragraph (1) of this subsection. Any action under this paragraph may be brought in the district court of the United States for the district in which the defendant is located or resides or is doing business, and such court shall have jurisdiction to restrain such violation and to require compliance. Notice of the commencement of such action shall be given immediately to the appropriate State.

"(4)(A) Any person who willfully or negligently violates any condition or limitation in a permit issued by the Secretary under this section shall be punished by a fine of not less than $2,500 nor more than $25,000 per day of violation, or by imprisonment for not more than one year, or by both. If the conviction is for a violation committed after a first conviction of such person under this paragraph, punishment shall be by a fine of not more than $50,000 per day of violation, or by imprisonment for not more than two years, or by both.

"(B) For the purposes of this paragraph, the term 'person' shall mean, in addition to the definition contained in section 502(5) of this Act, any responsible corporate officer.

"(5) Any person who violates any condition or limitation in a permit issued by the Secretary under this section, and any person who violates any order issued by the Secretary under paragraph (1) of this subsection, shall be subject to a civil penalty not to exceed $10,000 per day of such violation.

"(t) Nothing in this section shall preclude or deny the right of any State or interstate agency to control the discharge of dredged or fill material in any portion of the navigable waters within the jurisdiction of such State, including any activity of any Federal agency, and each such agency shall comply with such State or interstate requirements both substantive and procedural to control the discharge of dredged or fill material to the same extent that any person is subject to such requirements. This section shall not be construed as affecting or impairing the authority of the Secretary to maintain navigation.".

(c)(1) Section 308(a)(4) of the Federal

Water Pollution Control Act is amended by inserting "404 (relating to State permit programs)," immediately before "and 504".

(2) Section 309 of the Federal Water Pollution Control Act is amended—

(A) in subsection (a)(1) thereof, by striking out "section 402" and inserting in lieu thereof "section 402 or 404";

(B) in subsection (a)(3) thereof, by inserting "or in a permit issued under section 404 of this Act by a State" immediately after "State";

(C) in the first sentence of subsection (c)(1) thereof, by inserting "or in a permit issued under section 404 of this Act by a State" immediately after "State"; and

(D) in subsection (d) thereof, by inserting "or in a permit issued under section 404 of this Act by a State," immediately after "State,".

SLUDGE DISPOSAL

Sec. 68. (a) Section 405(a) of the Federal Water Pollution Control Act is amended by striking out "under this section" and inserting in lieu thereof "under section 402 of this Act".

(b) Section 405(b) of the Federal Water Pollution Control Act is amended by striking out the period at the end of the first sentence and inserting in lieu thereof "and section 402 of this Act".

(c) The last sentence of section 405(b) of the Federal Water Pollution Control Act is amended by striking out ", as the Administrator determines necessary to carry out the objective of this Act".

(d) Section 405(c) of the Federal Water Pollution Control Act is amended by striking out "if upon submission" and all that follows down through the period at the end thereof and inserting in lieu thereof the following: "in accordance with section 402 of this Act.".

EMERGENCY FUND

Sec. 69. Section 504 of the Federal Water Pollution Control Act is amended by inserting "(a)" immediately after "Sec. 504." and by adding at the end thereof the following:

"(b)(1) The Administrator is authorized to provide assistance in emergencies caused by the release into the environment of any pollutant or other contaminant including, but not limited to, those which present, or may reasonably be anticipated to present, an imminent and substantial danger to the public health or welfare.

"(2) There is hereby established a contingency fund to carry out paragraph (1) of this subsection and there is authorized to be appropriated to such fund not to exceed $10,000,000. The amounts appropriated under this paragraph shall remain available until expended. There is authorized to be appropriated such sums as are necessary to maintain that portion of such fund available for emergency assistance at a $10,000,000 level.

"(3) The Administrator shall submit a report annually to each House of Congress on his activities in carrying out this subsection.

"(4) This subsection shall not be construed to relieve the Administrator of any requirement imposed on the Administrator by any other Federal law. Nothing contained in this subsection shall (A) affect any final action taken under such other Federal law, or (B) in any way affect the extent to which human health or the environment is to be protected under such other Federal law.

"(5) The Administrator is authorized to provide emergency assistance under this subsection whenever the Administrator determines—

"(A) such assistance is immediately required to prevent, limit, or mitigate the emergency;

"(B) there is an immediate significant risk to the public health or welfare and the environment; and

"(C) such assistance will not otherwise be provided on a timely basis.

"(6) Emergency assistance provided under this subsection may include (A) measures to abate and remedy the emergency, (B) the performance of research on the effects of an emergency on public health, welfare, and the environment, and (C) providing officers and employees of the agency to administer, at the site of any emergency, the authority under this or other Federal law to minimize and mitigate the adverse effects of the emergency.

"(7) The Administrator shall prepare and publish a contingency plan for responding to emergencies under this subsection. Such contingency plan shall include actions and responsibilities comparable to those specified in section 311(c)(2) of this Act.

"(8) If emergency assistance is provided under this subsection in an emergency caused by the discharge of any pollutant subject to section 311 of this Act, the cost of such assistance shall, at the discretion of the Administrator, be a cost of removal for the purposes of subsections (f) and (g) of such section, and added to any liability which may be imposed under subsection (b)(2) of such section.

"(9) The cost of any emergency assistance provided under this subsection in an emergency caused by the discharge of a pollutant in violation of any requirement of section 301, 306, 307, 402, or 403 of this Act, shall be recoverable from the owner or operator of the source of the discharge in an action brought under section 309 of this Act.".

COMBINED SEWER OVERFLOWS

Sec. 70. Section 516 of the Federal Water Pollution Control Act is amended by adding at the end thereof a new subsection as follows:

"(c) The Administrator shall submit to the Congress by October 1, 1978, a report on the status of combined sewer overflows in municipal treatment works operations. The report shall include (1) the status of any projects funded under this Act to address combined sewer overflows, (2) a listing by State of combined sewer overflow needs identified in the 1977 State priority listings, (3) an estimate for each applicable municipality of the number of years necessary, assuming an annual authorization and appropriation for the construction grants program of $5,000,000,000, to correct combined sewer overflow problems, (4) an analysis using representative municipalities faced with major combined sewer overflow needs, of the annual discharges of pollutants from overflows in comparison to treated effluent discharges, (5) an analysis of the technological alternatives available to municipalities to correct major combined sewer overflow problems, and (6) any recommendations of the Administrator for legislation to address the problem of combined sewer overflows, including whether a separate authorization and grant program should be established by the Congress to address combined sewer overflows.".

UTILIZATION OF TREATED SLUDGE

Sec. 71. Section 516 of the Federal Water Pollution Control Act is amended by adding at the end thereof a new subsection as follows:

"(d) The Administrator shall submit to the Congress by October 1, 1978, a report on the status of the use of municipal secondary effluent and sludge for agricultural and other purposes that utilize the nutrient value of treated wastewater effluent. The report shall include (1) a summary of results of research and development programs, grants, and contracts carried out by the Environmental Protection Agency pursuant to sections 104 and 105 of this Act, regarding alternatives to disposal, landfill, or incineration of secondary effluent of sludge, (2) an estimate of the amount of sludge generated by public treatment works and its disposition, including an estimate of annual energy costs to incinerate sludge, (3) an anlysis of current technologies for the utilization, reprocessing, and other uses of sludge to utilize the nutrient value of sludge, (4) legal, institutional, public health, economic, and other impediments to the greater utilization of treated sludge, and (5) any recommendations of the Administrator for legislation to encourage or require the expanded utilization of sludge for agricultural and other purposes. In carrying out this subsection, the Administrator shall consult with, and use the services of the Tennessee Valley Authoirity and other departments, agencies, and instrumentalities of the United States, to the extent it is appropriate to do so.".

WATER SUPPLY-WASTEWATER TREATMENT COORDINATION

Sec. 72. Section 516 of the Federal Water Pollution Control Act is amended by adding at the end thereof the following new subsection:

(e) The Administrator, in cooperation with the States, including water pollution control agencies, and other water pollution control planning agencies, and water supply and water resources agencies of the States and the United States shall submit to Congress, within two years of the date of enactment of this section, a report with recommendations for legislation on a program to require coordination between water supply and wastewater control plans as a condition to grants for construction of treatment works under this Act. No such report shall be submitted except after opportunity for public hearings on such proposed report.".

EXISTING GUIDELINES

Sec. 73. Within 90 days after the date of enactment of this Act, the Administrator shall review every effluent guideline promulgated prior to the date of enactment of this Act which is final or interim final (other than those applicable to industrial categories listed in table 2 of Committee Print Numbered 95–30 of the Committee on Public Works and Transportation of the House of Representatives) and which applies to those pollutants identified pursuant to section 304(a)(4) of the Federal Water Pollution Control Act. The Administrator shall review every guideline applicable to industrial categories listed in such table 2 on or before July 1, 1980. Upon completion of each such review the Administrator is authorized to make such adjustments in any such guidelines as may be necessary to carry out section 304(b)(4) of such Act. The Administrator shall publish the results of each such review, including, with respect to each such guideline, the determination to adjust or not to adjust such guideline. Any such determination by the Administrator shall be final except that if, on judicial review in accordance with section 509 of such Act, it is determined that the Administrator either did not comply with the requirements of this section or the determination of the Administrator was based on arbitrary and capricious action in applying section 304(b)(4) of such Act to such guideline, the Administrator shall make a further review and redetermination of any such guideline.

SEAFOOD PROCESSING STUDY

Sec. 74. The Administrator of the Environmental Protection Agency shall conduct a study to examine the geographical, hydrological, and biological characteristics of marine waters to determine the effects of seafood processes which dispose of untreated natural wastes into such waters. In addition, such study shall examine technologies which may be used in such processes to facilitate the use of the nutrients in these wastes or to reduce the discharge of such wastes into the marine environment. The results of such study shall be submitted to Congress not later than January 1, 1979.

COST RECOVERY STUDY

Sec. 75. (a) The Administrator of the Environmental Protection Agency (hereafter in this section referred to as the "Administrator") shall study the efficiency of, and the need for, the payment by industrial users of any treatment works of that portion of the cost of construction of such treatment works (as determined by the Administrator) which is allocable to the treatment of industrial wastes to the extent attributable to the Federal share of the cost of construction. Such study shall include, but not be limited to, an analysis of the impact of such a system of payment upon rural communities and on industries in economically distressed areas or areas of high unemployment. No later than the last day of the twelfth month which begins after the date of enactment of this section, the Administrator shall submit a report to the Congress setting forth the results of such study.

(b) During the period beginning on the date of enactment of this section and ending on the last day of the eighteenth month which begins after the date of enactment of this section (both dates inclusive), no officer or employee of the Federal Government shall enforce, or require any recipient of a grant under section 201(g)(1) of the Federal Water Pollution Control Act (33 U.S.C. 1284) to enforce, any provision in an application for a grant or in a grant agreement under such section which requires any payments by industrial users pursuant to section 204(b)(1)(B) of such Act.

(c) or purposes of this section, the terms "industrial user" and "treatment works" have the same meaning given such terms in the Federal Water Pollution Control Act.

(d) Any payment by an industrial user which, but for subsection (b) of this section, was due and payable during the eighteen-month period described in such subsection shall after such eighteen-month period be paid in accordance with the applicable provisions of the Federal Water Pollution Control Act in equal annual installments prorated over the remaining useful life of the treatment works with respect to which they are requested to be paid.

LAKE CHELAN DELEGATION

SEC. 76. The Secretary of the Army, acting through the Chief of Engineers, is authorized to delegate to the State of Washington upon its request all or any part of those functions vested in such Secretary by section 404 of the Federal Water Pollution Control Act and by sections 9, 10, and 13 of the Act of March 3, 1899, relating to Lake Chelan, Washington, if the Secretary determines (1) that such State has the authority, responsibility, and capability to carry out such functions, and (2) that such delegation is in the public interest. Such delegation shall be subject to such terms and conditions as the Secretary deems necessary, including, but not limited to, suspension and revocation for cause of such delegation.

SECONDARY TREATMENT FACILITY SITE

SEC. 77. The Administrator of the Environmental Protection Agency shall reimburse the city of Boston, Massachusetts, an amount equal to 75 per centum, but not to exceed $15,000,000, of the cost of constructing a modern correctional detention facility on a site in such city, on condition that such city convey to the Commonwealth of Massachusetts all of its right, title, and interest in and to that real property owned by such city on Deer Island which is the site of the existing correctional detention facility for use by such Commonwealth as the site for a publicly owned treatment works providing secondary treatment. There is authorized to be appropriated $15,000,000 to carry out the purposes of this section.

TOTAL TREATMENT SYSTEM FUNDING

SEC. 78. Notwithstanding any other provision of law, in any case where the Administrator of the Environmental Protection Agency finds that the total of all grants made under section 201 of the Federal Water Pollution Control Act for the same treatment works exceeds the actual construction costs for such treatment works (as defined in that Act) such excess amount shall be a grant of the Federal share (as defined in that Act) of the cost of construction of a sewage collection system if—

(1) such sewage collection system was constructed as part of the same total treatment system as the treatment works for which such section 201 grants were approved, and

(2) an application for assistance for the construction of such sewage collection system was filed in accordance with section 702 of the Housing and Urban Development Act of 1965 (42 U.S.C. 3102) before all such section 201 grants were made and such section 702 grant could not be approved due to lack of funding under such section 702.

The total of all grants for sewage collection systems made under this section shall not exceed $2,800,000.

And the Senate agree to the same.

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 3199) to amend the Federal Water Pollution Control Act to provide for additional authorizations, and for other purposes, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report.

The Senate amendment to the text of the bill struck out all of the House bill after the enacting clause and inserted a substitute text.

The House recedes from its disagreement to the amendment of the Senate with an amendment which is a substitute for the House bill and the Senate amendment. The differences between the House bill, the Senate amendment, and the substitute agreed to in conference are noted below, except for clerical corrections, conforming changes made necessary by agreements reached by the conferees, and minor drafting and clarifying changes.

SHORT TITLE

House bill

This Act may be cited as the "Federal Water Pollution Control Act Amendments of 1977".

Senate amendment

This Act may be cited as the "Clean Water Act of 1977".

Conference substitute

The conference substitute is the same as the Senate amendment.

AUTHORIZATION APPROVAL

House bill

Authorizes funds for fiscal year 1976 and the transition quarter which were previously appropriated for expenditure under the Federal Water Pollution Control Act [hereinafter in this statement referred to as the "Act"].

Senate amendment

No comparable provision.

Conference substitute

The conference substitute is the same as the House bill with the addition of the fiscal year 1977.

AUTHORIZATION EXTENSION

House bill

Section 3 provides for the following authorizations:

(1) Manpower training (section 104(u)(2)), not to exceed $2,000,000 for fiscal year 1977, and not to exceed $3,000,000 for fiscal year 1978.

(2) Manpower forecasting (section 104(u)(3)), not to exceed $1,000,000 for fiscal year 1977, and not to exceed $1,500,000 for fiscal year 1978.

(3) Program grants to State and interstate water pollution control agencies (section 106(a)(2)), $100,000,000 for each of the fiscal years 1977 and 1978.

(4) Training grants and scholarships to institutions of higher education (section 112(c)), $6,000,000 for fiscal year 1977, and $7,000,000 for fiscal year 1978.

(5) Grants for the costs of developing and operating areawide waste treatment management planning processes (section 208(f)(3)), not to exceed $150,000,000 for each of the fiscal years 1977 and 1978.

(6) Grants for the Clean Lakes program (section 314(c)(2)), $50,000,000 for fiscal year 1977, and $60,000,000 for fiscal year 1978.

(7) Funds for the Environmental Protection Agency to carry out sections of this Act for which no other specific authorization is provided (section 517), $150,000,000 for fiscal year 1977, and $150,000,000 for fiscal year 1978.

Senate amendment

Section 3 provides for the following authorizations:

(1) Manpower training (section 104(u)(2)), not to exceed $7,500,000 for each of the fiscal years 1978, 1979, and 1980.

(2) Manpower forecasting (section 104(u)(3)), not to exceed $2,500,000 for each of the fiscal years 1978, 1979, and 1980.

(3) Program grants to State and interstate water pollution control agencies (section 106(a)(2)), $75,000,000 for each of the fiscal years 1978, 1979, and 1980.

(4) Training grants and scholarships to institutions of higher education (section 112(c)), $25,000,000 for each of the fiscal years 1978, 1979, and 1980.

(5) Grants for the costs of developing and operating areawide waste treatment management planning processes (section 208(f)(3)), not to exceed $150,000,000 for each of the fiscal years 1978, 1979, and 1980.

(6) Grants for the Clean Lakes program (section 314(c)(2)), $150,000,000 for each of the fiscal years 1978, 1979, and 1980.

(7) Funds for the Environmental Protection Agency to carry out sections of this Act for which no other specific authorization is provided (section 517), $350,000,000 for each of the fiscal years 1978, 1979, and 1980.

Conference substitute

The conference substitute provides funding at the level authorized for fiscal year 1978 in the House bill for the 3-year period authorized by the Senate amendment.

The conferees expect the Administrator to redesign the budget for fiscal 1979 and thereafter so that appropriation requests will specifically reflect applicable authorizations. For example, funds for the Clean Lakes program should be identified in terms of the authorization for Clean Lakes. Funds for training programs should be specifically identified in relation to the authorization for training programs, and so on. The Congress must know the relationship of appropriations to authorizations in order to determine whether or not programs are being implemented as intended.

STATE JURISDICTION

House bill

No comparable provision.

Senate amendment

This section amends section 510 of the Act to provide that any authority now vested in a State to establish or operate programs for the allocation of waters within the State or any rights to, or allocations of, waters pursuant to such programs shall not be abrogated or otherwise affected by any other provision of this Act.

The conference substitute amends section 101 of the Act to add a new subsection declaring it the policy of Congress that the authority of each State to allocate quantities of water within its jurisdiction should not be superseded, abrogated or otherwise impaired by this Act. It is further the policy of Congress that nothing in this Act should be construed to supersede or abrogate rights to quantities of water that have been established by any State. Federal agencies are to cooperate with State and local agencies to develop solutions to prevent, reduce and eliminate pollution in concert with programs for managing water resources. In addition, the Administrator is required to submit a report before July 1, 1978, analyzing the relationship between programs under this Act and State and Federal programs for allocation of water. This report is to include necessary recommendations.

This provision is intended to clarify existing law to assure its effective implementation. It is not intended to change existing law.

ESTUARINE STUDY

House bill

No comparable provision.

Senate amendment

Amends section 104 of the Act to permit the estuarine report to be submitted every six years instead of every three years.

Conference substitute

The conference substitute is the same as the Senate bill.

CLEARINGHOUSE FOR ALTERNATIVE TREATMENT INFORMATION

House bill

No comparable provision.

Senate amendment

The Senate amendment further amends section 104 of the Act to establish a national clearinghouse for the collection and dissemination of information developed on alternative treatment technologies.

Conference substitute

The conference substitute is the same as the Senate amendment with additional authority granted the Administrator to establish a national clearinghouse within the agency or through other public or private nonprofit organizations.

ASSISTANCE FOR RESEARCH AND DEMONSTRATION PROJECTS

House bill

No comparable provision.

Senate amendment

This section amends section 105 to authorize grants for those costs of operating and maintaining a project which received a grant under section 104, 105, or 113 which exceed the operation and maintenance costs or a comparable community using a conventional treatment works.

Conference substitute

The conference substitute is the same as the Senate amendment restricted however to those grants made prior to the date of the enactment of the subsection.

The conferees have identified six projects under section 104 which would be eligible for operation and maintenance assistance under this provision. They include: Ely, Minnesota; Rock River, Ohio; Lake Tahoe, California; Colorado Springs, Colorado; Piscataway, Maryland; and El Lago, Texas. The conferees understand that the expected annual cost of these projects will not exceed $500,000.

In addition, the conferees expect the Administrator to review the Greenville, Maine and Avalon, California projects for the purpose of providing any appropriate operation and maintenance assistance during the period in which those communities are studying and making necessary modifications to reduce excessive operation and maintenance costs.

TRAINING GRANTS

House bill

No comparable provision.

Senate amendment

This section amends section 109 of the Act to increase the limit of a grant for a training facility from $250,000 to $500,000, to exempt any such grant from the requirements of section 204, and to increase the eligible uses of training grant funds.

Conference substitute

The conference substitute is the same as the Senate amendment except that it restricts the exemption to section 204(a)(3) only. In addition, if a grant is made to serve more than one State, an additional grant is authorized for a supplemental facility in each of those States.

The only provision under section 204(a)(3) from which training grants are exempted relates to the priority list requirement.

The amendment in section 10(d) of this Act which amends section 109(b)(1) of the Federal Water Pollution Control Act is intended to allow grants for 100 per centum of any additional costs of construction of waste treatment works required for a facility to train and upgrade waste treatment works operational and maintenance personnel. For example, a given facility could include classrooms at a local school and additional laboratory or training facilities or other facilities at more than one treatment works. The school facility would be central to the operation but satellite facilities at more than one treatment works would be considered to be part of an over-all training site.

Training programs under this section would not be limited to employees of State and local governments but could also be made available, on a cost reimbursable basis, to nongovernmental personnel.

RURAL VILLAGE STUDY

House bill

No comparable provision.

Senate amendment

This section amends section 113 of the Act to authorize a study for the development of a comprehensive program for adequate sanitation services in Alaska villages. It authorizes the Administrator to coordinate with the Secretaries of Health, Education, and Welfare, Housing and Urban Development, Interior, and Agriculture, and any other appropriate agency or department as well as the State of Alaska and the appropriate native organizations so as to develop a program for the provision of adequate sanitation services in Alaska. Funds are authorized for 1978 and 1979. A report, as well as any legislative or administrative recommendations, will be filed with the Congress.

This section requires a comprehensive planning study which will result in a coordinated approach of assuring adequate sanitation services in Alaska.

Upon conclusion of the study, the Administrator is to report to the Congress the results of the study, as well as recommendations he deems necessary to assure adequate sanitation services in rural areas of the State. The Administrator is also to provide any recommendations of administrative actions or legislation necessary to satisfy the purposes of the study.

The amendment authorizes the sum of no more than $200,000 for 1978 and no more than $220,000 for 1979 to complete the study and consequent recommendations.

Conference substitute

The conference substitute is the same as the Senate amendment with the additional requirement that the study be coordinated with, and not duplicative of, programs and projects authorized by sections 104(q) and 105(e)(2) of the Act.

GRANTS FOR INNOVATIVE AND ALTERNATIVE TECHNOLOGY

House bill

No comparable provision.

Senate amendment

Section 6 amends section 105 of the Act to provide 100-percent funding for research and development projects which demonstrate innovative technology, if such a project is on a State's priority list under section 303 of the Act. Such grants are now limited to 75 percent of the total cost. Under this new provision, the non-Federal costs of such projects may be provided from a State's allotment under the construction grant program. The total amount of such funds used for this purpose may not exceed one-half of 1 percent of a State's allotment.

Conference substitute

Section 9 of the conference substitute amends section 105 of the Act to authorize a grant to anyone who received an increased grant pursuant to section 202(a)(2) of the Act. This grant may pay up to 100 percent of the costs of technical evaluation of the costs of treatment works, the costs of training persons, and costs of disseminating technical information. Section 12 of the conference substitute amends section 201(g) of the Act to add a new paragraph (5) prohibiting the Administrator from making grants after fiscal year 1978 for treatment works unless the applicant satisfactorily demonstrates that innovative and alternative waste water treatment processes and techniques have been fully studied and evaluated and taking into account and allowing, to the extent practicable, for more efficient use of energy and resources. Section 15 of the conference substitute amends section 201 to require the Administrator to encourage waste treatment management methods, processes, and techniques which reduce total energy requirements. Section 16 of the conference substitute amends section 201 to authorize the Administrator to make a grant for treatment works utilizing processes and techniques meeting section 304(d)(3) guidelines if the Administrator determines it to be in the public interest and if in the cost effectiveness study the life cycle cost of the works for which the grant is to be made does not exceed the life cycle cost of the most cost effective alternative by more than 15 per centum. Section 17 of the conference substitute amends section 202(a) of the Act to provide that the amount of any grant made after September 30, 1978, and before October 1, 1981, for eligible treatment works, or significant portions thereof, utilizing innovative or alternative waste water processes and techniques shall be 85 per centum of the cost of construction. A State must maintain its proportionate contribution to the non-Federal share of these costs. Additionally, the Administrator is authorized to make a grant to fund all costs of modification or replacement of facilities constructed with such a grant if they fail to meet design performance specifications, unless this failure is attributable to negligence, and has significantly increased capital or operating and maintenance expenditures. For the purpose of this provision, "eligible treatment works" is defined as those which meet section 201((g)(5) requirements and can be fully funded from funds available to the State in fiscal years 1979, 1980, and 1981. It does not include collector sewers, interceptors, storm or sanitary sewers or the separation thereof, or major sewer rehabilitation.

Section 20 of the conference substitute amends section 204(a)(3) of the Act to provide that section 303(e)(3)(H) priority lists may be modified by a State to give higher priority for grants for construction drawings and specifications (Step 2) for treatment works using processes and techniques meeting section 304(d)(3) guidelines and giving higher priority for grants for the combined Federal share of construction drawings and specifications and building and erection of treatment works (Steps 2 and 3) meeting the requirements of the next to the last sentence of section 203(a) of this Act which utilize processes and techniques meeting section 304(d)(3) guidelines. Section 28 of the conference substitute amends section 205 of the Act to provide that not less than ½ of 1 per centum of funds allotted to a State for each of the fiscal years 1979 through 1981 shall be expended only for increasing the Federal share of grants for construction of treatment works utilizing innovative processes and techniques from 75 to 85 per centum and that including the ½ of 1 per centum, 2 per centum per year for fiscal years 1979 and 1980, and 3 per centum for fiscal year 1981, of funds allotted to a State shall be expended only for increasing grants for construction of treatment works from 75 per centum to 85 per centum pursuant to section 202(a)(2). Section 37 of the conference substitute amends section 212(2)(A) of the Act to include land used for storing treated waste water in land treatment systems prior to land application within the definition of the term "treatment works" for the purposes of title II of this Act. Section 38 of the conference substitute amends title II to add a new section requiring the Administrator to develop and operate a continuing program of public information and education on recycling and reuse of waste water (including sludge), the use of land treatment, and methods for reducing waste water volume. Section 49 of the conference substitute amends section 304(d) of the Act to add a new paragraph (3) which requires the Administrator to promulgate guidelines for identifying and evaluating innovative and alternative waste water treatment processes and techniques referred to in section 201(g)(5). This is to be done within six months. Section 60 of the conference substitute amends section 313 of the Act to require the Administrator, in coordination with other Federal agencies, to develop a program of cooperation for using waste water control systems utilizing innovative treatment processes and techniques for which there are guidelines under section 304(d)(3), including an inventory of facilities which could utilize these processes and techniques. After September 30, 1979, construction shall not be initiated for waste water treatment facilities on any Federal property or facility if alternative methods utilizing innovative treatment processes and techniques are not utilized unless the life cycle cost of the alternative exceeds the life cycle cost of the most cost effective alternative by more than 15 per centum. The Administrator may waive this where he determines it to be in the public interest or that compliance would interfere with complying with a permit issued under section 402 of the Act. Section 72 of the conference substitute amends section 516 of the Act to require the Administrator to submit to Congress within two years a report, with recommendations, on a program to require coordination between water supply and waste water control plans as a condition to grants for construction of treatment works under this Act. Public hearings must be held on this report.

Sections 9, 12, 13, 15, 16, 17, 21, 28, 37, 38, 49, 60, and 72 have been incorporated into this conference report to expand the treatment works construction grant program utilization of innovative and alternative waste water treatment processes and techniques. These sections generally follow a series of provisions in H.R. 9464. They are intended to result in a major reorientation of the construction grant program.

The 1972 amendments redirected the water pollution program to municipal waste treatment alternatives which would lead to reclaiming and recycling of water and the confined and contained disposal of wastes so that pollutants would not migrate to cause environmental pollution. Little was done to achieve this result. The purpose of the grant level increases set forth in section 28 for projects consistent with this program and the series of related amendments is to underscore and expand that 1972 intent by providing supplemental assistance for innovative and alternative waste treatment processes and techniques. This supplemental assistance program is intended to force technology so that new and better alternatives will be utilized.

The Administrator has been provided all of the legislative tools needed to require the utilization of such innovative and alternative waste water treatment processes and techniques.

Care should be taken in the evaluation of grant applications to avoid unnecessary studies, investigations or analyses which are irrelevant to, and unaffected by, application of new technology, recycling, reuse or land treatment.

The provisions for increased grants for publicly owned treatment works utilizing innovative and alternative technology has been specifically phased in to avoid delays in ongoing step 1 and step 2 projects. The Administrator is cautioned in promulgation of regulations and implementation of these sections not to cause delays in the construction grant program. The environmental benefits to be realized from these sections on innovative and alternative technology should not be vitiated by such delays.

While treatment works construction grant funds are authorized for 5 years by section 30 of this Act, it is to be noted that section 17 provides for increased grants for treatment works using alternative and innovative technology for 3 years only. This provision is not applicable to grants made from funds authorized from either the first or the last year for which grant funds are available. It is expected that Congress will evaluate the program at the same time Congress considers an allotment formula for the grant funds authorized for fiscal year 1982.

While funds to increase construction grants to 85 percent are made available only for fiscal years 1979, 1980, and 1981, it is important to recognize that while 2 percent of the construction grant funds are set aside for fiscal years 1979 and 1980 to carry out this program, 3 percent is set aside for fiscal year 1981. This underscores the intent of Congress to increase the number of projects utilizing innovative and alternative technology. During fiscal year 1981 over 25 percent of new grant awards should utilize such technology.

Nothing in this section is intended to reduce the current emphasis on funding cost effective alternatives to conventional treatment under the basic grant program.

It is not intended that conventional processes including advanced biological treatment processes or advanced waste treatment systems utilizing distillation, nitrification, and denitrification or breakpoint chlorination be eligible for the increased Federal share. In addition to improved methods for conventional treatment, innovative technology should include such techniques as nutrient utilization and reclaiming or recycling of water.

The Administrator is expected to coordinate promptly with the other heads of departments, agencies, or instrumentalities of the Federal Government which has jurisdiction over any property or facility utilizing federally owned waste water facilities. The Federal Government is expected to be a leader in the use of alternative and innovative treatment processes and techniques. The cost effectiveness provision of section 60 is a mechanism for forcing the use of such processes and techniques. Section 60 allows the Administrator to waive the application of such processes and techniques where he determines it to be in the public interest. This authority is not intended to be a means for negating the 15 per centum cost effectiveness provision. The Administrator is not expected to waive this requirement unless there is a clear showing that on-going projects would be delayed or that important public interest considerations cannot be met.

RECREATION AND OPEN SPACE

House bill

No comparable provision.

Senate amendment

This section amends section 204(a) of the Act to require the Administrator before approving a grant to determine that the applicant has analyzed potential recreation and open space opportunities in the design of the proposed works.

Conference substitute

The conference substitute amends section 201 to provide that the Administrator shall not make grants after fiscal year 1978 for any treatment works unless the grant applicant shows it has analyzed potential recreation and open space opportunities in planning proposed works.

INDIVIDUAL SYSTEMS

House bill

No comparable provision.

Senate amendment

This section amends section 201 of the Act to permit grants for construction of privately-owned treatment works where a public body applies for such grant on behalf of a number of such units and will assure that such treatment works are properly operated and maintained, and where such service is more cost-effective than collection and central treatment.

Conference substitute

Same as the Senate amendment except that the public body is required to certify that public ownership is not feasible. The public body must enter into an agreement with the Administrator that includes a system of charges to insure each recipient of services will pay its proportionate share of operation and maintenance costs. Such agreement must also provide for payment to the United States by commercial users of that part of the cost applicable to treatment of commercial waste attributable to the Federal share of the construction cost.

Ordinarily this authority will not be used to construct septic tanks serving single residences.

This subsection may be used only to construct or acquire waste treatment facilities, and not commodes or associated plumbing.

This section is intended to be utilized to provide for the construction of alternative or unconventional treatment works for individual residences or clusters of residences. Secondary treatment package plants do not meet the requirements of this section.

COMBINED GRANTS

House bill

Section 5 amends section 203 of the Act to provide that the Administrator may after approval of a Step 1 facility plan which contains estimates of the cost to complete the project, award a single grant for preparing construction drawings and specifications (Step 2) and the building and erection of the treatment works (Step 3) combined in a single application, where the total cost of Steps 2 and 3 for this grant would not exceed $1,000,000.

Senate amendment

Section 16 amends section 203 of the Act to authorize the award of a combined step 2 and step 3 grant in the case of a treatment works costing less than $2 million which will serve a population of 25,000 or less. In States which have unusually high construction costs, the grant limitation may be increased to $3 million.

Conference substitute

The conference substitute is the same as the Senate amendment.

The provision for increasing combined grants from $2 million to $3 million is intended for the high construction cost areas of Alaska and Hawaii.

CONTRACT ENFORCEMENT

House bill

No comparable provision.

Senate amendment

This section amends section 203 of the Act to authorize EPA or a State agency to be made a party to contracts for the design and/or construction of a treatment works assisted under title II of the Act.

Conference substitute

The conference substitute amends section 203 of the Act to authorize the Administrator, upon request of the grantee, to provide technical and legal assistance in administering and enforcing any contract in connection with treatment works assisted under title II, and to intervene in any civil action involving the enforcement of such a contract.

RESERVE CAPACITY

House bill

No comparable provision.

Senater amendment

This section adds a new subsection (c) to section 202 of the Act to provide that the amount of reserve capacity for treatment works eligible for Federal assistance is to be limited to that future capacity required to serve the users of such treatment works expected to exist within the service area of the project 10 years from the time such treatment works is estimated to become operational (or 20 years in the case of interceptor sewers and associated appurtenances). The provision also amends section 204(a)(5) to conform to the new paragraph in section 202.

Conference substitute

Amends section 204(a)(5) of the Act to require the Administrator in determining the amount of reserve capacity to take into account efforts to reduce total flow of sewage and unnecessary water consumption. The amount of reserve capacity eligible for a grant under title II of the Act shall be determined by the Administrator taking into account the projected population and associated commercial and industrial establishments within the jurisdiction of the applicant to be served by such treatment works as identified in an approved facilities plan, an areawide plan under section 208 or an applicable municipal master plan of development. For the purpose of section 204(a)(5), section 208, and any such plan, projected population shall be determined on the basis of the latest information available from the United States Department of Commerce or from the States as the Administrator, by regulation, determines appropriate.

USER CHARGES

House bill

Section 6 amends section 204(b) of the Act to permit the use of ad valorem taxes as a method of collecting the costs of operating and maintaining a municipal waste treatment works which was constructed with the assistance of a Federal grant provided under title II of the Act.

Section 6 provides that a grant applicant which is using an ad valorem tax system to collect any municipal revenues at the time of application for a Federal construction grant may be eligible to use this system for the purpose of collecting revenues to defray the costs of operating and maintaining the proposed treatment works. The Administrator would be required to determine that the ad valorem tax system would result in a proportional distribution of costs between user classes according to each class' use of the treatment work.

In addition, section 6 requires proportionality within the class of industrial users as defined by section 502(18) of the Act. The grant applicant would be required to establish surcharges to ensure that each industrial user pays its proportionate share of the cost on the basis of volume, strength, and other relevant factors.

Senate amendment

Section 19 amends section 204(b)(1) of the Act to authorize user charges based on something other than metering the sewage or water supply flow of residential recipients of waste treatment services, including ad valorem taxes. The charges must meet the requirements of subsection 204(b)(1)(A) that each recipient pay its proportionate share of costs of operation and maintenance (including replacement) of any waste treatment services provided.

If the system of charges is based on something other than metering, the Administrator must require the applicant to establish a system whereby the necessary funds will be available for operation and maintenance of the treatment works. The Administrator also must require the applicant to establish a procedure to notify the residential user as to how much of his total payment will be allocated to the operation and maintenance of treatment works.

Conference substitute

Amends section 204(b)(1) to provide that in any case where an applicant which, as of the date of enactment of the sentence uses a system of dedicated ad valorem taxes and the Administrator determines that the applicant has a system of charges which results in the distribution of operation and maintenance costs for treatment works within the applicant's jurisdiction, to each user class, in proportion to the contribution to the total cost of operation and maintenance of such works by each user class (taking into account total waste water loading of such works and other appropriate factors), and such applicant is otherwise in compliance with clause (A) of this paragraph with respect to each industrial user, then such dedicated ad valorem tax system shall be deemed to be the user charge system meeting the requirements of clause (A) of section 204(b)(1) for the residential user class and such small nonresidential user classes as defined by the Administrator. In defining small non-residential users, the Administrator shall consider the volume of wastes discharged into the treatment works by such users and the constituent elements of such wastes as well as such other factors as he deems appropriate. A system of charges which meets the requirement of section 204(b)(1)(A) may be based on something other than metering the sewage or water supply flow of residential recipients of waste treatment services, including ad valorem taxes. If the system of charges is based on something other than metering the Administrator shall require (i) the applicant to establish a system by which the necessary funds will be available for the proper operation and maintenance of the treatment works; and (ii) the applicant to establish a procedure under which the residential user will be notified as to that portion of his total payment which will be allocated to the costs of the waste treatment services.

INDUSTRIAL COST RECOVERY

House bill

No comparable provision.

Senate amendment

Amends section 204 of the Act to permit the exemption of small discharges (less than 2,500 gallons a day) from industrial cost recovery requirements. It also permits publicly owned, multiplant treatment works systems to be treated as a single system so that several significant economic burdens of industrial cost recovery are avoided.

Conference substitute

The same as the provisions of the Senate amendment except that the daily flow rate exemption is set at the equivalent of 25,000 gallons or less of sanitary waste but only if the industrial user does not introduce into the works any pollutant which interferes with, or contaminates or reduces the utility of the sludge of the works. This subject matter is further discussed under the center heading "Cost Recovery Study and Water Conservation".

ALLOTMENT

House bill

Section 7 amends section 205 of the Act to provide an allotment formula for the fiscal year 1977 and fiscal year 1978 authorizations. The allotment formula is as follows: one-fourth on the basis of population, one-half on the basis of partial needs (secondary treatment, more stringent treatment to meet water quality standards, interceptor sewers and appurtenances), and one-fourth on the basis of total needs (partial needs plus collector sewers, combined sewers, and infiltration/inflow). The formula does not include any estimates of treating stormwater flows. The formula is based on the May 6, 1975, EPA report, "Cost Estimates for Construction of Publicly-Owned Waste Water Treatment Facilities—1974 'Needs' Survey".

In addition, section 7 amends section 205 of the Act to establish a new allotment procedure for funds authorized for fiscal year 1977 and beyond. The entire authorization for the fiscal year is allotted to the States on the first day of the fiscal year for which it is authorized according to the statutory allotment formula. This eliminates the six-month lead time now in the law.

The amount of the authorization available for obligation in any fiscal year is subject to limitations on obligations set by appropriation Acts. The limitations shall be applied to each State in proportion to its allotment.

The amounts which are available for obligation remain available for obligation for the fiscal year during which they could first be obligated and for the period of the next 16 months.

Any funds not obligated by the end of the period for which they were made available will be immediately reallotted among the States by EPA according to the formula applicable to sums allotted for the current fiscal year. Any State which contributes funds to the amounts subject to reallotment is ineligible to receive any portion of the reallotment shall be in addition to any funds otherwise allotted to the State for waste treatment works construction grants during any fiscal year.

Further, section 7 provides that sums made available to the Administrator for obligation between January 1, 1975, and March 1, 1975, shall remain available for obligation until September 30, 1978.

Senate amendment

Section 12(c) amends section 205 of the Act to provide two allotment formulas for the distribution of funds authorized under the Act. For fiscal year 1977 funds, the committee agreed to the formula used for the distribution of the $1 billion already made available in the fiscal year 1977 supplemental appropriations Act. That formula is 25 percent 1975 population, 25 percent total needs, as represented in the 1974 Needs Survey.

The formula for fiscal years 1978–82 represents a combination of two formulas, 100 percent 1975 population and 100 percent 1976 Needs (Categories, I, II, III, IVB, V). The formula utilizes the higher of the two percentages each State would receive under the two formulas. Such a listing adds up to a total of 117.34 percent. This percentage total is then reduced to 100 percent and the resulting percentages are the basis for distribution of fiscal years 1978–82 funds.

There is an additional provision that notwithstanding either formula, no State shall receive less than one-half of 1 percent of the total allotment. Additional sums are authorized for this purpose.

The amendment to section 205 also provides an additional authorization so that no State's proportional allotment in each of the fiscal years 1978 through 1982 will be reduced by more than 25 per centum of its proportional share allotment under the 1977 formula.

Section 11 amends section 205(b) of the Act to extend the period of time of sums made available during fiscal year 1976 to September 30, 1978.

Conference substitute

Provides that sums authorized to be appropriated pursuant to section 207 for fiscal years 1978 through 1981 shall be allotted for each such year within 10 days of the date of enactment of the Clean Water Act of 1977. The allotment is to be in accordance with table 3 of House Public Works and Transportation Committee Print Numbered 95–30. Sums allotted are available for the fiscal year authorized and the next succeeding 12 months. Funds not obligated are reallotted on the basis of the then current fiscal year ratio except none of the reallotted funds shall be allotted to any State that failed to obligate any of the funds being reallotted. Reallotted funds are in addition to funds allotted to a State in any fiscal year. For the fiscal years 1978, 1979, 1980, and 1981 no State is to receive less than one-half of 1 per centum of the total allotment except that Guam, the Virgin Islands, American Samoa, and the Trust Territories are in the aggregate to be allotted not more than thirty-three one-hundredths of 1 per centum. A separate authorization of $75 million per year for fiscal years 1978, 1979, 1980, and 1981 is provided for these minimum allotments.

Following is table 3 of House Public Works and Transportation Committee Print Numbered 95–30.

TABLE 3.—*Allotment formula for construction grant funds*

State	*Percentage*
Alabama	1.2842
Alaska	.4235
Arizona	.7757
Arkansas	.7513
California	7.9512
Colorado	.9187
Connecticut	1.1072
Delaware	.3996
District of Columbia	.3193
Florida	3.8366
Georgia	1.9418
Hawaii	.7928
Idaho	.4952
Illinois	5.1943
Indiana	2.7678
Iowa	1.2953
Kansas	.8803
Kentucky	1.4618
Louisiana	1.2625
Maine	.7495
Maryland	2.7777
Massachusetts	2.9542
Michigan	4.1306
Minnesota	1.8691
Mississippi	.9660
Missouri	2.4957
Montana	.3472
Nebraska	.5505

Tennessee	1.5486
Texas	4.3634
Utah	.4457
Vermont	.3845
Virginia	1.9602
Washington	1.7688
West Virginia	1.7903
Wisconsin	1.9503
Wyoming	.3003
American Samoa	.0616
Guam	.0744
Puerto Rico	1.1734
Trust Territories	.1530
Virgin Islands	.0378
Total	100.0000

NOTE.—Allotments for the States of Alaska, Delaware, District of Columbia, Idaho, Montana, Nevada, New Mexico, North Dakota, South Dakota, Utah, Vermont, and Wyoming are less than ½ of 1 percent of the total allotment of treatment works construction grant funds for a fiscal year. Sec. 25(e) of the Clean Water Act of 1977 provides that for fiscal years 1978, 1979, 1980, and 1981, no State shall receive less than ½ of 1 percent of the total allotment. An authorization of $75,000,000 is provided for each of these fiscal years to carry out this provision. The following States would share any amount appropriated under this subsection in the following percentages: Alaska, 5.4449; Delaware, 7.1459; District of Columbia, 12.8612; Idaho, 0.3416; Montana, 10.8755; Nevada, 6.1352; New Mexico, 8.4057; North Dakota, 13.4733; South Dakota, 9.0178; Utah, 3.8648; Vermont, 8.2206; and Wyoming, 14.2135.

STATE MANAGEMENT ASSISTANCE

House bill

Adds a new section 214 to title II of the Act. Under this provision, the Administrator of EPA may accept from States qualifying to participate, certifications as to their compliance with the Act in developing applications for treatment works grants. Qualified states are defined as those whose water pollution control agencies have the authority, responsibility and capability to effect all actions, determinations or approvals for which certification is submitted.

Section 214 authorizes the Administrator to accept certification by a State that the following Federal requirements for a construction grant award had been complied with:

Evaluation of alternative waste management techniques; determination that the proposed treatment works will provide for the application of the best practicable waste treatment technology over the life of the works and will allow for the later application of advanced treatment technology (section 201(g)(2));

The proposed treatment works is not subject to excessive infiltration (section 201(g)(3));

Plans, specifications, and estimates have been submitted (section 203(a));

Stages of projects may be eligible for a grant award (section 203(d));

The proposed works are consistent with applicable areawide waste treatment management plans and State water quality plans (section 204(a)(1) and (a)(2));

The works are entitled to priority for funding over other works in the State (section 204(a)(3));

The grant applicant agrees to pay non-Federal costs and has made provisions for proper operation and maintenance of the works (section 204(a)(4));

The proposed works contains sufficient reserve capacity (section 204(a)(5));

Bid specification requirements will be complied with (section 204(a)(6));

The user charge and industrial cost recovery provisions of the Act have been complied with (section 204(b)(1) and (b)(3));

The proposed treatment works system is eligible for a grant under the definition of "treatment works" (section 212(2)(B)).

Subject to the Administrator's approval, after public hearings, and to judicial review, with respect to qualifications to conduct a certification program, States receiving certification authority would exercise this authority by certifying to the Administrator that projects are in compliance with all or a portion of legal, financial, technical, and administrative requirements.

Certification authority could be carried out by a State for all or a part of the actions, determinations or approvals for which certification may be accepted as its capabilities warrant at a given time.

Also, the section provides that the Administrator must determine that the State is following practices that conform to the Federal construction grant regulations under the Act, including a requirement that any person having a significant financial interest in the construction of treatment works will not be a member of any State board or body which processes an application for a grant under this title.

Under section 214, the Administrator is required to issue implementing regulations within 90 days of the date of the enactment of the bill.

Section 214 addresses the possibility of failure by States to meet the requirements of this section. If, after public hearing, the Administrator determines a State is not meeting the requirements for one or more of the actions, determinations, or approvals for which certification is accepted from that State the Administrator may suspend acceptance for any or all projects in the State. In the event of such suspension, the Administrator at his discretion may reinstate that State's program for any or all projects upon receiving evidence that the deficiencies have been corrected.

The responsibilities of the Administrator under any other Federal law including the

National Environmental Policy Act of 1969 are not affected by this section.

This section does not change the Administrator's responsibility to award Federal grants. Neither does it affect the existing procedures for environmental assessments.

States participating in this program are permitted to expend up to two percent of their construction allotments from section 205 of the Act for the reasonable costs of carrying out this responsibility.

The amount up to 2 percent reserved for this purpose may be granted by the Administrator from time to time to a State for carrying out the certification authority. A grant made from the amount reserved may be obligated by the States in the same manner as for construction projects and during the same period as the allotment from which the grant is made. Funds so obligated shall be available until expended.

This section further requires the Administrator to conduct interim and final inspections and audits for the State water pollution control agencies to submit information, data, and reports.

Senate amendment

Section 22 amends section 205 of the Act to authorize reservation of up to 2 percent of a State's construction grant allotment, but no less than $400,000, for use by the State in administering any aspects of the construction grant program. Such funds may be increased to assist in the administering of the 402 permit program, statewide 208 planning, and responsibility for managing construction grants for small communities.

Paragraph (c)(2) of this new subsection provides that a State assisting the Environmental Protection Agency in the implementation of its responsibilities under sections 201, 203, and 204 may receive grants to cover the reasonable cost of that assistance.

The activities include infiltration studies, reveiw of preliminary plans to evaluate the size and scope of the project, review of operation and maintenance programs, review of plans and specifications, determination of consistency with section 208 plans and review of priorities.

Sums reserved for making grants under this provision shall be available for the same period as sums are available from an allotment under subsection (b) of section 205 of the Act, and any grant shall be available for obligation only during that period. Reserve funds that are not obligated by the end of the period for which they are available will be added to the amounts last allotted to a State under such section 205 and would be immediately available for obligation in the same manner and to the same extent as such last allotment.

Conference substitute

The conference substitute is the same as the Senate amendment except that the grant eligibility is expanded to include costs of administering section 212 of the Act.

In addition, section 101(b) of the Act is amended to declare it the policy of Congress that States manage the construction grant program and implement the sections 402 and 404 permit programs.

The conferees intend that the sums made available under this provision should not be used to reduce the level of Federal or State expenditures to administer water pollution control programs as provided in section 106 of this Act.

SET-ASIDE FOR ALTERNATIVE SYSTEMS FOR SMALL COMMUNITIES

House bill

No comparable provision.

Senate amendment

This section amends section 205 of the Act to require the setting aside of between 5 percent and 10 percent of construction grant funds allotted to a rural State (States with a rural population of 25 percent or more of the total population of the State) for use only for alternative or unconventional systems for communities of 3,500 or less or for highly dispersed sections of larger communities. Nonrural States may request, through the Governor, a set-aside of up to 10 percent of its grant allotment to be used for such purposes.

Conference substitute

The conference substitute is the same as the Senate amendment except that the amount of the set-aside is 4 per centum of the alloted sums and the term "municipalities" is used in place of "communities".

For the purpose of this section, "rural" States are those having 25 percent or more of their total population residing in places with a population of 2,500 or less.

A table of States ranked by percent of rural population consistent with this section is set forth on pages 33 and 34 of Senate Committee on Environment and Public Works Report No. 95–370.

Nothing in this section is to affect existing administrative policy for the establishment of a reserve for small communities where a State chooses to set aside a reasonable percentage of its funds for the projects of such small communities. For the purpose of this policy, the State determines the definition of "small community", subject to approval by the Administrator. States whose priority lists now reflect a setaside of a proportional share of construction funds for small communities include Texas, Michigan, and Maryland.

REIMBURSEMENT AND ADVANCED CONSTRUCTION

House bill

Section 8 amends section 206(a) of the Act to extend from July 1, 1972, to July 1, 1973, the date by which initiation of construction on treatment works projects must have occurred in order for such projects to be eligible for reimbursement grants of 50 to 55 percent of project costs. Applications for reimbursement for those projects on which construction was initiated between July 1, 1972, and July 1, 1973, must be filed within 90 days after the date of enactment of this section.

Section 8 also amends section 206(e) of the Act to increase the authorization for reimbursement grants from $2,600,000,000 to $2,950,000,000 for the purpose of fully reimbursing the total eligible grant amount of 50 to 55 percent to all those communities which have previously qualified under section 206 (a) and those communities which become eligible under the provisions of this section.

Senate amendment

No comparable provision.

Conference substitute

The conference substitute is the same as the House provision with the following exceptions:

(1) construction must have been initiated before July 1, 1973,

(2) the grant must have been made under Public Law 660, 84th Congress, and

(3) the increased authorization has been eliminated.

The purpose of this amendment is to give equitable treatment to Public Law 84–660 projects which received less than either their 50 percent or 55 percent eligible grants and which were unable to initiate construction by the June 30, 1972 cut-off date to qualify for reimbursement under section 206(a).

Additional authorizations have not been requested as there remains $200,000,000 of unused authorizations for this purpose and the estimated amount needed for projects that would become eligible with this amendment is $40 million.

The term "initiation of construction" as used in this section means the issuance to a construction contractor of a notice to proceed, or, if no such notice is required, the execution of a construction contract (40 C.F.R. 35.890).

This section does not affect the term "initiation of construction" as defined by the Administrator in 40 C.F.R. 35.905, as presently in effect.

CONSTRUCTION GRANT AUTHORIZATIONS

House bill

Section 9 amends section 207 of the Act to provide additional authorizations for the purpose of providing 75 percent Federal grants for the construction of municipal waste treatment works. An authorization of $5,000,000,000 is provided for fiscal year 1977, $6,000,000,000 for fiscal year 1978, and $6,000,000,000 for fiscal year 1979.

Senate amendment

Section 12(a) amends section 207 of the Act to provide authorizations for the municipal construction grant program of $3,500,000,000 for fiscal year 1977, and $4,590,000,000 for each of the fiscal years 1978, 1979, 1980, 1981, and 1982.

Conference substitute

The conference substitute authorizes $4,500,000,000 for fiscal year 1978, and $5,000,000,000 per fiscal year for fiscal years 1979, 1980, 1981, and 1982.

The conference agreement provides an authorization for appropriations for five fiscal years. The authorizations for fiscal years 1978 through 1981 are allotted immediately after enactment. A major change in the Act is the provision making the amounts of each authorization subject to appropriations Acts. This provision was adopted so as to comply with the Congressional Budget and Impoundment Control Act of 1974. However, it is recognized that making the authorizations subject to annual appropriations Acts reintroduces the very uncertainty in the level of funding that Congress had attempted to eliminate in the Federal Water Pollution Control Act Amendments of 1972 when it provided for contract authority. Therefore an allotment is no longer a commitment to fund because, although contract authority is still theoretically available, it no longer has any impact on the availability of funds.

The Budget Impoundment and Control Act of 1974 anticipated that, in the absence of effective contract authority, the Appropriations Committees would make available advanced appropriations for those programs which require long-term planning commitments for efficient expenditures of funds. The conferees hope and expect the Appropriations Committees will, with the support of the Budget Committees, provide advanced appropriations for fiscal years 1979, 1980, and 1981. Only in this way can States and communities know in advance that adequate funds will be available and proceed to plan for construction of needed wastewater treatment works.

AREAWIDE PLANNING

House bill

Section 10 amends section 208(f)(2) of the Act to provide for 100 percent Federal grants to designated agencies for the first two years' costs of developing and operating a continuing areawide waste treatment management planning process if the first grants are approved by EPA before October 1, 1977. The 2-year period begins on the date the first grant is made.

Grants of up to 75 percent of the costs of developing and operating a continuing areawide waste treatment management process in any one year, are provided for each succeeding one year period to newly designated agencies whose first grants are approved after October 1, 1977, as well as for subsequent grants for each succeeding one year period to agencies which have already utilized their first grant.

Senate amendment

Section 13(a) amends section 208(b) of the Act to provide that any agency designated after 1975 under section 208(a) and a State acting as the planning agency for all portions of the State not otherwise designated shall have a full three years after receipt of the initial grant under section 208(f) to prepare an initial plan.

Section 13(b) amends section 208(f)(2) of the Act to provide that, for the first 2 years of operation of any agency designated prior to October 1, 1978, to conduct an areawide waste treatment management planning process under section 208, the amount of the Federal grant shall be 100 percent of the costs.

Conference substitute

The conference substitute is the same as the Senate amendment except that the date by which the first grant must be approved is set as October 1, 1977, as provided in the House bill.

The conferees note that the authorization for section 208 is unrelated to the litigation in *National Association of Regional Councils* v. *Costle*, No. 76-1970, U.S. Court of Appeals for the D.C. Circuit (decided September 8, 1977). Sums authorized for this section should not in any way be used to meet any order resulting from that case. Any funds appropriated pursuant to this authorization should be used only as set forth in this section.

AREAWIDE WASTE TREATMENT MANAGEMENT

House bill

No comparable provision.

Senate amendment

This section amends section 208(b)(2)(A) of the Act to require that any plan prepared under the areawide waste treatment management process must include an identification of open space and recreation opportunities expected to result from improved water quality, including methods and procedures to assure public access to navigable waters for recreation purposes.

Conference substitute

The conference substitute is the same as the Senate amendment except that the provision relating to public access to navigable waters has been replaced with a requirement that there be consideration of potential use of land associated with treatment works and increased access to water-based recreation.

IRRIGATION RETURN FLOWS

House bill

No comparable provision.

Senate amendment

This provision creates a new subsection (m) of section 402, and amends section 208 (b)(2)(F) of existing law. Its effect is to exempt irrigation return flows from all permit requirements under section 402 of the Act, and to assure that areawide waste treatment management plans under section 208 include consideration of irrigated agriculture.

Conference substitute

The conference substitute makes the same amendment to section 208(b)(2)(F) as the Senate amendment. It also amends section 502(14) of the Act to remove return flows from irrigated agriculture from the definition of the term "point source". In addition the amendment to section 402 of the Act is revised to prohibit the Administrator from requiring permits for this type of discharge and to prohibit the Administrator from requiring any State to require such a permit.

The purpose of this section is to assure that no permit can be required by EPA for regulation of irrigation return flows. The conferees do not intend, in any way, to restrict the authority of a State to regulate irrigation return flows as a part of an approved State section 402 permit program.

AGRICULTURE COST SHARING

House bill

No comparable provision.

Senate amendment

The section establishes a new program for the Department of Agriculture, in cooperation with the Administrator of the Environmental Protection Agency, to provide technical and financial assistance to land owners and operators in rural areas for implementing areawide management plans under section 208 of the Federal Water Pollution Control Act.

Financial assistance under this provision is delivered through a cost-sharing program for implementing long-term soil conservation practices for improving water quality under section 208. The funds would be authorized to the Secretary of Agriculture, acting through the Soil Conservation Service. The Secretary, with the concurrence of the Administrator of the Environmental Protection Agency, would enter into contracts with farm operators and owners for the purpose of installing measures to reduce agricultural runoff. Only those soil conservation measures approved as part of State plans under section 208 as best management practices for improving water quality would be eligible for such funding. The Federal cost share could be as high as 50 percent, unless the Secretary determines otherwise. Funds available are to be used for installation of control mechanisms and not day-to-day operating costs.

These cost-sharing funds will be made available only to those areas of States which have approved management plans under section 208. The Secretary will give priority to projects in those areas which have critical nonpoint source pollution problems from agricultural runoff. Section 208 management agencies will be required to assure an appropriate level of participation by land owners and operators in the area before funding can become available.

The Secretary is authorized to carry out this cost-sharing program through the State soil conservation districts.

There is authorized to carry out this provision $200,000,000 for fiscal year 1979, and $400,000,000 for fiscal year 1980.

Conference substitute

The conference substitute is the same as the Senate amendment except that the Secretary of Agriculture, with the concurrence of the Administrator, and acting through the Soil Conservation Service and such other agencies of the Department as the Secretary may designate, is to establish and administer this program. In addition, agreements to administer the program shall provide for payment by the United States of such administrative costs as the Secretary deems appropriate. The local soil conservation district, where one exists, together with the Secretary of Agriculture, will determine priority of assistance to assure the most critical water quality programs are addressed by the program.

This provision is essentially the same as the Senate-passed bill except that it has been clarified to give the Secretary of Agriculture more flexibility within his department. The funds authorized for agricultural cost-sharing programs are to be included in the request for appropriations for agricultural programs and not to be included in the EPA budget. The funds are to be appropriated to the Secretary of Agriculture.

The conferees agree that the function of this cost-sharing program is to reduce nonpoint source pollution through financial assistance for only those soil conservation practices which improve water quality. It is not intended to be a copy or extension of existing soil conservation programs in the Department of Agriculture, and should not finance production-oriented practices except as an incidental or indirect result.

GRANT ELIGIBLE CATEGORIES

House bill

No comparable provision.

Senate amendment

This section amends section 211 of the Act to eliminate from eligibility the construction of treatment works for the control of discharges from separate storm sewers, the replacement or rehabilitation of a collection system unless necessary to correct excessive infiltration, and the construction of a new collection system unless the grant is limited to existing population, there is or will be treatment capacity to serve the system, the system is necessary to protect ground or surface water supplies or to attain water quality standards, and the alternatives had been proved less cost-effective.

Conference substitute

The conference substitute adds two new subsections to section 211 of the Act. The first provides that if population density is used as a test of eligibility of a collector sewer for assistance population density shall only be used for the purpose of evaluating alternatives and in determining the needs for the collection system in relation to ground or surface water quality impact. The second provides that no grant may be made under title II from funds for fiscal years 1978 through 1982 for treatment works for control of pollutant discharges from separate storm sewer systems.

The conference agreement deletes the Senate provision which amends section 211 of existing law relating to major sewer rehabilitation and collector sewer eligibility. This leaves in place existing law. Collector sewer eligibility is thus limited to communities in existence on October 18, 1972, with sufficient existing or planned capacity adequate to treat such collected sewage.

For the purpose of this section, it is recognized that a community qualifying for Federal grant assistance to construct a collector sewer system may be a geographic or jurisdictional area that is less than the municipality which is applying for the treatment works grant.

The conferees added an amendment which limits the use of population density as a test for determining the grant eligibility of a collector sewer to evaluation of alternatives and determination of the needs for such system in relation to ground or surface water quality impact. The Agency has issued guidance on the use of density and other factors in cost effectiveness analysis. The conferees direct the Agency to review this guidance to assure that it meets the test of this new provision.

REQUIREMENTS FOR AMERICAN MATERIALS

House bill

The new section 216 created by section 12 would extend the application of the Buy American Act to any case where Federal construction grant funds for municipal treatment works are used. However, where the Administrator of EPA determines, as in the basic Buy American Act, that enforcement of the Buy American provision would not be in the public interest or that costs would be unreasonable, the provision shall not apply.

Senate amendment

No comparable provision.

Conference substitute

The conference substitute is the same as the House bill except that this provision is not to apply in any case where the Administrator determines, based upon those factors he deems relevant, including available agency resources, that enforcement is inconsistent with the public interest (including multilateral government procurement agreements), the cost to be unreasonable, or the articles are not reasonably available in commercial quantities of satisfactory quality.

DETERMINATION OF PRIORITY

House bill

Section 12 adds a new section 215 to the Act which gives each State the ability to determine the priority to be given each category of projects for construction of publicly owned treatment works within each State. The categories of projects for construction of publicly owned treatment works include: secondary treatment, treatment more stringent than secondary treatment as is necessary to meet water quality standards, correction of infiltration/inflow, major sewer system rehabilitation, new collector sewers and appurtenances, new interceptor sewers and appurtenances, and correction of combined sewer overflows.

Senate amendment

Section 8 amends section 106(f) to provide that in the approval of priority lists or determinations for priority under 106(f) or section 204(a)(3) or section 303(e) for grants for design or construction of publicly owned treatment works the Administrator shall give highest priority treatment works necessary to comply with sections 301(b) or 201(b), (d) and (g)(2)(A). Included are facilities providing for treatment, reclamation or recycling of wastewater and for beneficial use or disposal of residual sludges.

Conference substitute

The conference subsitute is the same as the House bill except that if the Administrator after a public hearing determines a project will not result in compliance with the enforceable requirements of the Act the project shall be removed from the priority list and the Senate shall submit a revised list. At least 25 percent of funds allocated to a State in any fiscal year for construction under this Act shall be obligated for eligible types of projects if they are on the State's priority list for that year and are otherwise eligible for funding for that year.

COST-EFFECTIVENESS GUIDELINES

House bill

No comparable provision.

Senate amendment

The bill adds a new section 213 to require that cost-effectiveness guidelines published by the Administrator provide for identification and selection of cost-effective alternatives to comply with the objective and goals of the Act and sections 201(b), 201(d), 201(g)(2)(A), and 301(b)(2)(B).

Conference substitute

The conference substitute is the same as the Senate amendment.

This section is to have no effect on collector sewers.

CONTRACT AUTHORITY

House bill

Section 11 amends section 208(f)(3) of the Act to make the payment of the Federal share of the cost of developing and operating a waste treatment management planning process approved by the Administrator subject to sufficient amounts being provided in appropriation Acts.

Senate amendment

Same as the House bill.

Conference substitute

The conference substitute is the same as the House bill and the Senate amendment.

MODIFICATION OF SECONDARY TREATMENT REQUIREMENT

House bill

No comparable provision.

Senate amendment

This section amends section 301 of the Act to provide for a modification of the secondary treatment requirement for any conventional pollutant in a discharge into marine waters from existing municipal sources if it can be shown that the modification will not interfere with the attainment or maintenance of that water quality which assures the protection of public water supplies and the protection and propagation of a balanced, indigenous population of fish, shellfish, and wildlife, and allows recreational activities, in and on the water, will not require additional controls on any other source, assures enforcement of all applicable pretreatment requirements, and assures that there will be no substantial increase in the volume of the discharge.

Conference substitute

The conference substitute is the same as the Senate amendment.

For those communities which can show that existing deep marine discharge requires less than secondary treatment, a case-by-case review waiver is provided. Such a waiver would be based on stringent criteria discussed below. The waiver would be reviewed every 5 years to assure continued compliance with these conditions.

This subsection is the result of recognition that there are some coastal areas of the United States and its territories where natural factors provide significant and in some cases sufficient elimination of traditional forms of pollution from publicly owned treatment works to avoid the necessity of providing secondary treatment.

An applicant, in order to obtain this relief, must demonstrate to the satisfaction of the Administrator that eight conditions are met. The first condition is that there is an applicable water quality standard specific to the pollutant for which the modification is requested. The degree of effluent reduction necessary to meet this standard must be provided as a minimum.

The second condition is that the modified requirements would not interfere with the attainment or maintenance of that water quality which assures protection of public water supplies and propagation of a balanced indigenous population of shellfish, fish and wildlife, and allows recreational activities, in and on the water.

The third condition is that the applicant has established a system for monitoring the impact of such discharge on a representative sampling of aquatic biota to the extent practicable.

The fourth condition is that the modified requirements will not result in any additional requirements on any other point or nonpoint source.

The fifth condition is that all applicable pretreatment requirements will be enforced.

The sixth condition is that to the extent practicable the applicant has established a schedule of activities designed to eliminate the entrance of toxic pollutants from nonindustrial sources into such treatment works.

The seventh condition is that there will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit.

The last condition is that any title II funds available to the owner of the treatment works are to be used to achieve the degree of effluent reduction required by section 201(b) and (g)(2)(A) or to carry out the requirements of this subsection. The referenced provisions of section 201 may require a degree of effluent reduction which is greater than that required under this section of the Act as amended. Available title II funds shall be used in this case to achieve the requirements of section 301 as amended before they are used to achieve the requirements of section 201. Uses of funds appropriate to carrying out the purposes of the section might include infiltration and inflow work, interceptor construction and repair, and proper location of outfall lines.

The amendment defines the "discharge of any pollutant into marine waters" as a discharge into deep waters of the territorial sea or contiguous zone or into saline estuarine waters where there is strong tidal movement and other hydrological and geological characteristics which the Administrator determines are necessary to comply with the second condition described above, and section 101(a)(2) of the Act.

Depth is a key factor in determining the amount of circulation in waters of the territorial sea or contiguous zone. Circulation in turn affects the degree to which waste water discharges to these waters are rapidly dispersed. In some instances, depth of water in the territorial seas or contiguous zone in excess of 200 feet is necessary to achieve sufficiently rapid dispersion (i.e., 45 seconds) of waste water and waste water constituents. In some instances, depth of 200 feet is insufficient to provide adequate dispersion. Poor net flushing (i.e. stagnation) of a deep basin may cause undesirable vertical cycling of discharges.

Factors determining the amount and rapidity of dispersion of saline estuarine waters are the degree of tidal movement and other hydrological and geological characteristics. In some cases, rip currents and strong tidal movements which contribute to high flushing efficiency in certain bays and estuaries, may provide sufficient circulation. Additional precautions, however, need to be considered in or near the mouths of estuaries due to possible tidal transport of pollutants landward into estuarine area where they may be retained.

Distance offshore for location of outfall lines is also a factor which must be considered in many situations. In these cases, sufficient distance offshore is generally necessary so that adverse water quality conditions will not be created under assumed worst conditions of onshore current and wind based on data derived from historical records.

Greater distance offshore may provide the desired protection during adverse conditions of onshore currents and wind. Geological characteristics such as submarine canyons may also be utilized because of the same advantages of rapid dispersion and desirable circulation.

There are, of course, constituents, such as polychlorinated biphenols (PCBs), which irrespective of depth, tidal movement or other factors related to circulation in marine waters, cannot be adequately dispersed because of their persistence.

Areas described by these conditions include most of the coast of the western United States, the coasts of Hawaii, Puerto Rico, American Samoa, the Virgin Islands, and portions of estuarine waters such as Cook Inlet near Anchorage, Alaska, and Resurrection Bay near Seward, Alaska.

This provision assumes that any criteria promulgated by the Administrator under section 403 remain applicable.

MUNICIPAL TIME EXTENSIONS

House bill

Section 13 amends section 301 of the Act by adding a new subsection (g) which authorizes the Administrator to modify on a case by case basis, the time for achieving the July 1, 1977, treatment requirements imposed by section 301(b)(1) of the Act for both publicly-owned waste treatment facilities and other point sources.

In the case of publicly-owned treatment works, subsection (g) authorizes the Administrator to grant time extensions up to July 1, 1982, or if innovative technology is to be utilized, up to July 1, 1983.

New subsection (g)(3) provides that no time modifications shall be granted under this subsection unless there is an approved schedule of compliance. Failure to meet the approved schedule of compliance would be a violation of the requirements of section 301 and would be subject to enforcement under section 309 in the same manner as another violation of the requirements of section 301.

Section 13 adds a new subsection (g)(4) to section 301 of the Act. This new subsection addresses the question of point sources which introduce their effluents into publicly-owned treatment works. It provides that any point source which has a contract enforceable against itself to participate in a publicly-owned treatment works may discharge its effluent into a publicly-owned treatment works and shall not be subject to the best practicable control technical requirements of subsection 301(b)(2)(A) or the more stringent requirements necessary to meet the necessary water quality standards required by subsection 301(b)(1)(C) until the date which the treatment works receiving the effluent is itself required to meet subsections 301(b)(1) (B) and (C), secondary treatment or water quality standards, respectively. It is necessary that the enforceable contract must be in effect not later than the sixtieth day after the date the time modification is granted to the publicly-owned treatment works.

Section 13 adds a new section 301(h) to the Act which provides that industries which received grants under section 105(c) of the Act to develop new technology to treat industrial waste, and were unsuccessful, will receive an additional period of time to comply with section 301(b)(1) of the Act.

Senate amendment

Section 31 amends Section 301 of the Act to permit a case-by-base modification of the July 1, 1977, deadline for publicly owned treatment works up to July 1, 1983, where construction cannot be completed or where Federal funds have not been made available. Such modification is available to dischargers into the system if such dischargers have been found to have acted in good faith.

This amendment allows the Federal or State approved permitting agency to extend the July 1, 1977, deadline for the achievement of secondary treatment by sewage treatment plants on a case-by-case basis.

New section 301(f)(1) allows the permitting agency, in its discretion, to extend the statutory deadline for secondary treatment for sewage treatment plants, provided that either (1) major new construction is required and cannot reasonably be completed by the statutory deadline, or (2) necessary Federal financial assistance under title II of the Act has not been available.

If an extension is granted, the permitting agency shall specify in the permit that final compliance with the requirements of secondary treatment be achieved at the earliest date practically possible, but in no event later than July 1, 1983. In addition, the permit shall contain any other requirements necessary to carry out the Act, including interim effluent limitations to be achieved by the application of the best possible operations and maintenance practices and other noncapital intensive measures. In addition, the permit shall contain such requirements as are necessary to achieve the requirements of water quality standards, best practicable waste treatment technology, toxic effluent limitations, and pretreatment standards.

Paragraph (2) of section 301(f) allows the permitting authority, in its discretion, to extend the date of compliance with the July 1, 1977, deadline for nonmunicipal point sources which intend to discharge their waste to a yet unfinished sewage treatment plant.

Several criteria must be met before the nonmunicipal point source can be considered for an extension. First, the point source's permit must evidence a decision to tie-in to the municipal treatment works.

Second, the sewage treatment plant which is the intended recipient of waste from the nonmunicipal point source, must either have obtained an extension pursuant to the first paragraph of this section or require substantial construction in order to process the waste. This section allows the industrial point source to obtain an extension of its final effluent limitations pending the completion of this major construction by a sewage treatment plant, provided that the sewage treatment plant has been fully planned and can demonstrate to the satisfaction of the permitting authority that it can complete construction by July 1, 1983.

Third, no extension can be granted unless the permitting agency finds that the sewage treatment plant will be able to meet the requirements of secondary treatment and water quality standards when the waste from the contributing industry is received.

Fourth, the point source and the sewage treatment plant must have entered into a binding contract providing that the contributor agrees to discharge its waste to the treatment plant, and the sewage treatment plant agrees to accept and treat that waste by a certain date. Also, the contract must provide that the contributor agrees to pay all user charges and construction cost recovery charges required under section 204 of the Act.

In order to assist the permitting agency in protecting the public interest, the agency is instructed to consider the good faith of the industrial discharger in deciding whether or not to grant an extension of the 1977 deadline.

If all the above conditions are met, the permitting agency may extend the date of compliance with final effluent limitations either to correspond with any extension granted to the receiving treatment work, or to the earliest possible date that sewage plant construction permits the tie-in (in no event later than July 1, 1983). The permit allowing such an extension shall not allow any extension of the permittee's obligation to comply with pretreatment standards and toxic effluent limitations.

The Administrator may not grant an extension for an industry which intends to discharge through a municipal system if he determines that the municipality will not have its treatment works completed by July 1, 1983. In that event, the Administrator is required to issue the affected industry a permit which sets forth an effluent limitation and a compliance schedule which will assure compliance by that source at the earliest reasonable date.

Section 41 amends section 309 of the Act to provide two new enforcement options for violations of the 1977 best practicable technology for industrial dischargers. The first option authorizes the issuance of an enforcement order requiring a "reasonable" time for compliance, reserving the 30-day requirement for violation of operation and maintenance requirements and interim compliance schedules. The second option authorizes an extension of the 1977 deadline up to January 1, 1979, where the Administrator finds that the discharger acted in good faith, that a serious commitment to achieve compliance had been made, that compliance will occur no later than January 1, 1979, that the extension will not impose additional controls on other sources, that an application for a permit was filed before December 31, 1974, and that the necessary abatement facilities are under construction.

Conference substitute

The conference substitute is based upon the Senate amendment with the following modifications:

(1) The requirement that "major" new construction be required has been revised to require that construction be required.

(2) The requirement that construction cannot be "reasonably" completed has been revised to require that construction cannot be completed.

(3) It has been made clear that the United States must have failed to make financial assistance available in time.

(4) The owner or operator of a treatment works is given 180 days to file a request for an extension.

(5) Where an industrial point source will not achieve the requirements and (i) if a permit issued before July 1, 1977, to that source is based upon a discharge into a publicly owned treatment works or (ii) if such industrial point source had before July 1, 1977, a contract enforceable against it to discharge into a publicly owned treatment works or (iii) if either an application made before July 1, 1977, for a construction grant for a publicly owned treatment works or engineering or architectural plans that such industrial point source was to discharge into the publicly owned treatment works and that the publicly owned treatment works is presently unable to accept the industrial point source without construction and, in the case of a discharge to an existing publicly owned treatment works, that treatment works has an extension under paragraph (1) of the subsection, then the owner or operator of the industrial point source may request the Administrator (or the State) to extend the time for compliance. This request must be filed within 180 days after the date of enactment of the subsection or the filing of a request by an appropriate publicly owned works under paragraph (1), whichever is later. The remaining provisions of the Senate amendment relating to the granting of such extension or modification are unchanged in the conference substitute.

This provision contemplates for those industries introducing their discharges into municipal systems, that such industries complete their pretreatment requirements by a date consistent with the pretreatment provisions of this Act which would have to be met if the municipal systems were available. For example, if an industry is planning on participating in a municipal system which will not be available until January 1983, that industry would still have to install and operate pretreatment facilities within the time specified for compliance at the time the applicable pretreatment standard was promulgated and in no event later than 3 years from the date of said promulgation. Thus, if the pretreatment regulations are promulgated March 1, 1979 and require compliance within two years, that industry would be required to comply by March 1, 1981.

There will be no time extension for industries which intend to be tied into municipal systems the treatment works for which will not be completed by July 1, 1983.

PROCEDURE FOR MODIFICATIONS

House bill

No comparable provision.

Senate amendment

This amendment establishes a procedure for filing applications for a modification of the requirements of the Act for secondary treatment for publicly owned treatment works which discharge into marine waters, and for the 1983 best available technology requirement for other point source discharges.

The amendment requires that any publicly owned system or industrial discharger which wants a modification must file an application to that effect with the Administrator within 9 months of enactment of the 1977 amendments (or in the event that EPA has not promulgated effluent guidelines for the pollutant in question, within 9 months of such a promulgation).

In the case of a modification of the best available technology requirement, the Administrator may condition a stay on the filing of a bond or other appropriate security, such as a line of credit, which will assure timely compliance with the requirements for which a modification is sought.

Conference substitute

The conference substitute is essentially the same as the Senate amendment except that the procedure for modification of best available technology only applies to nonconventional pollutants. An application for a modification is not to stay requirements of the Act unless in the judgment of the Administrator the stay or modification will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment and there is a substantial likelihood the applicant will succeed on the merits.

INNOVATIVE TECHNOLOGY

House bill

No comparable provision.

Senate amendment

This section amends section 301 of the Act so that any industrial point source discharger proposing to replace existing production capacity with an innovative process which will achieve a greater reduction in effluent than that achievable with the application of "best available technology", or achieve at least equivalent reduction with an innovative system that has the potential for significantly lower costs industrywide than the best available technology level determined by the Administrator, could receive an extension of the deadline for compliance with best available technology for a maximum of 2 years beyond the July 1, 1983, deadline.

Conference substitute

The conference substitute is the same as the Senate amendment except the deadline for compliance may not be later than July 1, 1987.

Prior to any State granting a waiver for innovative technology, the State must consult with the Administrator. The purpose of the consultation is to assure that a State only approve innovative systems which have the potential for industrywide application.

INFORMATION AND GUIDELINES

House bill

No comparable provision.

Senate amendment

The bill adds a paragraph to section 304(a) of the Act requiring the Administrator to develop and publish information on the factors necessary for the protection and propagation of balanced, indigenous populations of shellfish, fish, and wildlife, and to allow recreational activities, in and on the water. To the extent practicable, the Administrator is to publish this information within 6 months after enactment and before consideration of requests for modifications of the best available technology requirement for industry or the uniform secondary treatment requirements for municipalities discharging into deep ocean waters.

Conference substitute

Same as the Senate amendment except that references to modification of best available technology for industry have been deleted. A further discussion of this matter is found under the center heading "Toxic Effluent Standards and Modifications of Best Available Technology Requirements".

BEST MANAGEMENT PRACTICES FOR INDUSTRY

House bill

No comparable provision.

Senate amendment

This section amends section 304 of the Act to permit the control, through best management practices, of ancillary industrial activities which contribute toxic pollutants to the navigable waters.

The amendment to section 304, adding a new subsection (e), authorizes the Administrator to publish regulations for ancillary industrial activities of point source dischargers which contribute pollutants designated as toxic under section 307. For these ancillary activities, the regulations will specify treatment requirements, operating procedures, and other management practices by classes and categories of point source dischargers. Once promulgated, the requirements, procedures, and practices established in the regulations must be included in section 402 permits where applicable, being considered as requirements of section 301, 302, 307, or 403.

Conference substitute

The conference substitute is essentially the same as the Senate amendment and applies to toxic and hazardous pollutants under sections 307(a)(1) and 311. Once promulgated, the requirements, procedures, and practices established in the regulations must be included in section 402 permits where applicable being also considered as a requirement of section 306.

The conferees have modified the Senate provision to assure that this authority is not used by the Administrator to become involved in actual plant process design and operating decisions. The intent is to control runoff of toxic and hazardous materials from industrial sites resulting from poor housekeeping procedures. Such control should be applied as a part of the 402 permit process.

It may not be necessary to use this authority for every substance designated under section 311. In applying his discretion under this subsection the Administrator should consider whether regulation of plant site runoff, materials storage, waste disposal, or other activities covered by this amendment is appropriate to assure that any particular substance listed under section 311 is not released into the water.

INTERAGENCY AGREEMENTS

House bill

No comparable provision.

Senate amendment

This section amends section 304 of the Act to authorize $100 million for each of the fiscal years 1979–83 for interagency agreements to encourage the use of expertise in other Federal agencies.

The Administrator may enter into agreements and fund programs of the Departments of Agriculture, Army, and Interior, as well as other departments and agencies, for the purpose of achieving and maintaining water quality through the appropriate implementation of the Act.

This amendment would reauthorize funds to implement such agreements, transfer funds to the above departments, and would broaden this authority to include Federal agencies other than those above.

Conference substitute

The conference substitute is the same as the Senate amendment.

STATE REPORTS

House bill

Section 14 amends Section 305 of the Act to require the State water quality inventory report to be submitted biennially bebeginning April 1, 1976 in lieu of the present requirement for annual reports.

Senate amendment

Section 37 is the same as the House bill.

Conference substitute

The conference substitute is the same as the House bill and the Senate amendment.

TOXIC EFFLUENT STANDARDS AND MODIFICATION OF BEST AVAILABLE TECHNOLOGY REQUIREMENT

House bill

Section 15 amends section 307 of the Act to delete the existing requirement that a public hearing be held within 30 days of the date of notice, thus permitting the Administrator to hold a public hearing on a proposed toxic standard within six months of its publication. It would also require the Administrator to insure compliance with final toxic effluent standards no later than three years from the date the standard takes effect where he determines it would be technologically infeasible for a category of resources to comply with such standards within a one-year period.

The House bill has no provision for the modification of the best available technology requirement.

Senate amendment

Section 38 amends section 307 to revise the procedures for establishing and publishing a toxic pollutant and extend the period for compliance from 1 to up to 3 years as long as there is no significant risk to public health, public water supplies, or the environment.

The two major changes to this section from the present statute are the change from a formal rulemaking procedure to a less formal procedure and a provision for extended compliance times.

The first change would replace the present requirements of formal "trial-type" rulemaking hearings on the record with a less formal rulemaking. This would involve a procedure similar to that which is presently required in connection with the establishment of pretreatment standards under section 307 (b) of the Act.

The second change would allow for extended compliance time under certain circumstances. Installation of pollution abatement technology can often require lead times exceeding 1 year. This provision would allow the Administrator to extend compliance in those instances if by doing so he would not subject public health or the environment to unreasonable risks.

The bill would further amend section 307 (a) so as to extend the maximum rulemaking period from 6 months to 270 days.

The Senate amendment also amends section 301 of the Act to provide for a modification of the best available technology requirement for any conventional pollutant as long as the modified requirement is at least best practicable technology, will not require controls on any other source, will not interfere with the attainment or maintenance of that water quality which assures the protection of public water supplies and the protection and propagation of a balanced, indigenous population of fish, shellfish, and wildlife, and allows recreational activities, in and on the water, and represents a reasonable cost for level of reduction achieved.

Conference substitute

Section 42 of the conference substitute amends section 301(b) of the Act to require that all toxic pollutants actually listed in table 1 of House Public Works and Transportation Committee Print Numbered 95–30 must comply with effluent limitations which require the application of best available technology no later than July 1, 1984. For all other toxic pollutants compliance must be achieved no later than 3 years after the limitation is established. For all pollutants other than toxic pollutants or conventional pollutants, compliance with effluent limitations requiring best available technology must be achieved not later than 3 years after the limitation is established or not later than July 1, 1984, whichever is later, but in no case later than July 1, 1987. The earliest date for which compliance is required is the same as the date for compliance with the requirements of sections 301(b)(2) (C) and (E), that is, not later than July 1, 1984. In the case of conventional pollutants identified pursuant to section 304(a)(4) effluent limitations shall be achieved no later than July 1, 1984 which require application of best conventional pollutant control technology determined in accordance with regulations issued under section 304(b)(4). Section 43 of the conference substitute amends section 301 by adding a new subsection (g) which authorizes the Administrator (with concurrence of the State) to modify the requirements of subsection (b)(2)(A) of section 301 with respect to any pollutant (except toxic pollutants, conventional pollutants and heat) upon a showing satisfactory to the Administrator that the modified requirements will result at least in compliance with section 301(b)(1) (A) or (C), whichever is applicable, that the modified requirements will not result in additional requirements on any other source and will not interfere with attaining or maintaining water quality which assures protection of public water supplies and protection and propagation of a balanced population of shell fish, fish, and wildlife, and allow recreational activities, in and on the water and will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity (including carcinogenicity, mutagenicity or teratogenicity), or synergistic propensities. If an owner or operator of a point source applies for a modification under new subsection (g) with respect to the discharge of any pollutant, the owner or operator shall be eligible to apply for modification under section 301(c) with respect to that pollutant only during the same time period as the owner or operator is eligible to apply for a modification under subsection (g).

Section 48 of the conference substitute amends section 304(a) by adding at the end thereof a new paragraph (4) which requires the Administrator to publish and revise as appropriate information identifying conventional pollutants, including, but not limited to, pollutants classified as biological oxygen demanding, suspended solids, fecal coliform, and pH. Paragraph (5)(A) requires the Administrator to develop and publish information on factors necessary for the protection of public water supplies and the protection and propagation of a balanced population of shellfish, fish, and wildlife, and to allow recreational activities in and on the water. Paragraph (5)(B) requires the Administrator to develop and publish information on factors necessary for the protection of public water supplies and the protection and propagation of a balanced indigenous population of shellfish, fish, and wildlife and to allow recreational activities, in and on the water. Paragraph (6) requires the Administrator, for purposes of section 301(h), to publish and revise information identifying each water quality standard in effect under the Act or State law, the specific pollutants associated with such standard, and the particular water to which the standard applies. Section 48 of the conference substitute also amends section 304(b) of the Act to require the Administrator, by regulation, to identify, in terms of amounts of constituents and chemical, physical, and biological characteristics of pollutants, the degree of effluent reduction attainable through application of best conventional pollutant control technology for classes and categories of point sources (other than publicly owned treatment works) and to specify factors to be taken into account in determining the best conventional pollutant control technology measures and practices to comply with section 301(b)(2)(E) to be applicable to any point source within the category or class. These factors shall include consideration of the reasonableness of the relationship between the costs of attaining a reduction in effluent and the affluent reduction benefits derived, and the comparison of the cost and level of reduction of such pollutants from the discharge from publicly owned treatment works to the cost and level of reduction of such pollutants from a class or category of industrial sources, and shall take into account the age of equipment and facilities involved, the process employed, the engineering aspects of the application of various types of control techniques, process changes, non-water quality environmental impact (including energy requirements), and such other factors as the Administrator deems appropriate. Section 53 of the conference substitute provides the list of the toxic pollutants or combinations thereof subject to the Act shall be those listed in table 1 of the House Public Works and Transportation Committee Print Numbered 95–30. The Administrator shall publish this list within 30 days after the date of enactment. The Administrator may revise the list and add to or remove from the list any pollutant. It is intended that the test for adding and for removing are the same. It is not intended to be more difficult either to remove pollutants from, or to add pollutants to, the list. A determination of the Administrator to add to or remove a pollutant from the list is final unless it is based on arbitrary and capricious action. Every toxic pollutant so listed shall be subject to effluent limitations resulting from application of best available technology economically achievable for the applicable class or category of point sources. The Administrator shall publish a proposed effluent standard (including prohibition) applicable to a class or category of point sources to which a best available technology effluent limitation applies only if the standard imposes more stringent requirements. A procedure is established for promulgating such a standard. Effluent limitations are required to be established for every toxic pollutant referred to in table 1 of Committee Print Numbered 95–30 as soon as practicable but no later than July 1, 1980. Effluent limitations or standards shall be established for every other toxic pollutant listed as soon as practicable after it is listed. Every effluent standard is to be reviewed and, if appropriate, revised at least once every 3 years. An effluent standard must take effect within 1 year after the date of its promulgation unless the Administrator determines compliance to be technologically infeasible for a category of sources, in which case the effective date for that category is the earliest date compliance can be feasibly attained, but not more than 3 years after the date of promulgation. The Administrator may not modify any requirement of section 301 if it applies to any specific pollutant on the toxic pollutant list under section 307(a)(1).

Section 73 of the conference substitute requires the Administrator to review within 90 days every best available technology guideline heretofore promulgated which is final or interim final (other than those listed in table 2 of House Public Works and Transportation Committee Print Numbered 95–30), and which apply to conventional pollutants identified under section 304(a)(4). Those guidelines applicable to industrial catetories listed in table 2 must be reviewed before July 1, 1980. After the review the Administrator is authorized to make any necessary adjustments in the guidelines to carry out section 304(b)(4) of the Act. The results of the review are to be published including any determination to adjust, or not to adjust, any guideline. This determination is final unless, on judicial review, the court decides the Administrator either did not comply with this section 73 or his determination was based on arbitrary and capricious action in applying section 304(b)(4) to the guideline, in which case the Administrator shall make a further review and redetermination of any such guideline.

The conferees recognize that best practicable technology has proven more stringent in many instances than anticipated. Consequently the application of effluent limits based on those regulations will result in a larger measure of progress toward the achievement of the goals of the Act.

The cost test for conventional pollutants is a new test. It is expected to result in a determination of reasonableness which could be somewhat more than best practicable technology or could be somewhat less than best available technology for other than conventional pollutants. The result of the cost test could be a 1984 requirement which is no more than that which would result from best practicable technology but also could result in effluent reductions equal to that required in application of best available technology.

The conferees also recognize that in some instances, growth alone, despite the requirements of new source performance standards, may increase the discharge of conventional pollutants to such an extent as to erode some of the progress achieved in compliance with best practicable technology and permit requirements. Further progress toward the reduction of discharges of conventional pollutants through advancement of control technology should continue to be encouraged.

The conferees recognize that the list in table 1 of the Committee Print Numbered 95–30 of the Committee on Public Works and Transportation of the House of Representatives includes pollutants and families of pollutants which have varying levels of toxicity. As was set forth in the consent decree in the case *NRDC* v. *Train*, the Administrator is specifically authorized by this section to delete pollutants from the list. The Administrator is also authorized by this section to add pollutants to this list. Because of limitations on agency resources, the Administrator is urged to utilize this authority whenever the Administrator determines appropriate. It is recognized that there are specific chemical compounds within these families of pollutants for which the Administrator may not set a specific effluent limitation or standard.

The Administrator, in his discretion, may establish effluent standards for toxic pollutants under section 307(a). If the Administrator establishes an effluent standard for a toxic pollutant which is added to the list under section 307(a)(1) after the date of enactment, then the Administrator may choose not to establish effluent limitations resulting from the application of the best available technology economically achievable for such toxic pollutant.

If the owner or operator of a point source who requests a modification under section 301(g) also files for a modification under section 301(c), within the same time period, and such section 301(c) modification is not granted, nothing in this section shall preclude such owner or operator from reapplying for a modification under section 301(c) if as a result of regulations under this Act subsequent to the initial request for modification there is a substantial change in the economic circumstances of the applicant which could not have been anticipated at the time of the initial request.

These amendments do not in any way change statutory requirements for the control of the discharge of heat or affect any pending administrative or judicial proceedings under provisions of this Act addressing heat, including but not limited to, sections 301, 303, 304, 306, and 316.

PRETREATMENT

House bill

No comparable provision.

Senate amendment

This section amends section 307 of the Act to provide a mechanism for EPA enforcement of pretreatment standards for pollutants which pass through or interfere with municipal treatment processes or contaminate sewage sludge.

The provision amends sections 307(b) and

304(b) to make contamination of sludge one of the criteria for pretreatment standards. For pollutants which require pretreatment standards, the amendments require, at a minimum, the application of best available technology in national pretreatment standards.

The amendments regarding pretreatment also stipulate that local pretreatment programs must be required as a condition of any grant made under title II of the Act as well as any permit issued to a publicly owned treatment works under section 402 of the Act.

The bill amends section 304(f) to make the same clarification regarding sludge contamination and the appropriateness of best available technology that are incorporated into section 307.

Section 402(b)(8) is amended to insure the identification of pollutants that are introduced into municipal systems, to provide for the development of local pretreatment programs and to make the requirements of local pretreatment programs enforceable under sections 309 and 505 of this Act. Section 309 also is amended to insure that anyone who discharges a pollutant to which section 307(b) standards are applicable must notify the proper authorities in a timely manner, and that other pertinent information called for under section 402(b)(8) is provided. A penalty is provided for failure to provide such notice.

In addition, the amendments provide that any pretreatment requirements established or adopted through such local programs shall become an enforceable permit requirement. Such requirements can be enforced directly against the industrial source using the authorities of section 309 or 505 of the Act.

Conference substitute

Section 54 of the conference substitute amends section 307(b)(1) of the Act to provide that if a toxic pollutant is introduced into a publicly owned treatment works and the treatment by those works removes all or any part of that toxic pollutant and the discharge from that works is not in violation of the effluent limitation or standard which would apply to that toxic pollutant if it were discharged by such source other than a publicly owned treatment works and does not prevent sludge use or disposal by such works in accordance with section 405 of the Act, then the pretreatment required by sources actually discharging that toxic pollutant into that publicly owned treatment works may be revised by the owner or operator of those works to reflect the removal of that toxic pollutant by that works. In addition section 309 of the Act is amended by adding a new subsection (f) to provide that whenever the Administrator finds that a owner or operator of any source is introducing a pollutant into a treatment works in violation of subsection (d) of section 307, he may notify the owner or operator of such treatment works and the State of such violation. If the owner or operator of the treatment works does not commence appropriate enforcement action within 30 days of the date of such notification, the Administrator may commence a civil action for appropriate relief, including but not limited to, a permanent or temporary injunction, against the owner or operator of such treatment works. In any such civil action the Administrator shall join the owner or operator of such source as a party to the action. Such action shall be brought in the district court of the United States in the district in which the treatment works is located. Such court shall have jurisdiction to restrain such violation and to require the owner or operator of the treatment works and the owner or operator of the source to take such action as may be necessary to come into compliance with the Act. Notice of commencement of any such action shall be given to the State. Nothing in new subsection (f) shall be construed to limit or prohibit any other authority the Administrator may have under the Act. Section 402(b)(8) of the Act is amended to provide that a State program must insure the identification in terms of character and volume of pollutants of any significant source introducing pollutants subject to pretreatment standards under section 307(b) of the Act into publicly owned treatment works and a program to assure compliance with such pretreatment standards by each such source. State permit programs heretofore approved which require modification to conform to this requirement are not to be required to be modified for one year unless in order to make the required modification a State must amend or enact a law in which case the modification shall not be required by the State for two years. Section 405 of the Act is amended to require the Administrator to develop and publish regulations providing guidelines for the disposal of sludge and the utilization of sludge for various purposes. These regulations shall identify uses (including disposal) specify factors to be taken into account in determining measures and practices applicable to each such use or disposal (including information on costs) and identify concentration of pollutants which interfere with each such use or disposal. The determination of the manner of disposal or use of sludge is a local determination except that if a guideline has been established for a use it is thereafter unlawful for the owner or operator of a publicly owned treatment works to dispose of sludge from such works for that use except in accordance with the guideline.

Under the amendment to section 307(b) the Administrator would establish national pretreatment standards for toxic pollutants based on the best available technology economically achievable, or any more stringent effluent standards under section 307(a). Then in applying these pretreatment standards through its pretreatment program, the owner or operator of the municipal treatment works could modify the requirements applicable to individual classes of sources introducing that pollutant into the treatment works to reflect the degree of reduction of that pollutant achieved by the treatment works. The combination of pretreatment and treatment by the municipal treatment works shall achieve at least that level of treatment which would be required if the industrial source were making a direct discharge. Any effluent reduction attained by the treatment works and used to justify a modification of pretreatment requirements must be a permit condition enforceable against the owner or operator of the treatment work.

In promulgating national pretreatment standards the Administrator shall include a provision recognizing the option of the owner or operator to modify the requirements to reflect the degree of reduction achieved by the treatment works. An adequate pretreatment program under section 402(b)(8) may include municipal ordinances or regulations specifying pretreatment requirements and incorporated into the treatment works permit by reference, or pretreatment requirements applicable to specific sources set forth as conditions on the permit.

In addition to the express criteria of section 307(b), the Administrator in establishing pretreatment standards shall consider the guidelines for sludge disposal or use established under section 405.

It is expected that the Administrator will work with the Economic Development Administration to see that direct EPA loans as well as loan and lease guarantees are provided to eligible plants to offset the costs of installing pretreatment equipment.

Also, section 8 of Public Law 92–500, provides for loans from the Small Business Administration to small businesses for the installation of pollution control equipment. This section has never been fully implemented. It is expected that these loans will be made available to assist in the installation of pretreatment processes to industries such as metal finishers.

1977 DEADLINES

House bill

No comparable provision.

Senate amendment

Amends section 309 of the Act to provide two new enforcement options for violations of the 1977 best practicable technology for industrial dischargers. The first option authorizes the issuance of an enforcement order requiring a "reasonable" time for compliance, reserving the 30-day requirement for violation of operation and maintenance requirements and interim compliance schedules. The second option authorizes up to an 18-month extension of the 1977 deadline where the Administrator finds that the discharger acted in good faith; that a serious commitment to achieve compliance had been made; that compliance will occur no later than January 1, 1979; that the extension will not impose additional controls on other sources; that an application for a permit was filed before December 31, 1974; and that the necessary abatement facilities are under construction.

Conference substitute

The conference substitute retains the first option authorized by the Senate amendment and retains the second option revised to ensure that a person, other than a violator, who is otherwise not in compliance with the time requirements of the Act, may have an extension of up to April 1, 1979.

In addition, the conference substitute establishes an additional option which provides that if the Administrator finds (1) that a person is in violation of section 301(b)(1)(A) or (C) of the Act, (2) that the person cannot meet the requirements for a time extension under section 301(i)(2) and (3) the appropriate means of compliance by the person is to discharge into a publicly owned treatment works, then upon the request of the person, the Administrator may issue a compliance order for the earliest practicable date, but not later than July 1, 1983, for the treatment works if that works concurs with the order.

For those municipal sources which are unable to meet this statutory deadline due to their unwillingness to take appropriate actions and spend necessary amounts of money at the earliest possible time, no extension would be granted and enforcement actions would be undertaken under section 309.

In determining whether or not to grant the extension, the permitting agency must consider whether the delays in construction were due to EPA's inability to make available appropriate construction grant monies promptly (as described in section 301(i) of the Act), or whether the fault lies with the municipality's unwillingness to move as fast as possible with all available resources toward the achievement of the requirements of secondary treatment.

The conferees modified the Senate amendment to provide recognition of the fact that some sources may fail to comply with the deadlines of the Act for reasons beyond their control such that it is not appropriate to label them as violators. Under the conference modification, these kinds of sources may receive extensions without bearing the stigma of violation of law. It is the intent of the conferees that under the provision which allows the Administrator to establish a reasonable time in which to comply with an enforcement order, existing administrative and court orders which provide for attainment dates beyond April 1, 1979, continue in effect unless modified under these amendments. Therefore, the existing enforcement policy of the EPA is continued. The conferees also intend that during such time of compliance, the Administrator may require a point source to meet any interim levels of treatment as he deems appropriate under the circumstances.

In any case where an industry planned on, negotiated with, and conducted joint engineering studies with a municipality which planned to construct a publicly-owned treatment works and subsequently decided not to proceed with such a works such industry would be eligible for an extension of its 1977 best practicable technology requirement for a period of time not to exceed that which elapsed during the negotiations with the municipality and the engineering studies.

A number of industries received grants under section 105(c) of the Act to assist them in developing innovative technologies for treating their wastes. A small number of these industries were unable to perfect these innovative technolcgies, through no fault of their own, and were thus required to install the necessary conventional facilities to meet the requirements of section 301(b)(1) by July 1, 1977.

It is intended that industries which received grants under section 105(c) of the Act to develop new technology to treat industrial waste, and were unsuccessful, will be eligible to receive additional time to comply with section 301(b)(1) of the Act. An example of such an industry that has come to the attention of the Managers is the Holliston Mills in Kingsport, Tennessee which would require one additional year.

A person who wishes an extension must have made a serious commitment of the necessary resources to achieve compliance as soon as possible after July 1, 1977, but no later than April 1, 1979. Here the Administrator must determine whether purchase orders were executed, land cleared, and engineers and construction workers available, or other steps taken to insure that the job can be completed by the new extended date.

TECHNICAL AND CONFORMING AMENDMENTS

House bill

No comparable provision.

Senate amendment

This section amends section 309 of the Act to insure the enforceability of permits issued under section 318 (aquaculture) and section 405 (sewage sludge).

Conference substitute

Except for the elimination of one technical amendment which was unnecessary, the conference substitute is the same as the Senate amendment.

MITIGATION COSTS

House bill

No comparable provision.

Senate amendment

This section amends section 311 of the Act to permit the expenditure of funds from the contingency fund for the purpose of mitigating the effects of a spill of a nonremovable hazardous substance and the recovery of such expenditures from the discharger.

Conference substitute

The conference substitute is the same as the Senate amendment.

The amendments provide that under section 311 the Administrator may act to mitigate the threat to public health or welfare caused by the discharge of a hazardous substance determined not to be removable. The costs of this mitigation effort are deemed costs incurred under subsection (c).

There are clear limits on the costs which the Administrator may include within subsection (c) costs. For example, the long term solution to many spills may be the construction of major capital structures, including advanced treatment systems or extension dikes. While such major construction may well mitigate the danger to public health or welfare, they are not the type of actions which the managers intend to be included within recoverable mitigation costs. Rather, this provision was intended to allow recovery for costs associated with immediate responses previously demonstrated to be effective. Mitigation efforts include, but are not limited to, activities such as containment measures, measures required to warn and protect the public of acute danger, activities necessary to provide and monitor the quality of temporary drinking water sources, monitoring for spread of the pollutant, biomonitoring to determine extent of the contamination, physical measures to identify and contain substances contaminated by the discharge, providing navigational cautions while response to the problem is underway, efforts to raise sunken vessels which are the source of the discharge, and implementation of emergency treatment facilities. The costs for such measures, efforts and activities are recoverable. Mitigation also includes efforts necessary to locate the source of the discharge and identity properties of the pollutants released. The response must follow within a reasonable period of time after discovery of the discharge of the hazardous substance or risk of such discharge.

However, it is recognized that it may be appropriate for the Administrator to take action beyond those for which recovery would be allowed for mitigation.

OIL SPILL LIABILITY

House bill

No comparable provision.

Senate amendment

This section amends section 311 of the Act to extend the jurisdiction under this section out to 200 miles, to raise the limits of liability for cleanup of oil or hazardous substance spills from vessels to $150 per gross ton (or for vessels carrying oil as cargo, $500,000, whichever is greater), to raise the limits of liability for cleanup of oil or hazardous substance spills from onshore and offshore facilities to $50 million, to authorize the use of the contingency fund for protection against threatened discharges, to permit immediate recovery of cleanup costs from oil cargo vessels or bulk oil storage or handling facilities in the event of allegations of third-party fault, reserving rights of subrogation, and to permit the recovery of costs expended by the Federal or a State government in restoring or replacing natural resources damaged by an oil or hazardous substance spill.

Conference substitute

The conference substitute makes a number of amendments to section 311 of the Act relating to liability for discharging oil or hazardous substances. One series of amendments has for their purpose the extension of the section to discharges of oil or hazardous substances in connection with activities under the Outer Continental Shelf Lands Act or the Deepwater Port Act of 1974 or which may affect natural resources belonging to, appertaining to, or under the exclusive management authority of the United States (including resources under the Fishery Conservation and Management Act of 1976). The second series of amendments is designed to insure that only persons who are owners, operators, or in charge of vessels who are otherwise subject to the jurisdiction of the United States will be liable for the penalties provided in the section if they spill outside the waters of the contiguous zone. The next series of amendments is designed to make a distinction between inland oil barges and other vessels with respect to the amount of liability. In the case of inland oil barges, liability would be $125 per gross ton or $125,000, whichever is greater. In the case of any other vessel, liability would be $150 per gross ton unless the vessel carries oil or hazardous substances as cargo in which case it is $250,000, whichever amount is the greater. The limits in existing law for all vessels are $100 per gross ton or $14,000,000, whichever is the lesser. In the case of any class or category of onshore and offshore facilities, the President is authorized to provide a maximum limit of liability of less than $50,000,000, but in no case less than $8,000,000. Evidence of financial responsibility for the increased liability is not required of any vessel before October 1, 1978. In the case of onshore and offshore facilities, the maximum amount is increased from $8,000,000 to $50,000,000. Another amendment exempts the owner or operator of an inland oil barge from responsibility to the United States for actual removal costs of oil or a hazardous substance discharged from that barge which is caused by an act or omission of a third party. All other amendments to section 311 contained in the conference substitute are as contained in the Senate amendments.

New subsection (f) (4) and (5) make governmental expenses in connection with damage to or destruction of natural resources a cost of removal which can be recovered from the owner or operator of the discharge source under section 311. For those resources which can be restored or rehabilitated, the measure of liability is the reasonable costs actually incurred by Federal or State authorities in replacing the resources or otherwise mitigating the damage. Where the damaged or destroyed resource is irreplaceable (as an endangered species or an entire fishery), the measure of liability is the reasonable cost of acquiring resources to offset the loss.

The Senate conferees are committed to consideration in this Congress of pending legislation authorizing creation of an oil spill superfund. Legislation to create such a fund has passed the House (H.R. 6803) and has been referred to the Senate Environment and Public Works Committee along with a similar bill reported from the Senate Commerce, Science and Transportation Committee (S. 2083).

These amendments to section 311 will provide interim assurance that adequate funds will be available to clean up most oil spills and will provide a basis against which the Senate Committee can consider the superfund legislation.

The conferees expect that matters raised in this section will be further reviewed in conjunction with consideration of the superfund legislation and of any international agreements on pollution beyond the territorial seas.

MARINE SANITATION DEVICES

House bill

No comparable provision.

Senate amendment

This section amends section 312 of the Act (1) to require the EPA Administrator to prohibit the discharge of treated sewage from vessels in drinking water intake zones, upon an application of a State and (2) to require the Administrator to amend current marine sanitation device regulations for commercial vessels on the Great Lakes and navigable waters other than coastal waters to require said devices, within a time period to be determined by the Administrator, to produce an effluent, at a minimum, of a quality of secondary treatment, and that such vessels be required to treat graywater also.

Conference substitute

This is the same as the Senate amendment with the following changes:

(1) The application of this provision is confined to the Great Lakes.

(2) Commercial vessels are defined as those used in the business of transporting property for compensation or hire or transporting property in the business of the owner, lessee, or operator.

(3) Graywater is defined to mean galley, bath, or shower water.

(4) Upon application by a State the Ad-

ministrator shall, by regulation, establish a drinking water intake zone in any waters in that State and prohibit discharge of sewage from vessels within the zone. The conferees intend that the Administrator define the area to which the prohibition applies in his promulgation of such a prohibition.

In implementing section 304(f) (4) (B), the Administrator is cautioned to use discretion in establishing drinking water intake zones. This new subparagraph is intended to protect drinking water and not to result in far reaching discharge prohibitions unnecessary to protect drinking water.

A technology for meeting the equivalent of secondary treatment as defined under section 304(d) of this Act for vessels is readily available. The U.S. Coast Guard has certificated Type II flow through systems. In one system the treatment tank "digests" sewage material in a network of closely-positioned vertical columns of fiber. Sewage is retained by the fibers, and is reduced to liquid effluent and CO_2 through a process of biodegradation, digestion and attrition.

FEDERAL FACILITY COMPLIANCE

House bill

No comparable provision.

Senate amendment

This section clarifies section 313 of the Act to provide that all Federal facilities must comply with all substantive and procedural requirements of Federal, State, or local water pollution control laws. It also eliminates the exception for Federal agencies from the State certification of activities under section 401.

This section also amends section 404 to insure that the dredge and fill activities of any Federal agency are carried out in compliance with State, local, or interstate substantive or procedural requirements.

Conference substitute

The conference substitute is essentially the same as the Senate amendment revised to conform with a comparable provision in the Clean Air Act and with the additional requirement that any action or other judicial proceeding to which this provision applies may be removed by the Federal department, agency, instrumentality, officer, agent, or employee to the appropriate district court of the United States. In addition the President may, upon a determination that the paramount interest of the United States is to do so, issue regulations exempting from compliance with this section any weaponry equipment, aircraft, vessels, vehicles, or other classes or categories of property, and access to that property, owned or operated by the Armed Forces of the United States or the national guard of a State which are uniquely military in nature. The amendment to section 404 is revised to limit it to State and interstate requirements and to provide that this is not to be construed as affecting or impairing the authority of the Secretary of the Army, acting through the Chief of Engineers, to maintain navigation.

It is anticipated that nothing in this section will prevent any action or other proceeding to which this section applies from being removed by the appropriate department, agency, instrumentality, officer, agent, or employee of the United States to the district court of the United States for the district and division embracing the place where the action or other proceeding is pending.

CLEAN LAKES

House bill

No comparable provision.

Senate amendment

This section amends section 314 of the Act by requiring the Administrator to provide financial assistance to the States to prepare surveys to identify and classify freshwater lakes and to issue biennially information to the States on methods and procedures to restore and enhance freshwater lakes. Section 314 is amended in another provision to authorize $150 million per fiscal year for fiscal years 1978, 1979, and 1980 for the clean lakes program.

Conference substitute

The conference substitute is the same as the Senate amendment except that the authorization is $60,000,000 per fiscal year.

The Clean Lakes Program has been amended to provide additional funding authority and to require the Environmental Protection Agency to provide financial assistance to the States to prepare surveys to identify and classify freshwater lakes and to issue biennially information to the States on the methods and procedures to restore and enhance freshwater lakes.

When the program was first authorized, it was intended that EPA would aggressively work with the States in developing and implementing lake pollution control, including financial assistance. In fact, there has been almost no program implementation by EPA. It is expected that EPA will request full funding for the Clean Lakes Program and initiate an active implementation of this program, including lake identification and classification, and development of methods and procedures to restore lake quality. It is further intended that special attention be given to restoring lakes which offer the potential for high utility as recreation areas.

AQUACULTURE

House bill

No comparable provision.

Senate amendment

This section amends section 318 of the Act to assure that permits issued under this section are consistent with section 402, by authorizing a State to administer a permit program for aquaculture projects. A State wishing to administer such a program would be able to obtain the necessary approval from the Administrator and to issue permits accordingly. Such permits would be issued under section 402 of the Act and subject to all of the same criteria, factors, procedures, and requirements of such section.

Conference substitute

The conference substitute is the same as the Senate amendment except that the requirement of existing law that regulations be issued by the Administrator not later than January 1, 1974, to carry out this provision has been deleted.

NONCOMPLIANCE FEE

House bill

No comparable provision.

Senate amendment

This section amends title III of the Act by adding a new section 319. Any point source (other than a publicly owned treatment works) not in compliance with the effluent limitations and compliance date in its permit, shall be required to pay a fee equivalent to the economic value of noncompliance. The payment shall be imposed automatically for sources out of compliance with the 1977 requirements or applicable new source, toxic of thermal limitations beginning on July 1, 1979, and for sources out of compliance with the 1983 requirements beginning on January 1, 1984.

When the Administrator or the State determines that a violation of a permit has occurred, certain data is required from the discharger. This data (or where this data is manifestly inaccurate in the opinion of the State or the Administrator, other data determined from other relevant sources within the industry or by contract) would be used to determine a noncompliance fee. The Administrator or the State would determine the economic value that accrued to the discharger because of its failure to comply with the requirements of the law. Factors to be included in this determination would include total cost of the project, the cost of capital, and the cost of operation and maintenance activities that would have been performed plus any other factors relevant to the economic value of noncompliance as the guidelines published by the Administrator may include.

This estimated economic value would be translated into an equivalent monthly or quarterly fee that would be payable to the Administrator or the State. When the discharger has come into compliance and the actual costs are known, the fee would be recalculated and any excess amount returned to the discharger. Where sufficient fees were not paid, additional amounts would be collected. This fee is automatic. It is not to be used for long administrative proceedings. Judicial appeals on the amount of the fee collected shall not be allowed to stay collection of the fee. Errors in the determination of the fee are to be corrected using the recalculation procedure that will come into effect following the dischargers return to compliance. Good faith or bad faith should not enter into the calculation of noncompliance fees. Whenever a source is out of compliance after July 1, 1979, the fee will come into effect. Section 309(a) (5) authorizes the Administrator under certain limited circumstances to extend for a maximum of 18 months the statutory date for compliance. Therefore, the noncompliance fee provision is effective on July 1, 1979. The noncompliance fee for the 1983 deadline will become effective 6 months after the statutory date in 1983.

Rather than determining the size of the fee based upon specific data related to the source in noncompliance, the Administrator may choose to base the fee upon industry-wide costs.

In the event an owner or operator contests the noncompliance fee established under this section, he may seek review of such penalty in the appropriate United States district court. Upon review, the action of the Administrator or the State shall be affirmed, unless the court finds that such action is arbitrary, capricious or otherwise not in accordance with this section on the Administrator's guidelines.

Civil and criminal remedies for noncompliance that exist under the Act are in addition to payment of a noncompliance fee.

Conference substitute

No comparable provision.

COMPLIANCE WITH STATE REQUIREMENTS

House bill

No comparable provision.

Senate amendment

The bill amends section 401 of the Act to add section 303 to the list of the Act's provisions for which a State must certify compliance before a Federal license or permit can be issued. This means that a federally licensed or permitted activity, including a discharge permit under section 402, must be certified to comply with State water quality standards adopted under section 303.

Conference substitute

The conference substitute is the same as the Senate amendment.

The inserting of section 303 into the series of sections listed in section 401 is intended to mean that a federally licensed or permitted activity, including discharge permits under section 402, must be certified to comply with State water quality standards adopted under section 303. The inclusion of section 303 is intended to clarify the requirements of section 401. It is understood that section 303 is required by the provisions of section 301. Thus, the inclusion of section 303 in section 401 while at the same time not including section 303 in the other sections of the Act where sections 301, 302, 306, and 307 are listed is in no way intended to imply that 303 is not included by reference to 301 in those other places in the Act, such as sections 301, 309, 402, and 509 and any other point where they are listed. Section 303 is always included by reference where section 301 is listed.

ENVIRONMENTAL PROTECTION AGENCY ISSUANCE OF PERMITS

House bill

No comparable provision.

Senate amendment

This amendment provides that in any case where the Administrator objects to the issuance of a permit by a State he may, at the time of the objection, issue a permit under section 402(a) for that source in accordance with the guidelines and requirements of the Act. Any such permit shall be subject to the State's refusal to certify under section 401 for sixty days after it has been issued.

Conference substitute

The conference substitute amends section 402(d) of the Act to require the Administrator to include in the written objections to the issuance of a permit by a State the reasons for the objection and the effluent limitations and conditions such permit would include if it were issued by the Administrator. If thereafter the Administrator objects to the issuance of a permit by a State, if the State requests it a public hearing shall be held on the objection. If the State fails to resubmit a revised permit meeting the objection within 30 days of completion of the hearing, or within 90 days of the date of the objection if no hearing is requested, the Administrator may issue the permit for such source in accordance with the requirements of the Act.

There have been occasions under the existing law where the Administrator has objected to the issuance of a State permit, the State has refused to issue a revised permit, and in the absence of effluent limitations for a source specified in a permit, the Administrator has initiated enforcement action against the source seeking particular effluent reductions. This may also have occurred in other cases where a valid permit is not in effect. After the date of enactment of this provision the Administrator is expected to use the authority given by this amendment to issue a permit after objecting to a State-issued permit. Thus any litigation over the degree of effluent reduction required for a source should take place in the context of judicial review of the permit, rather than in the context of an enforcement action.

The conferees modified this provision of the Senate bill to establish a procedure for appeal of an EPA veto of State permit and to authorize EPA to issue a permit in the event of an impasse. This provision in no way authorizes the Administrator to issue a permit less stringent than required by any State effluent limitations or water quality standards. That authority is specifically preserved in section 510 of the Act and is not affected by this amendment. Judicial review arising out of this provision would be in the same manner as judicial review of any EPA issued 402 permit.

ENFORCEMENT OF MUNICIPAL PERMITS

House bill

No comparable provision.

Senate amendment

This section amends section 402(h) of the Act to permit the Administrator to obtain injunctive relief against the introduction of any pollutant into a publicly owned treatment works which has been issued a State permit to discharge if he determines the permit has been violated and the State has not commenced appropriate enforcement action.

Conference substitute

The conference substitute is the same as the Senate amendment.

PERMITS FOR DREDGED OR FILL MATERIAL AND STATE PROGRAMS FOR BEST MANAGEMENT PRACTICES

House bill

Section 16 amends section 404 of the Federal Water Pollution Control Act by limiting the requirement for a permit to navigable waters and adjacent wetlands. Navigable waters are defined as those waters which are presently used or are susceptible to use in their present condition or with reasonable improvement to transport interstate or foreign commerce.

Section 16 also contains the following provisions:

The discharge of dredged or fill material into non-navigable waters and wetlands adjacent to them is regulated if the Secretary of the Army and the Governor of the State in which thy are located agree that their regulation is needed because of their ecological and environmental importance.

The Secretary of the Army is authorized to issue general permits. Normal farming, ranching and silviculture activities, the maintenance of structures such as dikes, dams and levees, and the construction and maintenance of farm or stock ponds and irrigation ditches are exempted from the requirement for a permit.

There is a similar exemption for Federal or Federally assisted projects where an environmental impact statement for the project has been submitted to Congress in connection with the authorization or funding of the project.

The Secretary of the Army's permit authority over wetlands adjacent to navigable waters may be delegated to a State if the State has the authority, responsibility and capability to exercise the authority and the delegation is in the public interest.

The Secretary's permit authority over freshwater lakes located entirely within the bounds of a State, under section 404 or sections 9, 10, and 13 of the Act of March 3, 1899, may likewise be delegated under the same conditions.

The discharge of dredged or fill material in waters other than navigable waters and in wetlands other than those adjacent to navigable waters is made subject to the regulation of toxic substances under section 307 of the Federal Water Pollution Control Act.

Senate amendment

Section 53 amends section 402 to provide a mechanism for approving permit programs of States for controlling disposal of dredge and fill material which meet their particular needs. Section 404 of the Act is amended to provide specific exemptions from any permit requirement for certain activities. The amendment also provides for the use of general permits as a mechanism for eliminating the delays and administrative burdens associated with this program.

A third provision amends section 208(b)(4) to provide that the placement of fill material associated with activities which a State chooses to regulate by requiring best management practices under that section, is also exempt from any permit requirement under section 404 or 402.

The national wetland inventory is required to be completed by December 31, 1978, and $6 million is authorized for that purpose.

This provision does not redefine navigable waters. Under the section as amended, the Army Corps of Engineers will continue to administer the section 404 permit program in all navigable waters for a discharge of dredge or fill material until the approval of a State program for phase 2 and 3 waters.

The provision exempts from permit requirements the maintenance and emergency reconstruction of existing fills such as highways, bridge abutments, dikes, dams, levees, and other currently serviceable structures.

The provision specifically exempts from permit requirements the construction or maintenance of farm or stock ponds, as well as construction and maintenance of agricultural irrigation ditches and the maintenance of drainage ditches.

The construction of farm and forest roads is exempted from section 404 permits.

The amendment exempts from permit requirements the construction of temporary mining roads for the movement of equipment. These roads must not only be designed and constructed in accord with the prescribed requirements for protection of the navigable waters applicable to roads, they must also be removed in a manner consistent with these requirements.

These specified activities should have no serious adverse impact on water quality if performed in a manner which will not impair the flow and circulation patterns and the chemical and biological characteristics of the affected waterbody and which will not reduce the reach of the affected waterbody.

All exempt activities will be required to have permits if the activity introduces toxic materials into the navigable waters.

The bill specifically requires the Administrator to include in guidelines methods for identification and testing of toxic pollutants so as to minimize the possibility that de minimus contamination with trace amounts of toxics will not expose an exempt placement or activity to the need for a permit.

The provision continues the requirement that a permit must be obtained under section 402(1) or section 404 to minimize or prevent adverse effects caused by altering the flow or the reach of the navigable waters from direct discharges of dredged or fill material.

Under this section, a State may elect to seek approval of a dredge and fill permit program independent of any application for approval of a National Pollutant Discharge Elimination System program.

The provision also provides that a State may elect to administer its dredge and fill permit program independent of the National Pollutant Discharge Elimination System program.

The provision encourages the use of a variety of existing or developing State and local management agencies and recognizes mapping, protective orders, standards of performance and the like as useful management tools.

The authority for control of discharges of dredge or fill material granted to a State through the approval of a program pertains solely to the environmental concerns reflected in the specific guidelines set forth in the amendment. The responsibility of the Corps of Engineers under the Rivers and Harbors Act of 1899, as specified under section 511 of the Act, is not affected or altered by this provision.

The Administrator shall consult with the Secretary of the Army and the Director of the Fish and Wildlife Service prior to his approval of a State permit program for control of discharges of dredge and fill material (sec. 402(1)(2)).

This section adds a requirement for a consultation process with the State agency having primary jurisdiction over fish and wildlife resources in developing the 208 regulatory program.

In this regard, an amendment to section 208 is included which would authorize and direct the Secretary of the Interior, acting through the Director of the Fish and Wildlife Service, to consult with and provide technical assistance to any State or designated agency in developing and operating a continuing planning process (sec. 208(j)(1)).

Further, a requirement for a coordination process with the Fish and Wildlife Service is added, including a process for use of the National Wetland Inventory being conducted by that agency as part of the State's regulatory program under section 208(b)(4).

The section provides an authorization of $6 million to the Secretary of the Interior to complete the initial phase of the National Wetland Inventory by December 31, 1978.

Also, the provision authorizes the use of general permits by the Corps and States with approved programs for classes or categories of activities which cause, individually or cumulatively, only minimal environment impact.

Conference substitute

AMENDMENTS TO SECTION 404

Section 67 of the conference substitute amends subsection (a) of section 404 of the Act to require that the Secretary publish notice of any application for a permit under subsection (a) within 15 days after the applicant submits all required information. The conference substitute adds a new subsection (e) to section 404 which gives the Secretary authority to issue general permits on a State, regional, or nationwide basis for any category of activities involving discharges of dredged or fill material if the Secretary determines that the activities are similar in nature, and cause only minimal adverse environmental effects when performed separately, and will have only minimal cumulative adverse effect on the environment. Any general permit issued by the Secretary shall be based on the guidelines set forth in subsection (b) of section 404 and shall include the requirements and standards which apply to activities authorized by the permit. Any general permit issued by the Secretary shall be for a period of not more than five years and may be revoked or modified if after opportunity for public hearing the Secretary determines that activities authorized by the permit have an adverse impact on the environment or are more appropriately authorized by individual permits. The conference substitute also adds a new subsection (f) which provides that the discharge of dredged or fill material (1) from normal farming, silviculture, and ranching activities, (2) for the purpose of maintenance (including emergency reconstruction of recently damaged parts) of currently serviceable structures, (3) for the purpose of construction or maintenance of farm or stock ponds or irrigation ditches or the maintenance of drainage ditches, (4) for the purpose of construction of temporary sedimentation basins on a construction site which does not include placement of fill material into the navigable waters, (5) for the purpose of construction or maintenance of farm roads or forest roads, or temporary roads for moving mining equipment, where such roads are constructed and maintained, in accordance with best management practices, to assure that flow and circulation patterns and chemical and biological characteristics of the navigable waters are not impaired, that the reach of the navigable waters is not reduced, and that any adverse effect on the aquatic environment will be otherwise minimized, (6) resulting from any activity with respect to which a State has an approved program under section 208(b)(4) which meets the requirements of subparagraphs (B) and (C) of such section, is not prohibited by or otherwise subject to regulation under section 404 or 301(a) or 402 of this Act (except for effluent standards or prohibitions under section 307). This subsection (f) shall not apply if the discharge of dredged or fill material into the navigable waters is incidental to any activity having as its purpose bringing an area of the navigable waters into a use to which it was not previously subject where the flow or circulation of navigable waters may be impaired or the reach of such waters be reduced. The conference substitute also adds subsections (g) through (l) of section 404. These new subsections establish a process to allow the Governor of any State to administer an individual and general permit program for the discharge of dredged or fill material into phase 2 and 3 waters after the approval of a program by the Administrator.

Subsection (g) requires the Administrator upon receipt of a program from a State to submit copies of such program to the Secretary and the Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service who have 90 days from the date of receipt of the program to submit any comments with respect to the program to the Administrator in writing. Within 120 days after the receipt by the Administrator of a program submitted by a State the Administrator shall determine, taking into account any comments received from the Secretary and the Secretary of the Interior, whether such State has certain authority with respect to the issuance of permits pursuant to the program. The authority which the State must have in order for the program to be approved by the Administrator is essentially the same authority it must have to administer a 402 permit program under the Act. If, with respect to a State program submitted under subsection (g) of section 404, the Administrator determines that the State has the requisite authority to carry out the program he shall approve the program and notify the Secretary who shall suspend the issuance of permits under subsections (a) and (e) of that section for activities covered by the State program. If the Administrator determines that the State does not have the requisite authority to administer the program, he must so notify the State which notification is to include any revisions or modifications necessary so that the State can resubmit the program for a new determination by the Administrator. If the Administrator fails to make a determination with respect to a State program within the 120 days provided, the program is deemed approved and the Administrator must so notify the State and the Secretary who shall suspend the issuance of permits under subsections (a) and (e) of section 404 for activities covered by the State program. Upon notification that a State program has been approved by the Administrator, the Secretary shall transfer any applications for permits pending with the Secretary for activities with respect to which a permit may be issued pursuant to the State program to the State for appropriate action. Also, if a State, after its permit program has been approved, notifies the Secretary that it intends to administer and enforce the terms and conditions of a general permit issued by the Secretary under subsection (e) of section 404 with respect to activities in that State, the Secretary shall suspend the administration and enforcement of such general permit with respect to those activities.

New subsection (i) of section 404 provides that whenever the Administrator determines, after public hearing, that a State is not administering its permit program in accordance with this section he shall so notify the State, and if corrective action is not taken by the State within 90 days, the Administrator shall withdraw approval of the program until the corrective action is taken and shall notify the Secretary that the Secretary shall resume the issuance of permits under this section until such State again has an approved program. New subsection (j) requires each State which has an approved permit program under section 404 to transmit to the Administrator a copy of each permit application received by the State and a copy of each proposed general permit which such State intends to issue. The Administrator is to provide copies of each permit application or each proposed general permit within 10 days of its receipt to the Secretary and the Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service. If the Administrator intends to provide written comments to the State on the permit application or the proposed general permit he must notify the State within 30 days, and provide the written comments, after consideration of any written comments from the Secretary and the Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service, within 90 days, after the receipt of the application or the proposed general permit. If the Administrator has notified the State within the 30-day period that he intends to submit written comments the State shall not issue the proposed permit until after the receipt of the comments from the Administrator or after such 90th day, whichever first occurs.

A State shall not issue a proposed permit after such 90th day if it has received written comments from the Administrator in which he objects to the issuance of the proposed permit and the proposed permit is one that has been submitted to the Administrator pursuant to section 404(h)(1)(E) or the Administrator objects to the issuance of the proposed permits as being outside the requirements of section 404 unless the State modifies the proposed permit in accordance with such comments. Whenever the Administrator objects to the issuance of a permit under subsection (j) of section 404 the objection shall contain a statement of the reasons for the objection and the conditions which the permit would include if it were issued by the Administrator. If the Administrator objects to the issuance of a permit, on request of the State, a public hearing shall be held by the Administrator on the objection. If the State does not resubmit the permit revised to meet the objection within 30 days after completion of the hearing or, if no hearing is requested within 90 days after the date of the objection, the Secretary may issue the permit pursuant to subsection (a) or (e) of section 404, as the case may be, for the source in accordance with the guidelines and requirements of the Act. New subsection (k) of section 404 authorizes the Administrator, in accordance with section 304(h)(2) guidelines, to waive the requirements of section 404(j) at the time of the approval of a State permit program for any category of discharge within the State submitting the program. New subsection (l) of section 404 requires the Administrator to promulgate regulations establishing categories of discharges which he determines shall not be subject to the requirements of section 404(j) in any State with a program approved under section 404. New subsection (m) of section 404 requires that within 90 days after the Secretary notifies the Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service, that an application for a permit under section 404(a) has been received by the Secretary or that the Secretary proposes to issue a general permit under section 404(e), the Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service, shall submit any comments with respect to the application or the proposed general permit in writing to the Secretary. New subsection (n) of section 404 indicates that nothing in that section shall be construed to limit the authority of the Administrator under section 309 of the Act. New subsection (o) of section 404 requires that a copy of each permit application and each permit issued under section 404 be available to the public and that the permit application be available on request for the purpose of reproduction. New subsection (p) of section 404 indicates that compliance with a permit issued under that section, including any activity carried out pursuant to a general permit, shall be deemed compliance for purposes of sections 309 and 505 of the Act, with sections 301, 307, and 403 of the Act.

New subsection (q) of section 404 provides that within 180 days after the date of the enactment of the subsection the Secretary shall enter into agreements with the Administrator, the Secretaries of the Department of Agriculture, Commerce, Interior, and Transportation, and the heads of other appropriate Federal agencies, to minimize to the maximum extent practicable, duplication, needless paperwork, and delays in the issuance of permits under section 404. The agreements shall be developed to assure that, to the maximum extent practicable, decisions with respect to applications under section 404(a) will be made within 90 days after the date the notice for such application was proposed. New subsection (r) of section 404 provides that the discharge of dredged or fill material as part of the construction of a Federal project specifically authorized by Congress, whether prior to or on or after the date of the enactment of this new subsection, is not prohibited by or otherwise subject to regulation under section 404, or a State program approved under that section, or section 301(a) or 402 of the Act (except for effluent standards or prohibitions under section 307) if information on the effects of the discharge is included in an environmental impact statement for such project and such statement has been submitted to Congress before the actual discharge of dredged or fill material in connection with the construction of the project and prior to either authorization of the project or an appropriation of funds for the construction. New subsection (s) of section 404 provides similar enforcement authority with respect to permits issued by the Secretary under section 404 as is provided to the Administrator in section 309 of the Act with respect to permits issued under section 402 and 404 of the Act. New subsection (t) of section 404 provides that nothing in section 404 shall preclude or deny the right of any State or interstate agency to control the discharge of dredged or fill material in any portion of the navigable waters within the jurisdiction of the State, including any activities of any Federal agency, and that each agency shall comply with the State, or interstate requirements, both substantive and procedural to control the discharge of the dredged or fill material to the same extent that any person is subject to its requirements. This new subsection is not to be construed as affecting or impairing the authority of the Secretary to maintain navigation. Finally, the Secretary of the Army, acting through the Chief of Engineers, is authorized to delegate to the State of Washington upon its request all or any part of those functions vested in the Secretary by section 404 of the Act and by sections 9, 10, and 13 of the Act of March 3, 1899, relating to Lake Chelan, Washington, if he determines that the State has the authority, responsibility, and capability to carry out the functions and that the delegation is in the public interest. The delegation shall be subject to such terms and conditions as the Secretary deems necessary.

The Conference substitute provides for the administration by a State of its own permit program for the regulation of the discharge of dredged or fill material into the navigable waters other than traditionally navigable waters and adjacent wetlands if the program of the State meets the requirements set forth in the Conference substitute and is approved by the Environmental Protection Agency. The Federal program for the regulation of the discharge of dredged or fill material into these waters is then suspended.

The conferees wish to emphasize that such a State program is one which is established under State law and which functions in lieu of the Federal program. It is not a delegation of Federal authority. This is a point which has been widely misunderstood with regard to the permit program under section 402 of the Act. That section, after which the Conference substitute concerning State programs for the discharge of dredged or fill material is modeled, also provides for State programs which function in lieu of the Federal program and does not involve a delegation of Federal authority.

The exemption from the requirement for a section 404 permit granted certain Federal projects in the conference substitute is in recognition of the Constitutional principle of separation of powers. Where a project has been specifically authorized by the Congress that authorization shall not thereafter be subject to nullification by an executive agency. The Conferees have, however, limited the exemption so as to ensure that the Congress will have full information on the impacts of the discharge of dredged or fill material associated with a project when it determines whether or not to authorize the project or to appropriate funds for its construction. Only those projects which have received an analysis of the effects of a discharge equivalent to that provided under the guidelines promulgated under section 404 (b)(1) prior to authorization or specific funding for activities which would result in the discharge of dredge and fill material are exempt. An environmental impact statement addressing the impact of the discharge, with particular reference to the guidelines promulgated pursuant to subsection 404(b)(1), must have been submitted to Congress prior to either the authorization or the appropriation of funds. Thus Congress is to have the benefit of all the necessary information when it makes its decision. It is emphasized that the failure of a project to meet these requirements will result in the project having to obtain a section 404 permit. It would not require a reauthorization or additional appropriation action.

To expedite the consideration of permit applications, and to avoid unnecessary delay, the conference substitute provides that any comments of the Fish and Wildlife Service concerning an application for a section 404 permit be furnished to the Secretary of the Army, acting through the Chief of Engineers, within ninety days, and that such comments must be in writing. If such comments are not received within this ninety day period, the Secretary is expected to proceed with the consideration and final disposition of the permit application.

This procedure is intended to recognize that the Fish and Wildlife Service, because of its responsibilities to protect a very vital natural resource, should provide advice and consultation. Allegations have been made that the Fish and Wildlife Service has not provided written recommendations concerning responsible requirements to be included as permit conditions. Rather, it is alleged that verbal demands are made and permit negotiations conducted on the basis of resolving these verbal requirements. This practice is unacceptable. That is why a written coordination procedure has been adopted. In doing so, however, the Fish and Wildlife Service should be involved at the beginning of the permit process and not after the fact.

The section 404 permit process is not to be used as the sole vehicle to require land exchange in the case of non-Federal activities. Any such requirements must be imposed solely through specific requirements of applicable statutes.

A qualification on the exemptions granted by new subsections (f) and (r) is that permits are required for discharges of dredged or fill material containing toxic pollutants regulated under section 307.

The exemptions agreed to by the conferees for normal farming, silviculture and ranching activities attempt to clarify that many of the normal activities included within these categories were never intended by the Congress in the 1972 Act to be within the section 404 permit program. The Corps of Engineers regulations under existing law include, among other things, such exemptions.

AMENDMENTS TO SECTION 2008

Section 34(a) of the conference substitute amends section 208(b)(4) of the Act to allow the Governor of a State to develop and submit the requirements of clauses (F) through (K) of paragraph (2) of section 208(b) to the Administrator for application to a class or category of activity throughout the State. In addition, section 34(a) adds the following new subparagraphs to section 208(b)(4):

Subparagraph (B) which requires that any program submitted under subparagraph (A) of that section which is, in whole or in part, to control the discharge or other placement of dredged or fill material into the navigable waters include the following: (i) a consultation process with the State agency with primary jurisdiction over fish and wildlife; (ii) a process to identify and manage the discharge or other placement of dredged or fill material which adversely affects navigable waters, which shall complement and be coordinated with a State program under section 404 of the Act, conducted pursuant to the Act; (iii) a process to assure that any activity conducted pursuant to a best management practice will comply with the guidelines established under section 404(b)(1), and sections 307 and 403 of the Act; (iv) a process to assure that any activity conducted pursuant to a best management practice can be terminated or modified for cause including, but not limited to (I) violation of any condition of the best management practice, and (II) change in any activity that requires either a temporary or permanent reduction or elimination of the discharge pursuant to the best management practice; and (v) a process to assure continued coordination with Federal and Federal-State water-related planning and reviewing processes, including the National Wetlands Inventory.

Subparagraph (C) which provides that if a State obtains approval from the Administrator of a statewide regulatory program and if the State is administering a permit program under section 404 of the Act, no person is required to obtain an individual 404 permit or comply with a general 404 permit with respect to any appropriate activity within the State for which a best management practice has been approved by the Administrator under the State's approved 208 program.

Subparagraph (D) which requires the Administrator, whenever the Administrator determines after a public hearing that a State is not administering a program approved under section 208 of the Act in accordance with the requirements of the section to so notify the State and if appropriate corrective action is not taken within not to exceed 90 days the Administrator shall withdraw approval of the program. The Administrator prior to the withdrawal of approval must make public, in writing, the reasons for the withdrawal. In the case of a State with a program submitted and approved under section 208(b)(4), the Administrator shall withdraw approval of the program under this subparagraph only for a substantial failure of the State to administer its program in accordance with such section.

Section 34(b) adds a new subsection (i) to section 208 which requires the Secretary of the Interior, acting through the Director of the United States Fish and Wildlife Service, upon request of the Governor of a State, and without reimbursement to provide technical assistance to the State in developing a statewide program under section 208(b)(4) (B) and in implementing the program after its approval. Also, subsection (i) authorizes to be appropriated to the Secretary of the Interior $6,000,000 to complete the National Wetlands Inventory by December 31, 1981, and to provide information from the Inventory to States as it becomes available to assist States in the development and operation of programs under the Act.

The conference substitute amends section 208 of the Act to provide for the development and implementation of section 208 programs, administered by the State Government, for the regulation of a class or category of activity involving dredge or fill material throughout the State in accordance with best management practices. In reviewing and approving any program applying best management practices under section 208(b)(4)(C), the Administrator shall consider whether the proposed best management practices requirements are in fact the best applicable practices, as well as whether such a program will adequately protect the navigable waters at least to the same extent as if the activity were regulated in accordance with the section 404(b)(1) guidelines.

For example, a program may be developed for the use of best management practices for a forestry activity.

If a State regulatory program is approved by the Administrator, and if the State has a permit program approved by the Administrator under section 404, then no individual permit is required under section 404 for an activity which involves the discharge of dredged or fill material which is in conformance with the prescribed best management practices. If a particular program is disapproved by the Administrator, as provided by the conference substitute, that disapproval only applies to that particular program and not to other approved programs regulating other classes or categories of activities.

The new section 208(b)(4) programs to address dredge or fill activities are distinct from and can be developed separately from the other section 208(b)(2) programs.

The National Wetlands Inventory is intended to be used for technical assistance, as the regulatory agency deems appropriate, in carrying out this program.

SLUDGE DISPOSAL

House bill

No comparable provision.

Senate amendment

This section amends section 405 of the Act to require that any permit for the discharge of sewage sludge shall be issued pursuant to section 402 of the Act and subject to all of the criteria, factors, procedures, and requirements of that section.

Conference substitute

The conference substitute is the same as the Senate amendment with conforming amendments.

EMERGENCY FUND

House bill

Section 7 amends section 504 of the Act to establish a contingency fund to be used by EPA in handling emergency situations such as those which present an imminent and substantial danger to public health or welfare, require the protection of persons where the endangerment is to their livelihood, and those which result from natural and other disasters. EPA would be required to report annually to the Congress on its activities under this section.

Nothing in this section shall be construed to relieve the Administrator of any requirement imposed on the Administrator by any other Federal law. Also, nothing in this section shall affect any final action taken under such other Federal law, or affect in any way the extent to which human health or the environment is to be protected under such other Federal law.

Funds are to be appropriated as necessary to replace expenditures from the fund in order to maintain it at a $5,000,000 level.

Senate amendment

No comparable provision.

Conference substitute

The conference substitute amends section 504 of the Act to authorize the Administrator to provide assistance in emergencies and establishes a contingency fund for this purpose. This fund is to be maintained at a level of $10,000,000. The Administrator is authorized to provide emergency assistance whenever it is immediately required to prevent, limit, or mitigate the emergency, there is an immediate significant risk to public health or welfare and the environment, and this assistance will not otherwise be provided on a timely basis. The Administrator is required to prepare and publish a contingency plan for responding to emergencies and, at the discretion of the Administrator, emergency assistance provided because of the discharge of a pollutant subject to section 311 of the Act may be a removal cost added to liabilities under that section. The cost for emergency assistance provided as a result of the discharge of a pollutant in violation of section 301, 306, 307, 402, or 403 of the Act shall be recoverable from the owner or operator of the source of the discharge. The remainder of the provision is the same as the House bill.

COMBINED SEWER OVERFLOWS

No comparable provision.

Senate amendment

This provision requires the Administrator to prepare and submit a study by October 1, 1978, on combined sewer overflows in municipal treatment works operation, including status of existing funded projects, needs, time required to correct combined sewer overflows, analysis of pollutant discharges from overflow compared to treated effluent discharges, technological alternatives, and recommendations for legislation, including necessity for a separate program.

Conference substitute

The conference substitute is the same as the Senate amendment.

UTILIZATION OF TREATED SLUDGE

House bill

No comparable provision.

Senate amendment

This section requires the Administrator to prepare and submit a study by October 1, 1978, on the current and potential utilization of municipal waste water and sludge for productive purposes.

This study requires the Administrator to report to the Congress on the prospects of increased use of waste water and sludge for productive purposes, including legal, institutional public health and other impediments to the greater utilization of waste water and sludge.

The Administrator is also to recommend whether Federal legislation is adequate to encourage or require the expanded use of municipal waste water and sludge rather than the prevalent nationwide practice of discharge, landfilling, or incineration, or whether new legislation will be necessary.

Conference substitute

The conference substitute is the same as the Senate amendment with the addition that in carrying out this provision the Administrator is required to consult with and use the services of TVA and other departments, agencies and instrumentalities of the United States to the extent appropriate.

SHORT TITLE OF THE ACT

House bill

No comparable provision.

Senate amendment

Amends section 518 to provide that the short title of the Act shall be the Clean Water Act.

Conference substitute

The conference substitute amends section 518 to recognize that the Act is commonly referred to as the Clean Water Act. The short title of the Act remains unchanged.

COST RECOVERY STUDY AND WATER CONSERVATION

House bill

Section 21 requires the Administration to study the efficiency of, and need for, the payment by the industrial users of any treatment works of that portion of the cost of construction of that treatment works which is allocable to the treatment of each industrial users' waste to the extent attributable to the Federal share of the cost of construction.

Section 21 further provides that for a period of 18 months after the date of enactment of this section, no officer or employee of the Federal Government shall enforce, or require any recipient of a construction grant to enforce any provision in an application for a grant or in a grant agreement which requires industrial cost recovery payments.

Senate amendment

Section 20 amends section 204(b)(3) to allow a grantee which received a grant prior to the enactment of the Clean Water Act of 1977 to reduce the amounts to be paid by any industrial user which reduces its total flow of sewage or unnecessary water consumption. The amounts to be paid are to be reduced in proportion to the flow reduction achieved as determined in accordance with regulations promulgated by the Administrator.

Section 20 also amends section 204(a)(5) to require that the amount of reserve capacity approved by the Administrator shall take into account, in accordance with regulations promulgated by the Administrator, efforts to reduce flow of sewage and unnecessary water consumption.

Conference substitute

The conference substitute contains both the provisions of the House bill and the amendment to section 204(b)(3) of the Act in the Senate amendment. The Senate amendment to section 204(a)(5) is contained in section 21 of the conference substitute.

During the period of moratorium, the conferees expect the Administrator to continue to make grants and not to withhold any funding. Any funds which have been withheld should be released. At the same time, the existence of the moratorium in no way exempts any applicant or grant recipient from the requirement to develop a system for industrial cost recovery. At the end of the 18-month period, if Congress has not changed the law, the grant recipient must begin to collect industrial share of Federal grants for appropriate distribution. The grant recipient may spread the accrued industrial cost liability over the remaining life of the treatment works in order to avoid large lump sum payments.

SEAFOOD PROCESSING STUDY

Section 74 of the conference substitute requires the Administrator to conduct a study to determine the effects of seafood processes which dispose of untreated natural wastes into marine waters, to examine technologies to facilitate the use of nutrients in these wastes or to reduce their discharge into the marine environment. The results are to be reported to the Congress by January 1, 1979.

The conferees intend the Administrator of EPA to make a thorough review of marine discharges by the seafood processing industry. This study should take a full year to complete so that the full cycle of seafood wastes are examined and their compatibility with marine waters determined. The conferees expect this study to be completed and submitted to Congress by January 1, 1979. This study shall in no way interfere with the on-going regulatory process.

SECONDARY TREATMENT FACILITY SITE

House bill

Section 22 directs the Administrator of the Environment Protection Agency to reimburse the City of Boston, Massachusetts an amount equal to seventy-five percent, but not to exceed $15,000,000, of the cost of constructing a modern correctional dentention facility on condition that the City deed to the State of Massachusetts the city-owned property on Deer Island, which is the site of an existing correctional detention facility, for use by the State as the site for additional secondary treatment facilities and that the State deed to the City State-owned property for use by the City for a new correctional detention facility. $15,000,000 is authorized to be appropriated to carry out the section.

Senate amendment

No comparable provision.

Conference substitute

The conference substitute is the same as the House bill except that the requirement that the State deed certain property to the city has been deleted.

No funds shall be made available under this provision unless there is an agreement to construct at Deer Island, Massachusetts, a secondary treatment facility.

TOTAL TREATMENT SYSTEM FUNDING

House bill

Section 4 amends section 202 of the Act to provide that if grants for the construction of a treatment works exceed the actual construction costs of the treatment works, the excess amount, if certain conditions are met, shall be a grant of the Federal share of a sewage collection system, except that the total of all grants for the sewage collection system under this provision cannot exceed $2,800,000.

Senate amendment

No comparable provision.

Conference substitute

The conference substitute is essentially the same as the House bill except that the provision is not a part of the Act, but is made an independent provision since it deals with a single case in Derry Township, Pennsylvania.

FINANCIAL DISCLOSURE

House bill

Section 20 provides for the filing of a financial disclosure statement by any EPA employee who performs any function or duty under the Act and who has any known financial interests in any person who is subject to regulation by the Act or who is applying for or receiving financial assistance under the Act. The Administrator may exempt specific positions of a regulatory and nonpolicymaking nature from the filing requirement.

The first such statement is to be filed on October 1, 1977, and annually thereafter. These statements are to be available to the public. The Administrator is required to report to Congress on disclosures and actions taken in regard thereto during the preceding calendar year beginning June 1, 1978, and annually thereafter.

Any officer or employee who knowingly violates this section is subject to a fine of up to $2,500, or imprisonment of up to one year, or both.

Senate amendment

No comparable provision.

Conference substitute

No comparable provision. The conferees determined that financial disclosure requirements would be more appropriately dealt with in general legislation applicable to all Federal agencies.

RULE AND REGULATION REVIEW

House bill

Section 19 provides that either House of Congress may, by resolution, disapprove, in whole or in part, any administrative rule or regulation issued under the authority of the Federal Water Pollution Control Act.

Any rule or regulation adopted by an agency or department under the authority of this Act would be transmitted to Congress. During a period of 60 calendar days while Congress is in session, either body could adopt a resolution which would result in the disapproval of that rule or regulation.

Congressional inaction on or rejection of such a resolution, is not to be considered an expression of approval of the rule or regulation.

Senate amendment

No comparable provision.

Conference substitute

No comparable provision.

JUDICIAL REVIEW

House bill

Section 18 amends section 509(b)(1) of the Act regarding the judicial review of actions by the Administrator. Section 18 also adds two items for which a review of actions by the Administrator may be had in the Court of Appeals.

A new item (H) is added to section 509(b)(1) to provide that the decision of the Administrator to approve a State certification program pursuant to section (b) of the new subsection 214 of the Act, may be reviewed by the Circuit Court of Appeals for the United States for the Federal Judicial District in which a person seeking review resides or transacts business.

Also a new item (G) is added to section 509(b)(1) to expressly provide for review of the Administrator's actions in promulgating or revising regulations, providing guidelines for effluent limitations, under section 304(b) of the Act by any interested person in the Circuit Court of Appeals of the United States for Federal Judicial District in which such person resides or transacts such business.

Senate amendment

No comparable provision.

Conference substitute

No comparable provision These provisions were omitted as unnecessary.

REGULATION OF DETERGENTS IN GREAT LAKES REGION

House bill

No comparable provision.

Senate amendment

This amendment contains two major provisions.

One, it creates a series of limitations for the amount of phosphates contained in laundry detergents, dishwashing compounds, and water conditioners sold within the eight Great Lakes Basin States.

Two, it calls upon the Environmental Protection Agency to undertake a study to determine whether a national phosphate limitations program should be enacted by Congress.

Specifically, this amendment establishes a 0.5 percent by weight limitation on the amount of phosphorus contained in laundry detergents, an 8.7 percent by weight limitation on the amount of phosphates contained in commercial and household dishwashing compounds, and a 20 percent by weight limitation on the amount of phosphorus contained in water conditioners sold within the Great Lakes Basin States. These limitations would take effect 6 months after the date of enactment of this Act. In addition, this amendment directs the EPA to conduct a study to determine the economic feasibility and environmental desirability of extending this limitation program to the rest of the Nation. A report and recommendations for further action is due within 6 months.

It provides for one uniform performance standard for all the Great Lakes States—Wisconsin, Minnesota, Michigan, Illinois, Ohio, Indiana, Pennsylvania, and New York.

Conference substitute

No comparable provision.

STUDY OF INDUSTRIAL DISPOSAL OF COMPATIBLE POLLUTANTS INTO THE MARINE ENVIRONMENT

It has been stated that some Virgin Islands and Puerto Rico rum distillers might safely dispose of certain natural wastes untreated into the marine environment. In response to these statements, the conferees direct the Administrator to conduct a study, to be completed by January 1979, to ascertain if there is merit in this argument and if disposal can be environmentally acceptable or even possibly beneficial. In this study the Administrator should specifically examine geographical, hydrological and biological characteristics of marine waters receiving such wastes to determine if the discharge can be environmentally acceptable either for the purpose of acquaculture or some other purpose. In addition, the study should examine technologies which might be used in these industries to facilitate the utilization of the valuable nutrients in these wastes or the reduction in discharge to the marine environment.

WATER TREATMENT CONTRACTING AND BID SHOPPING

Information was received that section 204(a)(6) of the 1972 Act which provides that no bids for equipment for treatment works may specify particular brand names, has been interpreted in current regulations in a way which requires acceptance of the low-dollar treatment equipment bid in practically all circumstances. Also, there is concern that post-contract bid shopping for lower-tier equipment suppliers by successful bidders for grantee construction contracts has increased.

Information on potential problems posed by post bid-shopping and the emphasis on low dollar bid, has also been presented to the Environmental Protection Agency by concerned equipment suppliers. The conferees direct the Administrator to review implementation of the section 204(a)(6) provisions to determine if any modifications of regulation or law may be necessary or appropriate. The Administrator is expected to include in the review an evaluation of whether or not principal subcontractors and equipment suppliers should be named in bid submissions for treatment works. The Administrator shall submit this report to Congress within 3 months after enactment of this Act. The Administrator should include an outline of any proposed actions, together with recommendations for any necessary legislation.

CONFERENCE REPORT ON S. 305, FOREIGN CORRUPT PRACTICES

Mr. STAGGERS submitted the following conference report and statement on the Senate bill (S. 305) to amend the Securities Exchange Act of 1934 to require issuers of securities registered pursuant to section 12 of such act to maintain accurate records, to prohibit certain bribes, and for other purposes:

CONFERENCE REPORT (H. REPT. No. 95-831)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 305) to amend the Securities Exchange Act of 1934 to require issuers of securities registered pursuant to section 12 of such Act to maintain accurate records, to prohibit certain bribes, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its disagreement to the amendment of the House to the text of the bill and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the House amendment insert the following:

TITLE I—FOREIGN CORRUPT PRACTICES

SHORT TITLE

SEC. 101. This title may be cited as the "Foreign Corrupt Practices Act of 1977".

ACCOUNTING STANDARDS

SEC. 102. Section 13(b) of the Securities Exchange Act of 1934 (15 U.S.C. 78q(b)) is amended by inserting "(1)" after "(b)" and by adding at the end thereof the following:

"(2) Every issuer which has a class of securities registered pursuant to section 12 of this title and every issuer which is required to file reports pursuant to section 15(d) of this title shall—

"(A) make and keep books, records, and accounts, which, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the issuer; and

"(B) devise and maintain a system of internal accounting controls sufficient to provide reasonable assurances that—

"(i) transactions are executed in accordance with management's general or specific authorization;

"(ii) transactions are recorded as necessary (I) to permit preparation of financial statements in conformity with generally accepted accounting principles or any other criteria applicable to such statements, and (II) to maintain accountability for assets;

"(iii) access to assets is permitted only in accordance with management's general or specific authorization; and

"(iv) the recorded accountability for assets is compared with the existing assets at reasonable intervals and appropriate action is taken with respect to any differences.

"(3)(A) With respect to matters concerning the national security of the United States, no duty or liability under paragraph (2) of this subsection shall be imposed upon any person acting in cooperation with the head of any Federal department or agency responsible for such matters if such act in cooperation with such head of a department or agency was done upon the specific, written directives of the head of such department or agency pursuant to Presidential authority to issue such directives. Each directive issued under this paragraph shall set forth the specific facts and circumstances with respect to which the provisions of this paragraph are to be invoked. Each such directive shall, unless renewed in writing, expire one year after the debate of issuance.

"(B) Each head of a Federal department or agency of the United States who issues a directive pursuant to this paragraph shall maintain a complete file of all such directives and shall, on October 1 of each year, transmit a summary of matters covered by such directives in force at any time during the previous year to the Permanent Select Committee on Intelligence of the House of Representatives and the Select Committee on Intelligence of the Senate.".

FOREIGN CORRUPT PRACTICES BY ISSUERS

SEC. 103. (a) The Securities Exchange Act of 1934 is amended by inserting after section 30 the following new section:

"FOREIGN CORRUPT PRACTICES BY ISSUERS

"SEC. 30A. (a) It shall be unlawful for any issuer which has a class of securities registered pursuant to section 12 of this title, or which is required to file reports under section 15(d) of this title, or for any officer, director, employee, or agent of such issuer or any stockholder thereof acting on behalf of such issuer, to make use of the mails or any means or instrumentality of interstate commerce corruptly in furtherance of an offer, payment, promise to pay, or authorization of the payment of any money, or offer, gift, promise to give, or authorization of the giving of anything of value to—

"(1) any foreign official for purposes of—

"(A) influencing any act or decision of such foreign official in his official capacity, including a decision to fail to perform his official functions; or

"(B) inducing such foreign official to use his influence with a foreign government or instrumentality thereof to affect or influence any act or decision of such government or instrumentality,

in order to assist such issuer in obtaining or retaining business for or with, or directing business to, any person;

"(2) any foreign political party or official thereof or any candidate for foreign political office for purposes of—

"(A) influencing any act or decision of such party, official, or candidate in its or his official capacity, including a decision to fail to perform its or his official functions; or

"(B) inducing such party, official, or candidate to use its or his influence with a foreign government or instrumentality thereof to effect or influence any act or decision of such government or instrumentality,

in order to assist such issuer in obtaining or retaining business for or with, or directing business, to any person; or

"(3) any person, while knowing or having reason to know that all or a portion of such money or thing of value will be offered, given, or promised, directly or indirectly, to any foreign official, to any foreign political party or official thereof, or to any candidate for foreign political office, for purposes of—

"(A) influencing any act or decision of such foreign official, political party, party official, or candidate in his or its official capacity, including a decision to fail to perform his or its official functions; or

"(B) inducing such foreign official, political party, party official, or candidate to use his or its influence with a foreign government or instrumentality thereof to affect or influence any act or decision of such government or instrumentality,

in order to assist such issuer in obtaining or retaining business for or with, or directing business to, any person.

"(b) As used in this section, the term 'foreign official' means any officer or employee of a foreign government or any department, agency, or instrumentality thereof, or any person acting in an official capacity for or on behalf of such government or department, agency, or instrumentality. Such term does not include any employee of a foreign government or any department, agency, or instrumentality thereof whose duties are essentially ministerial or clerical.".

(b) (1) Section 32(a) of the Securities Exchange Act of 1934 (15 U.S.C. 78ff(a)) is amended by inserting "(other than section 30A)" immediately after "title" the first place it appears.

(2) Section 32 of the Securities Exchange Act of 1934 (15 U.S.C. 78ff) is amended by adding at the end thereof the following new subsection:

"(c) (1) Any issuer which violates section 30A(a) of this title shall, upon conviction, be fined not more than $1,000,000.

"(2) Any officer or director of an issuer, or any stockholder acting on behalf of such issuer, who willfully violates section 30A (a) of this title shall, upon conviction, be fined not more than $10,000, or imprisoned not more than five years, or both.

"(3) Whenever an issuer is found to have violated section 30A(a) of this title, any employee or agent of such issuer who is a United States citizen, national, or resident or is otherwise subject to the jurisdiction of the United States (other than an officer, director, or stockholder of such issuer), and who willfully carried out the act or practice constituting such violation shall, upon conviction, be fined not more than $10,000, or imprisoned not more than five years, or both.

"(4) Whenever a fine is imposed under paragraph (2) or (3) of this subsection upon any officer, director, stockholder, employee, or agent of an issuer, such fine shall not be paid, directly or indirectly, by such issuer.".

FOREIGN CORRUPT PRACTICE BY DOMESTIC CONCERNS

SEC. 104. (a) It shall be unlawful for any domestic concern, other than an issuer which is subject to section 30A of the Securities Exchange Act of 1934, or any officer, director, employee, or agent of such domestic concern or any stockholder thereof acting on behalf of such domestic concern, to make use of the mails or any means or instrumentality of interstate commerce corruptly in furtherance of an offer, payment, promise to pay, or authorization of the payment of any money, or offer, gift, promise to give, or authorization of the giving of anything of value to—

(1) any foreign official for purposes of—

(A) influencing any act or decision of such foreign official in his official capacity, including a decision to fail to perform his official functions; or

(B) inducing such foreign official to use his influence with a foreign government or instrumentality thereof to affect or influence any act or decision of such government or instrumentality,

in order to assist such domestic concern in obtaining or retaining business for or with, or directing business to, any person;

(2) any foreign political party or official thereof or any candidate for foreign political office for purposes of—

(A) influencing any act or decision of such party, official, or candidate in its or his official capacity, including a decision to fail to perform its or his official functions; or

(B) including such party, official, or candidate to use its or his influence with a foreign government or instrumentality thereof to affect or influence any act or decision of such government or instrumentality,

in order to assist such domestic concern in obtaining or retaining business for or with, or directing business to, any person; or

(3) any person, while knowing or having reason to know that all or a portion of such money or thing of value will be offered, given, or promised, directly or indirectly, to any foreign official, to any foreign political party or official thereof, or to any candidate for foreign political office, for purposes of—

(A) influencing any act or decision of such foreign official, political party, party official, or candidate in his or its official capacity, including a decision to fail to perform his or its official functions; or

(B) inducing such foreign official, political party, party official, or candidate to use his or its influence with a foreign government or instrumentality thereof to affect or influence any act or decision of such government or instrumentality,

in order to assist such domestic concern in obtaining or retaining business for or with, or directing business to, any person.

(b)(1)(A) Except as provided in subparagraph (B), any domestic concern which violates subsection (a) shall, upon conviction, be fined not more than $1,000,000.

(B) Any individual who is a domestic concern and who willfully violates subsection (a) shall, upon conviction, be fined not more than $10,000, or imprisoned not more than five years, or both.

(2) Any officer or director of a domestic concern, or stockholder acting on behalf of such domestic concern, who willfully violates subsection (a) shall, upon conviction, be fined not more than $10,000, or imprisoned not more than five years, or both.

(3) Whenever a domestic concern is found to have violated subsection (a) of this section, any employee or agent of such domestic concern who is a United States citizen, national, or resident or is otherwise subject to the jurisdiction of the United States (other than an officer, director, or stockholder acting on behalf of such domestic concern), and who willfully carried out the act or practice constituting such violation shall, upon conviction, be fined not more than $10,000, or imprisoned not more than five years, or both.

(4) Whenever a fine is imposed under paragraph (2) or (3) of this subsection upon any officer, director, stockholder, employee, or agent of a domestic concern, such fine shall not be paid, directly or indirectly, by such domestic concern.

(c) Whenever it appears to the Attorney General that any domestic concern, or officer, director, employee, agent, or stockholder thereof, is engaged, or is about to engage, in any act or practice constituting a violation of subsection (a) of this section, the Attorney General may, in his discretion, bring a civil action in an appropriate district court of the United States to enjoin such act or practice, and upon a proper showing a permanent or temporary injunction or a temporary restraining order shall be granted without bond.

(d) As used in this section:

(1) The term "domestic concern" means (A) any individual who is a citizen, national, or resident of the United States; or (B) any corporation, partnership, association, joint-stock company, business trust, unincorporated organization, or sole proprietorship, which has its principal place of business in the United States, or which is organized under the laws of a State of the United States or a territory, possession, or commonwealth of the United States.

(2) The term "foreign official" means any officer or employee of a foreign government or any department, agency, or instrumentality thereof, or any person acting in an official capacity for or on behalf of any such government or department, agency, or instrumentality. Such term does not include any employee of a foreign government or any department, agency, or instrumentality thereof whose duties are essentially ministerial or clerical.

(3) The term "interstate commerce" means trade, commerce, transportation, or communication among the several States, or between any foreign country and any State or between any State and any place or ship outside thereof. Such term includes the intrastate use of (A) a telephone or other interstate means of communication, or (B) any other interstate instrumentality.

TITLE II—DISCLOSURE

Sec. 201. This title may be cited as the "Domestic and Foreign Investment Improved Disclosure Act of 1977".

Sec. 202. Section 13(d)(1) of the Securities Exchange Act of 1934 (15 U.S.C. 78m) is amended to read as follows:

"(d)(1) Any person who, after acquiring directly or indirectly the beneficial ownership of any equity security of a class which is registered pursuant to section 12 of this title, or any equity security of an insurance company which would have been required to be so registered except for the exemption contained in section 12(g)(2)(G) of this title, or any equity security issued by a closed-end investment company registered under the Investment Company Act of 1940, is directly or indirectly the beneficial owner of more than 5 per centum of such class shall, within ten days after such acquisition, send to the issuer of the security at its principal executive office, by registered or certified mail, send to each exchange where the security is traded, and file with the commission, a statement containing such of the following information, and such additional information, as the Commission may by rules and regulations, prescribe as necessary or appropriate in the public interest or for the protection of investors—

"(A) the background, and identity, residence, and citizenship of, and the nature of such beneficial ownership by, such person and all other persons by whom or on whose behalf the purchases have been or are to be effected;

"(B) the source and amount of the funds or other consideration used or to be used in making the purchases, and if any part of the purchase price is represented or is to be represented by funds or other consideration borrowed or otherwise obtained for the purpose of acquiring, holding, or trading such security, a description of the transaction and the names of the parties thereto, except that where a source of funds is a loan made in the ordinary course of business by a bank, as defined in section 3(a)(6) of this title, if the person filing such statement so requests, the name of the bank shall not be made available to the public;

"(C) if the purpose of the purchases or prospective purchases is to acquire control of the business of the issuer of the securities, any plans or proposals which such persons may have to liquidate such issuer, to sell its assets to or merge it with any other persons, or to make any other major change in its business or corporate structure;

"(D) the number of shares of such security which are beneficially owned, and the number of shares concerning which there is a right to acquire, directly or indirectly, by (i) such person, and (ii) by each associate of such person, giving the background, identity, residence, and citizenship of each such associate; and

"(E) information as to any contracts, arrangements, or understandings with any person with respect to any securities of the issuer, including but not limited to transfer of any of the securities, joint ventures, loan or option arrangements, puts or calls, guaranties of loans, guaranties against loss or guaranties of profits, division of losses or profits, or the giving or withholding of proxies, naming the persons with whom such contracts, arrangements, or understandings have been entered into, and giving the details thereof.".

Sec. 203. Section 13 of the Securities Exchange Act of 1934, as amended (15 U.S.C. 78m), is amended by adding at the end thereof the following new subsection:

"(g)(1) Any person who is directly or indirectly the beneficial owner of more than 5 per centum of any security of a class described in subsection (d)(1) of this section shall send to the issuer of the security and shall file with the Commission a statement setting forth, in such form and at such time as the Commission may, by rule, prescribe—

"(A) such person's identity, residence, and citizenship; and

"(B) the number and description of the shares in which such person has an interest and the nature of such interest.

"(2) If any material change occurs in the facts set forth in the statement sent to the issuer and filed with the Commission, an amendment shall be transmitted to the issuer and shall be filed with the Commission, in accordance with such rules and regulations as the Commission may prescribe as necessary or appropriate in the public interest or for the protection of investors.

"(3) When two or more persons act as a partnership, limited partnership, syndicate, or other group for the purpose of acquiring, holding, or disposing of securities of an issuer, such syndicate or group shall be deemed a 'person' for the purposes of this subsection.

"(4) In determining, for purposes of this subsection, any percentage of a class of any security, such class shall be deemed to consist of the amount of the outstanding securities of such class, exclusive of any securities of such class held by or for the account of the issuer or a subsidiary of the issuer.

"(5) In exercising its authority under this subsection, the Commission shall take such steps as it deems necessary or appropriate in the public interest or for the protection of investors (A) to achieve centralized reporting of information regarding ownership, (B) to avoid unnecessarily duplicative reporting by and minimize the compliance burden on persons required to report, and (C) to tabulate and promptly make available the information contained in any report filed pursuant to this subsection in a manner which will, in the view of the Commission, maximize the usefulness of the information to other Federal and State agencies and the public.

"(6) The Commission may, by rule or order, exempt, in whole or in part, any person or class of persons from any or all of the reporting requirements of this subsection as it deems necessary or appropriate in the public interest or for the protection of investors.

"(h) The Commission shall report to the Congress within thirty months of the date of enactment of this subsection with respect to (1) the effectiveness of the ownership reporting requirements contained in this title, and (2) the desirability and the feasibility of reducing or otherwise modifying the 5 per centum threshold used in subsections (d)(1) and (g)(1) of this section, giving appropriate consideration to—

"(A) the incidence of avoidance of reporting by beneficial owners using multiple holders of record;

"(B) the cost of compliance to persons required to report;

"(C) the cost to issuers and others of processing and disseminating the reported information;

"(D) the effect of such action on the securities markets, including the system for the clearance and settlement of securities transactions;

"(E) the benefits to investors and to the public;

"(F) any bona fide interests of individuals in the privacy of their financial affairs:

"(G) the extent to which such reported information gives or would give any person an undue advantage in connection with activities subject to sections 13(d) and 14(d) of this title;

"(H) the need for such information in connection with the administration and enforcement of this tile; and

"(I) such other matters as the Commission may deem relevant, including the information obtained pursuant to section 13(f) of this title.".

Sec. 204. Section 15(d) of the Securities

Exchange Act of 1934 is amended by inserting immediately before the last sentence the following new sentence: "The Commission may, for the purpose of this subsection, define by rules and regulations the term 'held of record' as it deems necessary or appropriate in the public interest or for the protection of investors in order to prevent circumvention of the provisions of this subsection.".

And the House agree to the same.

That the Senate recede from its disagreement to the amendment of the House to the title of the bill and agree to the same with an amendment as follows:

In lieu of the amendment of the House, amend the title to read as follows: "An Act to amend the Securities Exchange Act of 1934 to make it unlawful for an issuer of securities registered pursuant to section 12 of such Act or an issuer required to file reports pursuant to section 15(d) of such Act to make certain payments to foreign officials and other foreign persons, to require such issuers to maintain accurate records, and for other purposes."

And the House agree to the same.

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 305) to amend the Securities Exchange Act of 1934 to require issuers of securities registered pursuant to section 12 of such Act to maintain accurate records, to prohibit certain bribes, and for other purposes, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report:

The House amendment to the text of the bill struck out all of the Senate bill after the enacting clause and inserted a substitute text.

The Senate recedes from its disagreement to the amendment of the House with an amendment which is a substitute for the Senate bill and the House amendment. The differences between the Senate bill, the House amendment, and the substitute agreed to in conference are noted below, except for clerical corrections, conforming changes made necessary by agreements reached by the conferees, and minor drafting and clarifying changes.

TABLE OF CONTENTS OF JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

A. Corporate bribery of foreign officials:
1. Title of the Act.
2. Accounting:
a. Integrity of accounting records and reports.
b. Systems of accounting controls.
c. Prohibition on falsification of books and records; false statements to accountants.
d. National security.
3. Payments to officials:
a. Prohibition against certain payments to foreign officials by issuers subject to SEC jurisdiction.
1. Definitions.
2. Penalties.
b. Prohibition against certain payments to foreign officials by domestic concerns:
1. Definitions.
2. Department of Justice injunctive power.
B. Disclosure.

A. CORPORATE BRIBERY OF FOREIGN OFFICIALS

1. Title of the act—Foreign Corrupt Practices Act

The Senate bill established the title of Title I of the Act as the "Foreign Corrupt Practices Act of 1977".

The House amendment established the title of the Act as the "Unlawful Corporate Payments Act of 1977".

The House receded to the Senate.

2. Accounting

a. Integrity of Accounting Records and Reports

The Senate bill contained a provision which required issuers subject to the jurisdiction of the Securities and Exchange Commission (the "SEC") to make and keep books, records, and accounts which accurately and fairly reflect the transactions and dispositions of the assets of the issuer.

The House amendment contained no provision.

The House receded to the Senate with an amendment requiring such books, records and accounts to be made and maintained accurately and fairly "in reasonable detail". The conference committee adopted the "in reasonable detail" qualification to the accurate and fair requirement in light of the concern that such a standard, if unqualified, might connote a degree of exactitude and precision which is unrealistic. The amendment makes clear that the issuer's records should reflect transactions in conformity with accepted methods of recording economic events and effectively prevent off-the-books slush funds and payments of bribes.

b. Systems of Accounting Controls

The Senate bill contained a provision requiring issuers to devise and maintain adequate systems of internal accounting controls sufficient to provide reasonable assurances that, among other things, transactions are recorded as necessary to maintain accountability for assets.

The House amendment contained no provision.

The House receded to the Senate with an amendment deleting the word "adequate". Since the precise requirements of the system of internal accounting controls to be maintained by the issuer are set forth in specific terms in the statute, the term adequate was deemed superfluous.

c. Prohibition on Falsification of Books and Records; False Statements to Accountants

The Senate bill contained provisions to make it unlawful for (1) any person knowingly to falsify any book, record, or account required to be made for any accounting purpose, and (2) any person knowingly to make a materially false or misleading statement or to omit to state or cause another person to omit any material fact necessary in order to make statements to an accountant not misleading.

The House amendment contained no comparable provisions because the SEC had already published for comment rules designed to accomplish similar objectives under its existing authority.

The Senate receded to the House. Although these provisions were supportive of the basic accounting section, the use of the "knowingly" standard has become involved in an issue never intended to be raised or resolved by the Senate bill—namely, whether or not the inclusion or deletion of the word "knowingly" would or would not affirm, expand, or overrule the decision of the Supreme Court in *Ernst & Ernst* v. *Hochfelder* (425 U.S. 185). As stated clearly in the Committee Report on S. 305, these provisions were to be severable from the rest of the securities laws.

Under the circumstances, the conferees determined the best method of proceeding was to retain only new section 13(b)(2) of the Securities Exchange Act of 1934. The conferees further decided that this legislation should not be converted into a debate on the important issues raised by the *Hochfelder* decision.

In deleting the Senate provisions, the conferees intend that no inference should be drawn with respect to any rulemaking authority the SEC may or may not have under the securities laws.

d. National Security

The Senate bill contained provisions which excluded from any duty or liability under paragraph (2) any person acting in cooperation with and at the specific written directive of any Federal agency or department responsible for matters concerning national security. Such directives were to be executed with specificity and to expire annually unless renewed in writing. The President of the United States was directed to review such directives annually and to certify that such directives involved classified information and were in conformity to applicable statutes and Executive orders.

The House amendment contained no provision.

The House receded to the Senate with an amendment. The amendment required that each directive be issued only pursuant to Presidential authority to issue such directives.

In addition, the amendment provides that a summary of all such directives shall be submitted annually to the appropriate intelligence oversight committees.

The conferees intend to make clear, as set forth in the Senate provision, that the only matters to be excluded from the requirements of paragraph (2) are those which would result, or would be likely to result, in the disclosure of information which has been classified by the appropriate department or agency for protection in the interests of the national security and then only to the extent that such information is specifically related to the person's lawful cooperation.

3. Payments to officials

a. Prohibitions Against Certain Payments to Foreign Officials by Issuers Subject to SEC Jurisdiction

The Senate bill amended the Securities Exchange Act of 1934 (the "Exchange Act") to prohibit the corrupt use of the mails or other means of interstate commerce by any issuer of securities registered with the SEC pursuant to section 12(b) or required to file reports pursuant to section 15(d) of the Exchange Act as well as any officer, director, employee or stockholder acting on behalf of the issuer, in furtherance of an offer, payment, promise to pay, or authorization of the payment of money or anything else of value to any official of a foreign government or instrumentality thereof, any foreign political party, any candidate for foreign political office, or any other person which the issuer knows or has reason to know will make such offer, promise or gift. The scope of the prohibition was limited by the requirement that the offer, promise, authorization, payment, or gift must have as a purpose inducing the recipient to use his influence with the foreign government or any instrumentality, influencing the enactment or promulgation of legislation or regulations of that government or instrumentality or refraining from performing any official responsibilities, so as to direct business to any person, maintain an established business opportunity with any person or divert a business opportunity from any person.

The House amendment was similar to the Senate bill; however, the scope of the House amendment was not limited by the "business purpose" test, nor did it contain the "in furtherance of" requirement.

The conference substitute includes provisions found in both the Senate bill and the House amendment. In section 30A(a), the conferees adopted the identical provisions of both bills with the addition of the Senate "in furtherance of" language. The conference substitute prohibits corporations subject to SEC jurisdiction from making corrupt use of the mails or other means of interstate commerce in furtherance of an offer, payment, promise to pay or authorization of payment of anything of value to any foreign official, foreign political party, candidate for foreign political office or any other person which the issuer knows or has reason to know will make such offer, promise or payment. The adoption of the Senate "in furtherance of" language makes clear that the use of interstate commerce need only be in furtherance of making the corrupt payment.

By incorporating provisions from both bills, the conferees clarified the scope of the prohibition by requiring that the purpose of the payment must be to influence any act or decision of a foreign official (including a decision not to act) or to induce such official to use his influence to affect a government act or decision so as to assist an issuer in obtaining, retaining or directing business to any person.

1. *Definitions.*—The Senate bill contained no definitional section.

The House amendment defined the terms "control" and "foreign official". "Control" was defined as the power to exercise a controlling influence over the management or policies of an issuer. Any person who owned beneficially, either directly or through one or more controlled issuers, more than 50 percent of the voting securities of an issuer, was presumed to control such issuer and any person who did not own more than 50 percent of the voting securities of an issuer was presumed not to have such control.

"Foreign official" was defined to mean any officer or employee of a foreign government or any department, agency or instrumentality thereof, or any person acting in an official capacity for or on behalf of such government, department, agency, or instrumentality. The term did not include employees whose duties were primarily ministerial or clerical.

The Senate receded to the House concerning the definition of "foreign official" and the House receded to the Senate concerning the definition of "control."

2. *Penalties.*—The Senate bill provided fines of not more than $500,000 for willful violations by issuers and penalties of up to $10,000 and/or 5 years imprisonment for willful violations by any officer, director, employee or shareholder thereof.

The House amendment provided a fine of not more than $1 million for knowing and willful violations by an issuer. Penalties for knowing and willful violations by officers, directors, agents, or natural persons in control of any issuer were similar to those provided in the Senate bill. However, an agent's liability was predicated upon a finding that the issuer violated the section. Finally, the House amendment prohibited an issuer from paying either directly or indirectly any fine imposed under this section upon any officer, director, agent or natural person in control of such issuer.

The conference substitute adopts the maximum corporate penalty in the House amendment and the penalties applicable to officers, directors, employees, and stockholders acting on behalf of the issuer as provided in the Senate bill. The conference substitute incorporates the "agent" provisions of the House amendment. To provide additional protection for agents and employees, the conference substitute predicates an employee's or agent's liability upon a finding that the issuer has violated the section. As in the House amendment, the conference substitute prohibits an issuer from paying, either directly or indirectly, any fine imposed upon any individual under this section.

b. Prohibition against certain payments to foreign officials by domestic concerns

Both the Senate bill and the House amendment applied their respective prohibitions and penalties from the previous sections to domestic concerns other than those subject to SEC jurisdiction.

The conference substitute parallels the agreement reached by the conferees with respect to the provisions governing issuers.

1. *Definitions.*—The Senate bill defined several terms used in this section. "Domestic concern" is defined as an individual who is a citizen or national of the United States as well as any corporation, partnership, association, joint-stock company, business trust, or unincorporated organization which is owned or controlled by individuals who are citizens or nationals of the United States and which has its principal place of business in the United States or which is organized under the laws of a State or any territory, possession or commonwealth of the United States.

The Senate bill restated the definition of interstate commerce in the Securities Exchange Act of 1934.

The House amendment defined the terms "control" and "foreign official" as previously discussed. In addition, the House amendment defined the term "domestic concern" as any corporation, partnership, association, joint-stock company, business trust, unincorporated organization or sole proprietorship (1) which is owned or controlled by individuals who are citizens or nationals of the United States, (2) which has its principal place of business in the United States, or (3) which is organized under the laws of a State of the United States or any territory, possession, or commonwealth of the United States. The House amendment extended the coverage of the section to U.S. controlled foreign subsidiaries.

The Senate receded to the House concerning the definition of "foreign official." The House receded to the Senate concerning the definition of control. The House receded to the Senate in the definition of "domestic concern" with an amendment to make clear that any company having a principal place of business in the United States would be subject to the bill.

In receding to the Senate, the conferees recognized the inherent jurisdictional, enforcement, and diplomatic difficulties raised by the inclusion of foreign subsidiaries of U.S. companies in the direct prohibitions of the bill. However, the conferees intend to make clear that any issuer or domestic concern which engages in bribery of foreign officials indirectly through any other person or entity would itself be liable under the bill. The conferees recognized that such jurisdictional, enforcement, and diplomatic difficulties may not be present in the case of individuals who are U.S. citizens, nationals, or residents. Therefore, individuals other than those specifically covered by the bill (*e.g.*, officers, directors, employees, agents, or stockholders acting on behalf of an issuer or domestic concern) will be liable when they act in relation to the affairs of any foreign subsidiary of an issuer or domestic concern if they are citizens, nationals, or residents of the United States. In addition, the conferees determined that foreign nationals or residents otherwise under the jurisdiction of the United States would be covered by the bill in circumstances where an issuer or domestic concern engaged in conduct proscribed by the bill.

2. *Department of Justice injunctive power.*—The House amendment authorized the Department of Justice to enforce violations of the bill by domestic concerns through civil injunctions.

The Senate bill contained no provision. The Senate receded to the House.

B. DISCLOSURE

Title II of the Senate bill, entitled "The Domestic and Foreign Investment Improved Disclosure Act of 1977", amended the ownership disclosure and reporting requirements of the Securities Exchange Act of 1934. The House amendment contained no similar provisions.

The House receded to the Senate with an amendment to new section 13(g). The purpose of the amendment is twofold. First, the amendment deleted section 13(g)(1)(C) to make clear that the SEC may not require extensive historical ownership and transaction information. Second, the amendment deleted section 13(g)(1)(D) while the Conferees agreed was unnecessary in view of the Commission's general grant of rulemaking authority under section 13(g).

CONFERENCE REPORT ON H.R. 3722, AUTHORIZING APPROPRIATIONS FOR THE SECURITIES AND EXCHANGE COMMISSION FOR FISCAL YEAR 1978

Mr. STAGGERS submitted the following conference report and statement on the bill (H.R. 3722) to amend the Securities Exchange Act of 1934 to authorize appropriations for the Securities and Exchange Commission for fiscal year 1978:

CONFERENCE REPORT (H. REPT. No. 95-832)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 3722) to amend the Securities Exchange Act of 1934 to authorize appropriations for the Securities and Exchange Commission for fiscal year 1978, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate to the text of the bill and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the Senate amendment insert the following:

That section 35 of the Securities Exchange Act of 1934 (15 U.S.C. 78kk) is amended—

(1) in the first sentence thereof, by striking out "and not to exceed" and inserting in lieu thereof a comma;

(2) by inserting immediately before the period at the end of the first sentence thereof the following: ", and $63,750,000 for the fiscal year ending September 30, 1978"; and

(3) in the last sentence thereof, by striking

out "the 1977 fiscal year" and inserting in lieu thereof "fiscal year 1978".

And the Senate agree to the same.

That the Senate recede from its amendment to the title of the House bill.

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 3722) to amend the Securities Exchange Act of 1934 to authorize appropriations for the Securities and Exchange Commission for fiscal year 1978, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report:

The Senate amendment to the text of the bill struck out all of the House bill after the enacting clause and inserted a substitute text.

The House recedes from its disagreement to the amendment of the Senate with an amendment which is a substitute for the House bill and the Senate amendment. The differences between the House bill, the Senate amendment, and the substitute agreed to in conference are noted below, except for clerical corrections, conforming changes made necessary by agreements reached by the conferees, and minor drafting and clarifying changes.

The House bill authorized $67 million for the Securities and Exchange Commission ("Commission") for the fiscal year 1978.

The Senate amendment authorized $58,290,000.

The conference substitute adopts a figure of $63,750,000 for the Commission budget authorization for the fiscal year 1978.

Managers on the Part of the Senate.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed with amendments in which the concurrence of the House is requested, a joint resolution of the House of the following title:

H.J. Res. 662. Joint resolution making further continuing appropriations for the fiscal year 1978, and for other purposes.

PERSONAL EXPLANATION

Mr. MIKVA. Mr. Speaker, a longstanding commitment to discuss pending health legislation forced me to miss a number of rollcall votes before the recess. Had I been present on Thursday, November 3 for rollcall No. 739, the Mahon motion that the House agree to the Senate abortion language, I would have voted "yes." I would also have voted "yes" on House Resolution 892, rollcall No. 740, the rule under which the continuing appropriations resolution was considered.

On Friday, November 4, I would have voted "yes" on rollcall No. 742, approval of the November 3 Journal.

On Tuesday, December 6, I would have voted "yes" on rollcall No. 762, the rule on the HEW appropriation.

RESOLUTION OFFERED BY MR. COLLINS OF TEXAS CONCERNING TAKING OF NOTES FROM COMMITTEE RECORDS

Mr. COLLINS of Texas. Mr. Speaker, I rise to a question of the privileges of the House and offer a resolution, which I ask to have the Clerk report.

The Clerk read the resolution, as follows:

Whereas, because of a ruling by the Chairman of the Subcommittee on Oversight and Investigations of the Committee on Interstate and Foreign Commerce that Members could not take such notes as they chose of non-classified documents in Subcommittee files, Members have been effectively denied their right of access to such records under Rule XI 2. (e) cl. 2 of the Rules of the House of Representatives; and

Whereas, this is a matter affecting the rights of all Members of the House of Representatives; and

Whereas, this is a matter affecting the dignity and integrity of the proceedings of the House of Representatives.

Resolved, That Members of the House of Representatives are entitled to free and complete access of the records, data, charts, and files of the Committee and Subcommittees upon which they serve and shall be entitled to take personal notes with regard to any non-classified material contained in such records, data, charts, and files in order to allow the Member to conduct his legitimate legislative business and for his personal files.

POINT OF ORDER

Mr. SANTINI. Mr. Speaker, I make a point of order that the gentleman does not present a question of privilege.

The SPEAKER. The gentleman will state his point of order.

Mr. SANTINI. Mr. Speaker, the resolution just offered would modify clause 2(e) (2) of rule XI of the rules of the House. As such, the gentleman's resolution does not present a question of privilege under rule IX. (I cite Speaker Cannon sustained by the House by a vote of 235 to 53, Volume VIII, at page 3377.) A Member may not by raising a question of the privileges of the House thereby attach privilege to a question not otherwise in order under the rules of the House. (I cite Speaker Albert, June 27, 1974, page 21596; July 31, 1975.

The SPEAKER. Does the gentleman from Texas desire to be heard?

Mr. COLLINS of Texas. Yes, Mr. Speaker.

Rule IX of the Rules of the House and the precedents of the House make it clear that a question of what constitutes a question of the privilege of the House. It must affect the House collectively and not Members individually.

The issue that I raise today does not affect me alone, but applies to all Members of the House. Every Member is affected by my resolution for it deals with the rights of all Members with respect to access to committee and subcommittee records.

Second, rule IX clearly provides that a question of the privilege of the House is one that affects the safety, dignity, and integrity of our proceedings.

My resolution affects all those.

Mr. SANTINI. Mr. Speaker, any change affecting the rules of the House affects every Member of the body. The gentleman is seeking to do indirectly what the gentleman could not do directly.

The SPEAKER. The Chair is ready to rule. The Chair thanks the gentleman for informing the Chair that the gentleman was filing the resolution.

The gentleman from Nevada makes the point of order that the resolution offered by the gentleman from Texas (Mr. COLLINS) does not present a question of the privileges of the House under rule IX.

The resolution provides that all Members of the House are entitled, under clause 2(e) (2) of rule XI to take personal notes with regard to any nonclassified material contained in committee or subcommittee records, data, charts, and files and to incorporate those notes in their personal files.

While clause 2(e) (2) of rule XI grants Members access to all committee files, charts, records, and data, whether they are executive session materials or not, that rule has been interpreted merely to permit Members to examine such records in committee rooms, and not to take copies or otherwise divulge the contents of executive session materials which have not been released or made public by the committee or subcommittee (Speaker Rayburn, August 14, 1957; June 3, 1960). Clause 2(e) (2) also requires all committee files to be kept separate from the congressional office records of the Member serving as chairman of the committee (and implicity separate from the congressional office records of all other Members).

In the opinion of the Chair, the resolution offered by the gentleman from Texas constitutes an attempt to change the meaning of the term "access" in clause 2(e) (2) of rule XI as that term has been interpreted by Speakers of this House. The precedents indicate that it is not in order under the guise of a resolution offered under rule IX to raise as a question of the privilege of the House an issue which is merely an attempt to change the rules of the House (Speaker Albert, June 17, 1974; July 31, 1975). In reaching this decision, the Chair is not being called upon, nor does he take this occasion, to comment upon the interpretations of the "access rule" made by the subcommittee in question or by its chairman.

The Chair is merely ruling that the resolution offered by the gentleman from Texas does not present a question of the privileges of the House under rule IX. The Chair, therefore, sustains the point of order.

SUPPORT FOR RURAL NIGHTTIME RADIO SERVICE GROWS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. FINDLEY) is recognized for 10 minutes.

Mr. FINDLEY. Mr. Speaker, today I am reintroducing House Resolution 637 with additional cosponsors. The total number of Congressmen who have introduced this resolution has now grown to 55. The purpose of this resolution is to urge the Federal Communications Commission, in the strongest terms possible, to maximize meaningful local nighttime radio service, particularly in the Nation's vast rural areas. The resolution also states that the Commission should not permit operation of standard broadcast stations in excess of 50,000 watts, which is the current maximum power for a radio station.

The reason this is so important is that, presently, approximately 30 percent of the population of this country does not have a local radio station to listen to at night. This is so because the vast majority of radio stations in this country are crowded onto a relatively few channels while a handful of the largest stations serving some of the big cities are assigned the preferred "clear channels" for fulltime use. Under FCC rules, any small station on a clear channel must quit broadcasting at sunset each evening, even though the small station would cause no detectable interference to the listeners of the dominant station if it were permitted to stay on the air at night. There is neither rhyme nor reason behind this FCC rule which deprives millions of Americans of their fair share of a valuable national resource—our Nation's airwaves.

The wide disparity between the number of stations assigned to the preferred clear channels and the regional and local channels is made abundantly clear in the following chart. In some cases, more than 170 small stations have been crowded onto one channel, while in others, only one or two stations are assigned to the "clears." Over the last half century, the FCC has allowed radio station assignments on some channels to grow like topsy, while permitting no growth whatsoever on other channels. It is time to change that policy. It is time to assure that all Americans have the same ability to listen to their local radio station each evening. If the FCC fails to bring a measure of equity into the situation, then Congress should act.

A chart and a list of cosponsors follow:

PRIVILEGE OF THE HOUSE RESOLUTION MEMBERS RIGHTS TO COMMITTEE INFORMATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Texas (Mr. COLLINS) is recognized for 60 minutes.

Mr. COLLINS of Texas. Mr. Speaker, the Speaker ruled against my resolution today to have the right of a minority member to be able to review and use committee information. The information that I sought was not secret, it was not classified, it was not proprietary, it was not subpenaed, it was not from an executive session, it was not a trade secret. It was basic, though, for us to use it to study and review the work of our Investigations Committee. It is so important because this is not just a subcommittee of the House; this is an investigation committee.

The effect of this ruling is that we in the minority do not have an opportunity to study the information that becomes available through the process of investigations. We have a 2-to-1 majority here in Congress of the Democratic Party. A member of that party is the President, and we who are in the minority are being excluded. I wonder how we can operate a democracy, how we can live in a republic, when the minority is not allowed to express itself.

Mr. Speaker, I serve as the ranking minority member of the Subcommittee on Oversight and Investigations of the Committee on Interstate and Foreign Commerce. In June 1975, our subcommittee began an investigation into the reliability of American Gas Association (AGA) reserve estimates in southern Louisiana. The focal point of the investigation was an effort to compare AGA reserve estimates with comparable reserve estimates made by natural gas producers.

On June 9, 1975, our subcommittee held a hearing during which there were allegations made that the company estimates were considerably higher than the AGA's. As a result our subcommittee subpenaed between 750,000 and 1,000,000 documents relating to reserve estimates from seven major natural gas producers and the AGA. All of the companies and the AGA complied with the subpenas.

In July 1975, the subcommittee staff with the help of General Accounting Office and U.S. Geological Survey personnel began to review these subpenaed documents for the purpose of actually comparing AGA estimates with company estimates.

Now in December of 1977, 2½ years after this investigation began, the Congress and the American people have received no information on the findings of this exhaustive analysis. This is in spite of the fact that in May 1976, the staff had completed its review and readied its conclusion.

I learned of the fact that there had been a conclusion reached only last month when I asked for and received the permission of the subcommittee chairman to review the committee's files on this investigation. I was advised by the subcommittee chairman that I could personally review this data, but my counsel on the subcommittee could not. The chairman also ruled that I could not disclose any of these materials.

During my review of the subcommittee's records I uncovered a memorandum from the subcommittee staff member in charge of the investigation to the subcommittees' chief counsel. This memorandum dated May 4, 1976, sets forth the conclusions of the subcommittee staff who reviewed and compared the data.

After then learning of the existence of this memorandum, and its contents, I requested that I be provided with a copy of this memorandum. The subcommittee chairman refused to provide me with a copy of it. The memorandum contains absolutely no proprietary nor classified material. It simply states the findings of the staff based upon their review of the various reserve estimates. The subcommittee chairman, based his ruling on a precedent established by Speaker Rayburn on August 14, 1957, in which he ruled that a committee member could not make copies of documents in committee files by using a photostate machine.

I have reviewed Speaker Rayburn's ruling and concluded that I could under that ruling gain access to the memorandum and make a handwritten copy of it. The subcommittee chairman, however, ruled this was not permitted by the rules of the House and Speaker Rayburn's 1957 ruling.

Mr. Speaker, rule X12(e)(2) provides that:

> All Committee hearings, records, data, charts, and files shall be kept separate and distinct from the Congressional office records of the Member serving as Chairman of the Committee; and such records shall be the property of the House and all members shall have access thereto.

I believe that my legitimate right of access provides for me to make any and all handwritten records that I desire providing it is not classified or proprietary. How can I discuss this material with my counsel? How can I prepare my own summary statement?

On the question of disclosure of the contents of materials contained in the files, I could fully understand a rule that forbade disclosure of confidential, trade secret or proprietary information, but the May 4, 1976 staff memorandum which I seek contains no such information.

In that I have been denied the opportunity to acquire materials from the subcommittee files, I believe my rights under the rules have been abridged, and have asked the Speaker to rule on whether or not I am allowed under the rules of the House to be permitted to take full handwritten copies of materials in my subcommittee's files and, if so, what limitations do I have on the rights of freedom of information?

I would have thought that I would have had the support of my subcommittee chairman in my effort to apprise the Congress and the people of the results of this study, because he was the principal author of the famous Freedom of Information Act. During the debate on that legislation on June 20, 1966, he said the following:

> (1) "We must remove every barrier to information about—and understanding of Government activities. . . ."
>
> (2) "It is my hope that this fact (Freedom of Information Act) will be a moderating influence on those officials who on occasion have an almost proprietary attitude toward their own niche in Government."
>
> (3) "the subcommittee . . . has endeavored to build a greater awareness of the need to remove unjustifiable barriers to information . . ."
>
> (4) "We are simply attempting to enforce a basic public right—the right to access to Government information."

The facts are that I have received no such support from my subcommittee chairman because he has ruled that I not only cannot disclose nonclassified and nonproprietary data in the subcommittee's possession, but I cannot even have a copy of it for complete review.

I find the rulings of my subcommittee chairman to be strange, because he ruled in a totally different fashion on September 29, 1975. It was on this date that I questioned his public disclosure of a document from the subcommittee files without the approval of the subcommittee. The facts in this case are that on September 4, 1975, document was introduced into the record of executive sessions hearings concerning declining deliverability from Bastian Bay natural gas field as exhibit 4. This document was a Getty Oil Co. internal document entitled "Industry Outlook Series."

On September 25, 1975, without the approval of the subcommittee, the chairman introduced this very same document into the record of public hearings before the Subcommittee on Energy and Power. On September 29, 1975, I inquired of the chairman asking how could such a document be released without subcommittee approval? He ruled that the disclosure by him was not improper because he was honor bound to protect only subpenaed and executive session documents. It is true that the document in question was not subpenaed, but our subcommittee's hearing record of September 4, 1975, shows clearly that it was evidence in executive session.

I seek to have disclosed no executive session material nor subpenaed material as it is only a subcommittee staff memorandum containing no classified nor proprietary information.

Twice last year when I raised questions about the conclusions of this extensive subcommittee study, I was told that I would be seeing the results in the near future. The first time I raised the issue was on April 14, 1976, during the course of Federal Trade Commission oversight hearings. I was told by the presiding member that the subcommittee would "be publishing and releasing shortly a report" on this subject.

The second time last year, I raised the issue was in views that I filed to the subcommittee's report of October 1976, entitled "Federal Regulation and Regulatory Reform." The chairman of the subcommittee wrote additional views to this report responding to me on this issue. In his views, the subcommittee chairman said:

> The subcommittee will issue a comprehensive report on this subject as soon as possible.

These views were filed 5 months after the staff had readied its conclusions and, now in December 1977, I still have seen no report from the subcommittee.

The information that I am seeking to disclose is important for two very critical reasons. First, the Federal Trade Commission is conducting an exactly comparable investigation, but has acquired the documents that our subcommittee has had for the last 2½ years only within the past few months. If the FTC had the subcommittee's conclusions, they would see as I have seen that this investigation should be terminated without further action.

Second, the energy conferees are now considering natural gas legislation. The subcommittee's conclusion would greatly remove the cloud over AGA reserve estimates.

I would summarize four basic reasons why I am entitled to the privilege of having this information. I believe that any one of these four points merits the release of documents.

First. The document requested is not classified nor does it have any proprietary value.

Second. I need the full document to discuss in detail with my Counsel. I need to have the benefit of review by my community.

Third. To bring the results of our survey to the public could eliminate duplicate studies on this same material that are being made by other Federal agencies.

Fourth. Congress should not ask of the public what we do not ask of ourselves. Present law would provide this information immediately if these were not congressional internal papers.

FORMER SECRETARY OF DEFENSE MEL LAIRD WARNS AGAINST CONCEALING SOVIET VIOLATIONS OF SALT AGREEMENTS FROM THE AMERICAN PEOPLE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KEMP) is recognized for 10 minutes.

Mr. KEMP. Mr. Speaker, as important as the issue of the Panama Canal is, I believe a greater impact on American security is at stake in the outcome the administration is proposing in the forthcoming treaty and protocol on the limitation of strategic arms.

As one who favors a balanced and equitable SALT treaty, I believe the proposed SALT II agreements are now fundamentally unequal. They favor the Soviet Union to a degree which poses a direct and grave threat to our land-based American nuclear forces. They undermine the very essence of deterrence upon which our peace and freedom depend so heavily.

A great deal of extremely careful thought and analysis will be required to make sure that the treaty and protocol are balanced and equitable. Yet, it could come as a surprise to no one that U.S. negotiators are approaching this matter with a self-imposed impetus which could undercut that thought and analysis required to make sure the treaty and protocol are good measures. This is certainly no time for haste.

It is also no time for burying our heads in the sand about what true Soviet intentions are. Ascertaining those intentions does not have to be a guessing game. It can be fairly accurately surmised from what their actions have been with respect to the initial SALT agreements.

There was much speculation during the prior administration over the extent of Soviet violations of the SALT treaties and mutual understandings surrounding them. On more than one occasion, the administration rejected assertions that the Soviets were violating these agreements. I do not know for sure why officials within the administration denied them, but we now know—in light of a major article just released and written by former Secretary of Defense, Melvin R. Laird—that the American people had concealed from them an accurate account of Soviet violations.

The Laird thesis is this: Long withheld evidence proves that, by repeatedly violating the SALT I accords. the Soviets are posing a grave threat to U.S. security. It should also caution us about the present administration's approach to negotiating with the Soviets, one perhaps shown by the fact that on the day the Laird article was released to the press, showing the violations and the dangers of concealing them from the American people, the U.S. Department of State was issuing a communique saying that the five-year-old treaty restricting United States and Soviet antiballistic missile systems is operating effectively and "requires no amendment at this time."

The Laird article follows:

[From the Reader's Digest, December 1977]

ARMS CONTROL THE RUSSIANS ARE COMING!

(By Melvin R. Laird)

The United States took a calculated risk in 1972 by entering into strategic-arms-limitation treaties with the Soviet Union. When the accords were signed, the nuclear striking power of the two nations was roughly equal. We knew that if the Russians were permitted to violate these agreements, known popularly as SALT I, they well might gain a potentially disastrous military advantage over us. In testifying before Congress, I stressed the necessity of guarding against this danger. But we went ahead anyway, hoping that the Soviet Union would show good faith, slowing and eventually halting the nuclear-arms race that threatened the world with proliferation of ever more costly and deadly weapons.

As Secretary of Defense at that time, I felt that the prospective benefits of mutual cooperation justified our taking a chance. But today, five years later, I must report that our hopes have not been realized and that our worst fears are rapidly becoming reality. The evidence is incontrovertible that the Soviet Union has repeatedly, flagrantly and indeed contemptuously violated the treaties to which we have adhered.

This evidence has been withheld from the Congress, the press and the public. I believe there no longer is any excuse for denying the American people and their elected representatives facts whose suppression profits only our enemies. Let us consider the record.

TERMS OF AGREEMENT

The United States and the Soviet Union contracted by the 1972 accords to limit their land and sea missiles to the number then in place or under construction.[1] Both sides further agreed not to perfect and build extensive advanced missile defenses that could substantially nullify the other's striking force. Existing, obsolescent missiles could be replaced by modern models. However, the replacements could not appreciably exceed the size of those discarded.

We argued that—to guarantee that both nations abided by SALT I—each should open its territory to inspection teams from the other. The Russians adamantly rejected this approach. So the treaties specified that, to assure compliance, "each Party shall use national technical means of verification at its disposal." This meant that we would watch each other by means of satellite reconnaissance and electronic monitoring. The treaties also stipulated that "each Party undertakes not to interfere with the national technical means of verification of the other Party." Neither nation would resort to camouflage, deception or other action intended to disguise what it was doing.

The treaties were signed by President Nixon and Secretary Brezhnev in Moscow amid extravagant expectations. The next year, however, sophisticated U.S. monitoring equipment clearly showed that the Russians were testing a radar for use with an antiballistic-missile (ABM) system—in flagrant violation of explicit treaty provisions. When we privately protested, the Russians pretended ignorance. After they had performed more than a dozen radar tests specifically proscribed by the treaties (I alluded to these violations in a 1975 article[2]), the Russians finally halted the tests. But not until they had accomplished all the illegal research and development they desired.

---

[1] Under SALT I, the total number of land-based intercontinental ballistic missiles and submarine-launched missiles allowed was: 1710 for the United States, and 2358 for the Soviet Union. The numerical superiority accorded the Russians was partially offset by our lead in intercontinental bombers, not covered by the treaties, and by the superior accuracy of our missiles.

Among some in the Ford Administration, evidently, the desire to see détente work was so intense that they sought to suppress—or at least minimize the significance of—intelligence revealing Soviet violations. When President Ford was asked at a press conference about the violations to which my article generally referred, he truthfully stated that he knew of no Soviet cheating. I promptly shared with him the intelligence that certainly should have been brought to his attention much earlier. Upon verifying what I had told him, the President offered to issue a correction of his press-conference statement. But such a public confirmation of disarray within the Administration would not have helped us in dealing with the Russians.

VIOLATIONS MOUNT

At the time, I hoped that through confidential negotiations the Soviet Union might still be induced to live up to its treaty commitments. But Soviet violations have increased progressively, in both number and seriousness:

The treaties prohibit the development, testing and deployment of any mobile components of an ABM system. Stationary weapons systems, unless artfully camouflaged, can in time be detected and counted through satellite photography. But it is very difficult to assess the overall capability of mobile systems moved stealthily about at night and hidden in forests. Thus, we have cause for concern upon learning, as we have, that the Russians have tested movable ABM radars in defiance of treaty pledges.

The Soviets have also emplaced around 110 urban areas the most formidable anti-aircraft defenses ever created, based upon thousands of surface-to-air SAM–5 missiles. Some U.S. intelligence experts have long feared that were the SAM–5 modified, then joined with appropriate computers and radars, it could be converted to shoot down missiles as well as aircraft. Because such a transformation would radically shift the balance of power, the SALT treaties expressly forbade any testing aimed at upgrading an anti-aircraft missile system into an ABM system. Nevertheless, on at least five occasions the Russians have made such tests. From their desert range at Kapustin Yar, north of the Caspian Sea, they have fired SAM–5s in an effort to test their capability to intercept missiles.

The Soviet Union is producing a new intercontinental ballistic missile, the SS–16, with the range and power to obliterate any U.S. city. Unlike our land-based missiles, the SS–16 is mobile, and the Russians have gone to extreme lengths to deny us knowledge of how many are being built and where they are being stationed. SS–16s have been transported from factories under cover of darkness and camouflaged in wooded areas. Sections of the Plesetsk range where they have been tested are cloaked in netting seldom penetrable by cameras.

Because of such concealment, we cannot be sure whether the Russians are producing SS–16s merely to replace older missiles, as the treaties allow, or to expand their missile force beyond the numbers permitted. But we are sure that by elaborate concealment they are deliberately interfering with our "national technical means of verification"—a flagrant violation of the treaties.

In further contempt of SALT I, the Soviets have sought to hide the capabilities of another new missile, the SS–20. As a missile undergoes tests, devices aboard measures every aspect of its performance and continuously transmit data by telemetry to ground stations. The Russians are aware that ordinarily we, too, can receive and analyze the telemetry from their tests, so they encrypted SS–20 telemetry to make it incomprehensible to us.

Why would they violate the treaties by hiding the capabilities of the SS–20? Ostensibly an intermediate missile with sufficient range to threaten Western Europe and China but not the United States, the SS–20 is not included in the number of intercontinental missiles authorized by treaty. However, when we finally deciphered SS–20 telemetry military analysts concluded that the missile had been tested with some 2000 pounds of ballast. Were this ballast to be replaced by fuel, the SS–20 would become an intercontinental missile capable of menacing North America.

Soviet Goal. As if the Soviets do not care whether we document still other undeniable treaty violations, they continue to expand already extensive camouflage of strategic sites. Huge sections of the prefabrication and assembly areas at the Severodvinsk submarine construction yard on the White Sea, the largest such yard in the world, have been covered by canvas and planking placed over intricate lattice work. Giant tarpaulins mask submarine hulls, preventing us from counting and studying missile launch tubes. A similar coverup has been effected at the Khabarovsk submarine construction yard in Siberia. Factories known to produce components for missiles and submarines are being camouflaged, as are missile launching and test sites throughout the U.S.S.R.

How much of a military advantage the Russians have gained by all this cheating is unclear. But it is terribly clear that they remain determined to gain decisive military superiority over the United States, and that in pursuit of this end they have been willing to dishonor their most fundamental agreements with us. This reality becomes all the more apparent with consideration of the dramatic Soviet expansion of conventional military power.

Since 1972, virtually every segment of the Soviet civilian economy has fallen upon hard times, and indicators suggest that even gloomier economic times are ahead. Yet, instead of diverting resources from the military to the civilian sectors of its economy, the Soviet Union has increased military spending each year since the signing of SALT I.

The U.S. intelligence community generally agrees that the Soviets are currently allocating at least 17 percent of their gross national product to the military in contrast with a U.S. allotment of less than six percent. In every vital phase of military preparedness, the Russians now are outspending us both in dollar terms and as a percentage of GNP. In modernization of ground forces, they are outspending us by an astonishing ratio of three to one.

I submit that the Russians would not be willing to so cheat and sacrifice in quest of military dominance unless they intend to exploit that dominance, once it is attained. I do not think that they necessarily are planning a Pearl Harbor-like nuclear attack on the United States, although that possibility could not be excluded should the balance of power radically change. Rather, I think Soviet leaders contemplate threatening the use of their superiority to drive the United States into headlong retreat and isolation from its vital interests around the world.

U.S. Response. In light of this Soviet duplicity and continuing military buildup, what should the United States do? We still must try to persuade the Soviet Union that a stable balance of power and an effective end to the arms race would ultimately benefit them as much as us. But such efforts certainly will fail unless we are much more realistic than we were five years ago.

As a nation, we must convince the U.S.S.R. that we are unwilling to be militarily inferior and politically subservient. Accordingly, we should not even consider any new treaty likely to consign us to inferiority. We must not seek agreement for the mere sake of agreement.

Treaties that cannot be enforced are worse than no treaties at all. They breed a baseless sense of security and dangerous complacency. Therefore, we must effectively communicate to the Russians our unwillingness to tolerate any further violations of past agreements or any transgressions of future accords. Our position should be that henceforth any deliberate violation of a treaty will mean instant abrogation of that agreement.

The Soviets appreciate that the U.S. economy is so strong and our technology so advanced that we can outstrip them in any form of weaponry, if we have a national resolve to do so. What the Russians are counting upon are ignorance and a lack of will among Americans. We should unite to demonstrate that we will do whatever is necessary to ensure survival of the United States and all nations wishing to stand with us in freedom. There is a very practical way to demonstrate such resolve.

The Congress, with the support of the people, should proceed now to give President Carter standby authorization and appropriations to immediately and decisively strengthen our military forces should the Russians defy any new agreements. More than anything else, such action would be likely to induce the Russians to negotiate reasonably and seriously. It would remind them and everybody else that the emblem of the United States still is the eagle and not the ostrich.

LEGISLATION TO IMPLEMENT DEPARTMENT OF THE INTERIOR UPPER DELAWARE RIVER STUDY REPORT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. McDade) is recognized for 5 minutes.

Mr. McDADE. Mr. Speaker, today I am introducing legislation to implement the 3-year Department of the Interior Upper Delaware River study report that will lead to the designation of a portion of the Delaware River as a wild and scenic river. This bill will not only implement the specifics of the Carter administration study of the creation of a wild and scenic river but it provides the framework for drawing up very flexible zoning guidelines which have been a high priority for the local government units which are contiguous to the river.

The legislation designates a 75.4 mile portion of the river between Hancock, N.Y., and Matamoras, Pa., for inclusion in the Wild and Scenic Rivers System. My bill calls for minimal land acquisition on the part of the Federal Government while at the same time insuring that the river will retain its free flowing scenic character. The bill provides for a maximum amount of local citizen input by giving local governments up to 3 years to implement the necessary zoning guidelines to protect the river. It also establishes a citizen advisory committee to monitor the progress and scope of Federal activities in the area.

Mr. Speaker, this legislation implements the Upper Delaware River study fully while satisfying local concerns about the future of the Delaware River. It does not call for any new massive acquisitions along the river nor does it seek to adjust the boundaries farther down the river than called for in the study. It does provide the opportunity for the Congress to make a spectacular and welcome addition to the National Wild Rivers System and I am optimistic about its future impact upon the scenic beauty of one of our Nation's greatest rivers. I shall be soliciting cosponsors for this bill soon and I shall welcome the interest and support of my colleagues.

---

A BIOGRAPHY OF ALEXANDER HAMILTON

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Maryland (Mr. LONG) is recognized for 5 minutes.

Mr. LONG of Maryland. Mr. Speaker, I wish to bring to the attention of the Members two articles, one from the Baltimore News American and one from the Baltimore Sun, on the subject of Holmes Alexander's "A Biography of Alexander Hamilton." The articles follow:

[From the Baltimore (Md.) News American, Nov. 13, 1977]

ALEXANDER'S ALEXANDER: HAMILTON THE HONORABLE

(By R. P. Harris)

In his youth the prolific author Holmes Alexander found Aaron Burr's career fascinating, and produced a life and a play about the brilliant adventurer who killed Alexander Hamilton in a duel. Now, in his maturity, the author has written a life of the victim of that encounter.

A far sounder man than Burr, Hamilton was not faultless. The title of this eminently readable, well-researched and thoughtful book takes its title from Shakespeare's "Henry V":

> But if it be a sin to cover honor,
> I am the most offending man alive.

The author makes it clear that Hamilton coveted both abstract honor and power, but not wealth. He did not enrich himself at his adopted country's expense, and he served it valiantly.

Hamilton has been pictured in American history as the low-born, self-made aristocrat who favored a monarchical, or at least strongly centralized, form of government, as opposed to the high-born Jefferson who opted for democracy. Hamilton's present biographer makes a strong case for Hamilton as a humanitarian. This is a warmly sympathetic life, but it does not whitewash the subject. His Hamilton is a hero, but no saint.

Born illegitimate (but of the planter class) in the British West Indies, red-headed young Hamilton was so attractive, ambitious and bright that a public purse was subscribed to send him to the mainland for education at Princeton. Rather than delay his entrance there, he seized the opportunity in New York to enter what is now Columbia University. As the War for Independence came on, he had his first go at the honor he so coveted, as a young officer. Gen. Washington recognized bravery and intelligence, and lost no time in making Hamilton his personal aide.

Eventually, Hamilton resigned in a huff and got into a line regiment, but he was reconciled with the commander in chief, and he became President Washington's chief adviser. Hamilton's Federalist papers and his financial genius get detailed examination and explication in "To Covet Honor." His private life likewise comes under close scrutiny.

Hamilton married the rather plain daughter of rich and powerful Philip Schuyler. And while his letters show him to have been intensely affectionate toward her and their children, it appears that he and her older (and prettier) sister Angela fell deeply in love. Had not Angela and her husband lived much of their time abroad—but here the reviewer should not speculate, when the biographer himself does not.

All this did not deter Hamilton from becoming embroiled in a sordid liaison with a woman whose husband blackmailed him. It nearly cost Hamilton his post as secretary of the Treasury, but he was able to prove beyond a doubt that he had steadfastly refused to give the woman's husband any sort of federal job. Hamilton underwent an investigation and came through it clean as a hound's tooth.

The duel that cut short Hamilton's career resulted from an indiscreet letter written by a well-connected nincompoop who happened to be a guest at a private dinner party where Hamilton made derogatory remarks about Aaron Burr. Burr had every reason to hate Hamilton, for the latter regarded Burr as a national menace, and frustrated him at every turn. Indeed, Hamilton had just been instrumental in Burr's defeat in a campaign for governor of New York. Here was Burr's chance, and he promptly sent a challenge.

Hamilton's courage had been amply proved in war. He was against dueling, but he could not manage to extricate himself now from the exigencies of the *code duello*. Burr, a crack shot, gave him no way out. Apparently Hamilton resigned himself to his fate. He arranged his personal papers as best he could, and at the appointed time went to meet his challenger. He told one of his seconds he intended only to fire over Burr's head.

Their meeting on the Heights of Weehawken, where each had arrived at dawn with his seconds by boat, was so somberly dramatic that a description could easily become maudlin. The author describes it with tensely moving restraint. Equally well told is Hamilton's lingering death, surrounded by family and friends.

[From the Baltimore (Md.) Sun, Sept. 8, 1977]

BIOGRAPHY OF HAMILTON BY ALEXANDER

(By L. G. Shreve)

Hamilton, a figure of almost unequaled influence in the formation and early direction of the United States, has long been congenial to biographers and is certainly so to the latest in the series. Mr. Alexander has given us, accordingly, a comprehensive, penetrating look at the first Secretary of the Treasury and his dreams for the republic which he helped found.

The many sides of this enigmatic and complex man, soldier, writer, orator, lawyer, financier and scandalous lover are presented in this new, highly readable and well-documented study.

Mr. Alexander is very much at home writing about the era covered by Hamilton's relatively short lifespan—beginning in 1755 and ending tragically in 1804, the result of a shot fired by his archenemy, Aaron Burr, in a duel on the heights of Weehawken. Two earlier works, a biography of Burr, and "How to Read the Federalist Papers," led the author, a longtime student of American history, to this, his most comprehensive and ambitious work.

Beginning with Hamilton's birth on the West Indian island of Nevis, Mr. Alexander traces the triumphs and tragedies of Hamilton's life. Wisely, he does not dwell upon Hamilton's illegitimacy, although making no effort to hide it—Hamilton himself made no effort to do so. Self-confident almost to the point of arrogance, highly intelligent, Hamilton would have been called a "quick study" in Twentieth-Century America.

Washington, who made him an aide-de-camp, was first attracted to Hamilton by the latter's stellar performance as a young artillerist, barely 21, at the Battle of Princeton in December, 1776. The Commander-in-Chief was "charmed by the brillant courage and admirable skill" of the young officer. Upon being told Hamilton's name, Washington immediately put him on his staff. Washington's aides were mostly young and notable for their loyalty, capacity for hard work, personal bravery and aristocratic background.

Hamilton remained with Washington until their celebrated quarrel in February, 1781, when arrogance got the best of him and he quit the staff in a huff, insisting on a return to a troop command. Maryland's own Tench Tilghman, also an aide, was sent to patch up the quarrel, but to no avail. Hamilton got his wish and at Yorktown, eight months later to the day, covered himself with glory by leading the assault in the capture of a British redoubt.

As early as 1780–1781, while still on active duty in the Continental Army, Hamilton began to point out defects in the Articles of Confederation, and called for the establishment of a strong, centralized government. He displayed a remarkable grasp of the fiscal and administrative problems of government, but, distrusting the capacity of the common man, advocated rule by the elite.

He was twice a delegate to Continental Congress from New York and also represented New York at the Annapolis convention of 1786 and at the federal Constitutional Convention of 1787. "To Covet Honor" deals profusely with Hamilton's private life and his numerous love affairs, related in detail but with the comment that "chastity has never been a requirement of genius."

In 1789 Washington made Hamilton the first Secretary of the Treasury. He initiated a national fiscal sysem, strengthened the federal government and stimulated trade and commerce.

He was also influential in the formation of political parties, which were first drawn along the lines of supporters of Hamilton and Washington (Federalists) and their Jeffersonian opponents (Anti-Federalists). In 1798, Hamilton was appointed inspector general of the Army with the rank of major general.

Holmes Alexander is a native West Virginian whose formative years were spent in Baltimore. A graduate of the Gilman School and Princeton, Mr. Alexander served a term in the Maryland legislature as a delegate from Baltimore county before doing graduate work at Cambridge University and Johns Hopkins. After teaching at McDonogh School, he turned to writing as a profession, becoming a syndicated newspaper columnist in 1947. He has lived in Washington for the last 20 years.

"To Covet Honor" presents one of the most controversial of the Founding Fathers, often in his own words and those of his contemporaries, as the true founder of the early American system of business and finance and major interpreter of the Constitution he helped write—a very human, colorful and attractive personality.

HELP REUNITE SOVIET JEWISH FAMILY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut (Mr. Cotter) is recognized for 5 minutes.

Mr. COTTER. Mr. Speaker, I hope my colleagues will join my efforts to reunite a Soviet Jewish family with their father in America.

Leizer Falkovich is an American citizen who lives in Hartford, Conn. His son, Naym Falkovich, resides in Moscow with his wife, Mariana, and their 4-year-old son, Dimitri.

Naym and his family have tried to emigrate to the United States to join their father, but the Soviet Government, without explanation, has denied them exit visas.

On Friday, December 16, I will mail an appeal to Soviet emigration authorities requesting exit visas for the Falkovich family on humanitarian grounds. A copy of this letter follows. I would be grateful if my colleagues could add their names to this appeal.

House of Representatives,
Washington, D.C., December 16, 1977.

V. S. Obidin,
Chief of the All-Union OVIR, Ogarev ul. Moscow, R.S.F.S.R., U.S.S.R.

Dear Mr. Obidin: We, the undersigned Members of the Congress of the United States, would be grateful for your assistance in an effort to reunite a family that has been tragically separated.

Leizer Falkovich is an American citizen. His son, Naym Falkovich, lives in Moscow with his wife, Mariana, and their five-year-old son, Dimitri.

N. Falkovich has attempted unsuccessfully to obtain exit visas for himself, his wife and son in order to join his father in America.

The Falkovich family wishes to end their separation and live together. We urge you, on humanitarian grounds, to make this possible by granting exit visas for the three members of the family who live in the Soviet Union.

Sincerely,

William R. Cotter,
Member of Congress.

SOCIAL SECURITY FINANCING

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mr. Burke) is recognized for 5 minutes.

Mr. BURKE of Massachusetts. Mr. Speaker, the following three articles appeared in major newspapers in this country within the past few days. These articles are clear indicators that we must look to general revenues for partial financing of the social security system.

I ask each of my colleagues to read these articles to gain a better understanding of: One, the history of general revenue financing for social security; two, the need to reduce payroll taxes in order to stimulate the economy; and three, the specific problems relating to the increases in social security taxes contained in the financing bill presently in conference.

It is of vital importance to the economy of this Nation that we provide tax relief at the employment level—thus creating jobs and providing a great incentive for people to get off the welfare rolls and back into the labor force as productive citizens where they are earning a living and contributing to the social security system.

The articles follow:

[From the Boston Herald American, Dec. 4, 1977]

The U.S. Tax Game—One Up, One Down

(By Tom Wicker)

Washington.—Once again last week President Carter indicated that what he called "necessary" Social Security tax increases for next year would be offset to some extent by income tax reduction. The final size of the Social Security tax rise and the proposed new crude oil tax, he said, would affect the amount of income tax reduction he would propose in 1978.

That's understandable, since both forms of tax increase would reduce consumer buying power while driving up the price level—a disastrous combination at a time when the economy may be slowing and unemployment remained high. Yet, the crude oil tax is the centerpiece of Carter's energy program, his primary proposal for reducing oil imports, trimming the huge balance of payments deficit caused by those imports, and shoring up the dollar.

On the other hand, cutting income taxes to compensate for rising Social Security payroll taxes is nothing more than an indirect way of diverting general tax revenues into the Social Security trust funds. But the payroll tax increases are "only necessary" because of the widespread belief in Congress that to apply general fund revenues to Social Security would convert it from an insurance to a welfare system.

It has been argued in this space that the insurance notion is a myth—that, for example, benefits usually surpass what a retired person has contributed to the trust funds, and that since employer payroll taxes are deductible from employers' income taxes, this too is an indirect method of diverting general fund revenues to Social Security.

In a recent article to that effect, J. Douglas Brown, who headed President Roosevelt's Social Security Advisory Council in 1937–38, was quoted as having said that "the planners" of Social Security have been "convinced that, as the system matured, government contributions would be necessary and fully justified to preserve the integrity of the system." Their idea, he had written in a letter to The New York Times, was that after about 1962 approximately equal contributions would be needed from workers, employers, and "the general taxpayers of the country."

This elicited an interesting letter from Thomas H. Eliot, who was in 1935 general counsel to the President's Committee on Economic Security (composed of four Cabinet members and Harry Hopkins, with a large research staff and an advisory board).

"It's fair to say," Eliot wrote, "that all these groups, with the exception of one man, assumed that 'public' contributions would eventually be necessary, and that most, if not all, believed that such contributions would be desirable." The committee drafted a report citing 1965 as the year after which contributions from general funds probably would be necessary.

Eliot—later the chancellor of Washington University in St. Louis—said the lone holdout was Secretary of the Treasury Henry Morgenthau. He persuaded Roosevelt not to issue the report on grounds that a "self-supporting" system was a political necessity. In Eliot's view, this had little to do with the kind of opposition to welfare that is common today, instead it was based on "the political need to refrain from an unbalanced budget," or anything that tended in that direction in the 1930s.

So a system based only on employer and employee contributions was set up, with payroll tax rates that were supposed to keep it sound for 30 years. But when "survivors" were brought into the system, the original rates became inadequate; the merry-go-round of rising benefits and rising payroll taxes has been going on ever since.

But the point of Eliot's letter bears out Brown: the Social Security planners of the 1930s did not intend, as today's Congress assumes they did, that the system should always be self-supporting or that it should be an insurance system. They recognized that, as in other Western democracies, a tripartite system including government contributions eventually would be necessary to avoid ruinous payroll taxes of the kind now in prospect.

If Congress could reach the same conclusion there would be no necessity for it to raise payroll taxes with one hand, while lowering income taxes with the other.

[From the Washington Post, Dec. 4, 1977]

The Tax on Labor

The other day President Carter wrote to the congressional conferees on the Social Security bill, warning them of the perils of excessive fairness. It is quite true that the Social Security rules are full of unfair eccentricities. Why, for example, should benefits be cut when recipients earn wages, but not when they get stock dividends? Income is income, after all. The trouble is that fixing the formula and ending the cuts would cost several billion dollars a year. With the enormous growth of the Social Security system over the past decade, even relatively small adjustments in the rules can be astonishingly expensive. Mr. Carter isn't the only citizen who's beginning to get apprehensive about the scale of the government's pension obligations.

Unfortunately, Congress is still determined to finance Social Security with the traditional payroll tax and nothing else. Last spring Mr. Carter suggested that it might be wise to begin using, in a modest and hesitant way, the general revenues. That means personal and corporate income taxes. Congress turned the idea down flat and Sen. Russell Long (D-La.), the chairman of the Finance Committee, continues to scoff at it. The general revenues, he observes, already fall short of balancing the federal budget, and diverting some of them to Social Security would only increase the deficit.

There is less to Mr. Long's logic than you might think at first glance. Next year Congress is going to have to cut income taxes to compensate for the automatic increase in Social Security payroll taxes. The effect on the deficit will be precisely the same as if the income tax revenues were being used directly for pensions. The difference is that, when Congress cuts the income tax and increases the payroll tax, it is shifting the tax burden from a progressive tax to a regressive one.

There's another consequence as well, and it deserves more thought than Congress seems to be giving it. The payroll tax makes labor more expensive to the employer. The increases are very gradual, to be sure, but they are mounting up. To accelerate this trend over the coming years, as the emerging Social Security bill will do, is going to make it harder than ever to push the unemployment rate down.

These next few years are going to be a particularly bad time for the federal government to impose this kind of tax on labor. Because of the very high birth rates in the 1950s and early 1960s, unprecedented numbers of young people will be pouring into the job market. At the same time women are increasingly looking for paid work outside their homes. The proportion of the American population actually holding jobs has never before been as high as it was in November, according to the Bureau of Labor Statistics. But the unemployment rate—still a painfully high 6.9 per cent—is evidence that the number who want to work is even higher.

Congress keeps saying that, as a matter of national policy, it wants those people on payrolls. Quite right. But in that case, it does not make much sense to put stiff, and steadily rising, tax on the payrolls.

[From the Wall Street Journal, Dec. 5, 1977]

Social Security, Income Tax Link Is Seen Gaining

(By John Pierson)

Washington.—House and Senate tax writers are heading toward a compromise that will greatly increase pressure to fund at least some Social Security benefits with income taxes.

Social Security has always been financed with payroll taxes, levied equally on employers and employes, a link conservatives argue is needed to preserve the system's insurance and pay-as-you-go characteristics. Break the link, conservatives warn, and politicians will be tempted to raise benefits without raising taxes, further deepening the federal deficit.

But payroll taxes are reaching the point where they really hurt. A worker earning at least $16,500 this year is paying $965.25 while his boss is making an equal contribution on his behalf. Next year, under existing law, a worker making $17,700 or more will have to pay $1,070.90. By 1987, the maximum payment is due to rise to $2,012.40, more than twice this year's maximum.

Meanwhile, congressional tax writers resume work today on a bill that will escalate the payroll tax bite even farther. The conferees have before them a House bill that would triple the maximum contribution, to $3,024.60, by 1987 and a Senate bill that would hold the maximum contribution of a worker to $2,406.90 a decade from now, but only by boosting the maximum employer contribution more than five times, to $5,325 per worker.

Senate conferees met privately Friday and reaffirmed their commitment to transfer much of the burden from employes to employers, a switch the Carter administration also supports. But House conferees—and most business interests—are dead set against an end to the traditional "parity" between employer and employe contributions, a tradition the full Senate voted to scrap by only the slimmest of margins.

Thus it's widely believed, even among "disparity's" supporters, that "parity" will prevail in the conference. "If some kind of disparity survives, I'll be very surprised," says one administration source.

But retaining parity means retaining the House bill's higher employe taxes; if bosses pay less, workers have to pay more.

Even though these higher taxes are still only a gleam in the conferees' eyes, Congress has begun to hear from unhappy workers. "The mail is really bad," says Rep. Bill Gradison (R., Ohio). "They're really screaming," adds Rep. Sam Gibbons (D., Fla.).

To deflect this anger, at least until after the 1978 election, the two chief tax writers, Rep. Al Ullman (D., Ore.) and Sen. Russell Long (D., La.), have agreed there won't be any Social Security tax increase next year beyond that already scheduled. Under existing law, the tax rate is due to rise to 6.05% from 5.85% Jan. 1, and the maximum earnings base, against which the tax is levied, is due to increase to $17,700 from $16,500.

The House bill would delay any new rate increase until 1981 but would boost the earnings base to $19,000 next year, making the maximum contribution for employes and employers $1,204, or $133.10 more than currently scheduled. The Senate bill wouldn't raise either the scheduled base or rate until 1979.

Putting off any tax increase until after the 1978 election might save a few congressional incumbents, but it would also mean that subsequent increases would be even stiffer than otherwise.

In the view of some interested observers, the situation is tailor-made for a decision to transfer some of the Social Security funding burden from payroll taxes to the Treasury's general fund; that is, to income taxes. Advocates of income-tax funding believe that when workers find themselves paying substantially higher payroll taxes in 1979, they will start demanding relief.

"That's when the pinch is going to come," says one House staff man. "This year's bill is almost a necessary catharsis," says Rep. Abner Mikva (D., Ill.), one of the House conferees. "We have to face the higher taxes and the political fallout before we can go to general funding."

Those who prefer to finance Social Security with income taxes argue that the tax is more progressive—it bears more heavily on those who can afford to pay it. Further, they say, unlike the payroll tax, income taxes aren't a levy on labor and thus don't discourage hiring.

Rep. Mikva plans to introduce a bill next year that would provide general revenue for two of the three Social Security trust funds—hospital insurance and disability insurance. Only the old age and survivors fund would continue to be supported by payroll taxes under the Mikva formula.

Funding hospital and disability insurance out of the Treasury might even permit Congress to cut the payroll tax in 1980. Under existing law, 1.7 percentage points of that year's scheduled 6.05% rate will go into the hospital and disability trust funds. Without the hospital and disability burden, the rate would be only 4.35% in 1980, and the maximum contribution would be only $887.40, instead of $1,234.20.

Not only Congress but also President Carter, who will be seeking a second term in 1980, might like to follow next year's anticipated cut in income taxes with a cut in payroll taxes in 1980.

To be sure, conservatives like Sen. Long remain strongly opposed to general funding of Social Security. Rep. Ullman, for one, would like to pay for increased benefits with some sort of national sales tax, modeled perhaps after the value-added taxes of European nations.

But House Republicans recently proposed paying for half of hospital insurance from general funds. And big business isn't as opposed to the idea as one might expect.

One corporate official who represents his company on the politically powerful Business Roundtable says he might be willing to use income tax revenue to pay for hospital and disability insurance if both programs were removed from Social Security. Such a separation would be needed to reduce the temptation to pay old age and survivors benefits out of general funds, as well, the corporate man says.

"QUORUMITIS CURED"

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. Michael O. Myers) is recognized for 5 minutes.

Mr. MICHAEL O. MYERS. Mr. Speaker, of the more pleasurable duties I have as a Member of the House of Representatives, I find that of my service on the Post Office and Civil Service Committee to be among the most rewarding. This is in large order due to the professional stewardship of the committee under Chairman Robert Nix.

As many of you know, the committee was for some years in a state of relative inactivity. This year, to date, the committee record is equal to or surpasses that of most other committees. It has favorably reported 23 bills and 3 resolutions to the House floor. Of these 16 have passed the House and 4 have become law.

The acceleration in the committee pace was recognized recently by one of the best publications in the field of Government reporting, The Federal Times.

I would appreciate it, Mr. Speaker, if this Federal Times article could be reprinted in the Record for the edification of all my colleagues, and there being no objection, I hereby submit it for such printing:

[From the Federal Times, Sept. 5, 1977]

Quorumitis Cured

Several years ago this newspaper coined the term—quorumitis—to describe former House Post Office and Civil Service Committee chairman Dave Henderson's inability to attract enough members to act on bills of interest to federal and postal employees.

Toward the end of Henderson's stint as chairman, quorumitis became a bad joke. He almost never was able to persuade enough of his colleagues to attend weekly business and mark-up meetings of the committee.

Henderson—we would concede—was generally sympathetic to the needs of federal and postal workers. Alas he was no great shakes as a legislative prime mover, which in practical terms meant that perhaps dozens of good bills were summarily killed not on their merits but because of Henderson's inability to lead his Democrat and Republican brothers and sisters to their roosts in the Cannon House Office Building.

That has all changed.

We are not now saying that a cornucopia of beneficial legislation is springing from the committee. But under the stewardship of Bob Nix, the full committee is meeting in regular fashion. And Nix regularly is attracting a quorum.

Thus legislation coming from the seven subcommittees is receiving a full and fair hearing. And we believe this improved turn of events may be pegged entirely to Bob Nix.

It would appear that the House is finally beginning to seriously regard the committee. A good job, Mr. Chairman.

. . . MORE ON NIX

While we're handing out praise to Bob Nix—we might just as well heap it on in generous measure.

By way of introduction, Congress is in recess. We did not expect to find during this lazy summer hiatus any new initiatives for reforming the U.S. Postal Service.

As previously reported, the White House view—or more accurately, Mr. Carter's non-position—has been out since the end of July. Our presumption was that postal reorganization had become for all intents a dead issue this year.

But Nix, last week, on his home turf in Philadelphia, gave postal service boosters reason to rejoice.

In a speech before the Pennsylvania State Association of Letter Carriers, Nix unveiled a surprisingly simple approach toward making the USPS leadership more responsive to not only postal workers but also the people.

He promised to introduce a bill that would force the postmaster general to seek prior clearance from the House or Senate before ordering service level cuts.

As Nix told the Keystone State carriers:

"Such policy decisions should not be left to the discretion of the PMG. The way to insure that postal policies will be carried out as Congress and the people wish it is to require the postmaster general to come to Congress when he wants to make such changes."

Nix's bill would give either House body 60 days to weigh whatever recommendation the postal service offers. If one or both chambers voted against the postal service, the proposal would be null.

The Nix bill is a master stroke. It would mandate a measure of responsiveness from the postal service that has not been seen since the days of the now defunct Post Office Department.

On one hand, the people would have considerable say over what levels of service they want. And on the other, the charter of the postal service, which is to say the Postal Reorganization Act of 1970, would remain intact.

A preliminary inquiry by this newspaper discloses that the Nix bill almost certainly will win the full backing of Reps. Charles H. Wilson and James M. Hanley, who control those two subcommittees in the House that focus on postal services and operations.

And we suspect that President Jimmy Carter would not fault the bill.

With Nix behind the measure, we are assured that it will—at the very least—be subject to a full House vote.

We believe that cutting the current six-day delivery week by one day or eliminating as many as 17,000 small town post offices are issues of too critical importance to be left to the devices of a top postal management, which by definition and design, is insulated from the White House and the public.

Or as Nix said in Philadelphia:

"The time has come for Congress to reassert its constitutional responsibility and role in determining postal policy. If the people are willing to give up Saturday delivery, then through the system of representative government, that will be done.

"But the day of decisions by those who do not represent the people must come to an end."

DEFICIENCY DIVIDEND DEDUCTION FOR SMALL BUSINESS INVESTMENT CORPORATIONS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. LaFalce) is recognized for 5 minutes.

Mr. LaFALCE. Mr. Speaker, as chairman of the Subcommittee on Capital, Investment and Business Opportunities of the Committee on Small Business, I have become familiar with a highly technical tax problem confronting certain small business investment companies licensed under the Small Business Investment Act of 1958. Approximately 20 of these companies are taxed as regulated investment companies. In order to gain this tax treatment, the corporation must distribute at least 90 percent of its "investment company taxable income" to its shareholders. Hence, on an annual basis, the tax status is determined by reference to both taxable income and amounts distributed to shareholders.

In the event such a company is subsequently audited by the Internal Revenue Service, and an adjustment increasing its income made, it may lose its tax status as a regulated investment company if it has not distributed 90 percent of its investment company taxable income as adjusted. In fact, one such corporation was audited, and deductions of $72,000 were disallowed, thereby increasing its "investment company taxable income" by a like amount. As a result of this increase, the company failed to distribute 90 percent of its investment company taxable income to its shareholders, missing the mark by a mere $200. This resulted in the corporation's failure to meet the tax definition of a regulated investment company, and resulted in a tax assessment of an additional $190,000.

The Deficiency Dividend Deduction for Small Business Investment Companies Act provides an equitable solution to this problem. It permits a corporation to make a dividend distribution to its shareholders after a taxable year to reflect an adjustment made by the Internal Revenue Service. This has the effect of enabling the corporation to comply with the requisite percentage to be distributed so that the status of regulated investment company may be maintained, notwithstanding the adjustment.

Real estate investment trusts face the same problem; last term in Public Law 94–455 we added section 859 of the Internal Revenue Code, an almost identical provision, to remedy this inequity for such trusts. Similarly, an almost identical provision is found in the personal holding company provisions—Internal Revenue Code section 547—which enables corporations to avoid personal holding company status through the use of deficiency dividends.

I urge all of you, especially those Members of the Ways and Means Committee, to consider the act favorably upon this proposal.

FINANCIAL DISCLOSURE RULES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina (Mr. Preyer) is recognized for 5 minutes.

Mr. PREYER. Mr. Speaker, the Select Committee on Ethics last week issued a formal advisory opinion defining and interpreting the provisions of House Rule XLIV, Financial Disclosure. This Advisory Opinion No. 12, together with a sample disclosure form prepared by the Clerk of the House, will be distributed to Members' offices and to each committee during the next week.

The select committee has also prepared a factsheet summarizing the application of House rules to the acceptance and disclosure of travel-related expenses.

Mr. Speaker, for the information of the Members, officers and employees of the House, I insert in the Record at this point the complete text of Advisory Opinion No. 12 and the factsheet on travel-related expenses.

ADVISORY OPINION NO. 12

(Issued by the Committee on December 1, 1977)

SUBJECT

Application and Interpretation of House Rule XLIV, Financial Disclosure.

REASON FOR ISSUANCE

The Select Committee has received a number of inquiries regarding the interpretation and application of the new financial disclosure requirements under House Rule XLIV, as amended on March 2, 1977.

BACKGROUND AND DISCUSSION

Rule XLIV requires Members, officers, their principal assistants, and professional committee staff to file an annual financial disclosure statement with the Clerk of the House. The first disclosure statement under the new Rule must be filed by April 30, 1978 and will cover only the period from October 1 through December 31, 1977. Thereafter, each annual disclosure statement will relate to the preceding calendar year.

In order to clarify the disclosure requirements, the Committee, pursuant to its authority under H. Res. 383, issues this Advisory Opinion defining and interpreting the provisions of Rule XLIV, which requires the following information to be disclosed:

(1) Income: The source and amount of each item of income aggregating $100 or more from one source. Capital gains are excluded from the first filing.

(2) Gifts: (A) The source, a brief description, and value of gifts of transportation, lodging, food, or entertainment aggregating $250 or more from one source; and (B) The source, a brief description, and value of all other gifts aggregating $100 or more from one source. Exempted are gifts from relatives, gifts valued at $35 or less, and gifts of personal hospitality of an individual in the personal residence of, or on property owned by that individual.

The term "gift" means a payment, advance, forebearance, rendering, or deposit of money, or any thing of value, unless consideration of equal or greater value is received, but does *not* include: 1) inheritances; 2) political contributions; 3) transportation, lodging, food, and entertainment provided: (a) by federal, state, and local governments, or political subdivisions thereof; or (b) within a foreign country by the government of that country; 4) communications to the offices of a Member, including subscriptions to newspapers and periodicals; 5) suitable mementos of a function held in honor of the Member, officer, or employee; 6) consumable products provided by home-state businesses to a Member's office for distribution; and 7) food and beverages consumed at banquets, receptions or similar events. (N.B. This exemption does not include dinners for small groups at restaurants or other such "private" events.)

In disclosing gifts, it is not necessary that exact dollar figures be reported in every case. If the exact value of a gift is not reasonably ascertainable, a good-faith estimate is sufficient for disclosure purposes. In some cases involving "travel-related" expenses provided as a gift to a reporting individual, it might be difficult to provide even the approximate value of such expenses. Under these limited circumstances, a brief description of the nature of the expenses provided would be sufficient for disclosure purposes.

Travel-related expenses provided to a Member or employee for his personal benefit and which are unrelated to official duties are considered to be gifts. Travel-related expenses provided for speaking engagements, fact-finding tours, etc. are not considered to be gifts and should be disclosed as reimbursements (see below).

(3) Reimbursements: The source and value of reimbursements, directly or indirectly, for expenditures aggregating $250 or more in value from any one source. Exempted are reimbursements for travel-related expenses provided by federal, state and local governments or political subdivisions thereof. Reimbursements provided by foreign governments or by international governmental associations (e.g., NATO, Interparliamentary Union) are exempt. Such foreign travel-related expenses are required to be disclosed elsewhere under the terms of the Foreign Gifts and Decorations Act as amended (Public Law 95–105).

Additionally, Members of Congress are often provided travel-related expenses from campaign funds to make political appearances on behalf of their colleagues or other candidates for federal office. Reimbursements for these campaign-related activities are exempt from disclosure since such expenses are required to be disclosed elsewhere under the Federal Election Campaign Act.

Disclosure of reimbursements is thus required for expenses provided by non-governmental sources such as trade associations, foundations, corporations, labor unions, educational institutions, and individuals. This category would generally include items such as travel expenses provided in connection with a speaking engagement or a fact-finding event related to official duties whether those expenses were reimbursed to the individual or paid directly by the sponsoring organization.

Since reimbursements will often involve travel-related expenses which are not provided directly to a Member or employee on an individual basis, but rather involve an official group or delegation (as part of a fact-finding tour, etc.), actual or estimated costs may not be reasonably ascertainable. Therefore, whenever the exact or approximate value of travel-related expenses is not reasonably ascertainable, a brief description of the itinerary or the nature of the expenses provided is sufficient for disclosure purposes.

(4) Holdings: The identity and category of value of any property held, directly or indirectly, in a trade or business or for investment or the production of income and which has a fair-market value of at least $1,000 as of the close of the year. Items such as household goods, automobiles, and other personal property not principally held for investment purposes or the production of income need not be disclosed.

With respect to business interests, the reporting individual need only disclose the category of value of his interest in the business and not the assets and holdings of the business itself. Since the value of holdings needs to be disclosed only within certain categories, an appraisal to determine the fair-market value should usually not be necessary. However, in those few instances where it is difficult to estimate even the category of value of an asset, the individual may use any generally recognized indication of value provided that the method of valuation is indicated on the disclosure form.

(5) Liabilities: The identity and category of value of each personal liability owed, directly or indirectly, which exceeds $2,500 as of the close of the year. This category applies to all personal loans, whether secured or unsecured, and regardless of the repayment terms or interest rates. Exempted, however, are mortgages secured by real property which is the personal residence of a Member or his spouse in the Washington, D.C. area or in the district; or the principal residence of any other reporting individual or his spouse. Also exempted from disclosure are loans secured by automobiles and obligations to make alimony or child-support payments. A contingent liability (e.g., if the individual co-signs a note) need not be disclosed. Similarly, an individual with an interest in a business, corporation, partnership, etc., need not list a liability of that organization.

(6) Security transactions: The identity, date, and category of value of any transaction, directly or indirectly, in securities or commodity futures during the calendar year (beginning in 1978) which exceeds $1,000 in value. The first filing to be made in 1978 does not require the reporting of this information. Exempted are any transactions donating such securities to any tax-exempt organization, as defined in section 501(c)(3) of the IRS Code.

(7) Real property transactions: The identity, date, and category of value of any purchase or sale, directly or indirectly, of any interest in real property which exceeds $1,000 in value as of the date of such purchase or sale. This category requires the reporting of only real property transactions. Any real property held for investment purposes would be listed as a holding under item 4, as described above. As with liabilities owed, transactions involving personal residence property are exempted from disclosure.

Categories of Value: A detailed net-worth statement is not required under House Rule XLIV. Instead, financial interests and liabilities need be disclosed only by categories of value. The categories of value for items 4–7 are as follows: less than $5,000; between $5,000 and $15,000; between $15,000 and $50,000; between $50,000 and $100,000; and more than $100,000.

Spouse disclosure

Rule XLIV requires disclosure of spouse interests if they are under the "constructive control" of the reporting individual. This requirement has existed under House Rule XLIV since its original adoption in 1968. As defined by the Committee on Standards of Official Conduct, the financial interests of a spouse are regarded as constructively controlled "if enhancement of those interests would substantially benefit the person reporting. Normally, in the absence of specific property division agreements, trusts, etc., the interests of spouses . . . would be constructively controlled."

In view of the more detailed information now required to be disclosed, the Select Committee believes that clarification of spouse disclosure requirements is necessary.

Accordingly, the financial interests of a spouse should be reported as follows: (1) source, but not amount, of spouse earned income exceeding $1,000; (2) gifts or reimbursements to the spouse, unless received independent of the relationship to the reporting individual; and (3) assets and liabilities of the spouse unless the reporting individual indicates that: (a) he or she neither derives, nor expects to derive, any economic benefit from such interests; and (b) such interests were not obtained in any way from the assets or activities of the reporting individual.

The assets and liabilities of a spouse must be reported in the same manner as those of the reporting individual; however, the person reporting need not identify such items as those of the spouse. The financial interests of a spouse living separate and apart from the reporting individual need not be disclosed.

HOUSE RULES ON ACCEPTANCE AND DISLOSURE OF TRAVEL-RELATED EXPENSES

The following summary has been prepared by the Select Committee on Ethics in response to questions concerning the application of House Rules to acceptance and disclosure of travel-related expenses (i.e. transportation, lodging, food, and entertainment).

DISCLOSURE (HOUSE RULE XLIV)

Exemptions

Certain travel-related expenses are exempt from disclosure because they are either disclosed elsewhere and/or do not involve potential conflicts of interest. A reporting individual need not list travel-related expenses which are:

(a) provided by federal, state or local governments, or subdivisions thereof;

(b) provided by a foreign government or international governmental organization (Such expenses must be reported in the Federal Register under the terms of the Foreign Gifts and Decorations Act, as amended PL 95–105);

(c) provided from campaign funds to make a political appearance on behalf of a federal officeholder or candidate for federal office.

Requirements

Disclosure is required for all travel-related expenses aggregating $250 or more in a calendar year from any "non-governmental source." Therefore, expenses exceeding $250 in value provided from such sources as trade associations, foundations, corporations, labor unions, educational institutions, political organizations, or individuals (other than a relative) should be disclosed as either a reimbursement or a gift.

(a) Reimbursements.—This category includes travel-related expenses provided for such activities as speaking engagements, conferences, and fact-finding events related to official duties. Such expenses would be listed as reimbursements whether they were actually reimbursed to the reporting individual or paid directly by the sponsoring organization.

(b) Gifts—This category includes travel-related expenses provided for the personal benefit of the reporting individual (e.g., a vacation or personal side trip during fact-finding tours). However, exempted from disclosure is the "personal hospitality" of an individual provided in the residence or other property owned by that individual (e.g. use of a friend's summer home).

In disclosing travel expenses, it is not necessary that exact dollar figures be reported in every case. If the costs of travel-related expenses are not reasonably ascertainable, a good-faith estimate, along with a brief description of the expenses provided, is sufficient for disclosure purposes. In those instances where it is difficult to estimate even the approximate value of the travel-related expenses, a brief description of the itinerary or the nature of the expenses provided would be sufficient.

ACCEPTANCE OF GIFTS (HOUSE RULE XLIII)

House Rule XLIII, clause 4 prohibits the acceptance of gifts aggregating $100 or more in value in a calendar year from any source with a direct interest in legislation before the Congress, or from a foreign national. Exempted are gifts from relatives, gifts of personal hospitality of an individual, and gifts valued at $35 or less.

Therefore, acceptance of such gifts as corporate jet trips back to the district, weekends at resort areas, or personal sidetrips during fact-finding tours which exceed $100 in value are prohibited if the source of such expenses has a direct interest in legislation. Note, however, that expenses provided for fact-finding tours, conferences, and other activities related to official duties are not considered to be gifts, but rather reimbursements which may be accepted subject to disclosure requirements.

AMERICAN LEGION SUPPORTS TIGER TEAGUE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Mississippi (Mr. Montgomery) is recognized for 5 minutes.

Mr. MONTGOMERY. Mr. Speaker, I recently received a copy of a letter Mr. R. E. Lyngh with the American Legion sent to our distinguished colleague from Texas, Tiger Teague. The letter sets out quite clearly the long and successful efforts of Tiger on behalf of our Nation's veterans, especially in the area of educational assistance benefits. I could not agree more with the comments made in the letter.

Congressman Teague's contributions to our Nation's veterans over the years are well known and his record speaks for itself. It is unfortunate that a small and uninformed group of people have lately attempted to take Tiger to task simply because he and other members of the House Veterans' Affairs Committee would not establish an inequitable program of GI bill benefits.

I include at this point of the record the letter from Mr. Lyngh in order that all my colleagues may be aware of the high esteem in which Tiger Teague is held by one of the Nation's largest veterans' organizations.

The American Legion,
Washington, D.C., November 29, 1977.

Hon. Olin E. Teague,
The U.S. House of Representatives, Rayburn House Office Building, Washington, D.C.

Dear Congressman Teague: On November 21, the Washington Post newspaper published an article by Colman McCarthy, titled: 'Tiger' Teague and the Veterans Compromise. The article does several things. It first demeans the value of your service in WW II and in Congress. It indicates that the current GI Bill program is not a good one; and it challenges the right of The American Legion to speak for the Vietnam veteran.

We do not think The American Legion needs to rise to your defense, either as a Congressman, or as a decorated combat veteran of WW II. The Second World War was considered quite important at the time it was being fought, and there was no indication at that time that the American people, the beneficiaries of victory in that war, would at some subsequent time depreciate the service of those who were wounded. Your service as a Congressman, and especially the interest you have shown through the years in veterans affairs, has resulted in legislation that has paid billions of dollars in benefits to veterans, their dependents and survivors. Mr. McCarthy apparently sees no need to review in detail your record of service, either in war or in peace. The American Legion has not forgotten how you achieved your distinguished military record, nor how you have helped veterans through the years since WW II ended.

The present GI Bill program, is the best of the three programs for WW II, Korean and Vietnam veterans. Vietnam veterans receive benefits under the present program that were never given to earlier veterans. For example, 45 months of training, as against 36 for WW II; the entitlement to benefits while completing high school level work, without loss of any of the total 45 month entitlement; tutorial assistance to help do college level work; a liberal loan program; entitlement to benefits for training prior to discharge.

The 6.6% increase in the new bill the President has just signed, will put more than 500 million additional dollars during the current Fiscal Year into the pockets of the 2 million Vietnam veterans who are now in training. That ain't hay. And the point could be made that more than half of the total of more than 8 million Vietnam Era veterans have used some or all of their GI Bill entitlement—a higher percentage than trained under either the WW II or Korean Programs. Mr. McCarthy has never mentioned that in any of his articles.

What seems to be bothering Mr. McCarthy, really, is the failure of the GI Bill to pay what is called a tuition equalizer. A tuition equalizer would pay a differential to those veterans, mainly in the Northeast, who do not have the advantage of low cost tuition in academically high level schools, such as there is in States like California. It is truly unfortunate that the Northeastern states do not spend as much of their per capita taxes on education as do states like California and Texas. But the thrust of Mr. McCarthy's solution to that problem is to say to veterans, that all military service is equal, but the service of those who live in the Northeast is more equal than that of those from California, etc. So far Congress has not seen fit to accept Mr. Carthy's premise.

As to Mr McCarthy's inference that The American Legion cannot speak for Vietnam veterans, all we can say is that we probably speak for them as much as anybody can. It is true that we have 700,000 Vietnam veterans presently enrolled in the Legion. No organization, including those that purport to be exclusively Vietnam organizations, have as many. It seems to be true that most veterans don't join any organization—but then more than half of all Americans don't go to church either.

The Legion never asks any veteran who requests assistance, whether he is a member. The Legion concerns itself with the problems of all generations of veterans. The veterans of WW I, WW II, Korea, and Vietnam were led to believe that their service was valuable and appreciated—at least they were so led to believe at the time that service was required of them.

The American Legion continues to appreciate that veterans have a friend like you in Congress. Your help through the years has amounted to more than lip service.

Sincerely,

R. E. Lyngh,
Director, National Veterans Affairs and Rehabilitation Commission.

THE NEED FOR COST/BENEFIT ANALYSIS ON THE ENERGY TAX BILL

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. Vanik) is recognized for 5 minutes.

Mr. VANIK. Mr. Speaker, currently, the House and Senate are in conference, trying to resolve the differences between the energy tax bills which passed each Chamber. It has been a long and difficult conference and little progress has been made. This is not surprising in view of the enormous differences between the two Chambers. The House bill between 1978 and 1985 raises $52.9 billion and will result in a savings in 1985 of 2,041,000 barrels of oil per day. The Senate bill will result in a cumulative loss between 1978 and 1985 of $25.5 billion and a savings in 1985 of 1,396,000 barrels of oil per day.

I am worried, Mr. Speaker, about the large number of provisions, particularly in the Senate bill, which result in large revenue losses with "negligible" energy savings. I have compiled the following table from the information provided by the Joint Committee on Taxation in its comparative committee print entitled, "Conference Comparison on the Energy Tax Provisions of H.R. 5263," dated November 7, 1977. According to this document, the Senate spends some $1,574 million between 1978 and 1985 on programs which result in what the Joint Committee defines as "negligible" energy savings.

The House bill spends some $745 million on items of "negligible" energy value. In addition, the table below highlights the home insulation credit provision where the Senate spends a cumulative of $5,167 million more than the House over the next 8 years to obtain an energy savings of only 30,000 barrels per day more than the House bill in 1985. On the excise tax on business use of oil and natural gas and the investment tax credits to encourage conservation of or conversion from oil and gas or to encourage new energy technology, the cost/benefit ratio is even worse. The Senate bill gives away $16.2 billion over the next 8 years to achieve 780,000 barrels per day in energy savings in 1985, while the House bill raises $2.2 billion to achieve a million barrels per day of oil savings in 1985. Never has so much been given away to gain so little.

We cannot afford this type of legislative extravagance; we do not have the resources to give away so much revenue to gain so little in energy savings.

I hope that as the conferees proceed, they will be able to give more attention to the cost/benefit ratio of the various provisions in the energy tax bill.

The table follows:

Comparison: House-Senate energy tax bill provision	House		Senate	
	Revenue cost, 1978-85 (millions)	Energy savings, barrels per day in 1985	Revenue cost, 1978-85 (millions)	Energy savings, barrels per day in 1985
1. Insulation credit for homeowners	-$4,017	270,000	-$9,274	[1] 300,000
2. Repeal of deduction for State and local tax on gasoline	+7,250	(2)	(3)	(3)
3. Exemption from excise taxes on fuels for gasoline	(3)	(3)	-76	(4)
4. Repeal of excise tax on buses and bus parts and removal of excise tax on certain items used in connection with buses	-204	(4)	-204	(4)

Comparison: House-Senate energy tax bill provision	House		Senate	
	Revenue cost, 1978-85 (millions)	Energy savings, barrels per day in 1985	Revenue cost, 1978-85 (millions)	Energy savings barrels per day in 1985
5. Tax credits for vans used in van pooling and exclusion from income of certain employer-furnished transportation	(3)	(3)	(5)	(4)
6. Tax credit for electric or hydrogen motor vehicles	[6] −8	(4)	−50	(4)
7. Exemption from Federal tax for interest on industrial development bonds for coal gasification and liquidation, conversion of wastes into energy, and facilities for local furnishing of electricity or gas	(3)	(3)	−532	(4)
8. Percentage depletion	[7]−13	10, 000	[8]−69	20, 000
9. Option to deduct intangible drilling costs	[9]−179	(4)	[8]−348	(4)
10. Percentage depletion for peat	(3)	(3)	(5)	(4)
11. Intangible drilling cost deductions for oil and gas wells and the minimum tax	−354	(4)	−354	(4)
12. A. Excise tax on business use of oil and natural gas	+2, 908	1, 000, 000	+244	780, 000
B. Investment tax credits to encourage conservation of or conversion from oil and gas or to encourage new energy technology	−681		−16, 402	
Total	+2, 227		−16, 158	

[1] Reason: Refundability of credit and additional items.
[2] No significant energy savings.
[3] No provision.
[4] Negligible.
[5] Less than —$5,000,000.
[6] 1978–83.
[7] Geothermal alone.
[8] Geothermal geopressurized methane.
[9] Geothermal only.

THE LATE SENATOR JOHN L. McCLELLAN

(Mr. PERKINS asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. PERKINS. Mr. Speaker, a few days ago the Congress lost one of its strongest and most steadfast Members, Senator John L. McClellan of Arkansas. In his 35 years of service in the Senate he rose to become chairman of the Appropriations Committee and one of the most respected and revered leaders in the Senate.

Over the years I have worked on a number of occasions with Senator McClellan and each time I came in contact with him my respect for him grew greater. He was a fair man, an intelligent man, and a hard working man. Once he made up his mind on something, he plowed straight ahead to achieve it. But in the process he always handled himself with dignity and was willing to respect opponents' views.

An example of Senator McClellan's character occurred in 1974 when the Congress was engaged in a very devisive struggle over title I of the Elementary and Secondary Education Act. Although he did not serve on the Senate Education Subcommittee, Senator McClellan felt so strongly about the principles of equity being applied to the allocation of title I funds that he immersed himself in the issue for weeks in order to educate the Senate on the principles involved. In that debate he stood like a giant oak tree withstanding the lashings of winds and storms until finally the majority of the Senate agreed with him and adopted the amendment he had offered on the Senate floor.

America's schoolchildren will miss Senator McClellan for his devotion to their cause that day. And, the country in general is the lesser because we have lost such a fine upstanding gentleman as Senator McClellan.

I extend my sympathies to the Senator's family and especially to his wife who shared so much of his life.

ACTION FOR BOSTON COMMUNITY DEVELOPMENT

(Mr. BURKE of Massachusetts asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BURKE of Massachusetts. Mr. Speaker, it was at this time 15 years ago that Action for Boston Community Development—better know as ABCD—began a novel experiment in uniting the citizens of Boston's neighborhoods into a common effort to augment community services.

This nonprofit organization has, with Federal assistance, initiated several major programs such as Head Start, manpower training, youth job counselling, and career information services. For Boston's elderly they have provided neighborhood drop-in centers, social services, and the like. They have engaged themselves in all aspects of the city's life. They have tried, with great success, to provide the personal touch while gearing programs to neighborhood needs.

Perhaps the most important by-product of ABCD's efforts is the heightened citizen awareness and political action that has resulted from local participation in the various programs. Local residents have found a forum where their concerns can be aired.

ABCD has been an advocate for the poor, and in poor communities it has helped mobilize the communities so they might secure public recognition of their problems.

In 15 years of service, Action for Boston Community Development has accumulated an enviable record. At this time, I ask my colleagues to join with me in publicly congratulating them.

RETIREMENT OF ERIC SEVAREID

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, I believe every one of us who heard Eric Sevareid the evening of December 1 say goodby last evening on the TV felt a deep sadness in our hearts that this eloquent, able, and compassionate man, will no longer be able to delight an estimated 16 million people every evening with the moving beauty and the confirmed wisdom of his commentary.

Sad was the fact that he was not by some tragedy being taken off the air from so many Americans, but by a pernicious discriminatory practice of his company denying him the privilege to work only because of the fact he had reached 65 years of age. I am proud that this House has initiated legislation which in spite of some obstruction from the other body now in conference within a few months will become the law of this land against discriminating employment and mandatory discharge on account of age, as we have previously prohibited discrimination in employment on account of race and sex, and the more perfectly will our democracy be functioning in America.

Mr. Speaker, I have announced that every month I propose to announce the name of at least two people of noteworthy accomplishment and distinguished careers who have been arbitrarily and discriminatively forced out of their accustomed employment solely because of age. I hope the American people, having their attention focused upon such shocking facts, will more and more determine that we will no longer tolerate such rank and unfair discrimination analogous in principle to discrimination on account of race and discrimination on account of sex which we have long ago banned by the law of this land.

Mr. Speaker, the American people are not telling Eric Sevareid goodby. His memory will always be with us. Ever echoing in our hearts will be many of the beautiful words with which he has told us of things around us and about us; and we pray that that providence which has spared him, with all of his magnificent vitality, to 65 years of age may give him many many more years in which to adorn his generation and to inspire and to stimulate his fellow man. Wherever he is and whatever he does we shall know about him and catch, if only more infrequently than in the past, his words of wisdom with which he shall with beautiful elucidation tell us of events, of great deeds, or meaningful episodes in the lives of our people or our country, indeed of mankind. So, Eric, as one American and a Member of this House, and an old friend as well, we thank you for all that you have meant to make Americans see themselves in clearer light and to walk on higher ground.

But, Eric, we are not saying goodbye. We can never say goodbye as long as you and we are here. We can only say au revoir.

Mr. Speaker, I include to follow these remarks and appear in the body of the RECORD an article entitled, "Eric Sevareid's Final Commentary," by Tom Shales in the November 30 issue of "The Washington Post."

Mr. Speaker, following the above article in "The Washington Post" I include to appear in the body of the RECORD an article entitled, "This Was Eric Sevareid," on page C17 of the December 1 issue of "The Washington Post," which article includes the last moving TV commentary on CBS and saddening goodbye of this great and good man, Eric Sevareid.

The articles follow:

ERIC SEVAREID'S FINAL COMMENTARY

(By Tom Shales)

Eric Sevareid has come to represent a one-man coalition of enlightened common sense. What we learned to expect of him from his commentator's pulpit was not so much the taking of a position as the taking of The Great Position—an ultimate, melting-pot statement of opinion produced from remnants of all available viewpoints.

Maybe 10 minutes later you couldn't remember just what the position had been; but while you were hearing it, it seemed incredibly reasonable and considered and, somehow, national rather than personal—a touchstone for the mainstream.

When that venerable prune face showed up on the screen, you knew you weren't in for a cheap thrill or bit of fey japery. It was, instead, a little like being confronted with your old civics professor, pop-quiz in hand, at that. "Eric went from facts to intelligence to wisdom," reporter Charles Kuralt will say of Sevareid on a CBS News special to be seen December 13, But he also went from wit to sage to eminence; he became the very avatar of sober significance, yet maintained the requisite oatmeal immediacy we require of television performers.

And so a number of interlocking eras may be ending as Sevareid's last commentary for the CBS Evening News airs tonight. With Sevareid's forced retirement (at 65) from an active role in CBS News, we lose the sense of stability that his recurring presence conveyed. It's a tacit victory for the forces of fractionalism and specialization in broadcasting and American life generally.

Certainly the momentousness of the occasion is not going unnoticed. In a very rare gesture, and one made purely out of respect, NBC News got permission from CBS to show about 40 seconds from Sevareid's farewell on the NBC Nightly News tonight (in some cities, including Washington, the two networks' newscasts air at the same time).

Nightly News producer Joseph Angotti says of the last Sevareid piece, "It's just absolutely beautiful."

At ABC, Av Westin, producer of the ABC Evening News, said he "hadn't really considered" yesterday whether or not to take note of Sevareid's retirement on his show. Howard K. Smith, who becomes the last remaining nightly network commentator, is on vacation, so Westin expects that either Harry Reasoner or Barbara Walters will "probably say something."

Sanford Sokolow, CBS News vice president in Washington, says that Sevareid taped his last commentary on Sunday, partly to avoid "all the sobbing and handshakes" of a twilight's last gleaming.

Is it possible there will be so much hard news that the Sevareid farewell will have to be postponed? "World War III would have to break out to bump that piece off the air," Sokolow says.

It will be a "personal" note, and CBS has given Sevareid about 45 seconds beyond his usual two and a quarter minutes to deliver it. All Sevareid will let us quote in advance is his sign-off, after 38 years with CBS and 14 years on the Cronkite newscast:

"This is Eric Sevareid. Thank you, and goodbye."

Sevareid retires even as the Geraldo Riveras of TV journalism ascend—at a time when network TV news is more noisily competitive and show-bizzy than ever. Sevareid was an obstacle to the cult of personality, partly by virtue of appearing not to have any; instead, he came across as an idealized granite composite of nine Supreme Court Justices. He wasn't one to mess around, wear gaudy shirts or hit us over the head with his own name.

And yet Sevareid himself, one of the few remaining graduates of the revered Edward R. Murrow school of broadcast journalism, isn't despairing about the present or future of TV news, even though its trivializing tendencies would seem anathema to him.

"It is a problem of course," Sevareid said yesterday. "Television is the most personal journalism there has ever been, more personal even than radio, and you cannot get away from that personality aspect of it. As competition gets more severe, I think there'll be an even higher premium on personality in TV news. That doesn't have to mean that everybody on the air will be a charming idiot. There are plenty of able reporters and writers who are also good on television.

"Within three or four years, all the news people on television will be people like that—somebody who projects a personality but who is believable as well as attractive."

In a series of valedictory CBS Radio interviews with Walter Cronkite, Sevareid decried the "glut of happiness" in some TV newscasts but still thinks the happy news craze has cooled.

"I don't think it's getting worse, not even on local stations," Sevareid says. "There's bound to be some of it, because in a long period of peace and prosperity, it's inevitable that people turn inward. You can't keep dealing with the great cosmic questions because people weary of them. So you have new magazines devoted to personalities and newspapers like The Washington Post giving more space to gossip.

"When something really serious happens, some great world calamity, then you'll see a change. I don't wish for such things to happen, but they do."

With Sevareid stepping down the demise of the broadcast commentator, and perhaps of the gentleman journalist as well, seems at hand. Commentary is more and more something that creeps into regular news reports. Sevareid thinks commentary's golden era was before television, anyway.

"Commentary flowered in radio days, partly because radio time was cheaper. You had all kinds of people doing 15-minute commentaries. It didn't translate into TV very well. In radio I had four minutes or so, and I wasn't buried in a hard-news program. I come along now as a little postscript, and I've had to run with the news of the day as close as I could.

"And the time they give me is not really a natural length," Sevareid says. "As a result, you're bound to sound terribly positive and almost smug. That's part of the price of compression; it gives you no chance to loosen up a bit. And of course I look like the great stone face anyway."

Sevareid is by no means going to vanish from the public eye. He has already taped narration for a public TV documentary on the human brain and will soon start work on a 16-part, Mobil-sponsored syndicated TV series called "Between the Wars," which will be telecast beginning in April.

"I won't leave CBS entirely," Sevareid also notes. "I'm just moving my office one flight up, to a littler one. I'll spend a couple days a week kibitzing as a CBS News consultant, annoying people here and there with memos."

In bidding its farewell, Newsweek dubbed Sevareid "without doubt the most imposing of all broadcast commentators." But New York magazine sent a sniper with its bon voyage: "Why I Won't Miss Eric Sevareid." Sevareid hasn't read that one but says, "It's almost a relief to know someone's giving me hell; everyone's been so nice it was beginning to make me nervous."

It's easy to mistake for blandness Sevareid's even-headed and unifying soundness; his opinions were indeed homogenized, at least as opposed to being rancorous, but that helps prove how sensitive he remained to the breadth of his constituency. Those who think they won't give him another thought after tonight might be surprised to find themselves giving him several in the rocky years to come. Eric Sevareid could almost have made his parting words those of another respected sage: "May the force be with you."

He is a knight of an old order.

"THIS WAS ERIC SEVAREID . . . ."

Eric Sevareid, who is retiring after 38 years with CBS News, delivered his final regular daily commentary last night on the CBS Evening News. The following is a transcript of his remarks:

"By my time of life one has accumulated more allegiances and moral debts than the mind can remember or the heart contain.

"So I cannot enumerate my betters, my mentors and sustainers during so many years of trying to use, with sense, this communications instrument, as unperfected as the persons who use it. But they know that I know who they are.

"Many are gone, including the man who invented me, Ed Murrow. Some died in the wars we were reporting. I have gone the nomal span of a man's working life, rather abnormal in this calling, and it's a happy surprise.

"We were like a young band of brothers in those early radio days with Murrow. If my affections are not easily given, neither are they easily withdrawn. I have remained through it all with CBS News, and if it is regarded as old-fashioned to feel loyalty to an organization, so be it.

"Mine has been, here, an unelected, unlicensed, uncodified office and function. The rules are self-imposed. These were a few:

"Not to underestimate the intelligence of the audience and not to overestimate its information.

"To elucidate, when one can, more than to advocate.

"To remember always that the public is only people, and people only persons, no two alike.

"To retain the courage of one's doubts as well as one's convictions, in this world of dangerously passionate certainties.

"To comfort oneself, in times of error, with the knowledge that the saving grace of the press, print or broadcast, is its self-correcting nature. And to remember that ignorant and biased reporting has its counterpart in ignorant and biased reading and listening.

We do not speak into an intellectual or emotional void.

"One's influence cannot be measured. History provides, for the journalist, no markers or milestones. But he is allowed to take his memories.

"And one can understand, as he looks back, the purpose of the effort and why it must be done.

"A friend and teacher, the late Walter Lippmann, described the role of the professional reporter and observer of the news in this manner:

"'We make it our business,' he said, 'to find out what is going on, under the surface and beyond the horizon; to infer, to deduce, to imagine and to guess what is going on inside—and what this meant yesterday and what it could mean tomorrow. In this way we do what every sovereign citizen is supposed to do but has not the time or the interest to do it for himself. This is our job. It is no mean calling and we have a right to be proud of it and be glad that it is our work.'

"In the end, of course, it is not one's employers or colleagues that sustain one quite so much as the listening public when it be so minded.

"And I have found that it applies only one consistent test—not agreement with one on substance—but the perception of honesty and fair intent. There is, in the American people, a tough, undiminished instinct for what is fair. Rightly or wrongly, I have the feeling that I have passed the test. I shall wear this like a medal.

"Millions have listened, intently or indifferently, in agreement and in powerful disagreement. Tens of thousands have written their thoughts to me.

"I will feel, always, that I stand in their midst.

"This was Eric Sevareid in Washington. Thank you and goodbye."

BACKGROUND AND ANALYSES OF INVESTIGATIONS INTO ASSASSINATIONS OF PRESIDENT JOHN F. KENNEDY AND DR. MARTIN LUTHER KING, JR.

(Mr. STOKES asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. STOKES. Mr. Speaker, the Select Committee on Assassinations has received numerous requests from constituents for information on the work and progress of the committee. As you know, under the rules adopted by this committee, the members and staff are not permitted to discuss the substance or procedure of the investigation with persons outside the committee.

Nonetheless, we are aware of the public's interest and want to be as responsive as possible under the circumstances. With this in mind, I am inserting in the RECORD two issue briefs, prepared by the Congressional Research Service in the Library of Congress, which deal with background and analyses of investigations into the assassinations of President John F. Kennedy and Dr. Martin Luther King, Jr., including chronology of events, legislation, hearings, congressional documents, and additional reference sources.

I am hopeful that this will provide some insight into the task that has been undertaken by the select committee.

The material follows:

ASSASSINATION OF JOHN F. KENNEDY: THE CONSPIRACY CONTROVERSY

ISSUE BRIEF NO. IB77054

(Author: Cavanagh, Suzanne, Government Division, the Library of Congress, Congressional Research Service, Major Issues System)

(Date originated May 4, 1977.)

(Date updated November 3, 1977.)

ISSUE DEFINITION

President John F. Kennedy was assassinated on Nov. 22, 1963, in Dallas, Texas. The Warren Commission issued its report on Sept. 24, 1964. The Commission found that: (1) the shots that killed President Kennedy and wounded Governor Connally were fired from the sixth floor window at the southeast corner of the Texas School Book Depository; (2) that the weight of evidence indicated that three shots were fired; (3) that the shots which killed President Kennedy and wounded Governor Connally were fired by Lee Harvey Oswald; and (4) that there was no evidence that either Lee Harvey Oswald or his assassin, Jack Ruby, was part of any conspiracy, domestic or foreign, to assassinate President Kennedy.

Since that time there has been controversy about the findings of the Warren Commission. Several major issues are: did Lee Harvey Oswald really kill President Kennedy; if so, did he act alone; was there a conspiracy to assassinate the President; and, if there was a conspiracy, was any foreign Government or any agency of the United States Government involved?

BACKGROUND AND POLICY ANALYSIS

President John F. Kennedy was assassinated on Nov. 22, 1963, in Dallas, Texas. The alleged assassin, Lee Harvey Oswald, was charged with the murder of President Kennedy on the following day, Nov. 23, 1963. On Sunday, Nov. 24, as Oswald was being transferred from the city jail to the Dallas County jail, he was shot and killed. Jack Ruby, a local nightclub owner, was indicted and convicted of murdering Oswald, and was sentenced to death. Ruby's conviction was overturned on appeal, and while he was awaiting a new trial, he died of a blood clot in his lungs in Dallas, Texas, on Jan. 3, 1967.

On Nov. 29, 1963, President Lyndon B. Johnson issued Executive Order 11130, creating a Commission to investigate the assassination of President Kennedy. Earl Warren, Chief Justice of the United States, was appointed chairman of the Commission, and the members included two United States Senators (Richard Russell and John Sherman Cooper), two members of the House of Representatives (Hale Boggs and Gerald Ford), a former Director of the Central Intelligence Agency (Allen Dulles), and a former U.S. High Commissioner for Germany and former President of the International Bank for Reconstruction and Development (John McCloy). The Commission reported its finding to the President on Sept. 24, 1964. Its investigation was conducted over a 10-month period by a staff of 83 who interviewed several hundred witnesses. The Commission concluded that Lee Harvey Oswald did kill President Kennedy, and that he acted alone in doing so.

From the time the Warren Commission Report was made public to the present, the Commission has been criticized for its methods, comprehensiveness, and findings. There have been many allegations against the conclusions of the Warren Commission, and the critics are not in unity with respect to alternative theories to the findings of the Commission. Criticisms frequently made are:

(1) The Warren Commission sought to dispel rumors of a conspiracy to assassinate President Kennedy—thus its function was more political than investigative. It assumed that Lee Harvey Oswald was the lone assassin and set out to prove that assumption by giving undue weight to any evidence that would be used to support the theory that Oswald acted alone.

(2) The Commission concluded that three shots were fired and that one of those bullets fatally wounded President Kennedy and that the same bullet that exited through President Kennedy's throat wounded Governor Connally. Critics argue that at least four bullets were fired, and that the "single bullet" theory is incorrect.

(3) The Warren Commission concluded that all of the bullets came from behind. Critics allege that some of the bullets came from the front, and that the wound in President Kennedy's throat was an entrance, not an exit wound. Some critics question whether President Kennedy's body arrived at the Bethesda Hospital in the same condition as it left Dallas, saying that the wound in President Kennedy's throat may have been altered to appear like an exit wound. Some of the descriptions of the wound by doctors at Parkland Memorial Hospital who first treated the President were ignored or discounted by the Warren Commission.

(4) The Warren Commission discounted 52 witnesses who insisted that some of the shots that President Kennedy came from in front of him, from the direction of the grassy knoll.

(5) Critics argue that the fatal shot came from the right and to the front and could only have been fired from the grassy knoll. In addition, the film taken by Abraham Zapruder showed President Kennedy's body moved backward after the bullet impact. The film, some argue, indicates that four bullets were shot—one from the Texas Book Depository, hitting the President in the back; the second from the County Records Building, hitting Governor Connally; the third from the rear, hitting President Kennedy in the back of the head; and the fourth from the front, hitting the President in the head. An investigation conducted by CBS television in 1975 concluded, on the basis of a study of x-rays and photographs taken at the autopsy, that only two bullets hit President Kennedy and that neither struck the President from the front.

(6) The Warren Commission ignored an FBI Summary Report which stated that President Kennedy and Governor Connally were wounded by separate bullets. The FBI Summary Report also placed President Kennedy's wounds 6 inches below the neck and in the head. The Warren Commission placed one wound at the base of President Kennedy's neck, contradicting the FBI Summary Report.

(7) There have been allegations that Lee Harvey Oswald had some connections with the FBI or CIA. On May 14, 1964, J. Edgar Hoover testified before the Commission that Oswald had no connections with the FBI. The Warren Commission did not pursue that allegation beyond Hoover's testimony. Allegations that Oswald was involved with the CIA were rejected by the Commission, with, according to some critics, a less than thorough investigation.

(8) Another concern of those who reject the "lone assassin" theory is that the Warren Commission did not give sufficient attention to the autopsy report. Critics point out that an examination of the wounds in President Kennedy's brain could resolve the question of whether or not the President was shot from the front as well as from behind. Physical evidence, including President Kennedy's brain and tissue slides from the bullet wounds, had been collected by the Warren Commission and were placed in the National Archives as a result of an agreement be-

tween the Kennedy family and the National Archives. However, in the Appendix to a Hearing before the Subcommittee on Government Information and Individual Rights of the House Committee on Government Operations, an article written by Fred P. Graham for the New York Times stated that the preserved brain of President Kennedy, plus microscopic slides of tissues removed from the bullet wounds, are missing from the National Archives. Dr. Cyril H. Wecht, a medical expert and critic of the Warren Commission Report, examined the autopsy items at the National Archives and after his examination asserted that these objects were not among the autopsy items.

(9) Critics of the sole assassin conclusion of the Warren Commission also point out that 17 witnesses connected to the assassination of President Kennedy were found dead within 3 years after the assassination. Actuarial odds against this happening are allegedly one hundred trillion to one.

(10) Finally, there have been various allegations of a Cuban connection with Lee Harvey Oswald—either governmental or nongovernmental. In the Final Report of the Senate Select Committee to Study Governmental Operations with Respect to Intelligence Activities (Church Committee) dated April 23, 1976, the committee stated that the CIA was involved in plots to assissinate Cuban Premier Fidel Castro and that this activity dated back to 1960. There have also been allegations that Oswald was involved with anti-Castro Cubans who were seeking revenge against President Kennedy for his role in the aborted Bay of Pigs invasion.

Critics have called for a new investigation into the assassination of President Kennedy. A Gallup Poll dated February 1977 revealed that 81 percent of those surveyed believed that more than one person was involved in the assassination of President Kennedy, 11 percent believed one man was responsible, and 8 percent expressed no opinion.

One congressional response to demands for a new investigation was the creation of the House Select Committee on Assassinations, presently chaired by Mr. Stokes (D. Ohio). This committee, according to H. Res. 433, will exist for the duration of the 95th Congress (see chronology for the itemization of key events concerning creation and operations of this Committee). The Committee is authorized to investigate both the assassinations of President Kennedy and of Martin Luther King, Jr. [see IB77057, The Assassination of Martin Luther King, Jr.: The Conspiracy Controversy] and to report its findings to the House.

LEGISLATION

95th Congress

H. Res. 465 (Dent). Provided for the funding of the Select Committee on Assassinations at $2.5 million for one year. Adopted by the House on Apr. 28, 1977.

H. Res. 433 (Stokes et al.). Provided for the extension of the Select Committee on Assassinations for the duration of the 95th Congress. Adopted by the House on Mar. 30, 1977.

H. Res. 222 (Bolling). Amended H. Res. 9 and provided for the creation of a Select Committee on Assassinations which would expire on Mar. 31, 1977. Reported favorably from the Committee on Rules on Feb. 1, 1977, and adopted by the House on Feb. 2, 1977.

H. Res. 9 (Wright). Provided for the reestablishment of the Select Committee on Assassinations and provided for interim funding under the provisions of H. Res. 11. Introduced on Jan. 4, 1977, and referred to the Committee on Rules.

94th Congress

H. Res. 1540 (Gonzalez et al.). Provided for a select committee to be composed of 12 members to be appointed by the Speaker of the House for the purpose of conducting a full and complete investigation and study of the circumstances surrounding the death of John F. Kennedy and the death of Martin Luther King, Jr., and of others the select committee shall determine. Introduced on Sept. 14, 1976, and referred to the Committee on Rules. Reported favorably to the House from the Committee on Rules on Sept. 17, 1976. Adopted Sept. 17, 1976.

CHRONOLOGY OF EVENTS

June 20, 1977—G. Robert Blakey named chief counsel to House Select Committee on Assassinations.

June 7, 1977—Reputed anti-Castro activist Loren Hall appeared, under subpoena, before a subcommittee of the House Select Committee on Assassinations and refused to answer any questions relating to the assassination of President John F. Kennedy.

April 28, 1977—House of Representative approved a budget of $2.5 million for one year for the Select Committee on Assassinations.

April 11, 1977—Alvin B. Lewis Jr. (now resigned) named acting chief counsel and staff director of the House Select Committee on Assassinations. Lewis had been a special counsel for the committee since Dec. 6, 1976.

April 1, 1977—William Oltmans, Dutch journalist and alleged friend of George de Mohrenschildt, testified before House Select Committee on Assassinations in a closed door session.

March 30, 1977—House Select Committee on Assassinations extended for the life of the 95th Congress.

Richard Sprague resigned as chief counsel for the Select Committee on Assassinations.

March 29, 1977—George de Mohrenschildt, Russian born professor, who allegedly knew Lee Harvey Oswald, and who was to be interviewed by the Select Committee on Assassinations, committed suicide in Florida.

March 16, 1977—Reputed organized crime leader Santo Trafficante Jr. appeared, under subpoena, before the House Select Committee on Assassinations and refused to answer any questions relating to the assassination of John F. Kennedy.

March 8, 1977—Congressman Henry B. Gonzalez's resignation as Chairman of the House Select Committee on Assassinations accepted by the House. Congressman Louis Stokes named new Chairman.

February 10, 1977—Chairman Gonzalez fired chief counsel Richard Sprague from position on the Select Committee on Assassinations. Sprague refused to leave his post. Eleven members of the Committee signed a letter to Sprague endorsing him and stating that the Chairman's action was "invalid in law . . ."

February 2, 1977—H. Res. 222, which provided for the creation of a Select Committee on Assassinations that would expire Mar. 31, 1977, was adopted by the House. Budget of $84,000 per month for the two month duration endorsed by the House. Speaker appointed twelve members of the House to the Committee with Mr. Gonzalez as Chairman.

January 3, 1977—The Select Committee on Assassinations officially expired at the end of the 94th Congress.

December 12, 1976—Chief Counsel Richard Sprague went before the Select Committee on Assassinations with a budget proposal of $6.5 million for the first year. The Committee voted unanimously to recommend the budget to the full House in the 95th Congress.

November 15, 1976—The Select Committee on Assassinations confirmed Richard Sprague, former Assistant District Attorney in Philadelphia, as chief counsel for the Committee.

September 30, 1976—The House of Representatives endorsed a preliminary budget of $150,000 for the Select Committee on Assassinations.

September 17, 1976—The House of Representatives adopted H. Res. 1540, which provided for the establishment of a select committee to be composed of 12 members appointed by the Speaker for the purpose of conducting a full and complete investigation and study of the circumstances surrounding the death of John F. Kennedy and the death of Martin Luther King and of others the select committee shall determine. Mr. Downing appointed Chairman of the Select Committee on Assassinations.

Assassination of Martin Luther King, Jr.: The Conspiracy Controversy Issue Brief Number IB77057

(Author: Cavanagh, Suzanne, Government Division, the Library of Congress, Congressional Research Service, Major Issues System)

(Date originated: May 4, 1977.)
(Date updated: November 3, 1977.)

ISSUE DEFINITION

Dr. Martin Luther King, Jr., was assassinated on Apr. 4, 1968, in Memphis, Tennessee. The indicated assassin, James Earl Ray, eventually pled guilty to the murder of Dr. King and was sentenced to 99 years in prison. Subsequently, Ray stated that he did not murder Dr. King, and that he was the unknowing victim of a conspiracy to assassinate Dr. King. He has attempted, so far without success, to change his guilty plea and secure a new trial. A Federal District Court in Memphis found no violation of Ray's constitutional rights resulting from his guilty plea and the Sixth U.S. Circuit Court of Appeals unanimously upheld that ruling, saying that Ray's testimony at his hearing on Mar. 10, 1969, made it clear that he understood his actions in pleading guilty. Key questions about the assassination of Dr. King are still raised by many. These include: did James Earl Ray assassinate Martin Luther King, Jr.? If so why, and did he do it alone, or was he involved in a conspiracy? If Ray did not kill Dr. King, who did? If there was a conspiracy, was any Federal, State, or local governmental authority involved?

BACKGROUND AND POLICY ANALYSIS

Dr. Martin Luther King, Jr. was struck by a sniper's bullet at 6:01 p.m. while standing on the balcony of his room in the Lorraine Motel in Memphis, Tennessee on Apr. 4, 1968. He was pronounced dead at 7:05 p.m. Within one half hour after the shooting the Memphis Field Office of the FBI was ordered to conduct a full investigation of the murder as a possible violation of the civil rights conspiracy statute (18 U.S.C. 241).

Eyewitnesses described a man seen fleeing from a rooming house near the Lorraine Motel as a white male, between 26 and 30 years old, about 6 feet tall, and weighing approximately 160 pounds. Some eyewitnesses reported that a man fitting that description dropped a bundle in front of a store close to the rooming house, got into a white car, possibly a Mustang, and sped away at a high speed. The contents of the bundle were turned over to the FBI and were sent to Washington, D.C. on the night of Apr. 4, 1968.

On Apr. 7, 1968, all FBI Field Offices were directed to participate in the investigation of Dr. King's assassination. The rifle found in Memphis was traced to the seller, the Aeromarine Supply Company in Birmingham, Alabama. On Apr. 11, 1968, an abandoned white Mustang was found in Atlanta, Georgia. A license check of the vehicle revealed that it was registered to an Eric Starvo Galt, and on Apr. 17, the FBI issued a fugitive warrant for the arrest of Galt. Two days later, a check of latent fingerprints found on the rifle and binoculars positively identified the fingerprints to be those of an escapee from the Missouri State Penitentiary, James Earl Ray. The FBI determined "that Eric Starvo Galt was James Earl Ray." On June 8, 1968, the man identified as James Earl Ray was arrested by British authorities at Heathrow Airport outside of London.

While awaiting extradition in London, Ray wrote to Arthur Hanes, Sr., former mayor of Birmingham, asking Hanes to represent him at his trial. Mr. Hanes and his associate, Arthur Hanes, Jr., agreed to take Ray's case.

On Nov. 10, 1968, Arthur Hanes, Sr. and his son went to the Shelby County Jail in Memphis to see their client. Upon arrival Hanes, Sr. was told that the Sheriff wished to see him. Hanes was shown a xeroxed copy of a handwritten note from James Earl Ray in which Ray stated that he was changing lawyers. Hanes was replaced by Percy Foreman, and the trial was rescheduled for Mar. 10, 1969. Foreman reportedly advised Ray to plead guilty and receive a prison sentence rather than to risk being sentenced to death if convicted by a jury. On Mar. 10, 1969, James Earl Ray pled guilty to the charge of murdering Dr. King and was sentenced to 99 years in prison. Since that time Ray has repeatedly denied shooting Dr. King and has sought a new trial. All of Ray's petitions for a new trial and a plea change have been denied.

In the 8 years following James Earl Ray's conviction and denial of guilt several theories have been advanced by those who either doubt Ray's guilt or his lone guilt. The critics of the court finding are not in agreement as to alternative explanations of the murder, and appeals for a reopening of the case have been denied by both a Federal District Court in Memphis and the Sixth U.S. Circuit Court of Appeals, both finding no unconstitutional violation of Ray's rights resulting from his guilty plea. A Justice Department report dated Jan. 11, 1977, concluded that James Earl Ray acted alone in assassinating Dr. King.

Theory A: Ray was knowingly involved in a conspiracy to assassinate Dr. King.

Those who believe that Ray was knowingly involved in a conspiracy to assassinate Dr. King, or at least had help in doing so, question how Ray could have obtained a passport, false identification, and four credible aliases without help. These critics of the "loner" theory point out that Ray had a previous record of mistakes and miscalculations in his criminal attempts. For example, in Ray's first known burglary of a Los Angeles cafeteria, he dropped his army discharge notice and his savings account passbook. In a chase after robbing a Chicago cab driver, Ray fell through the basement window of a house. In East Alton, Illinois, Ray returned for more loot after robbing a dry cleaner and was surprised by police who had noticed a window ajar. In two grocery store holdups, Ray and his accomplices took around $2,000 from cash registers and missed $30,000 in locked safes.

Supporters of the "knowingly-involved-conspiracy" theory say that Ray obtained money from an unknown source during the year following his escape from the Missouri State Penitentiary. Ray, according to an FBI report, spent approximately $7,000 between Apr. 23, 1967, when he escaped from prison, and June 8, 1968, when he was apprehended in Heathrow Airport. Ray's documented income from that period was $664.34. During that period Ray traveled both in the U.S. and abroad, making trips to Acapulco, Montreal, London, and Lisbon.

Ray contends that a person named "Raoul," whom he met in a bar in Montreal, financed many of his trips and purchases in exchange for Ray's smuggling items across the Canadian border into the United States. "Raoul" has never been identified, and the source of Ray's additional income has not been otherwise determined. Ray insists that "Raoul" instructed him to purchase a rifle and gave him the money to do so. Some say that "Raoul" is Jerry Ray, James Earl Ray's brother, and that Jerry Ray planned the assassination of Dr. King.

These critics of the investigation point out that Ray alleges that he drove to Atlanta by himself after the assassination. However, when authorities in Atlanta discovered the abandoned white Mustang, cigarette and cigar ashes were littering the floor of the car. Ray does not and did not smoke.

Theory B: Ray is innocent or was the unwitting actor in a conspiracy to assassinate Dr. King.

Some who doubt that James Earl Ray killed Dr. King contend that the Government has failed to produce a single reliable eyewitness who could place Ray at the scene of the crime and that the police artist's sketch of the alleged assassin did not resemble James Earl Ray. In addition, no expert testimony was given either to establish that the bullet taken from Dr. King's body did or did not come from the rifle allegedly belonging to Ray. Nor could a connection be established between James Earl Ray and the bullet that killed Dr. King. The critics of the Ray conviction allege that not a single fingerprint of Ray's has been positively identified from his alleged getaway car, or in the rooming house where he allegedly shot Dr. King.

Those who support the theory that James Earl Ray was an unwitting actor in a conspiracy question why Ray would have dropped the bundle containing the rifle with his fingerprints on it after assassinating Dr. King.

Ray continues to protest his conviction, saying that his second lawyer, Percy Foreman, did not give him the best defense possible, and did not conduct an adequate investigation. Foreman allegedly was to receive a 60% share of the royalties from Ray's biography, He Slew the Dreamer, eventually written by William Bradford Huie. Huie paid for Ray's defense in return for exclusive rights to Ray's story. Ray claims he was browbeaten and misled into pleading guilty.

Theory C: "Official" conspiracy to assassinate Martin Luther King, Jr.

Because of a perceived FBI mishandling of its King assassination investigation and the reputed hatred of the late Director J. Edgar Hoover for Dr. King, some critics have asked whether the FBI was in any way involved in a conspiracy to assassinate King. Some of these critics even allege that the FBI may have helped to plan the murder of Dr. King. In support of their claims, the "official" conspiracy critics point out that in testifying before the Senate Select Committee to Study Governmental Operations with Respect to Intelligence Activities, former Assistant Director of the FBI's Domestic Intelligence Division, William C. Sullivan, acknowledged harassing Dr. King and tapping his telephone on orders from J. Edgar Hoover. They also note that the FBI intelligence squad to which Hoover assigned the task of destroying Dr. King's reputation was then assigned primary responsibility by Hoover to investigate King's death.

These critics are also concerned with the time lag between the FBI's taking custody of the rifle containing Ray's fingerprints and the identification of the fingerprints as those of James Earl Ray. The FBI took the rifle that allegedly contained Ray's fingerprints to Washington the night of Apr. 4, 1968, the night of the assassination. Thirteen days later the FBI issued a fugitive warrant for "Eric Starvo Galt," not James Earl Ray, although Ray had a prison record.

Finally, these critics ask why one of the two Memphis police officers in charge of security for Dr. King was taken off that assignment two hours before Dr. King was killed.

Where are we now?

Critics have called for a new investigation into the assassination of Martin Luther King, Jr. A Gallup poll dated February 1977 revealed that 69% of those surveyed believed that more than one person was involved in the assassination of Dr. King.

One congressional response to demands for a new investigation has been the creation of the House Select Committee on Assassinations, presently chaired by Representative Stokes (D. Ohio). It will exist for the duration of the 95th Congress and is authorized to investigate both the assassination of Martin Luther King, Jr., and President John F. Kennedy [see IB77054, Assassination of President John F. Kennedy: The Conspiracy Controversy], and to report its findings to the House. (See chronology for itemization of key events concerning the creation and operations of this Committee). So far it has been funded $2.5 million to conduct its study.

As previously stated, a Justice Department report dated Jan. 11, 1977, and made public on Feb. 2, 1977, concluded that James Earl Ray acted alone in assassinating Martin Luther King, Jr.

LEGISLATION

95th Congress

H. Res. 465 (Dent). Provided for the funding of the Select Committee on Assassinations at $2.5 million for one year. Adopted by the House on Apr. 28, 1977.

H. Res. 433 (Stokes et al.). Provided for the extension of the Select Committee on Assassinations for the duration of the 95th Congress. Adopted by the House on Mar. 30, 1977.

H. Res. 222 (Bolling). Amended H. Res. 9 and provided for the creation of a Select Committee on assassinations which would expire on Mar. 31, 1977. Reported favorably from the Committee on Rules on Feb. 1, 1977, and adopted by the House on Feb. 2, 1977.

H. Res. 9 (Wright). Provided for the reestablishment of the Select Committee on Assassinations and provided for interim funding under the provisions of H. Res. 11. Introduced on Jan. 4, 1977, and referred to the Committee on Rules.

94th Congress

H. Res. 1540 (Gonzalez et al.) Provided for a select committee to be composed of 12 members to be appointed by the Speaker of the House for the purpose of conducting a full and complete investigation and study of the circumstances surrounding the death of John F. Kennedy and the death of Martin Luther King, Jr., and of others the select committee shall determine. Introduced on Sept. 14, 1976, and referred to the Committee on Rules. Reported favorably to the House from the Committee on Rules on Sept. 17, 1976. Adopted Sept. 17, 1976.

CHRONOLOGY OF EVENTS

June 20, 1977—G. Robert Blakey named chief counsel to House Select Committee on Assassinations.

June 13, 1977—James Earl Ray captured within 10 miles of Brushy Mountain State Penitentiary.

June 10, 1977—James Earl Ray escaped from Brushy Mountain State Penitentiary in Petros, Tennessee.

April 28, 1977—House of Representatives approved a budget of $2.5 million for one year for the Select Committee on Assassinations.

April 11, 1977—Alvin B. Lewis (now resigned) named acting chief counsel and staff director of the House Select Committee on Assassinations. Lewis had been a special counsel for the committee since Dec. 6, 1976.

March 30, 1977—House Select Committee on Assassinations extended for the life of the 95th Congress.

Richard Sprague resigned as chief counsel for the Select Committee on Assassinations.

March 22, 1977—Staff of the Select Committee on Assassinations visited James Earl Ray in prison to question him about the King assassination.

March 8, 1977—Congressman Henry B. Gonzalez's resignation as Chairman of the House Select Committee on Assassinations accepted by the House. Congressman Louis Stokes named new Chairman.

February 10, 1977—Chairman Gonzalez fired Chief Counsel Richard Sprague from position on the Select Committee on Assassinations. Sprague refused to leave his post. Eleven members of the Committee signed a letter to Sprague endorsing him and stating that the Chairman's action was "invalid in law. . . ."

February 2, 1977—H. Res. 222, which provided for the creation of a Select Committee on Assassinations that would expire on Mar. 31, 1977, was adopted by the House. Budget of $84,000 per month for the two month duration endorsed by the House. Speaker appointed twelve members of the House to the Committee with Gonzalez as Chairman.

Justice Department study concluding that James Earl Ray acted alone in assassination of Martin Luther King, Jr. made public.

January 3, 1977—The Select Committee on Assassinations officially expired at the end of the 94th Congress.

December 9, 1976—Chief Counsel Richard Sprague went before the Select Committee on Assassinations with a budget proposal of $6.5 million for the first year. The Committee voted unanimously to recommend the budget to the full House in the 95th Congress.

November 15, 1976—The Select Committee on Assassinations confirmed Richard Sprague, former Assistant District Attorney in Philadelphia, as chief counsel for the Committee.

September 30, 1976—The House of Representatives endorsed a preliminary budget of $150,000 for the Select Committee on Assassinations.

September 17, 1976—The House of Representatives adopted H. Res. 1540, which provided for the establishment of a select committee to be composed of 12 members appointed by the Speaker for the purpose of conducting a full and complete investigation and study of the circumstances surrounding the death of John F. Kennedy and the death of Martin Luther King and of others the select committee shall determine. Mr. Downing appointed Chairman of the Select Committee on Assassinations.

May 10, 1976—James Earl Ray was denied a new trial by the Sixth U.S. Circuit Court of Appeals.

April 29, 1976—Attorney General Edward H. Levi ordered an Internal Justice Department review of files compiled by the FBI in the investigation of Dr. King both before and after his assassination.

November 24, 1975—The Attorney General directed the Civil Rights Division of the Department of Justice to undertake a review of the files of the Department and of the FBI to determine whether the investigation of Dr. Martin Luther King, Jr. should be reopened.

November 1, 1975—William C. Sullivan, former Assistant Director, Domestic Intelligence Division, Federal Bureau of Investigation, testified before the Senate Select Committee to Study Governmental Operations with Respect to Intelligence Activities that from late 1963 until Apr. 4, 1968, when Dr. King was assassinated, the FBI conducted a campaign to harass and discredit him.

October 22, 1975—After 4 years of legal effort, James Earl Ray was granted a hearing to determine if he could retract his guilty plea and be granted a new trial for the murder of Martin Luther King, Jr.

February 27, 1975—U.S. District Court Judge Robert M. McRae, Jr. denied James Earl Ray's request for a new trial.

March 10, 1969—James Earl Ray entered a guilty plea to the charge of murdering Dr. Martin Luther King and was sentenced to 99 years in prison.

June 8, 1968—James Earl Ray apprehended by officer of New Scotland Yard at Heathrow Airport outside of London.

April 19, 1968—The FBI identified fingerprints on a rifle allegedly used to assassinate Dr. King. The fingerprints compared identically to those of James Earl Ray, an escapee from the Missouri State Penitentiary.

April 4, 1968—Dr. Martin Luther King assassinated in Memphis, Tennessee.

April 3, 1968—Dr. Martin Luther King arrived in Memphis, Tennessee, to lead a march in support of striking sanitation workers.

THE PEOPLE SPEAK

(Mr. SCHEUER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SCHEUER. Mr. Speaker, in the

November issue of Commentary Seymour Martin Lipset and William Schneider, two prominent public opinion scholars, report on the opinions of Americans on the Middle East conflict.

With so many alternative U.S. positions on the Mideast swirling about in the Washington air it is astonishing that it has taken so long for someone to try and develop an authoritative public opinion survey on the Mideast. As policymakers, my colleagues will be interested in the findings of Professors Lipset and Schneider.

Although the entire article is reprinted following my remarks, the concluding paragraph bears special repetition here:

> . . . a confrontation with Israel will create a deep conflict within the United States, one that could very well parallel the Vietnam controversy in its bitterness, and that could have a devastating effect on the popularity and the chances for reelection of those responsible.

Mr. Speaker, I commend the entire Commentary article to our colleagues' attention:

CARTER VS. ISRAEL—WHAT THE POLLS REVEAL

(By Seymour Martin Lipset and William Schneider)

(NOTE.—Seymour Martin Lipset, a leading authority on American public opinion, is professor of political science and sociology and senior fellow of the Hoover Institution, Stanford University. William Schneider is an associate professor of government at Harvard University.)

Even before the furor the new Soviet-American declaration on the Middle East, there was considerable interest in the White House on the state of American public opinion on the Middle East conflict. For as the Carter administration was moving closer and closer to support of a separate Palestinian state which would probably be dominated by the PLO, it was also moving closer and closer to a confrontation with Israel and therefore also with the friends of Israel in the United States. What the administration has wanted to know is how great the political costs of such a confrontation would be. What would happen if Jimmy Carter appealed to public sentiment in an open conflict with Israel? Would public opinion rally behind him and against the Israelis, or would he lose more ground politically than he would gain?

National samples of Americans have been questioned by myriad organizations about their attitudes toward Israel and its Arab opponents from the founding of the state in 1948 down to the polls taken for the White House by Pat Caddell this past summer. These surveys show certain clear patterns. First, there has never been a poll which has found more support for the Arabs than for the Israelis, no matter how the question has been asked. Many Americans have on different occasions told interviewers they did not know enough about the situation to make a choice. But among those who felt that they did know enough to form an opinion, sympathy for Israel has always predominated. Various surveys taken between February 1948 and March 1949, at the time of the first Arab-Israeli war, indicated that more than a third sympathized with the Israelis, while between 11 and 16 per cent said they favored the Arabs. Again, during the crisis which led to the Sinai War in 1956, surveys found two to three times as many people blaming the Arabs generally or the Egyptians in particular as blamed Israel.

In the next ten years, there was comparatively little interest in the Middle East, but the outbreak of the Six-Day War in June 1967 led to a groundswell of sympathy for Israel among the American public. According to a Gallup poll taken during the war, 48 per cent said their sympathy lay more with Israel than with the Arab states, as compared with only 4 per cent who replied that their sympathies lay with the Arabs. The findings of the Harris poll during the same period were 41 per cent sympathetic to Israel and only 1 per cent to the Arabs. In the months following the Six-Day War, the American public evidently became even more pro-Israel, if their answers to questions dealing with the future of Jerusalem were any indication. The Harris survey found that the percentage saying, "Let Israel keep control of Jerusalem" increased from 10 in July to 43 in September, while those who favored making Jerusalem an "international city" dropped from 70 to 33 per cent.

Since 1967 questions concerning sympathy in the Middle East conflict have been asked on a fairly regular basis by several national polling organizations: Gallup (1967–77), Harris (1967–75), Roper (1974–77), and Yankelovich, Skelly, and White (1974–77). In the twenty-seven national polls which we have located, taken between 1967 and 1977, sympathy for Israel has ranged between 35 and 56 per cent, and sympathy for the Arabs between 1 and 9 per cent, with the remainder saying "neither side," "both sides," or "don't know."

Thus, support for the Arabs among the American people in the past ten years has been consistently low, averaging only 6 per cent. There has been considerably greater variation in pro-Israel sentiment. But whenever support for Israel has fallen, it has done so not because sympathy for the Arabs has increased, but because of a rise in indifference. Moreover, sympathy for Israel over the Arab states has been much greater since 1967 than before—despite the oil crisis which developed in tandem with the Yom Kippur War and despite the apparent increase in isolationist sentiment following on the American fiasco in Vietnam. Many friends of Israel feared that distance from the Holocaust and from the events that led to Israel's founding, as well as the increase in opposition to Israel in other countries and the concern over oil supplies here, would lead to a decline in American sympathy for Israel. But this has simply not happened. On the contrary, support has greatly increased in recent years. The reason seems to be admiration for the way a small democratic nation, allied to the United States, has been able to stand off and defeat the massive onslaughts of Arab armies.

The quality or depth of feeling about Israel has also been tested by pollsters in a more extreme fashion by asking how people would react to Israel's destruction. Thus Harris inquired in the winter of 1974–75: "If there were another war in the Middle East and Israel were overrun by the Arabs, would you be very upset, mildly upset, mildly pleased, or very pleased?" His findings were 44 per cent very upset and 34 per cent mildly upset, as against 2 per cent mildly pleased, and only 1 per cent very pleased. More recently, Yankelovich touched on similar sentiments when he asked in March 1977: "If Israel were destroyed by the Arabs and ceased to exist as an independent state, would this leave you indifferent, sorry but not personally affected, or feeling a deep sense of personal loss?" Only 13 per cent replied "indifferent," 27 per cent said they would feel a "deep sense of personal loss," while the remaining 60 per cent indicated "sorry but not personally affected." Many of the latter group, however, were clearly pro-Israel, since 66 per cent of all those queried in the same survey agreed that "the continuation of Israel as a Jewish state is important to our country and people like yourself," while only 27 per cent replied "not important."

If large numbers of Americans feel warmly toward Israel, there is some evidence to suggest that a significant minority has negative, close to racist, attitudes toward the Arabs. This conclusion is suggested in the results of a poll taken by Pat Caddell's Cambridge Survey Research organization in the summer of 1975. Caddel gave respondents a list of images and asked them: "Does each word apply more to the Arabs or more to the Israelis?" Nearly half or more said that the terms "greedy," "arrogant," and "barbaric" apply to the Arabs; relatively few described the Arabs as "peaceful," as "honest," as "friendly," or as "like Americans," while a majority used these terms to describe the Israelis.

Israel does even better in competition with the Palestine Liberation Organization. In surveys conducted by Yankelovich in 1975, 1976, and 1977, respondents were asked to react to a number of statements about the PLO and Israel, and their answers revealed overwhelming preference for Israel in every case. In the most recent survey (March 1977), 88 per cent said that "we can get along" with Israel, while only 23 per cent said the same for the PLO. Four-fifths replied that the PLO was "anti-U.S.," while only a tenth had comparable opinions about Israel. Over 70 per cent believed that Israel was "democratic," while only 7 per cent thought the same about the PLO.

Israel has steadily bettered its comparative standing in these three studies, while the PLO has steadily fallen. But what is even more significant, American opinion has grown more and more sympathetic to Israel's refusal to negotiate with the PLO. When asked by Yankelovich in January 1975 whether "Israel is doing the right thing in refusing to negotiate with the PLO," only 27 percent said Israel was right, 36 percent felt it was wrong, and 35 percent were not sure. A year later, the responses were slightly more positive from Israel's point of view, with 31 percent saying Israel was right, 31 wrong, and 38 not sure. But in March 1977 Yankelovich found a plurality in Israel's favor, with 40 percent saying Israel is right in not negotiating with the PLO as compared with 21 percent who think this policy is wrong.

There is some indication in recent surveys that Americans differentiate between the Palestinians as a group and the PLO or the Arabs. They are more likely to express sympathy for the Palestinians than for the Arabs or the PLO. For example, while sympathy for the Arabs runs between 5 and 9 percent, Harris found 14 percent voicing sympathy for the Palestinians in his winter 1974–75 Middle East survey. Respondents were evenly split over the statement, offered by Harris, that "Israel has mistreated the Palestinian refugees and that is wrong" (29 percent agreed, 28 percent disagreed, while even more—41 percent—responded "don't know"). In the Yankelovich survey taken in March 1977—before Begin's election—the 61 percent of respondents who said they had heard of the PLO were asked: "Do you think the Palestinian refugees have any legitimate complaints against Israel?" Over half of these—55 percent—said yes, while only 18 percent felt that the Palestinians had no legitimate complaints. Only 16 percent of the same informed respondents, however, agreed that "the Arabs have a strong moral case against Israel which deserves more attention than we give it," a finding in line with the other evidence that Americans distinguish between "Arabs" and "Palestinians."

The point at which sympathy for the Palestinians ends is the PLO. In Harris's winter 1974–75 Middle East survey, a plurality of Americans labeled Yasir Arafat as an "extremist" and a "terrorist" and a man responsible for the outrageous slaughter of innocent children. Americans tended to reject the notion that Arafat "has become more moderate in his demands lately" (29 to 19 percent), that he "wants to work out a peaceful settlement in the Middle East" (30 to 19 percent), that he made a good impression at the United Nations (32 to 17 percent), or that he should be a permanent observer at the United Nations (35 to 18 percent).

The record seems clear. By whatever measure or question one uses, and whatever opinion poll one consults, American sympathy for Israel has remained relatively constant since 1967, and many more Americans have been supportive of Israel than of the Arabs.

Sympathy for Israel does not, however, translate directly into support for U.S. military aid to Israel. A review of ten polls taken by the Gallup, Harris, and Yankelovich organizations between 1967 and 1977 shows opponents of military aid outnumbering supporters in six polls, and supporters outnumbering opponents in four. In most cases, the two sides were almost evenly balanced.

Yet however limited the support we find for U.S. military aid to Israel, support for U.S. military aid to the Arab nations is consistently lower. In October 1973, just after the Yom Kippur War, Gallup asked those who had heard or read about the conflict whether the U.S. should supply arms and materiel to Israel and, in a separate question, to the Arabs. While military aid to Israel was opposed by a margin of 49 to 37 per cent, military aid to the Arabs was opposed by the much more decisive margin of 85 to 2.

The issue here, then, would seem to be not Israel versus the Arabs, but military aid itself. Foreign aid is not a particularly popular program, and military aid is even less so. In the 1974–75 Harris survey Americans were overwhelmingly favorable (93 per cent) to "our giving emergency food and medical supplies to other nations in cases of natural disasters such as floods and earthquakes" and by a margin of 53 to 38 they also favored "our giving economic aid to other nations for purposes of economic development and technical assistance." But when the survey turned to the issue of military rather than economic aid, public support collapsed. Asked "On the whole, do you favor or oppose our giving *military* aid to other nations?" (emphasis in questionnaire), only 22 per cent said they favored it, with fully 75 per cent opposed. Americans were even hostile (53-35) to the idea of selling arms abroad. In fact, when respondents were given a list of thirteen federal programs and asked whether each should be expanded, cut back, or kept the same, economic and military aid to other nations emerged as the two least popular policies: 70 per cent felt that military aid to other nations should be cut back and 56 per cent felt that foreign economic aid should be cut back.

Another piece of evidence that Americans are against military aid in general rather than aid to Israel is the finding that those who oppose military aid to Israel tend to oppose military aid to other countries as well, including the Arab countries. Thus, in October 1974 the Yankelovich poll asked respondents whether they thought the United States should send arms to each country in a list of ten. Those who opposed military aid to Israel were also likely to oppose it for South Korea, Greece, Italy, South Vietnam, Turkey, Ireland, and Yugoslavia, as well as for Jordan and Saudi Arabia.

In its winter 1974–75 survey, the Harris organization interviewed a sample of over 3,000 Americans for an average of 73 minutes each on the subject of Israel, the Middle East conflict, and anti-Semitism. The Harris survey included four questions relating to U.S. military aid to Israel. Two of these questions were worded in a "positive" way, that is, offering cues favorable to U.S. military aid: "In general, with the Russians arming Egypt and Syria, do you think the U.S. is right or wrong to send Israel the military supplies it needs?"; and "If war broke out again in the Middle East between the Arabs and Israel, would you favor or oppose the U.S. continuing to send military supplies, not troops or personnel, to help Israel?" On both questions, 65 per cent of the sample favored military aid, with only 21–24 per cent opposed, an unusually high level of support for Israel. One might suppose that such strong support was due to the bias in question-wording ("with the *Russians* arming Egypt and Syria," "the military supplies [Israel] *needs*," etc.). But the survey included two other questions which were worded with a negative bias toward Israel: "We need Arab oil for our gasoline shortage here at home, so we had better find ways to get along with the Arabs, even if that means supporting Israel less"; and "If it came right down to it and the only way we could get Arab oil in enough quantity and at lower prices were to stop supporting Israel with military aid, would you favor or oppose such a move by this country? Sixty-eight per cent opposed cutting off military aid to Israel in order to get more Arab oil at lower prices. Thus, on all four questions, the winter 1974–75 Harris survey showed a consistent 63–68 per cent of Americans in favor of U.S. military aid to Israel.

These figures are considerably more favorable to Israel than those obtained in other surveys taken at about the same time. Inspection of the Harris questionnaire reveals the likely explanation. Virtually the entire interview dealt with Israel and the Middle East, thus establishing a definite context in the minds of the respondents. Moreover, the first question concerning support for U.S. military aid was asked after a sequence of questions dealing with sympathy in the Middle East conflict (53 per cent for Israel); estimated chances for a Middle East peace settlement (only 16 per cent "excellent" or "pretty good"); blame for starting the October 1973 war (Arabs 42 per cent, Israel 10 per cent); assessment of which side won the 1967 war (Arabs 5 per cent, Israel 43 per cent) and the 1973 war (Arabs 10 per cent, Israel 27 per cent); and a guess as to who would win "another war in the Middle East" (Arabs 20 per cent, Israel 35 per cent). This sequence of questions clearly established *Israel*, rather than military aid, as the focus of attention. Moreover, the questions leading up to the one on military aid suggested a pattern of increasing Arab military success, from the 1967 war to the 1973 war to a possible future war.

On the other hand, whenever military aid to other countries is the focus—as in the Yankelovich poll of October 1974—support for aid to Israel falls considerably. Yet even in the Yankelovich interview, more Americans supported military aid to Israel than to any of the other nine countries listed.

A similar pattern is apparent in a November 1976 Roper survey which asked respondents whether they thought the U.S. should sell arms to each country in a list of eleven. Americans were favorable to selling arms only to two countries, England and France. Next came Israel and West Germany, where support and opposition were about even (37 per cent in favor, 42–43 per cent opposed). By contrast, rather strong pluralities opposed the sale of arms to Japan, Spain, South Korea, Turkey, and Greece, while the greatest opposition was expressed in the cases of Iran (55 per cent opposed) and Saudi Arabia (61 per cent opposed).

Thus, the data indicate positive public sentiment toward Israel, negative public sentiment toward military aid, and, when the two are combined, stronger public support for military aid to Israel than for military aid to other countries, with the exception of our major West European allies.

If there is one idea more negatively regarded than military aid, it is the involvement of American troops. "Suppose it looked as though the Arabs, with the help of the Russians, were going to take over Israel in the Middle East. Would you favor or oppose sending U.S. troops to keep Israel from being taken over?" Opposed, 52 per cent; in favor, 25 per cent (Harris, 1971). "If it looked as though Israel were going to be taken over by the Russians and Arabs, do you feel that the United States should do everything to save Israel, including going to war, or do you think the United States should avoid getting involved with our own troops, even if Israel were going under?" Avoid involvement, 51 per cent; favor involvement, 34 per cent (Harris, 1973). The two winter 1974–75 Harris polls, which differed widely in public support for military aid to Israel, showed quite similar results in questions involving the use of American troops. In the survey primarily concerned with Middle East issues, 55 per cent felt that the U.S. should not send troops even "if it looked as though Israel were going to be overrun by the Arabs in another war." (23 per cent supported the use of U.S. troops). In a general foreign-policy survey carried out by Harris on behalf of the Chicago Council on Foreign Relations, 50 per cent opposed U.S. military involvement, "including the use of U.S. troops," "if Israel were being defeated by the Arabs" (27 per cent favored U.S. involvement).

But opposition to U.S. troop involvement is not limited to Israel or the Middle East. The Harris poll for the Chicago Council on Foreign Relations listed twelve circumstances which "might justify U.S. military involvement, including the use of U.S. troops." Only one circumstance called forth more support for than opposition to the use of American troops—"if Canada were invaded." Opinion was about evenly divided over the use of U.S. troops "if Western Europe were invaded." Opposition to U.S. military involvement outweighed support by about 10 per cent "if the Russians took over West Berlin" and "if Castro's Cuba invaded the Dominican Republic." Opposition outweighed support by 23 per cent "if Israel were being defeated by the Arabs," and by 35 per cent "if the Arabs cut off the oil supply to Western Europe." In the other six circumstances, support for U.S. troops ranged between 10 and 20 per cent and opposition varied between 58 and 73 per cent: "if Communist China invaded Taiwan," "if Communist China attacked India," "if the Arabs cut off the oil supply to Japan," "if North Korea attacked South Korea," "if the Soviet Union attacked Yugoslavia after Tito's death," "if North Vietnam launched a major attack against Saigon."

Clearly, Americans are willing to fight for the security only of neighboring Western Hemisphere countries and of our principal allies in Western Europe. Gallup found in polls taken in 1971 and 1975 that a plurality of Americans favored sending U.S. troops if either Mexico or England were attacked "by Communist-backed forces." This sentiment did not apply, however, to West Germany, Israel, Japan, India, Thailand, Brazil, Taiwan, or Turkey.

In the first eight months of his Presidency, Jimmy Carter has pressured Israel on a number of issues—the occupied territories, the legitimacy of the Palestinians' claim to a homeland, negotiations with the PLO. To what extent do President Carter's positions find support in the public as a whole?

Just this past August, Pat Caddell's Cambridge Survey Research asked a national sample of Americans to react to the Carter peace package in the following terms: "The President has outlined several key elements of a Middle East Peace Agreement: an expressed willingness by the Arabs to recognize Israel's sovereignty and to normalize relations with Israel; phased Israeli withdrawal from occupied territories, combined with effective security measures; a homeland for the Palestinians. Do you think this represents a fair basis of settlement?"

This question referred in general terms to all the elements that have been demanded by each side of the other. Not surprisingly, a plurality of Americans agree that obtaining all this would be desirable. Almost half, 48 per cent, said "Yes," 13 per cent replied "No," while 39 per cent were "Not sure."

It is, of course, impossible to tell what the respondents felt about any given element of the proposed agreement, whether they most favored recognition of Israel, phased Israeli withdrawal in return for "effective security measures," or a Palestinian homeland. We do, however, know from other surveys what Americans think about some of the individual parts of the President's package. On the question of the occupied territories, for example, there is very little public feeling that Israel is holding them unfairly and should simply give them up. The most straightforward question was asked in the Harris Middle East survey of December 1974–January 1975: "Israel should give back the territory it gained from the war of 1967." Americans disagreed with this proposition by a ratio of two to one. Support for Israel's hold on the occupied territories became even stronger when these same respondents were offered a slightly different proposition: "Israel should just give up the occupied Palestinian Arab territory and let Arafat rule it." In this case 54 per cent disagreed and 11 per cent agreed—a ratio of five to one.

Most relevant to the current situation, perhaps, was the public's response to the proposal that "the U.S. should not pressure Israel to give back all the Arab lands that were obtained in the 1967 Middle East war and in the latest war." Americans agreed with this position, 54 to 19 per cent, although it is possible that the specification of "all" the Arab territories may have seemed extreme to many Americans (Jerusalem, for example, would have been included). In March 1977, Yankelovich presented respondents with a proposition that was more moderate in scope: "The United States should reduce its support of Israel unless the Israelis are willing to compromise and give back some of the land they took from the Arabs during the recent wars." Still, 45 per cent of Americans were opposed to a reduction of American support and only 26 per cent favored it.

The essence of American opinion on the occupied terrritories is revealed by a question which the Roper poll has asked every year since 1973: "Ever since the Six-Day War, Israel has occupied territory that formerly belonged to the Arab nations. Which one of these statements comes closest to expressing how you feel about this?" The results show a remarkable stability of opinion over the last four years. Only a small percentage of respondents (6–7) have felt that "The territory Israel has taken in the last two wars didn't belong to her and she should not be allowed to keep it under any circumstances." The most hard-line position, "Israel should keep all of the territory she has won in the last two Arab-Israeli wars," is not very popular either; it is endorsed by only 13–16 per cent of the public. In all four polls, a majority of Americans took one of the two "intermediate" positions. About a quarter of the respondents endorsed the "soft" intermediate position, that "Israel should give up all or most of the territory she has taken in the last two wars—but only if a satisfactory treaty can be negotiated with the Arabs that will guarantee her existence as a state." The "hard" intermediate position—"It is time for Israel to make some concessions, but it is important that she keep what territory is essential for her defense"—is somewhat more popular, with about 30 per cent of Americans favoring that option. This last position was the one most frequently chosen in all four polls.

The only trend one can detect in the answers to the Roper question over the past four years is a slight increase in the percentage of Americans taking the two harder-line positions. Since the latest Roper figures were obtained from a survey administered after the Begin election, the data gave no indication of impatience with the new Israeli government on the part of the American public.

On the issue of a "Palestinian homeland," both Yankelovich and Roper have found considerable support for a position similar to the President's. Thus, in the March 1977 Yankelovich survey, 52 per cent agreed that "the Palestinians have a right to a homeland as much as the Jews do." But when the PLO is brought into the picture, support for the idea of a Palestinian homeland falls precipitously. In July, Roper asked: "As you may know, the Palestine Liberation Organization in the Middle East, known as the 'PLO,' wants to establish a homeland for Palestinian refugees in territory once held by the Palestinians but now held by Israel. Do you think the PLO is right or wrong in wanting to establish a Palestinian homeland in Israel, or haven't you paid much attention to it?" To this question 21 per cent said that the PLO is right in wanting to establish a Palestinian homeland and 20 per cent said it is wrong. An additional 9 per cent volunteered the response that the goal of a Palestinian homeland is right, but the methods of the PLO are wrong. (On this, as on most other questions dealing with the Palestinian issue, a large proportion of respondents, here 50 per cent, said that they "didn't know" how they felt or "hadn't paid attention" to the issue.)

In addition to pressuring Israel, the administration has been making no secret of its belief that Israeli "intransigence" is the major obstacle to peace. Does the public agree? All extant survey data suggests that it does not. Thus the March 1977 Yankelovich poll indicated that a majority viewed both sides as obstreperous, but over 70 per cent felt that the Arabs' refusal to recognize Israel and to sit down at a negotiating table with it was a major obstacle to peace, as contrasted with 55 per cent who believed that "Israel's refusal to negotiate with the Palestinians" was an obstacle. In earlier Yankelovich surveys, a majority of Americans said that "the Arab nations are not interested in making peace but rather in destroying Israel" (53 per cent in 1975, 56 per cent in 1976, with only 17–19 per cent expressing the opposite view). A poll taken by Cambridge Survey Research in the summer of 1975 showed three times as many Americans blaming the Arabs for the Middle East crisis (32 per cent) as blamed Israel (10 per cent). When asked to rate six Middle Eastern countries in terms of their "sincerity" in looking for a peaceful solution to their problems, Israel was ranked as very sincere by 26 per cent, followed by Egypt with 12 per cent, Jordan with 11 per cent, and Saudi Arabia with 10. And finally, Yankelovich surveys asked a key question relating to purported Israeli intransigence: "In the current situation, do you feel that the Israelis are doing everything possible to achieve a peace settlement or do you feel that their attitudes and demands are unreasonable?" In August 1975, Yankelovich showed 37 per cent of Americans claiming that Israel's demands were unreasonable, with only 23 per cent saying that Israel was doing everything possible to achieve peace. By March 1977, however, that attitude had reversed. Thirty-nine per cent now said that Israel was "doing everything possible to achieve a peace settlement," and only 29 per cent felt that Israel was being unreasonable.

On this issue, as on others, the evidence points to a trend in Israel's favor. Unfortunately, there have been no major polls dealing with this question since the new Israeli government took office. We have no basis, therefore, for assuming that the trend has continued. All the data suggest is that at the time of the May 1977 vote, American public opinion continued to see the Arabs as more intransigent, more reluctant to come to the peace table or to agree to the necessary conditions, than Israel.

In assessing the implications of these data, one has to take into consideration not only how many can be counted for and against, but also who they are. Which groups in the population are strongest in their support for, and opposition to, Israel? Our review of the distribution of public opinion reveals a persistent relationship: in virtually all surveys, support for Israel has tended to increase with higher levels of education, income, and occupational status.

The winter 1974–75 Harris survey found 65 percent of those who had attended college sympathetic to Israel, compared with 51 percent among the high-school-educated and 47 percent among those whose education had not gone beyond grammar school. Over half the college-educated, 54 percent, agreed that the United States has a special stake in seeing that Israel is not overtaken militarily, while only 38 percent of those who had not gone beyond high school and 30 percent of the grade-school-educated felt the same way. In Gallup's 1976 survey of national ratings, 77 percent of those who had been exposed to higher education gave Israel a favorable rating, while 62 percent of those with a high-school education were of the same opinion, but only 50 percent of the grade-school-educated felt the same way. In January 1977, Roper reported that 54 percent of those in executive and professional occupations were sympathetic to Israel compared with 50 percent of white-collar and 46 percent of blue-collar workers. By income, the range of sympathy for Israel ran from 55 percent pro-Israel among those earning $18,000 a year or more to 41 percent among those with family incomes of $6,000 or less. The March 1977 Yankelovich poll found that 75 percent of college graduates regarded Israel as a friend and ally of the United States, compared with 46 percent among high-school graduates and only 34 percent of those with less than a high-school diploma. Sympathy for the Arabs on these and other questions varied little by socioeconomic status and education: all groups were equally unenthusiastic, with the less advantaged more likely to give "don't know" responses.

These findings, consistently showing greater support for Israel among the better educated, the more affluent, and those in executive and professional positions, suggest that Israel has strong backing among the elite sectors—those who are more active politically and presumably more influential. The results of a number of studies of such groups confirm this assumption.

Thus, in winter 1974–75, Harris compared the opinions of a national sample of 3,377 persons with those of 491 "leaders," selected from among people who "have impact within their community." The leaders' sympathies were more with Israel than the Arabs by a ratio of over eleven to one, 56 to 5 per cent, as contrasted with the general public's seven-and-a-half to one, 52 to 7. Three-quarters of the leaders favored sending military supplies to Israel if war breaks out, a position taken by 66 per cent of the general public. When asked how they would feel if "Israel were overrun by the Arabs," 44 per cent of the general sample said "very upset" in contrast to 65 per cent of the leaders. The leaders and the public both overwhelmingly disagreed with the statement that "We need

Arab oil for our gasoline shortage here at home, so we had better find ways to get along with the Arabs, even if that means supporting Israel less." The leaders, however, felt this way by a ratio of 78–15 per cent, while the public took the same view by a somewhat lower one, 68–20. In a January 1977 survey, Roper found that fully 60 per cent of the 12 per cent of his respondents who were classified as "high" on a scale of political and social activism were sympathetic to Israel, as compared with 40 per cent of the sample as a whole. Both groups showed little sympathy for the Arabs, 6–7 per cent.

There is little doubt, then, that most Americans support Israel, and that support is strongest among the well-educated, activist, and influential social strata. But even knowing something about the distribution of public opinion does not give us everything we need to assess the political effectiveness of an issue. We have to make some estimate of the *salinence* of opinion among those on both sides of an issue; is the attitude measured by the polls a "mere opinion" with little intensity of conviction, or is it a passionate conviction which dominates the respondent's political activity?

It is hardly news that for Jews, Israel is just such a salient issue. In the past, there have been several sources of anti-Zionist sentiment within the Jewish community: socialist anti-Zionism, which rejected Zionism as a species of bourgeois nationalism; religious anti-Zionism, which saw no theological justification for reestablishing the state of Israel at this time; and assimilationist anti-Zionism, which feared that the charge of "dual loyalty" would retard the full acceptance of Jews by the larger secular society. Nevertheless, in the winter 1974–75 Harris poll, fully 95 per cent of the national Jewish sample proclaimed a sympathy for Israel in the Middle East conflict (0.2 per cent—precisely one Jewish respondent out of 506—favored the Arabs). Ninety-four per cent agreed that "The Arabs are determined to destroy Israel, so Israel is justified in building itself up militarily to defend itself." The same percentage—94—said that they would be "very upset" if there were another war in the Middle East "and Israel were overrun by the Arabs." Fully 96 per cent favored the U.S. sending military supplies to Israel, and a similar percentage opposed the U.S. lowering its aid to Israel in order to obtain more Arab oil at lower prices. "Israel," as Nathan Glazer has said, "has become the religion of American Jews."

It is difficult to gauge passion in the relatively dispassionate atmosphere of a survey interview, but several questions indicate the intensity of this Jewish commitment to Israel. Fully 81 per cent of the Jewish sample felt that "Jews who live in the United States have a special obligation to support Israel with funds and other aid" (17 per cent disagreed). And an astonishing 83 per cent said that they had given "financial contributions to [an] organization which is supporting Israel" during the previous twelve months; only 15 per cent of the Jews said that they had failed to contribute. And while only 37 per cent of the Jews had relatives living in Israel and 45 per cent had friends there, 71 per cent said that they felt a "special desire" to visit Israel because they were Jewish.

Are there any anti-Israel constituencies as intense in their antagonism as the Jewish community is in its support? If one looks through survey data for the single "simply defined group" which is least supportive of Israel, the answer one finds, in most cases, is the blacks. In twelve of the thirteen different surveys taken between 1970 and 1977 asking respondents whether they sympathized with Israel or the Arabs, blacks were less sympathetic to Israel than whites—by an average of 13 per cent. Black support for Israel was, moreover, lower than that of whites at every level of education and at every age level.

Generally, across the whole range of questions asked about Israel in the 1974–75 Harris survey, white Protestants were the most supportive (58 per cent) and blacks the least supportive (31 per cent), with white Catholics (47 per cent), and Hispanic-Americans (49 per cent) in between. While most surveys use samples that are too small to allow for any analysis of Hispanic-Americans as a group, the Catholic-Protestant difference was fairly consistent across thirteen different surveys. On the average, Catholics were 7 per cent less sympathetic to Israel than Protestants. Finally, it is important to point out that for blacks and Hispanics, relatively low support for Israel was accompanied by relatively high levels of "domestic" anti-Semitism, even after educational differences had been taken into account.

These ethnic effects are interesting, but they do not amount to evidence that blacks, Hispanic-Americans, or Catholics constitute a "veto group" passionately committed to a program of anti-Zionism and organized to help or hurt a politician depending on how he stands on this issue. The relative differences among the major racial and religious groups are noticeable and consistent, but one must also look at their absolute levels of support for Israel or the Arabs. Very few claim actually to sympathize with the Arabs: pro-Arab sympathy in the 1974–75 Harris poll was expressed by 5 per cent of white Protestants, 9 per cent of white Catholics, 11 per cent of Hispanic-Americans, and 12 per cent of blacks—hardly a passionate commitment. The same thirteen surveys that showed blacks, on the average, 13 per cent less favorable to Israel than whites did not show a comparable difference on the pro-Arab side; blacks were on the average only 3 per cent more pro-Arab than whites. The rest of the difference consisted of more black respondents saying "don't know," or favoring "both sides" or "neither side" in the conflict. When offered the statement, "Israel is a small, courageous, democratic nation, which is trying to preserve its independence," agreement was expressed by 89 per cent of whites but also by 72 per cent of Hispanic-Americans and 68 per cent—two-thirds—of blacks.

In comparison with whites (46 per cent for Protestants and 41 per cent for Catholics), fewer blacks (35 per cent) and Hispanic-Americans (37 per cent) said they would be "very upset" if Israel were overrun by the Arabs. But very few said they would be "pleased" by such an eventuality—only 4 per cent in each group, compared with about 2 per cent of whites. Again, the major difference was the higher proportion of blacks and Hispanics who said "don't know." Opposition to U.S. military aid to Israel was expressed by 22 per cent of white Protestants, 28 per cent of white Catholics, 22 per cent of Hispanic-Americans, and 31 per cent of blacks. But more blacks (47 per cent) favored military aid than opposed it. Similarly, a reduction in U.S. military aid to Israel in return for lower oil prices was favored by 16 per cent of white Protestants, 22 per cent of white Catholics, 25 per cent of blacks, and 26 per cent of Hispanics. But blacks opposing such a measure outnumbered those who favored it by 41 to 25 per cent, with Hispanic-Americans rejecting the same measure by 52 to 26.

In short, while the evidence does indicate a higher level of anti-Israel feeling among blacks, Hispanic-Americans, and (to a lesser extent) white Catholics, it does not indicate anything close to a passionate anti-Israel conviction among any of these groups.

Another source of anti-Israel sentiment is often said to consist of ideological liberals and radicals. But survey research does not confirm this much-publicized impression. Thus, a Yankelovich survey carried out in October 1974 showed self-described liberals as slightly more sympathetic to Israel than self-described conservatives (by a difference of 6 per cent), even though these liberals were considerably (15 per cent) less supportive of U.S. military aid to Israel—or to any other country tested. In the winter 1974–75 Harris poll, liberals were only slightly less likely than conservatives to support U.S. military involvement, including the possible use of troops, "if Israel were being defeated by the Arabs." Some 1975 results reported by Cambridge Survey Research show self-described conservatives more pro-Israel than liberals, but only marginally.

The March Yankelovich survey revealed some interesting and suggestive age differences. The young—those under thirty-five—were less likely to claim a strong identification with Israel, less likely to agree that "the Israelis are doing everything possible to achieve a peace settlement," and more likely to say that Israel's demands are unreasonable. Using the raw data from the winter 1974–75 Harris survey, we decided to determine whether these positions were really connected with age. The Harris survey did not include a question asking respondents to classify themselves as liberals, moderates, or conservatives, but respondents were asked how they had voted in the 1972 presidential election two years before, for Nixon or for McGovern. We looked at whites only, in order to remove the major confounding effect of large numbers of blacks and Hispanic-Americans voting for McGovern and at the same time expressing anti-Israel attitudes for—possibly—different reasons.

What we found was illuminating. McGovern voters were somewhat less supportive of Israel and a good deal less supportive of U.S. military aid to Israel than were Nixon voters—but this was true only among younger voters, that is, voters under the age of forty. Among those forty years of age or older, there was no consistent ideological difference between Nixon voters and McGovern voters; if anything, the older Nixon voters were slightly less supportive of military aid to Israel than were the older McGovern voters, averaged 5 per cent less sympathetic than younger Nixon voters, but there was no difference between Nixon and McGovern voters. On five questions eliciting sympathy toward Israel, younger McGovern voters averaged 5 per cent less sympathetic than younger Nixon voters, but there was no difference between Nixon and McGovern voters over the age of forty. On questions dealing with U.S. military aid to Israel, McGovern voters under forty averaged 21 per cent less favorable to such aid than Nixon voters under forty. Again, there was no consistent difference between Nixon and McGovern voters over the age of forty.

All this suggests that dissatisfaction with Israel is more characteristic of younger liberals (New Politics, New Left) than of older liberals (New Deal, Fair Deal). Older liberals grew up convinced that support of Israel was a legitimately liberal policy, given the experience of the Holocaust and the predominance of the socialist movement in Israeli politics. Younger liberals tend to doubt the legitimacy of Israel's liberal credentials—and they certainly tend to challenge the motivations behind American military aid to other nations.

Suggestive though these differences are, they do not point to the existence of a significant body of opinion hostile to Israel, and they give no evidence of a "passionate conviction" in any sense comparable to that of the Jewish community on the other side. One would have to go to a very fine level of detail—probably among younger blacks and radicals—to find deep-seated anti-Zionist convictions. To pursue the analysis at this level would require the tools not of survey research but of investigative reporting.

There can be little doubt, then, that the only "veto group" in the American electorate concerned with the Middle East is composed of those dedicated to the survival of Israel. This group, which includes almost all Jews along with many non-Jews, has been ready to bombard Congressmen and the administration with letters, telegrams, phone calls, and personal visits to present their case. Many of them have been willing to contribute generously to the campaign funds of politicians who support Israel. Conversely, they will vote against those who oppose Israel, a fact of which officeholders are well aware.

It may, of course, be argued that Jews constitute only 3 per cent of the population and that they can therefore be ignored by politicians who are not in areas of high Jewish concentration. In fact, however, Jews have a much higher rate of electoral participation than other groups. Close to 90 per cent of them vote in national elections, compared with 53 per cent of the electorate as a whole. Last summer, in a discussion, Pat Caddell estimated that outside of the South, Jews constitute not 3 but 7 per cent of the voters. If one adds to this figure the additional 20 per cent or so of non-Jews whom the opinion polls show to be as passionately pro-Israel as the Jews, it is clear that Israel enjoys the backing of one of the largest veto groups in the country. Hence, actions which antagonize or attract this body of opinion can affect the electoral fortunes of many candidates, including those running for President.

How important is public opinion, as revealed by the various national-opinion surveys, in the making of foreign policy? So far as the Middle East goes, in a recent piece in the New York Times, Terence Smith concluded: "In the final analysis, Pat Caddell, the President's pollster, and his other domestic political advisers may have a decisive voice in determining whether Mr. Carter takes on the Israelis. They will assess the political cost of such a campaign and advise Mr. Carter whether public concern at the possibility of another Arab oil embargo is enough to justify a confrontation with Israel."

If Mr. Smith is right that Jimmy Carter's policies on the Middle East will be deeply affected by judgments about public opinion, we would hope that the President examines the entire body of evidence, not simply the few questions asked by Caddell. For Caddell's most recent query is presented in the context of conditions for peace, an outcome fervently desired by most Americans, and it is worded in a manner bound to elicit support for the President's position. But examining all the evidence in hand, "public concern at the possibility of another Arab oil embargo" is not great enough "to justify a confrontation with Israel." The polls on the oil crisis suggest that the American public is still sanguine (overly so in our judgment) about the energy situation. Most of them do not feel that a genuine crisis exists. They believe that the oil companies and the government are exaggerating the problem.

Israel, it is fair to say, is still seen as a brave, small state, composed of people "like us," surrounded by wealthy, powerful, hostile neighbors, some of whom cooperate with the Communist world. And the past use by the Arabs of the oil weapon and their forcing up of the price of oil have reinforced the negative image held of them by most Americans. Overt pressure by the United States against Israel could very well be perceived by many as a form of bullying one of America's closest friends in order to appease states which have hurt us and helped our enemies.

Beyond whatever opinion the majority holds on specific issues like oil, Israel is fervently backed by a politically potent minority, including a very large number of non-Jews, who are prepared to punish at the ballot box those who seek to undermine the unique America-Israel relationship. Already, according to a Harris poll taken in late September, President Carter's popularity in the country at large has slipped for the first time below 50 per cent. Most of this decline is surely attributable to factors other than the administration's Middle East policy, yet just as surely that policy plays a part—especially for Jews, among whom Carter has fallen from July's standing of 57–37 per cent positive to a low of 60–37 per cent negative. (Jews, normally among the Democrats' most loyal supporters, were less favorable to Carter in this poll than blacks, Catholics, and unions, and over 10 per cent less favorable than the public as a whole.) But again, it is not only Jews who are concerned with the President's recent record on Israel and the Middle East. George Meany, interviewed on *Face the Nation* (October 2), warned that "I don't think the American people as a whole want to see Israel . . . compelled through strong, diplomatic pressure." When asked what the consequences of such a policy might be for President Carter's reelection prospects in 1980, the labor leader replied, "Well, I don't know what it's going to do to him in 1980, or 1978, or any other time, but I know politically it's going to be a great big minus for him. I'm sure of that."

What our examination of the opinion polls reveals, then, is that a confrontation with Israel will create a deep conflict within the United States, one that could very well parallel the Vietnam controversy in its bitterness, and that could have a devastating effect on the popularity and the chances for reelection of those responsible.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mrs. CHISHOLM (at the request of Mr. WRIGHT), for this week on account of a necessary absence.

Mr. DANIELSON (at the request of Mr. WRIGHT), for December 6 and 7 on account of official business of the Committee on the Judiciary.

Mr. MARRIOTT (at the request of Mr. RHODES), for today on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mrs. FENWICK) to revise and extend their remarks and include extraneous matter:)

Mr. MILLER of Ohio, for 10 minutes, today.

Mr. FINDLEY, for 10 minutes, today.

Mr. RUDD, for 60 minutes, on December 7, 1977.

Mr. COLLINS of Texas, for 60 minutes, today.

Mr. KEMP, for 10 minutes, today.

Mr. McDADE, for 5 minutes, today.

(The following Members (at the request of Mr. WATKINS) to revise and extend their remarks and include extraneous matter:)

Mr. LONG of Maryland, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. COTTER, for 5 minutes, today.

Mr. MATTOX, for 5 minutes, today.

Mr. BURKE of Massachusetts, for 5 minutes, today.

Mr. MICHAEL O. MYERS, for 5 minutes, today.

Mr. LAFALCE, for 5 minutes, today.

Mr. PREYER, for 5 minutes, today.

Mr. MONTGOMERY, for 5 minutes, today.

Mr. VANIK, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. STOKES, and to include extraneous matter notwithstanding the fact that it exceeds two pages of the CONGRESSIONAL RECORD and is estimated by the Public Printer to cost $1,288.

Mr. SCHEUER, and to include extraneous matter notwithstanding the fact that it exceeds two pages of the CONGESSIONAL RECORD and is estimated by the Public Printer to cost $1,395.32.

Mr. ROGERS, to extend his remarks on H.R. 8212.

Mr. ALEXANDER, to revise and extend his remarks prior to the vote on the Mahon motion on B–1 and to include two pages of items scheduled for research and development on aircrafts 5 and 6.

Mr. PEPPER, to revise and extend his remarks in support of Addabbo amendment just prior to vote on that amendment.

Mr. PEPPER, to revise and extend his remarks and include extraneous matter in two instances.

(The following Members (at the request of Mrs. FENWICK) and to include extraneous matter:)

Mr. FORSYTHE.

Mr. KASTEN.

Mr. MILLER of Ohio in four instances.

Mr. FINDLEY in two instances.

Mr. CRANE in two instances.

Mr. BADHAM in two instances.

Mr. ANDERSON of Illinois in two instances.

Mr. GILMAN.

Mr. ASHBROOK in three instances.

Mr. STEERS.

Mr. TRIBLE.

Mr. KETCHUM in two instances.

Mr. WHITEHURST.

Mr. WAMPLER in two instances.

Mr. COLLINS of Texas in three instances.

Mr. HAGEDORN in two instances.

Mr. DORNAN in three instances.

Mr. LAGOMARSINO in four instances.

Mr. BROWN of Ohio in three instances.

Mr. HYDE.

Mr. HANSEN in five instances.

(The following Members (at the request of Mr. WATKINS) and to include extraneous matter:)

Mr. O'NEILL.

Mr. CORNWELL.

Mr. LE FANTE.

Mr. CARNEY.

Mr. AUCOIN.

Mr. LEDERER in two instances.

Mr. GONZALEZ in three instances.

Mr. ANDERSON of California in three instances.

Mr. TEAGUE in two instances.

Mrs. SCHROEDER.

Mr. CORRADA.

Mr. BRECKINRIDGE.

Mr. BONIOR.

Mr. HAMILTON.

Mr. RICHMOND in two instances.

Mr. EILBERG in 10 instances.

Mr. MURPHY of Illinois in two instances.

Mr. MAZZOLI in five instances.

Mr. PATTISON of New York.

Mr. MILLER of California.

Ms. OAKAR.

SENATE ENROLLED BILLS SIGNED

The SPEAKER announced his signature to enrolled bills of the Senate of the following title:

S. 1316. An act to authorize appropriations for fiscal years 1978, 1979, and 1980 to carry out State cooperative programs under the Endangered Species Act of 1973; and

S. 2328. An act to amend Private Law 95–21 to make a technical correction therein.

ENROLLED BILL SIGNED

Mr. THOMPSON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 5555. An act for the relief of Adelaida Rea Berry.

ADJOURNMENT

Mr. WATKINS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 55 minutes p.m.), under its previous order, the House adjourned until tomorrow, Wednesday, December 7, 1977, at 10 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2792. A letter from the U.S. Commissioner of Education, Department of Health, Education, and Welfare, transmitting his annual report on the education professions, covering 1975–76, pursuant to section 503(b) of Public Law 90–35; to the Committee on Education and Labor.

2793. A letter from the Assistant Secretary of the Interior, transmitting the final rules for the initial regulatory program and coal production fee required by the Surface Mining Control and Reclamation Act of 1977; to the Committee on Interior and Insular Affairs.

2794. A letter from the Assistant Secretary of the Interior for Indian Affairs, transmitting a report on cancellations of debts of Indians and Indian tribes owed to the United States, covering fiscal year 1977, pursuant to the act of July 1, 1932 (47 Stat. 564); to the Committee on Interior and Insular Affairs.

2795. A letter from the Assistant Secretary of State for Congressional Relations, transmitting notice of a proposed license for the export of certain defense equipment sold commercially to Gabon (MC–56–77), pursuant to section 36(c) of the Arms Export Control Act; to the Committee on International Relations.

2796. A letter from the Assistant Secretary of State for Congressional Relations, transmitting notice of a proposed license for the export of certain defense equipment sold commercially to Malaysia (MC–59–77), pursuant to section 36(c) of the Arms Export Control Act; to the Committee on International Relations.

2797. A letter from the Assistant Secretary of State for Congressional Relations, transmitting notice of a proposed license for the export of certain defense equipment sold commercially to Iran (MC–60–77), pursuant to section 36(c) of the Arms Export Control Act; to the Committee on International Relations.

2798. A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting copies of orders entered in the cases of certain aliens found admissible to the United States, pursuant to section 212(a)(28)(I)(ii) of the Immigration and Nationality Act (66 Stat. 182); to the Committee on the Judiciary.

2799. A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting copies of orders suspending deportation under the authority of section 244(a)(1) of the Immigration and Nationality Act, together with a list of the persons involved, pursuant to section 244(c) of the act (66 Stat. 214; 76 Stat. 1247); to the Committee on the Judiciary.

2800. A letter from the Comptroller General of the United States, transmitting a report on combined truck/rail transportation service (CED–78–3, December 2, 1977); jointly, to the Committees on Government Operations, Interstate and Foreign Commerce, and Public Works and Transportation.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. ROBERTS: Committee of Conference. Conference report on H.R. 3199 (Rept. No. 95–830). Ordered to be printed.

Mr. STAGGERS: Committee of conference. Conference report on S. 305 (Rept. No. 95–831). Ordered to be printed.

Mr. STAGGERS: Committee of conference. Conference report on H.R. 3722 (Rept. No. 95–832). Ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDERSON of Illinois:

H.R. 10211. A bill to authorize the Japan-United States Friendship Commission to use penalty mail privileges; to the Committee on International Relations.

By Mr. ANDREWS of North Dakota:

H.R. 10212. A bill to protect the economy of the United States; domestic agriculture, labor and industry, by the maintenance of farm income and purchasing power; to the Committee on Agriculture.

By Mr. BALDUS:

H.R. 10213. A bill to amend title 38 of the United States Code to increase from $250 to $400 the maximum allowance for the burial and funeral expenses of certain veterans and of patients in Veterans' Administration facilities; to the Committee on Veterans' Affairs.

By Mr. BEDELL (for himself Mr. BLOUIN, Mr. CAVANAUGH, Mr. COHEN, Mr. CORNELL, Mr. EVANS of Georgia, Mr. FRASER, Mr. HARRINGTON, Mr. JEFFORDS, Mr. KINDNESS, Mr. MARLENEE, Mr. NOLAN, Mr. OTTINGER, and Mr. SIMON):

H.R. 10214. A bill to amend title 38, United States Code, to provide that agricultural employment required for eligibility for educational assistance under the GI bill for a person enrolled in a farm cooperative program need not be full-time employment or the principal expected source of income of such person and may include employment in establishments engaged in the processing, distribution, or sale of agricultural products; to the Committee on Veterans' Affairs.

By Mr. BROYHILL (for himself, Mr. ROSE, and Mr. ANDREWS of North Carolina):

H.R. 10215. A bill to authorize a study for the purpose of determining the feasibility and desirability of designating the Overmountain Men Victory Trail as a national scenic trail; to the Committee on Interior and Insular Affairs.

By Mr. CARNEY:

H.R. 10216. A bill to require certain companies to make quarterly reports to the Secretary of the Treasury with respect to the amount of imports of steel and other articles purchased for use in manufacturing or construction; to the Committee on Ways and Means.

By Mr. COCHRAN of Mississippi:

H.R. 10217. A bill to amend section 203 of the National Housing Act for the purpose of extending the repayment period of a mortgage which may be insured under such section; to the Committee on Banking, Finance and Urban Affairs.

By Mr. FRASER (for himself, Mr. VENTO, Mr. QUIE, Mr. NOLAN, and Mr. OBERSTAR):

H.R. 10218. A bill to amend the Internal Revenue Code of 1954 to allow a credit against tax for the cost of removal of trees required by the United States or a State or local government to be removed to prevent the spread of a disease caused by pests; to the Committee on Ways and Means.

By Ms. HOLTZMAN (for herself and Mr. MATTOX):

H.R. 10219. A bill to amend the Immigration and Nationality Act to exclude from admission into and to deport from the United States all aliens who persecuted others on the basis of religion, race, national origin, or political opinion; to the Committee on the Judiciary.

By Mr. LAFALCE:

H.R. 10220. A bill to amend the Internal Revenue Code of 1954 with respect to the tax treatment of small business investment companies electing to be taxed as regulated investment companies; to the Committee on Ways and Means.

By Mr. LATTA:

H.R. 10221. A bill to require that the Hungarian Crown of Saint Stephen and other relics of the Hungarian royalty remain in the custody of the U.S. Government and that they not be transported out of the United States, unless the Congress provides otherwise by legislation; to the Committee on International Relations.

By Mr. LATTA (for himself and Mr. VANIK):

H.R. 10222. A bill to amend section 111 of title 23, United States Code, relating to agreements for the use of and access to the rights-of-way of the Interstate System; to the Committee on Public Works and Transportation.

By Mr. LE FANTE:

H.R. 10223. A bill to amend title II of the Social Security Act to increase to $750 in all cases the amount of the lump-sum death payment thereunder; to the Committee on Ways and Means.

By Mr. MAGUIRE:

H.R. 10224. A bill to provide for the temporary suspension of the rate of duty on 2-Methyl 5-Ethyl pyridine, and for other purposes; to the Committee on Ways and Means.

By Mr. MIKVA:

H.R. 10225. A bill to amend the Hazardous Materials Transportation Act to prohibit the transportation of radioactive materials to or from any civilian airport, and for other purposes; jointly, to the Committees on Armed Services, Interstate and Foreign Commerce, and Public Works and Transportation.

By Mr. MONTGOMERY:

H.R. 10226. A bill to incorporate the American Ex-Prisoners of War, Incorporated; to the Committee on the Judiciary.

By Mr. RICHMOND:

H.R. 10227. A bill to require the Secretary of Labor to establish a grant program to provide employment training and placement services to individuals released from local, State, or Federal correctional facilities; to the Committee on Education and Labor.

H.R. 10228. A bill to provide more effectively for the use of interpreters in courts of the United States, and for other purposes; to the Committee on the Judiciary.

By Mr. ROONEY (for himself and Mr. Ertel):

H.R. 10229. A bill to authorize the creation of the Energy Corporation of the Northeast and to authorize the Secretary of the Treasury to provide guarantees for the obligations of such corporation and other financial assistance to such corporation; jointly, to the Committees on Interstate and Foreign Commerce, Banking, Finance and Urban Affairs, and the Judiciary.

By Mr. RUDD (for himself and Mr. Rhodes):

H.R. 10230. A bill to amend the Internal Revenue Code of 1954 to increase the amount allowable as a deduction for charitable contributions of certain items created by the taxpayer; to the Committee on Ways and Means.

By Mr. RYAN:

H.R. 10231. A bill to change the composition and licensing procedures of the District of Columbia Board of Cosmetology, and for other purposes; to the Committee on the District of Columbia.

By Mrs. SPELLMAN:

H.R. 10232. A bill to amend section 8332 of title 5, United States Code, to provide for the inclusion in the computation of creditable service periods of certain service rendered as an employee of a State or an instrumentality of a State, and for other purposes; to the Committee on Post Office and Civil Service.

By Mrs. SPELLMAN (for herself and Mr. Roe):

H.R. 10233. A bill to provide that legislation appropriating funds for payment of pay to Federal employees shall be enacted separately from other legislation; to the Committee on Rules.

By Mr. ULLMAN:

H.R. 10234. A bill to validate Federal reclamation contracts and written representations relating to repayment of allocated costs; to the Committee on Interior and Insular Affairs.

By Mr. ULLMAN (for himself, Mr. Weaver, and Mr. AuCoin):

H.R. 10235. A bill for the relief of the State of Oregon; to the Committee on the Judiciary.

By Mr. WALKER:

H.R.10236. A bill to amend title IV of the Social Security Act to improve the administration of the AFDC program by authorizing States to establish community welfare boards for the purpose of eliminating or dealing effectively with welfare fraud, considering and recommending changes in welfare policy, and (in specified cases) reviewing determinations made by the State welfare agency with respect to eligibility for assistance; to the Committee on Ways and Means.

By Mr. WEISS (for himself and Mr. Thompson):

H.R. 10237. A bill to amend the Labor-Management Reporting and Disclosure Act of 1959 to require reporting by certain employee associations; to the Committee on Education and Labor.

By Mr. BURLISON of Missouri:

H.R. 10238. A bill to provide parity to farmers and to prevent interruptions in the supply of food to American consumers; to the Committee on Agriculture.

By Mr. BURLESON of Texas:

H.R. 10239. A bill to amend the Internal Revenue Code of 1954 to clarify the tax status of certain industrial development bonds issued to provide facilities for the furnishing of water including water used to cool thermal generating plants or to generate hydroelectric energy; to the Committee on Ways and Means.

By Mr. LUJAN:

H.R. 10240. A bill to declare that the United States holds in trust for the Pueblo of Zia certain public domain lands; to the Committee on Interior and Insular Affairs.

By Mr. McDADE:

H.R. 10241. A bill to provide for the designation of a segment of the Upper Delaware River, New York and Pennsylvania, as a component of the National Wild and Scenic Rivers System, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. MILLER of California (for himself, Mr. Edwards of California, Mr. Price, Mr. Richmond, Mr. Ryan, and Mr. Stark):

H.R. 10242. A bill to require the Secretary of the Interior to establish a table of water rates to be charged irrigators who contract for water resources for agricultural purposes from the United States through the U.S. Bureau of Reclamation, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. MILLER of California (for himself, Mr. Bedell, Mr. Edwards of California, Mr. Harrington, Mr. Lagomarsino, Mr. Moss, Mr. Richmond, Mr. Ryan, Mr. Stark, and Mr. Vento):

H.R. 10243. A bill to provide that no contracts may be entered into by the Bureau of Reclamation for water supply for purposes of irrigation without prior public notice and opportunity for hearing; to the Committee on Interior and Insular Affairs.

By Ms. OAKAR (for herself, Mr. Archer, Mr. Badillo, Mr. Beard of Rhode Island, Mr. Blouin, Mr. Burke of Florida, Mr. Corcoran of Illinois, Mr. Crane, Mr. Cunningham, Mr. Fish, Mr. Goldwater, Mr. Gradison, Mr. Livingston, Mr. Miller of Ohio, Mr. Mitchell of New York, Mr. Regula, Mr. Rudd, Mr. Spence, Mr. Stockman, Mr. Stump, Mr. Vander Jagt, Mr. Walsh, Mr. Whitehurst, Mr. Young of Florida, and Mr. Young of Missouri):

H.R. 10244. A bill to require that the Hungarian Crown of Saint Stephen and other relics of the Hungarian royalty remain in the custody of the U.S. Government and that they not be transported out of the United States, unless the Congress provides otherwise by legislation; to the Committee on International Relations.

By Mr. PRESSLER:

H.R. 10245. A bill to require action by the President and Secretary of Agriculture to increase farm income and to improve the effectiveness of farm programs; to the Committee on Agriculture.

By Mr. WALSH:

H.R. 10246. A bill relating to certain Indian land claims in the State of New York, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. COTTER:

H.J. Res. 667. Joint resolution extending the deadline for the ratification of the equal rights amendment; to the Committee on the Judiciary.

By Mr. HYDE:

H.J. Res. 668. Joint resolution proposing an amendment to the Constitution of the United States providing that all persons shall have the right to be free from discrimination; to the Committee on the Judiciary.

By Mr. KEMP (for himself and Mr. Kasten):

H.J. Res. 669. Joint resolution designating the week in each year during which Veterans Day is observed as Love America Week; to the Committee on Post Office and Civil Service.

By Mr. McDADE:

H.J. Res. 670. Joint resolution designating the third week of September 1978, as National Rehabilitation Week; to the Committee on Post Office and Civil Service.

By Mr. MINISH:

H.J. Res. 671. Joint resolution authorizing the President to proclaim September 8 of each year as National Cancer Day; to the Committee on Post Office and Civil Service.

By Mr. FOLEY (for himself and Mr. McCormack):

H. Con. Res. 433. Concurrent resolution to declare the sense of Congress that full parity remains the goal of American agriculture; to the Committee on Agriculture.

By Mr. BEDELL (for himself and Mr. Robinson):

H. Con. Res. 434. Concurrent resolution to assure quality health care for population located in rural areas; jointly, to the Committees on Interstate and Foreign Commerce, and Ways and Means.

By Mr. FAUNTROY (for himself and Mr. Jones of Oklahoma):

H. Con. Res. 435. Concurrent resolution approving an amendment to the District of Columbia charter relating to recall of elected officials; to the Committee on the District of Columbia.

H. Con. Res. 436. Concurrent resolution approving an amendment to the District of Columbia charter relating to initiative and referendum; to the Committee on the District of Columbia.

By Mr. JONES of Oklahoma:

H. Con. Res. 437. Concurrent resolution approving an amendment to the District of Columbia charter relating to recall of elected officials; to the Committee on the District of Columbia.

H. Con. Res. 438. Concurrent resolution approving an amendment to the District of Columbia charter relating to initiative and referendum; to the Committee on the District of Columbia.

By Mr. DODD (for himself, Mr. Mitchell of Maryland, Mr. Long of Louisiana, Mr. Lundine, Mr. Roe, Mr. Kemp, Mr. Lloyd of California, Mr. Mineta, Mr. Burke of Florida, Mrs. Fenwick, Mr. Lott, Mr. Glickman, Mr. Wolff, Mr. Winn, Mr. Yatron, Mr. Edwards of California, Mr. Lagomarsino, Mr. Huckaby, Ms. Mikulski, Mr. Eilberg, Mr. Hughes, Mr. Gammage, Mr. Bedell, Mr. Roybal, and Mr. Edwards of Oklahoma):

H. Res. 924. Resolution of congratulations to the peoples of Egypt and Israel; to the Committee on International Relations.

By Mr. DODD (for himself, Mr. CRANE, Mr. PEASE, Mr. CARR, Mr. FRENZEL, Mr. LAFALCE, Mr. OTTINGER, and Mr. FORD of Tennessee):

H. Res. 925. Resolution of congratulations to the peoples of Egypt and Israel; to the Committee on International Relations.

By Mr. FINDLEY (for himself, Mr. RHODES, Mr. CORCORAN of Illinois, Mr. COUGHLIN, Mr. DRINAN, Mr. EDGAR, Mr. MURPHY of Pennsylvania, Mr. PRICE, Mr. SIMON, Mr. SCHULZE, and Mr. SPENCE):

H. Res. 926. Resolution to maximize local nighttime radio service; to the Committee on Interstate and Foreign Commerce.

By Mr. KETCHUM:

H. Res. 927. Resolution in opposition to reorganization of the field and nursing offices of the Department of Housing and Urban Development prior to the holding of congressional committee hearings; to the Committee on Banking, Finance and Urban Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BENNETT:

H.R. 10247. A bill for the relief of Elizabeth Berwick and Alexander Berwick, her husband; to the Committee on the Judiciary.

By Mr. FAUNTROY:

H.R. 10248. A bill for the relief of Dr. Halla Brown; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

360. By the SPEAKER: Petition of Italian-American Labor Council, New York, N.Y., relative to including State and local governments under the jurisdiction of the National Labor Relations Act; to the Committee on Education and Labor.

361. Also, petition of the Italian-American Labor Council, New York, N.Y., relative to the assignment of teachers by race; to the Committee on Education and Labor.

362. Also, petition of the Italian-American Labor Council, New York, N.Y., relative to the North Atlantic Treaty Organization; to the Committee on International Relations.

SENATE—*Tuesday, December 6, 1977*

(Legislative day of Tuesday, November 1, 1977)

The Senate met at 1 p.m., on the expiration of the recess, and was called to order by Hon. EDWARD ZORINSKY, a Senator from the State of Nebraska.

PRAYER

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Almighty God, Ruler of men and nations who didst prepare in ancient times the minds and hearts of men for divine interventions, may the conquering light of Hanukkah and the joyous light of Advent come upon us to illuminate our pathway. Grant us a sense of victorious expectation, so that when baffled by problems on the human scene and vexed by daily duties we may be ready for the surprises of history. Prepare our minds and hearts to receive the expected Messiah that His Spirit may reign in our thoughts and affections as the King of Love and the Prince of Peace.

In Thy holy name we pray. Amen.

APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., December 6, 1977.

To the Senate:

Under the provisions of rule I, section 3, of the Standing Rules of the Senate, I hereby appoint the Honorable EDWARD ZORINSKY, a Senator from the State of Nebraska, to perform the duties of the Chair.

JAMES O. EASTLAND,
President pro tempore.

Mr. ZORINSKY thereupon assumed the chair as Acting President pro tempore.

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from West Virginia.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the previously unapproved portions of the Journal of proceedings be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ADJOURNMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate stand in adjournment for 2 seconds.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Thereupon, at 1:02 p.m. on Tuesday, December 6, 1977, the Senate adjourned until 1:02 and 2 seconds p.m., the same day.

AFTER ADJOURNMENT

TUESDAY, DECEMBER 6, 1977

The Senate met at 1:02 and 2 seconds p.m., pursuant to adjournment, and was called to order by Hon. EDWARD ZORINSKY, a Senator from the State of Nebraska.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of the last legislative day be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there be no resolutions over under the rule during morning business today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that statements of Senators be limited to 10 minutes each during morning business.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

PROPOSED ARMS SALES

Mr. ROBERT C. BYRD. Mr. President, on my time under the standing order, I ask unanimous consent, on behalf of Mr. SPARKMAN, the chairman of the Committee on Foreign Relations, to have printed in the RECORD a statement and the attachments referred to therein.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

STATEMENT BY MR. SPARKMAN

Section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of $25 million or, in the case of major defense equipment as defined in the Act, those in excess of $7 million. Upon such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the Chairman of the Foreign Relations Committee.

In keeping with my intention to see that such information is immediately available to the full Senate, I ask unanimous consent to have printed in the RECORD at this point the notifications I have just received.

DEFENSE SECURITY ASSISTANCE AGENCY, DEPUTY ASSISTANT SECRETARY (SECURITY ASSISTANCE), OASD/ISA,
Washington, D.C. November 22, 1977.

In reply refer to:
I-10646/77ct

Hon. JOHN J. SPARKMAN,
Chairman, Committee on Foreign Relations, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 78-5, concerning the Department of the Army's proposed Letter of Offer to the Federal Republic of Germany for major defense equipment, as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $74.1 million and support costs of $5.0 million for a total estimated cost of $79.1 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

H. M. FISH,
Lieutenant General, USAF.

[Transmittal No. 78-5]

NOTICE OF PROPOSED ISSUANCE OF LETTER OF OFFER PURSUANT TO SECTION 36(b) OF THE ARMS EXPORT CONTROL ACT

(i) Prospective Purchaser: Federal Republic of Germany.

(ii) Total Estimated Value in millions:

Major defense equipment*	$74.1
Other	5.0
Total	79.1

*As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

(iii) Description of Articles or Services Offered: Fifteen-thousand (15,000) TOW missiles (BGM71A-1).

(iv) Military Department: Army.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: November 22, 1977.

Defense Security Assistance
Agency, Deputy Assistant Secretary (Security Assistance),
OASD/ISA,
Washington, D.C., December 2, 1977.
In reply refer to:
I-1079/77ct
Hon. John J. Sparkman,
Chairman, Committee on Foreign Relations,
U.S. Senate, Washington, D.C.

Dear Mr. Chairman: Pursuant to the reporting requirements of Section 36(b) of the Arms Export Control Act, we are forwarding herewith, Transmittal No. 78-6, concerning the Department of the Navy's proposed Letter of Offer to Australia not for major defense equipment, as defined in the International Traffic in Arms Regulations (ITAR), estimated to cost $49.6 million. Shortly after this letter is delivered to your office, we plan to notify the news media.

Sincerely,

H. M. Fish,
Lieutenant General, USAF.

[Transmittal No. 78-6]

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b) of the Arms Export Control Act

(i) Prospective Purchaser: Australia.

(ii) Total Estimated Value in millions:

Major defense equipment*	0
Other	$49. 6
Total	49 .6

*As included in the U.S. Munitions List, a part of the International Traffic in Arms Regulations (ITAR).

(iv) Military Department: Navy.

(v) Sales Commission, Fee, etc. Paid, Offered or Agreed to be Paid: None.

(vi) Date Report Delivered to Congress: December 2, 1977.

SENATOR HUDDLESTON: AN EFFECTIVE LEGISLATOR

Mr. ROBERT C. BYRD. Mr. President, the distinguished senior Senator from Kentucky (Mr. HUDDLESTON) has compiled an outstanding record during his first term in the Senate. Those of us who have the privilege to serve with him, and to work closely with him on issues, know that his success has resulted from hard work and his devotion to meeting the needs of his constituents.

Senator HUDDLESTON's dedication to duty has won him the respect of his colleagues, and, I am pleased to note, has won him the praise of Kentucky's largest newspaper, the Louisville Courier-Journal. Last Sunday, December 4, an article in the highly regarded newspaper correctly noted that Senator HUDDLESTON can "point to an enviable legislative record—in 5 years, only one of the dozens of amendments he has proposed has been defeated on the floor" of the Senate.

The article also said that he knows "where to turn to rattle the cages of the bureaucracy" and "where to reach to grasp the Federal-level power levers." That was a reference to Senator HUDDLESTON's work in the areas of mine safety and coal technology, both of which are vital to the economy of his State.

As a Senator from West Virginia, I share many interests in common with my neighbor from Kentucky—just as our constituents share many problems in common. On the Senate Appropriations Committee, where we both serve, I have seen Senator HUDDLESTON use his considerable influence for the benefit of Kentuckians.

And as Senate majority leader, I have been impressed by the studied approach he takes on issues which transcend State boundaries, which affect the Nation and the world. For instance, Senator HUDDLESTON made significant contributions as a member of a delegation I led to Panama last month. His questioning of Americans and Panamanians was thorough and incisive, and aimed at determining what effect the proposed Panama Canal treaties would have on the United States.

Kentucky is well-served by having "DEE" HUDDLESTON and WENDELL FORD in the Senate. Indeed, the entire Nation is well-served by their active presence here.

Mr. President, I ask unanimous consent that the Louisville Courier-Journal article of Sunday, December 4, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HUDDLESTON'S LOW-KEY, BUT GETS THINGS DONE

(By Ward Sinclair)

WASHINGTON.—In early 1973, just after he arrived to take his place as the new U.S. senator from Kentucky, Walter (Dee) Huddleston talked of himself and his job in tones that challenged the cynics.

No, he would say, he wasn't going to make a big splash. No, he would continue, he wouldn't be sounding off on this or that. And definitely no, he went on, he didn't have all the answers.

Even after six months on the job, he was saying much the same thing. A quote from that period went this way:

"We're pretty much on target—not in too great a hurry, not projecting ourselves into great positions of influence at the start, learning our way and where the power is and how you accomplish something. We're moving in that direction."

Huddleston is now completing the fifth year of the six-year term he was elected to serve as the successor to the venerated John Sherman Cooper, a Republican legislative and political eminence whose shadow still hangs impressively heavy about the Senate.

The Democrat from Elizabethtown next year will be asking Kentuckians to return him to the Senate for a second term. As he goes around the state, voters will find him to be a shade heavier, a shade grayer, perhaps, but still a same low-key politician.

The real difference is that he is no longer the tyro who didn't really know where to turn to rattle the cages of the bureaucracy or where to reach to grasp the federal-level power levers.

Cautiously, because he is a cautious man if nothing else, he has balanced his positions on issues over a period of time that put him somewhere in the middle of the political spectrum.

"I don't want a label, and I don't want to be put in anyone's pigeonhole," he said recently. "I try to take each bill separately, look at its impact and vote accordingly. I have tried to balance my positions over a period of time so I don't favor one side over the other. . . . It's a difficult line to follow."

The different and varied special-interest-group ratings reflect that. The liberal ratings put him around the middle. The conservative groups rate him around the middle.

Yet when he hits the hustings next year, Huddleston won't be talking about the labels. He will be talking about the value to Kentucky of the seniority system and committee assignments that have allowed him to direct federal largess toward the state.

And he'll be pointing to an enviable legislative record—in five years, only one of the dozens of amendments he has proposed has been defeated on the floor.

He's used an approach that he learned while serving as a state senator in Frankfort: Grease the skids beforehand, make sure everyone understands what you're doining, get it passed without a fight.

"Back there," he said, "I learned that oratory is great, but if you have people lined up with you ahead of time you can withstand any of the attacks that might occur. So I like to get agreement beforehand. As you know, most of my amendments have come up without roll calls."

Aside from the floor activity—some of his best moments have come when he quietly put together the support he needed to beat back the assaults on tobacco—the bread and butter of the work of Dee Huddleston, U.S. Senator, goes on far from the public view.

One of a senator's duties, of course, is to see that laws are passed. But a larger duty very well may be his ability to get things done for constituents with problems.

That is where committee assignments and personal staff come into play. Through positions on the agricultural and apppropriations committees and by assembling a talented staff, Huddleston has had a major impact on the affairs of Kentucky and its citizens.

"When I came here . . . I thought that if I could establish a reputation as a workhorse instead of as a "showhorse," as Majority Leader Bob Byrd likes to say, that would be a good foundation," Huddleston says.

"Once I had done that, I thought, I could be more effective for Kentucky, and I would then be able to move into the national picture and be a greater influence in the Senate. I think I've stuck to that course. I'm very pleased with my staff."

On the national scene, Huddleston has become best known for his work on the Senate intelligence-oversight committees that were formed in the wake of Watergate and disclosure of abuses by the FBI and CIA.

His assignment first to the temporary and then the permanent committee reflected his Senate peers' perception of him as a moderate who was not looking for a national forum of running for higher office, a thoughtful man who knew how to avoid publicity as well as get it.

But another key appointment—to the money-controlling Appropriations Committee—has been perhaps his biggest break in enabling him to look after his constituents. One committee seat was open; two men wanted it. And Huddleston handily defeated Sen. Bennett Johnston, D-La., for the assignment in 1975.

By virtue of that, Huddleston noted, he has been able to get more money to repair the leaking Wolf Creek Dam, repair roads in Northern Kentucky, continue coal-cleaning research projects, retain planning funds for housing programs, add money to the strip-mine reclamation budget, assure continuance of military construction at Ft. Knox and Ft. Campbell, get federal mine-safety efforts beefed up in the state.

The senator cited these other Kentucky-related efforts that he was proud of:

He helped rush an emergency bill through Congress to allow chemical spraying of blackbirds that plagued the state, but also then won approval of a $400,000 research program to study ways to combat the birds in the future.

After tornadoes swept through Kentucky in 1974 Huddleston and his staff blitzed the Commerce Department until the state was given a disaster-warning radio system that became a model for the nation.

After the record-level floods last April in Eastern Kentucky and as his office worked overtime to speed up federal assistance, Huddleston came up with an investigative bearing that allowed flood victims and bureaucrats to talk coherently to each other. A result was a plan to combine disaster and civil-defense programs to speed up help.

His concern over unsafe dams, nurtured by investigative reports and a fear of disaster in Kentucky, led to a legislative drive to require the Corps of Engineers to submit building plans to independent safety experts. President Carter co-opted the senator last spring by ordering the corps to do the same thing.

The thoughtful caution that marks Huddleston's style is not always to the liking of all his constituents. For example, in the view of some he waited too long to begin speaking out strongly on coal-mine safety and strip-mine abuses—issues vital in his state.

And he has steadily held to support of the controversial Corps of Engineers flood-control dam on Paint Creek, a project that is widely criticized by environmentalists. He doesn't say so specifically, but the reason is Rep. Carl Perkins, in whose district it would be built.

"I've had some misgivings about that project," Huddleston said, "but I decided that it would not be appropriate for me to go against the projects that were approved before I got to Washington.

"Yes, that might be a copout, but to oppose it would not stand me in very good stead with the other members of Congress that I have to work with other projects, it is important for our delegation to work together. For better or worse, it's my position—a position I'm not too comfortable with."

But in a variety of ways, Huddleston has made his influence felt in the Senate on matters with an impact far beyond Kentucky.

His early opposition to two Ford-administration nominees to the board of the Tennessee Valley Authority helped stop them both.

He has spurred the executive branch to begin studies on coal-haul roads and on the social impact of increased coal production.

He was an Agriculture Committee leader in reform of the grain-inspection program, and he led a fight to increase spending for rural-development planning.

In other areas, Huddleston spearheaded a plan directing the government to study the health needs of Appalachia and was instigator of a federal study of the impact of electric-power-plant construction in the Ohio Valley.

Such calls for study and planning might seem to be a hallmark of many of his legislative efforts. But Huddleston says it's because he wants to avoid goosechases that produce quick, short-term results to problems that aren't even understood.

His annual financial-disclosure statements, made voluntarily, show that, even with salary raises, he is losing ground economically. So why stay around?

"Anyone in Congress has to make some financial sacrifice," he said. "My position is deteriorating compared to what I could have done had I stayed in business. But that's no big issue with me. I never have felt like I wanted to chuck it all and get out of here."

RECOGNITION OF LEADERSHIP

The ACTING PRESIDENT pro tempore. The Senator from Tennessee.

Mr. BAKER. Mr. President, I have no requirement for my time under the standing order, and I yield it back.

The ACTING PRESIDENT pro tempore. The Senator from Nebraska.

SENATOR YOUNG'S BIRTHDAY

Mr. CURTIS. Mr. President, I rise to say happy birthday to our distinguished colleague, Senator MILTON YOUNG of North Dakota. This is the 50th anniversary of his 30th birthday. It was on December 6, 1897, that our distinguished colleague was born. The entire Senate is indebted to this great and good man for his years of service in the Senate.

All the farmers of America know about MILTON YOUNG. They know that throughout the years he has been a staunch friend and ally of everyone who lived in rural America. He was a farmer. He is a farmer now. He understands all the problems of agriculture: the problems of production, marketing, disaster, and all the rest. So the farmers I represent are pleased when I pay tribute to this distinguished legislator.

Senator YOUNG, for a long time, has held a place of great influence in the Committee on Appropriations. There he has served with fairness, distinction, and understanding. He has served with a sense of patriotism. In matters relating to the defense of our Republic, MILTON YOUNG has been dedicated to the cause of this country and to the defense of it.

Requests for appropriations always receive his fair and objective consideration. At the same time he was concerned, and is concerned, about fiscal difficulties of our country, and he has been a force for stability in the financing and voting of programs for our country.

Senator YOUNG has served longer in the U.S. Senate than any other Senator on the Republican side of the aisle. I rise on this occasion not only to mention his birthday but to express my appreciation for the public service of this outstanding man.

Mr. BAKER. Mr. President, will the Senator yield to me?

Mr. CURTIS. I yield.

Mr. BAKER. I shall take only a moment to join with the distinguished Senator from Nebraska in congratulating our colleague for his long and distinguished service in the Senate. I am sure that at no time has his service been more valuable to the country than it has been in the last several months.

In the course of his service as the senior Republican on the Appropriations Committee, all of us have called on him to protect our interests as we see them, to advance the programs and the proposals that are adopted by the Republican Conference, which is presided over with such skill by the distinguished Senator from Nebraska, and otherwise to advance the cause of our side of the aisle.

I take this opportunity to congratulate Senator YOUNG for his service, but most especially for the quality of that service in the last several months.

Mr. CURTIS. I thank my distinguished leader.

Mr. President, in yielding the floor, I am sure I speak for everyone in this Chamber when I express the wish not only for a very happy birthday today but many more of them, and that they will all be filled with health and happiness.

RELEASE OF CERTAIN SENATE DOCUMENTS

Mr. JACKSON. Mr. President, I report today a resolution to permit the release of certain materials and information in the possession of the Permanent Subcommittee on Investigations of the Committee on Governmental Affairs pursuant to the written request of the chairman of the Select Committee on Assassinations of the House of Representatives.

By letter dated November 18, 1977, the Honorable LOUIS STOKES, chairman of the House Select Committee on Assassinations, requested that the Permanent Subcommittee on Investigations provide the Select Committee certain materials and information now in the subcommittee's files that is pertinent to the House investigation.

Pursuant to rule XXX of the Standing Rules of the Senate, and the privileges of the Senate, such materials and information may not be released without the approval of the Senate.

Accordingly, I report the following resolution, approved by the Committee on Governmental Affairs, and ask that this resolution be agreed to.

The ACTING PRESIDENT pro tempore. The clerk will state the resolution.

The assistant legislative clerk read as follows:

A resolution (S. Res. 330) to permit the withdrawal and release of certain documents, papers and other information obtained by and in the possession of the Permanent Subcommittee on Investigations of the Committee on Governmental Affairs.

The resolution was considered and agreed to.

The preamble was agreed to.

The resolution, with its preamble, is as follows:

S. RES. 330

Whereas, the United States House of Representatives Select Committee on Assassinations has formerly requested by letter dated November 18, 1977, that the Permanent Subcommittee on Investigations of the Committee on Governmental Affairs provide access to, and copies of, certain materials and information obtained by and in the possession of the Permanent Subcommittee on Investigations as a result of its official investigative activities; and

Whereas, by the privileges of the Senate of the United States and by Rule XXX of the Standing Rules of the Senate, information secured by staff employees of the Senate pursuant to their official duties may not be revealed without the consent of the Senate, therefore, be it

Resolved that the Permanent Subcommittee on Investigations is authorized, at the discretion of and at the direction of its Chairman, and subject to such conditions as he may deem appropriate, to provide the Select Committee on Assassinations of the House of Representatives with certain materials and information obtained by and in the possession of the Subcommittee as requested by the Select Committee on Assassinations.

SEC. 2. The Secretary of the Senate shall transmit a copy of this Resolution to the Honorable Louis Stokes, M.C., Washington, D.C.

EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider the nominations under "New Reports."

Mr. BAKER. Mr. President, reserving the right to object, I shall not object. I wish only to advise the distinguished majority leader that all of the items on the Executive Calendar, with the exception of the first item, being those under National Museum Services Board and the National Science Foundation, as well as two nominations now at the desk reported earlier today, are cleared for confirmation on this side. We have no objection to proceeding.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished minority leader.

There being no objection, the Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The nominations will be stated.

NATIONAL MUSEUM SERVICES BOARD

The assistant legislative clerk read the nomination of Douglas Dillon, of New York, to be a member.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Neil Harris, of Illinois, to be a member.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Joan Mondale, of Minnesota, to be a member.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Mamie P. Clark, of New York, to be a member.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Benjamin W. Hazard, of California, to be a member.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Nancy Negeley, of Texas, to be a member.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Gary K. Clarke, of Kansas, to be a member.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of George Horse Capture, of Montana, to be a member.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Charlotte Ferst, of Georgia, to be a member.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Lewis Davis, of New York, to be a member.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Raul A. Lopez, of California, to be a member.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of E. Leland Webber, of Illinois, to be a member.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Lloyd Hezekiah, of New York, to be a member.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of Peter H. Raven, of Missouri, to be a member.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The assistant legislative clerk read the nomination of George S. Seybolt, of Massachusetts, to be a member.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

NATIONAL SCIENCE FOUNDATION

The assistant legislative clerk read the nomination of James Arthur Krumhansl, of New York, to be an Assistant Director.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

OFFICE OF ENERGY RESEARCH

The assistant legislative clerk read the nomination of John M. Deutch, of Massachusetts, reported earlier in the day by the Committee on Energy and Natural Resources, to be Director.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

OFFICE OF SURFACE MINING RECLAMATION AND ENFORCEMENT

The assistant legislative clerk read the nomination of Walter N. Heine, of Pennsylvania, reported earlier in the day by the Committee on Energy and Natural Resources, to be Director.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that it be in order to move to reconsider en bloc the votes by which the nominations were confirmed.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. I make that motion.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President to be immediately notified of the confirmation of the nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate return to the consideration of legislative business.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION FOR THE SECRETARY OF THE SENATE TO RECEIVE MESSAGES FROM THE HOUSE

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Secretary of the Senate be authorized to receive any House messages that come over during the recess which I am about to request, and that they be held at the desk pending further disposition.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT RECEIVED DURING RECESS

Under authority of the order of December 1, 1977, the Secretary of the Senate on December 2, 1977, received messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

Under authority of the order of December 1, 1977, the Secretary of the Senate on December 5, 1977, received messages from the President of the United States submitting sundry nominations which were referred to the appropriate committees.

Under authority of the order of December 1, 1977, the Secretary of the Senate on December 6, 1977, received messages from the President of the United States submitting sundry nominations which were referred to the Committee on the Judiciary.

(For nominations received on December 2, December 5, and December 6, 1977, see the end of the proceedings today.)

MESSAGES FROM THE HOUSE

At 4 p.m., a message from the House of Representatives delivered by Mr. Berry, one of its reading clerks, announced that the House agrees to the amendment of the Senate to thhe bill

(H.R. 3313) for the relief of Mark Charles Mieir and Liane Maria Mieir, with an amendment, in which it requests the concurrence of the Senate.

The message also announced that the House has passed the joint resolution (H.J. Res. 662) making further continuing appropriations for the fiscal year 1978, and for other purposes, in which it requests the concurrence of the Senate.

ENROLLED BILLS SIGNED

At 5 p.m., a message from the House of Representatives by Mr. Hackney, one of its reading clerks, announced that the Speaker has signed the following enrolled bills:

S. 1316. An act to authorize appropriations for fiscal years 1978, 1979, and 1980 to carry out State cooperative programs under the Endangered Species Act of 1973;

S. 2328. An act to amend Private Law 95-21 to make a technical correction therein; and

H.R. 5555. An act for the relief of Adelaida Rea Berry.

The enrolled bills were subsequently signed by the President pro tempore.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on December 2, 1977, he presented to the President of the United States the enrolled bill (S. 1131) to authorize appropriations for the Nuclear Regulatory Commission for the fiscal year 1978, and for other purposes.

PRESENTATION OF PETITIONS

Mr. BAKER. Mr. President, I have received petitions requesting repeal of the Federal withholding tax from my constituents, Mr. and Mrs. Frank C. Ray, Mr. Willis E. Edwards, Dr. L. J. Carter, and Mr. Raymond J. Ballard. These Tennesseans have requested that I present their petitions to the Senate, and I now submit them for appropriate referral.

The ACTING PRESIDENT pro tempore. The petitions will be received and appropriately referred.

POM-417. A petition seeking repeal of the withholding tax law; to the Committee on Finance.

POM-418. A petition seeking repeal of the withholding tax law; to the Committee on Finance.

POM-419. A petition seeking repeal of the withholding tax law; to the Committee on Finance.

POM-420. A petition seeking repeal of the withholding tax law; to the Committee on Finance.

POM-421. A petition seeking repeal of the withholding tax law; to the Committee on Finance.

Mr. BAKER. Mr. President, I have received petitions requesting repeal of the Federal withholding tax from five of my constituents, Miss Carolyn D. Miller, Mr. Robert G. Ely, Mr. James G. Masters, Mr. Ernest K. Peterson, and Miss JoAnn Parsley. These Tennesseans have requested that I present their petitions to the Senate, and I now submit them for appropriate referral.

The ACTING PRESIDENT pro tempore. The petitions will be received and appropriately referred.

POM-422. A petition seeking repeal of the withholding tax law; to the Committee on Finance.

POM-423. A petition seeking repeal of the withholding tax law; to the Committee on Finance.

POM-424. A petition seeking repeal of the withholding tax law; to the Committee on Finance.

POM-425. A petition seeking repeal of the withholding tax law; to the Committee on Finance.

POM-426. A petition seeking repeal of the withholding tax law; to the Committee on Finance.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. JACKSON, from the Committee on Governmental Affairs:

S. Res. 330. An original resolution to permit the withdrawal and release of certain documents, papers and other information obtained by and in the possession of the Permanent Subcommittee on Investigations of the Committee on Governmental Affairs; considered and agreed to.

By Mr. BAYH, from the Committee on the Judiciary, without amendment:

S.J. Res. 1. A joint resolution proposing an amendment to the Constitution to provide for the direct popular election of the President and Vice President of the United States (together with additional and minority views) (Rept. No. 95-609).

EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted.

By Mr. JACKSON, from the Committee on Energy and Natural Resources:

John M. Deutch, of Massachusetts, to be Director of the Office of Energy Research.

Walter N. Heine, of Pennsylvania, to be Director of the Office of Surface Mining Reclamation and Enforcement.

(The above nominations were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

Mr. JACKSON. Mr. President, the Committee on Energy and Natural Resources today approved the nominations of Walter N. Heine to be Director of the Office of Surface Mining Reclamation and Enforcement in the Department of the Interior and Dr. John M. Deutch to be Director of the Office of Energy Research in the Department of Energy.

I ask unanimous consent that the financial statements of Dr. Deutch and Mr. Heine be printed in the RECORD.

I also ask unanimous consent that there be included in the RECORD a letter from Mr. Heine dated November 1, 1977, advising the Committee of divestiture actions taken and a letter from the Acting General Counsel of the Department of Energy advising the committee of divestiture actions to be required of Dr. Deutch under the Department of Energy Organization Act.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The material ordered to be printed in the RECORD, is as follows:

FINANCIAL STATEMENT OF JOHN M. DEUTCH

Provide a complete, current financial net worth statement which itemizes all assets (including bank accounts, real estate, securities, trusts, investments, and other financial holdings) and all liabilities (including debts, mortgages, loans, and other financial obligations) of yourself, your spouse, and other immediate members of your household.

ASSETS

Cash on hand and in banks, $9,500.
Listed securities—add schedule, $146,323.
Unlisted securities—add schedule, $21,275.
Accounts and notes receivable: Due from others, $7,600.
Real estate interests—Home, $80,000.
Personal property, $25,000.
Life insurance—cash value .[1]
Limited Partnership, $26,250.
Total assets, $316,148.

LIABILITIES

Notes payable to banks—cars, $2,000.
Notes payable to relatives, $15,000.
Accounts payable, $4,900.
Real estate mortgages payable—add schedule, $28,977.
Total liabilities, $50,877.
Net worth, $265,271.

1. List sourses, amounts and dates of all anticipated receipts from deferred income arrangements, stock options, uncompleted contracts and other future benefits which you expect to derive from previous business relationships, professional services and firm memberships or from former employers, clients, and customers.

MIT September Salary $3,800. Science Applications, Inc. for any fees $2,000, Northrup Corporation September fee $2,000. All terminate upon confirmation. Dividends on securities—Pension benefits, MIT, TIAA/CREF (from Princeton) Supplemental retirement annuity TIAA/CREF and Prudential.

2. Are any assets pledged? (Add schedule.) No.

3. Are you currently a party to any legal action? No.

4. Have you ever declared bankruptcy? No.

5. Has the Internal Revenue Service ever audited your Federal tax return? If so, what resulted from the audit? Yes. Audit of 1973, 1974 returns. Adjustments reviewed and accepted, copy of IRS letter attached.

AFFIDAVIT

John Mark Deutch, being duly sworn, hereby states that he/she has read and signed the foregoing Financial Statement and that the information provided therein is, to the best of his/her knowledge and belief, current, accurate, and complete.

JOHN DEUTCH.

STATEMENT FOR COMPLETION BY PRESIDENTIAL NOMINEES

Name: Deutch, John Mark.

Position to which nominated: Director, Energy Research.

Date of nomination: Sept. 13, 1977.

Date of birth: 27 July 1938.

Place of birth: Brussels, Belgium.

Marital status: Married.

Full name of spouse: Samayla Dodek Deutch.

Name and ages of children: Philip, 13; Paul, 11; Zachary, 7.

Education: Institution, dates attended, degrees received, dates of degrees:

Amherst College, 1956–59, BA, 1961.

MIT, 1960–61, B. Eng., 1961.

MIT, 1961–65, Ph. D., 1965.

Employment record: List below all positions held since college, including the title and description of job, name of employer, location and date.

---

[1] Two term life insurance policies, MIT $100K, TIAA/CREF $60K.

Office of the Secretary of Defense, Systems Analyst, 1961–1965.

National Bureau of Standards, Post doctoral fellow, 1966.

Princeton University, Assistant Professor of Chemistry, 1966–1969.

MIT, Associate Professor of Chemistry, 1970–1973.

MIT, Professor of Chemistry, 1972 to present.

MIT, Chairman, Department of Chemistry, 1976 to present.

Presently Consultant to private corporations: RAND, Urban Institute, Science Applications, Inc., Northrop Corp.

Honors and awards: List below all scholarships, fellowships, honorary degrees, military medals, honorary society memberships, and any other special recognitions for outstanding service or achievement.

John Simon Guggenheim Memorial Fellow.

Alfred P. Sloan Foundation Fellow.

Predoctoral fellow—Union Carbide 1965 at MIT; NIH 1964/65 at MIT.

Postdoctoral fellow NAS/NRC at National Bureau of Standards 1966.

Sigma Xi, Tau Beta Pi, Phi Lambda Upsilon honorary societies.

Memberships: List below all memberships and offices held in professional, fraternal, business, scholarly, civic, charitable and other organizations.

Organization, office held, and dates:

Phi Lambda Upsilon, none, January 1961 to present.

Tau Beta Pi, none, January 1961 to present.

MIT Faculty Club, none, January 1970 to present.

American Phys. Society, none, 1964 to present.

Cosmos Club, none, 1970 to present.

Amer. Chem. Soc., none, 1976 to present.

Council on Foreign Relations, none, 1975 to present.

Temple Isaiah, none, 1971 to present.

Town Meeting Member, elected-political office, 1973—defeated 1976.

Lexington Historical Society, none, 1973 to present.

Lexington Citizens for Conservation, none, 1973 to present.

Hancock Men's Club, none, March 1974 to present.

Citizens' Comm. for Lexington Public Schools, none, 1973 to present.

Museum of Fine Arts, Boston, none, 1971 to present.

Science Museum, none, 1971 to present.

Children's Museum, none, 1971 to present.

Published writings: List the titles, publishers and dates of any books, articles, or reports you have written.

75. Dielectric Models for Solvent Effects in Electronic Spectra (with D. E. Sullivan) J. Chem. Phys. 65, 5315 (1976).

76. The Solvophobic Effect in Simple Fluid Mixtures (with D. Ronis and E. Martina), Chem. Phys. Letters 46, 53 (1977).

77. The Relation Between Structure of van der Waals Molecular Dimers and Dielectric Second Virial Coefficients (with William Klemperer), J. Chem. Phys. 66, 2753 (1977).

JOHN M. DEUTCH

Qualifications: State fully your qualifications to serve in the position to which you have been named. (attach sheet).

Future employment relationship:

1. Indicate whether you will sever all connections with your present employer, business firm, association or organization if you are confirmed by the Senate.

No. Will take leave of absence from MIT.

2. As far as can be foreseen, state whether you have any plans after completing government service to resume employment, affiliation or practice with your current or any previous employer, business firm, association or organization.

Yes. Return to MIT.

3. Has anybody made you a commitment to a job after you leave government?

MIT.

4. Do you expect to serve the full term for which you have been appointed?

No. Until October 1979.

Potential conflicts of interest:

1. Describe any financial arrangements or deferred compensation agreements or other continuing dealings with business associates, clients or customers who will be affected by policies which you will influence in the position to which you have been nominated.

Continued participation in MIT benefits and retirement plan.

2. List any investments, obligations, liabilities, or other relationships which might involve potential conflicts of interest with the position to which you have been nominated.

None.

3. Describe any business relationship, dealing or financial transaction (other than taxpaying) which you have had during the last 10 years with the Federal Government, whether for yourself or relatives, on behalf of a client, or acting as an agent, that might in any way constitute or result in possible conflict of interest with the position to which you have been nominated.

Consultant to various government agencies presently include:

(1) Defense Science Board, (2) Army Science Advisory Panel, (3) CNO Executive Panel, (4) DCI Science and Technology Advisory Committee, (5) OSTP consultant.

None constitute possible conflicts of interest.

4. List and describe any lobbying activity during the past 10 years in which you have engaged for the purpose of directly or indirectly influencing the passage, defeat or modification of any legislation at the national level of government or for the purpose of affecting the administration and execution of national law or public policy.

None.

5. Explain how you will resolve any potential conflict of interest that may be disclosed by your responses to the above items.

(1) Sale of securities in energy related companies as required.

(2) Will have no dealings with respect to MIT.

(3) Resignation of private consultancies.

INTERNAL REVENUE SERVICE,
Boston, Mass., October 20, 1975.

Mr. and Mrs. JOHN M. DEUTCH,
Lexington, Mass.

DEAR TAXPAYER: An examination report showing changes to your tax returns identified above was discussed and left with you by the examiner named. We have completed our review of the report and have accepted it.

If you have overpaid your tax, we will process your refund, if you owe aditional tax, we will send you a bill for the balance due. Interest, if any, will be included in the refund or bill.

Thank you for your cooperation.

Sincerely yours,

—— ——,
District Director.

FINANCIAL STATEMENT OF WALTER N. HEINE

Provide a complete, current financial net worth statement which itemizes in detail all assets (including bank accounts, real estate, securities, trusts, investments, and other financial holdings) and all liabilities (including debts, mortgages, loans, and other financial obligations) of yourself, your spouse, and other immediate members of your household.

ASSETS

Cash on hand and in banks, $6,000.
Listed securities—add schedule, $6,000.
Real estate interests, including mortgages—add schedule, $75,000.*
Personal property, $31,000.
Life insurance—cash value, $5,000.
Other assets—itemize:
Beef cattle herd, $16,000.
Corn in storage, $2,000.
Potential corn crop, $9,000.
Total assets, $150,000.

LIABILITIES

Real estate mortgages payable—add schedule, $19,000.**
Other debts—itemize:
Stock margin account, $2,700.
Insurance loans, $5,000.
Farm Co-op debt, $7,000.
Total liabilities, $33,700.
Net worth, $116,300.

---

*Farm. $65,000; rental house, $10,000.

**Mortgage at 6% will be paid off in ten (10) years.

STATEMENT OF SECURITY ACCOUNT FOR WALTER N. HEINE, PERIOD ENDING AUG. 26, 1977

Note: As required by law, dividends identified by an asterisk (*) on the statement are reported to the Internal Revenue Service.

WALTER N. HEINE

1. List sources, amounts and dates of all anticipated receipts from deferred income arrangements, stock options, uncompleted contracts and other future benefits which you expect to derive from previous business relationships, professional services and firm memberships or from former employers, clients, and customers.

None.

2. Are any assets pledged? (Add schedule.)

No.

3. Are you currently a party to any legal action?

No.

4. Have you ever declared bankruptcy?

No.

AFFIDAVIT

Walter N. Heine, being duly sworn, hereby states that he has read and signed the foregoing Financial Statement and that the information provided therein is, to the best of his knowledge and belief, current, accurate, and complete.

WALTER N. HEINE.

STATEMENT FOR COMPLETION BY PRESIDENTIAL NOMINEES

Name: Heine, Walter Norman.

Position to which nominated: Director, Office of Surface Mining, U.S. Department of Interior.

Date of Nomination: October 17, 1977.

Date of birth: February 21, 1934.

Place of birth: New York, N.Y.

Marital status: Married.

Full name of spouse: Salome Almyra Denny.

Name and ages of children: Dana, 8; Leah, 3.

Education: Institution, dates attended, degrees received, dates of degrees:

Drexel University, September 1952 to June 1959, B.S. Civil Eng., 1959.

University of Michigan, September 1963 to June 1964, M.S. Sanitary Engineering, 1964.

Honors and awards: List below all scholarships, fellowships, honorary degrees, military medals, honorary society memberships, and any other special recognitions for outstanding service or achievement.

None.

Memberships: List below all memberships and offices held in professional, fraternal, business, scholarly, civic, charitable and other organizations.

Organization, office held, dates:

National Society Professional Engineers, none, 1960.

American Society Civil Engineers, none, 1959.

Water Pollution Control Federation, none, 1959.

PA Water Pollution Control Association, none, 1959.

Employment record: List below all positions held since college, including the title and description of job, name of employer, location, and dates.

September 11, 1971 to present, Associate Deputy Secretary, PA Department of Environmental Resources. Assists the Deputy Secretary for Environmental Protection in supervising, planning and directing the program policy development, budget and personnel review, decision-making on difficult policy matters which often require knowledge of technical aspects; evaluation of proposed goals and progress toward meeting these goals. Regulatory programs include mining, water and air quality, mine safety, occupational health, solid waste management, oil and gas and radiological health.

May 5, 1970 to September 11, 1971, Chief Environmental Engineer, Skelly & Loy Consulting Firm. Responsible for consulting firm's environmental engineering activities including idea development, preparation of contract proposals, oral and written proposal presentations, planning of project implementation and control, supervising staff regarding project details, review of study reports and developing recommendations. Work involved active and abandoned mine projects, industrial waste control and sewage treatment plant design.

Employment record: List all positions held since college, including the title and description of job, name of employer, location and dates.

March 16, 1966 to May 5, 1970, Chief Mine Drainage Division, PA Department of Health Responsible for a state-wide program for regulating environmental protection aspects of underground coal mines, included development of policies and procedures for implementation of a new Act to control pollution from active underground mines, writing of regulations to interpret the Act, planning training programs for staff and the coal industry, supervising the inspection and enforcement results. This program was one of the first in the nation to succeed in accomplishing pollution control from mines.

March 16, 1966 to November 1964, Regional Sanitary Engineer, PA Department of Health. Responsible for all environmental protection (water pollution control) and public water supplies, mine drainage control in thirteen n.w. counties of PA. Included plan review, permit issuance or denial, inspections, enforcement and supervision of technical and administrative technical staff.

May 1964 to November 1964, Section Chief, Division of Sanitary Engineering, PA Department of Health. Reviewed plans and grant application requests for sewage treatment plants, prepared manuals and drafted proposed policies and procedures for Division Director.

March 1962 to August 1963, Operations Chief, Wilkes-Barre Regional Office, PA Department of Health. Responsible for supervising field inspection activities and personnel in assuring water pollution control facilities and coal mines were in compliance with water pollution laws, also that public water supplies were in compliance, carried out enforcement action against violators.

June 1959 to March 1962, Staff Engineer, Philadelphia Regional Office, PA Department of Health. Review of plans for sewer systems, bathing places and water supplies to prepare recommendations for permit issuance, inspected facilities to determine compliance and initiate enforcement action, appointed Acting Operations Chief to supervise field inspection staff.

Government experience:

List any experience in or direct association with Federal, State, or local governments, including any advisory, consultative, honorary or other part-time service or positions.

Almost twenty (20) years in State employment.

(See attached Employment Record.)

Published writings:

List the titles, publishers and dates of any books, articles, or reports you have written.

"Control of Pollution From Active Mines in Pennsylvania", Presented ORSANCO Engineering Committee, September 12, 1968. Reviews the activity of the Sanitary Water Board of Pennsylvania in regulating water pollution from mining.

"Mine Drainage Pollution—Still A Stepchild", PA Water Pollution Control Association Magazine, Nov.–Dec. 1970. Extent of abandoned mine drainage problem is discussed, pointing out need for public funding to initiate major national program for abatement.

"Treatment of Mine Drainage By Industry In Pennsylvania", Sanitary Engineering Division, Proceedings American Society Civil Engineering, 96 (SA 3), 743–755 (1970). Reports on study of five mine drainage treatment plants with emphasis on analysis for trace minerals.

"Controversy Over Proposed Federal Regulation of Surface Mining of Coal—Pro & Con", Congressional Digest, May 1974. Provides eight views of the need or desirability for federal regulation of coal surface mining.

"A New Method of Surface Coal Mining In Steep Terrain", Research and Applied Technology Symposium on Mine-Land Reclamation, National Coal Association, Pittsburgh, PA 1973. Describes technology development in lateral spoil handling in steep slope strip mining.

"Underground Disposal of Coal Mine Wastes", Member of National Academy of Sciences/National Academy of Engineering, Study Committee to Assess the Feasibility of Returning Underground Coal Mine Wastes to the Mined-Out Areas, Washington, D.C., 1975. Reports on studies, findings and conclusions about feasibility of underground disposal of coal refuse.

Government experience: List any experience in or direct association with Federal, State, or local governments, including any advisory, consultative, honorary or other part-time service or positions.

September 11, 1971 to Present: Associate Deputy Secretary for Mines and Land Protection, Pa. Department of Environmental Resources, Harrisburg, Pa.

May 5, 1970 to September 11, 1971: Director of Environmental Engineering, Skelly & Loy Consultants, Harrisburg, Pa.

March 16, 1966 to May 5, 1970: Chief of Division of Mine Drainage Control, Pa. Department of Health, Harrisburg, Pa.

November 11, 1964 to March 16, 1966: Regional Sanitary Engineer, Pa. Department of Health, Meadville, Pa.

May 27, 1964 to November 11, 1964: Staff Engineer, Sewerage Section, Pa. Department of Health, Harrisburg, Pa.

March 21, 1962 to August 28, 1963: Operations Engineer, Kingston Regional Office, Pa. Department of Health, Kingston, Pa.

January 10, 1955 to March 21, 1962: Staff Engineer, Philadelphia Regional Office, Pa. Department of Health, Philadelphia, Pa.

Qualifications: State fully your qualifications to serve in the position to which you have been named. (attach sheet).

Future employment relationships:

1. Indicate whether you will sever all connections with your present employer, business firm, association or organization if you are confirmed by the Senate.

I will sever all connections with the Commonwealth of Pennsylvania except for those necessitated by activities related to the position to which I have been nominated.

2. As far as can be foreseen, state whether you have any plans after completing government service to resume employment, affiliation or practice with your current or any previous employer, business firm, association or organization.

It is conceivable that I could return to State government service.

3. Has anybody made you a commitment to a job after you leave government?

No.

4. Do you expect to serve the full term for which you have been appointed?

Yes.

Potential conflicts of interest:

1. Describe any financial arrangements or deferred compensation agreements or other continuing dealings with business associates, clients or customers who will be affected by policies which you will influence in the position to which you have been nominated.

None.

2. List any investments, obligations, liabilities, or other relationships which might involve potential conflicts of interest with the position to which you have been nominated.

None.

Qualifications: State fully your qualifications to serve in the position to which you have been named.

In addition to my engineering education as set forth elsewhere in this Statement, I have vast experience in administration at the State level of programs which closely parallel those with which I will be charged in the nominated position. The highlights of this experience includes:

Appointment by Governor Milton J. Shapp to head newly established Office of Mines and Land Protection, PA Department of Environmental Resources (September, 1971). Assignment included development of organizational structure, staffing, budgeting and responsibility for implementation of state-wide programs for surface mine reclamation, mine safety, solid waste management, occupational health, mine subsidence control and oil and gas well drilling regulation. The programs involved a staff of about 350 persons and a budget (1976) of $6.1 million.

Successfully encouraged transfer of Pennsylvania technology in steep slope surface mine reclamation to other Appalachian States.

Assisted in drafting federal coal surface mine regulation bills; testified several times before House and Senate Committees concerning the bills. Received letters of commendation from Senator Richard Schweiker and Congresswoman Patsy Mink for this work.

Responded to public complaints on surface mine blasting by arranging and participating in joint industry-government research on effects of blasting on surface structures. This resulted in the requirement for stricter blasting plans in Pennsylvania than those set forth in the "national standard" developed by the U.S. Bureau of Mines and used in most states.

Appointed (1966) to head Division of Mine Drainage Control to carry out implementation of newly strengthened Clean Streams Law which, for the first time in the State or nationally, required all mine drainage discharges to meet stringent quality standards. This required development of a State-wide program and cooperation with mining companies in technology development which ultimately resulted in construction of over 250 mine drainage treatment plants and restored hundreds of miles of streams which were extensively polluted for decades. This technology included changes in underground mine planning so as to reduce probability of pollution after completion of mining.

Initiated program requirement for testing of workers and dust exposures at quarries to reduce incidence of silicosis and other respiratory diseases in quarry workers (such workers are not covered by the national OSHA).

As Pennsylvania's representative on the Monongahela River Mine Drainage Remedial Project Interstate Committee, participated in the first Federal/State cooperative effort in identifying and correcting abandoned mine drainage conditions on a large watershed basis.

As Pennsylvania's Commissioner to the Interstate Mining Compact Commission, urged and acted for a balance between mining and environmental protection positions and activities.

As Director of Environmental Engineering with the consulting firm of Skelly and Loy 1970–71), designed and carried responsibility for the firm's abandoned mine reclamation projects in Pennsylvania, West Virginia and Maryland, including development of innovative reclamation measures in this new area of technology.

Required underground mine operators to provide complete roof support at all active areas of mines except where a specific Department variance is granted on a case by case basis.

3. Describe any business relationship, dealing or financial transaction (other than taxpaying) which you have had during the last 10 years with the Federal Government, whether for yourself or relatives, on behalf of a client, or acting as an agent, that might in any way constitute or result in a possible conflict of interest with the position to which you have been nominated.

None.

4. List and describe any lobbying activity during the past 10 years in which you have engaged for the purpose of directly or indirectly influencing the passage, defeat or modification of any legislation at the national level of government or for the purpose of affecting the administration and execution of national law or public policy.

Upon the request of the staffs of both the Senate and House Committees which drafted the Surface Mining Control and Reclamation Act of 1977, I provided occasional technical consultation based upon the PA surface mine regulation experience. On a few occasions, this activity included discussions with Congressmen and Senators.

5. Explain how you will resolve any potential conflict of interest that may be disclosed by your responses to the above items.

I do not envision any conflicts of interest.

Department of Energy,
Washington, D.C., November 1, 1977.
Hon. Henry M. Jackson,
Chairman, Committee on Energy and Natural Resources, Washington, D.C.

Dear Mr. Chairman: This is in response to your request for an opinion as to the effect of the conflict of interest provisions contained in Title VI of the Department of Energy Organization Act (Pub. L. 95–91) on the financial holdings of John M. Deutch and Robert D. Thorne, who respectively have been nominated to be Director of the Office of Energy Research and Assistant Secretary for Energy Technology in the Department of Energy.

Section 602(a) of the Department of Energy Organization Act ("Act") prohibits supervisory employees of the Department of Energy from knowingly receiving compensation from, holding any official relation with, owning the stocks or bonds of, or having any pecuniary interest in, any energy concern. "Energy concern", defined in Section 601(b) of the Act, is described in terms of entities "significantly engaged in the business" of a variety of activities related to energy production, distribution, sale, research and development, as well as entities engaged in such research and development functions pursuant to DOE-funded programs irrespective of whether they otherwise are engaged in such "business." The precise boundaries of that term are currently being explored. Nonetheless, it is possible to make some initial determinations with respect to identifying energy concerns within the meaning of the statute.

As you know, a list of the financial holdings of Mr. Deutch and Mr. Thorne has been provided to the Committee. If confirmed, Mr. Deutch will divest the following interests in energy concerns in connection with his assuming the position of Director of the Office of Energy Research:

Corporation:
Montana Power Company.
Signal Oil Company.
Union Oil of California.
Bangor Hydro-Electric.
Southern Company.
Potomac Electric Power.
AMAX.
Imperial Oil Company.

We are currently examining other aspects of Mr. Deutch's financial statements in order to ascertain either the status of certain of his holdings in view of the statutory definition of "energy concern" or the appropriate disposition of some interests held by his minor children.

If confirmed, Mr. Thorne will divest the following interests in energy concerns in connection with his assuming the position of Assistant Secretary for Energy Technology:

Corporation: Dow Chemical Company.

The list of energy concerns required by Section 601(c)(1) of the Act is presently being prepared and will be published upon completion. At that time it may be determined that additional financial holdings of Mr. Deutch or Mr. Thorne may have to be divested.

If I can be of further assistance, please do not hesitate to contact me.

Sincerely,

Eric J. Fygi,
Acting General Counsel.

U.S. Department of the Interior,
Washington, D.C., November 1, 1977.
Hon. Henry M. Jackson,
U.S. Senate,
Washington, D.C.

Dear Senator Jackson: In response to the concern expressed at my hearing yesterday about stock ownership listed in my financial statement, this morning I have instructed my broker to sell my shares of The Williams Company and UGI Corporation.

When I have completely divested myself of the stock, which in the ordinary course of the market should be no more than four days, I will notify you.

Sincerely,

Walter N. Heine,
Director Designate,
Office of Surface Mining.

Mr. MAGNUSON. Mr. President, from the Committee on Commerce, Science, and Transportation, and as in executive session, I report favorably sundry nominations in the Coast Guard and the National Oceanic and Atmospheric Administration which have previously appeared in the Congressional Record and, to save the expense of printing them on the Executive Calendar, I ask unanimous consent that they lie on the Secretary's desk for the information of Senators.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

(The nominations ordered to lie on the Secretary's desk were printed in the Congressional Record of November 4 and November 22, 1977, at the end of the Senate proceedings.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. BAKER (for Mr. Hatch):

S. 2340. A bill for the relief of Rebecca Rachel Sampsel (nee Mary Jane Platero Jubay); to the Committee on the Judiciary.

By Mr. ABOUREZK:

S. 2341. A bill to provide parity to farmers and to prevent interruptions in the supply of food to American consumers; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. SASSER:

S. 2342. A bill to create a Great Smoky Mountains Wilderness Area within the Great Smoky Mountains National Park; to the Committee on Energy and Natural Resources.

By Mr. MELCHER (for himself, Mr. Abourezk, Mr. McGovern, Mr. Dole, Mr. Curtis, Mr. Hayakawa, Mr. Bellmon, Mr. Wallop, Mr. Young, Mr. Burdick, Mr. Humphrey, Mr. Anderson, Mr. Huddleston, Mr. Metcalf, Mr. McClure, Mr. Zorinsky, and Mr. Goldwater):

S. 2343. A bill to ensure the quality of imported meat; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. HUMPHREY (for himself and Mr. Anderson):

S. 2344. A bill to amend the Federal Crop Insurance Act to increase the use of Federal crop insurance by American farmers, and for other purposes; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. HUMPHREY:

S. 2345. A bill to translate into practical reality the right of all Americans who are able, willing, and seeking to work to full opportunity for useful paid employment at fair rates of compensation; to assert the responsibility of the Federal Government to use all practicable programs and policies to promote full employment, production and real income, balanced growth, adequate productivity growth, proper attention to national priorities, and reasonable price stability; to require the President each year to set forth explicit short-term and medium-term economic goals; to achieve a better integration of general and structural economic policies; and to improve the coordination of economic policymaking within the Federal Government; ordered held at the desk, by unanimous consent.

By Mr. MAGNUSON (for himself and Mr. Pearson) (by request):

S. 2346. A bill to implement the International Convention for the Prevention of Pollution From Ships, 1973, and for other purposes; to the Committee on Commerce, Science, and Transportation, and the Committee on Environment and Public Works, jointly, by unanimous consent.

By Mr. DOMENICI:

S.J. Res. 101. Joint resolution to authorize the President to issue a proclamation designating the Sunday following Fire Service Recognition Day as Memorial Sunday for firefighters who have been disabled or killed in the line of duty during the preceding year; to the Committee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. ABOUREZK:

S. 2341. A bill to provide parity to farmers and to prevent interruptions in the supply of food to American consumers; to the Committee on Agriculture, Nutrition, and Forestry.

EMERGENCY FARM ACT OF 1977

Mr. ABOUREZK. Mr. President, several months ago this body passed a piece of legislation called the Food and Agriculture Act of 1977. An entire section of that act was devoted to reaffirming the traditional U.S. Government policy of support and encouragement for the "family farm system of agriculture" in this country. To that end, an intricate web of loan floors, target price levels, disaster protection, and other means of supporting and augmenting producers' incomes was established. In so doing, this Congress recognized the present dilemma of our Nation's farmers, most of whom are not even recovering their costs of production. The agriculture committees of both houses spent many long hours in formulating this bill which they genuinely hoped would shore up the family farmer's income and slow down the alarming trend of forced farm sales.

Unfortunately, the message has been coming through loud and clear in recent weeks that the effort was not quite enough. The one who knows best just how short our relief measures have come is the farmer and, in recent weeks, he has been organizing in an attempt to stave off economic collapse. Calling itself the American Agriculture Movement, this organization has called for 100 percent parity for all agricultural products produced and consumed in the United States. Its members have promised to strike if the demands are not heard and acted upon in good faith by December 14 of this year.

Admittedly, if the record of past agricultural strikes is any indication, the prospects for achieving all of the stated objectives are slim. It seems to me, however, that much will have been achieved if the movement is able to educate the American public as to where its food dollar is going and how much it stands to lose if the present trend of family farm liquidations continues unabated.

As Americans we all too often forget that we are served by the most efficient producers of agricultural goods the world has ever seen. Disposable income spent for food in this country has declined from the 24.6 percent figure of the 1947–49 base period to less than 17 percent in 1970. Farm productivity (measured in terms of output per unit of input) skyrocketed, increasing 57 percent from the 1947–49 base to 1975. At the same time, however,, the farmer's share of the consumer's "market basket food dollar" declined from 50 percent in 1947–49 to 39 percent in 1970, while the farm retail spread increased almost 70 percent.

The inescapable conclusion offered by all of these statistics is that the American farmer has not received his fair share of the returns for the food he has produced. Today, farm income stands at 64 percent of parity, the lowest it has been since the Depression. Parity, which can be defined as the balance between the prices a farmer receives for his output and the prices that he has to pay for his inputs, has rarely been further away.

Mr. President, I am especially aware of the plight of the family farmer because my home State of South Dakota has a lot of them. The alarming thing about their present economic dilemma is that efficiency offers no escape—the depressed market prices have come about due to the oversupply of their products. They are also helpless to do anything about the skyrocketing costs of their inputs—machinery, fuel, fertilizer—and so they are being slowly squeezed out of business. The crisis is very real and it cannot be confronted by half-hearted measures. That is why I am here today to introduce a bill which would authorize the Secretary of Agriculture to institute a system of price supports for all the major crops at a level not below 100 percent parity. For each of the 1977 through 1981 crops, the Secretary shall insure, either by loans, purchases, payments, or other like measures, that producers of all the major crops will receive a return no less than that required to strike a balance with the prices he must pay for labor and equipment, necessities and comforts.

The American farmer has, through the years, been long-suffering and patient. His back is against the wall now, however, and he can be silent no longer. If we in Congress are to honor our pledge to "foster and encourage" the family farm in this country, then we can do no less than to enable our producers to make a return sufficient to remain in business.

I ask unanimous consent that the text of the bill be printed in the Record.

There being no objection, the bill was ordered to be printed in the Record, as follows:

S. 2341

Be it enacted by the Senate and House of Representatives of the United States of America in Congres assembled, That this Act may be cited as the "Emergency Farm Act of 1977."

Sec. 2. Notwithstanding any other provision of law, the Secretary of Agriculture is authorized and directed to make available through loans, purchases, payments, or other operations, price support to producers for each of the 1977 through 1981 crops of corn, cotton, peanuts, rice, tobacco, wheat, barley, oats, rye, grain sorghum, soybeans, sugar, wool, mohair, milk, and honey at a level of not less than 100 per centum of the parity price for such commodity, unless a majority of the producers of any such commodity voting in a referendum conducted by the Secretary of Agriculture vote to exempt such commodity from the provisions of this Act.

By Mr. SASSER:

S. 2342. A bill to create a Great Smoky Mountains Wilderness Area within the Great Smoky Mountains National Park; to the Committee on Energy and Natural Resources.

GREAT SMOKEY MOUNTAINS WILDERNESS ACT

Mr. SASSER. Mr. President, today I am introducing legislation to create a Great Smoky Mountains Wilderness Area within the Great Smoky Mountains National Park. Under this bill, approximately 475,000 acres of the park will be designated wilderness. The purpose of the legislation is to insure that future generations of Americans will be able to use and enjoy the grandeur of this rugged wilderness and to insure that the Tennessee and North Carolina regions surrounding the park will have a continuing economic base of support.

The bill preserves Mount LeConte Lodge and the trail shelters which now exist in the park, including the well used ones on the Appalachian Trail. Other areas, including Cades Cove, Elkmont, and the Clingman's Dome Tower, are also excluded to preserve various activities already taking place within the park boundaries.

Furthermore, the legislation insists on a fair settlement of the dispute arising from the 1943 agreement between the United States and Swain County, N.C.

It is my intention in introducing this legislation to strike an equitable balance between the needs of the regions around the Great Smoky Mountains National Park and the need to preserve the beauty and usefulness of this mountain chain which includes three of the four highest peaks in Eastern North America. The park is now the most used national park in the country. This legislation will do nothing to curtail any use presently permitted. It will preserve these mountains and valleys in their delicate, awesome condition for future generations of Americans.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 2342

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Great Smoky Mountains Wilderness Act".

SEC. 2. In accordance with section 3(c) of the Wilderness Act (78 Stat. 892; 16 U.S.C. 1132(c)), certain lands in the Great Smoky Mountains National Park, North Carolina and Tennessee, which comprise approximately 475,000 acres, and which are depicted on the map entitled "Citizens Wilderness Plan, Great Smoky Mountains National Park, North Carolina and Tennessee", and dated March 15, 1977, are hereby designated as wilderness. The map and the description of such lands shall be on file and available for public inspection in the offices of the National Park Service, Department of the Interior, and in the office of the superintendent of the Great Smoky Mountains National Park.

SEC. 3. A ten acre enclave including the Mount Le Conte Lodge is excluded from the wilderness area and is designated a potential wilderness area under the provisions of the Wilderness Act.

SEC. 4. Trail shelters in use within the Great Smoky Mountains National Park on the date of the enactment of this Act shall be excluded from the prohibitions of section 3(c) of the Wilderness Act (16 U.S.C. 1132 (c)). Such shelters shall be maintained for a period of at least fifteen years from the date of the enactment of this Act, unless the Director of the National Park Service determines that continued maintenance of the shelters is not required for the health, safety and well-being of lawful users.

SEC. 5. (a) The Secretary of the Interior and the Tennessee Valley Authority are directed to negotiate the transfer of certain legal rights and easements retained by the Authority over lands within the park, where such legal rights and easements are:

(1) inconsistent with the provisions of the Wilderness Act; or

(2) not necessary for the operation and maintenance of the Fontana Lake Dam.

(b) The tract of land formerly owned by the Tennessee Valley Authority, comprising approximately 44,000 acres, shall be designated and administered as wilderness effective on the date of the enactment of this Act.

SEC. 6. The Secretary of the Interior is directed to acquire all lands or interests in lands within the boundaries of the Great Smoky Mountains National Park within four years of the enactment of this Act. He shall allocate personnel and funds sufficient for this purpose.

SEC. 7. Within the boundaries of the wilderness designated by this Act, the Secretary of the Interior may acquire lands and interests therein by purchase, condemnation, donation, transfer from any Federal or State agency, or exchange.

SEC. 8. (a) Nothing in this Act shall be construed to affect adversely, or to authorize any Federal agency to take any action which would affect adversely, any rights or privileges, pursuant to an Agreement, dated July 30, 1943, of the Secretary of the Interior of the United States, the State of North Carolina, and the County of Swain, North Carolina, in property within the wilderness designated by this Act: *Provided, however,* That the Secretary of the Interior is directed to seek arrangements agreeable to the State of North Carolina and to the County of Swain, North Carolina, which would eliminate the need for any encroachment, pursuant to the Agreement of July 30, 1943, upon the wilderness designated by this Act.

(b) In fulfilling his duties under this section, the Secretary of the Interior shall endeavor to find an agreeable compromise which will:

(1) satisfy the intent of the Agreement relating to the County of Swain, North Carolina; and

(2) preserve the community values and the way of life of the County of Swain, North Carolina.

(c) In fulfilling his duties under this section, the Secretary of the Interior may conduct a survey of public preferences about environmental and aesthetic quality, traffic flow, growth alternatives, cultural centers, interpretive centers and other relevant matters.

SEC. 9. As soon as practicable after the date of the enactment of this Act, a map of the wilderness area and a description of its boundaries shall be filed with the Energy and Natural Resources Committee of the United States Senate and with the Interior and Insular Affairs Committee of the United States House of Representatives. Such map and description shall have the same force and effect as if included in this Act: *Provided, however,* That correction of clerical and typographical errors in the map and legal description may be made.

SEC. 10. The wilderness designated by this Act, including section 5(b), shall be known as the "Great Smoky Mountains Wilderness." It shall be administered by the Secretary of the Interior in accordance with the provisions of the Wilderness Act governing areas designated by such Act as wilderness areas, except that any reference to the effective date of the Wilderness Act shall be deemed to be a reference to the effective date of this Act, and any reference to the Secretary of Agriculture shall be deemed, where appropriate, as a reference to the Secretary of the Interior.

By Mr. MELCHER (for himself, Mr. ABOUREZK, Mr. MCGOVERN, Mr. DOLE, Mr. CURTIS, Mr. HAYAKAWA, Mr. BELLMON, Mr. WALLOP, Mr. YOUNG, Mr. BURDICK, Mr. HUMPHREY, Mr. ANDERSON, Mr. HUDDLESTON, Mr. METCALF, Mr. MCCLURE, Mr. ZORINSKY, and Mr. GOLDWATER):

S. 2343. A bill to insure the quality of imported meat; to the Committee on Agriculture, Nutrition, and Forestry.

Mr. MELCHER. Mr. President, I have just introduced a bill on behalf of myself and Mr. ABOUREZK, Mr. MCGOVERN, Mr. DOLE, Mr. CURTIS, Mr. HAYAKAWA, Mr. BELLMON, Mr. WALLOP, Mr. YOUNG, Mr. BURDICK, Mr. HUMPHREY, Mr. ANDERSON, Mr. HUDDLESTON, Mr. METCALF, Mr. MCCLURE, Mr. ZORINSKY, and Mr. GOLDWATER, amending our meat and poultry inspection laws to require that the Department of Agriculture certify to the President and Congress at least quarterly that U.S. inspectors have checked during the quarter on each foreign packing plant shipping meat products to the United States.

I was advised late last week that none of our "foreign review officers," or foreign plant inspectors who travel abroad, were being allowed to travel and had not been since August. There are 10 of them, including 3 supervisors, and it meant that many foreign plants shipping us meat went unvisited and uninspected by U.S. personnel.

Since I invited cosponsors on the bill, I understand a travel authorization (effective December 1 and retroactive to October 1), has been signed and the review officers have suddenly been "ungrounded." However, in view of the 3-month lapse in inspection service that has already occurred, I still feel strongly that the bill should be enacted to make absolutely positive there are no more lapses.

At best, our inspection of foreign meat and products coming into the United States is wholly inadequate. Less than 1 percent of it is examined by qualified U.S. inspectors at ports of entry. We put 99.5 percent of our reliance on the foreign packers meeting health standards and sanitary requirements equal to those required in the United States. That means that we are relying on visits by our inspectors to some foreign packing plants only once a year to guarantee us that day-by-day-by-day those foreign packers are not sneaking through sick animals, that they are not neglecting to scour their plants and machinery so decaying residues with bacteria build-ups cannot contaminate meat and that they are shipping us only clean and healthy meat.

A few short years ago our General Accounting Office sent investigators with some of our foreign review officers to look at plants abroad and a third of all of them were then found in violation of proper sanitary and inspection requirements.

If that could happen when the plants knew that the inspectors were in their country—we notify foreign governments when our people are coming in—one can well imagine how relaxed standards must have been when it is known that U.S. review officers in the United States have been grounded indefinitely.

Meat inspection was instituted in the United States at the turn of the century after revelation of the most revolting conditions in packing plants in Upton Sinclair's book, "The Jungle."

We instituted poultry inspection in the fifties after congressional hearings revealed almost equally revolting conditions in that industry—sick chickens being rushed to slaughter before they died, some probably after death, rodents, insects, and unbelievably insanitary practices being tolerated.

In both instances, "quality control" by some of the packers and processors was shown to be nothing short of abominable.

We currently maintain pre-mortem inspection to prevent sick animals from being slaughtered and put into the food chain, and post mortem inspection to assure that diseased animals—as revealed by examination of the carcasses and the organs of the animal—are not allowed in the food chain. The same inspectors make sure that sanitary conditions are maintained and that the blood and entrails of yesterday's pack do not contaminate the meat being processed today, or tomorrow.

I opposed the separation of meat and poultry inspection from the Animal and Plant Health Inspection Service earlier this year, Mr. President, because I feared that the effectiveness of our animal disease control programs would suffer and the quality of our inspection service—including inspection by personnel qualified to identify diseases and diseased carcasses—might suffer.

It has already suffered. Obviously, the importance of maintaining some degree of vigilance over foreign packing plants was downgraded when our foreign review officers were grounded. Booz-Allen has already recommended that we cut back on domestic inspection and revert to a large measure of "quality control" by packers on the domestic side—what we had when Congress decided at the turn of the century that there should be rigid meat inspection, and what it decided in the late fifties to be necessary in poultry packing plants.

The purpose of my proposed amendment to require quarterly certification of inspections abroad to Congress is to assure that foreign inspection services are maintained continuously and to bring about hearings on what is being done with and to our meat and poultry inspection services.

Even though the review officers are allowed to travel again, we need the assurance of at least quarterly inspections of each foreign meat packing plant that the measure will provide. Certainly, the Agriculture Committees of Congress should have been advised before inspection of foreign plants was so drastically reduced and we should not risk it happening again.

By Mr. HUMPHREY (for himself and Mr. ANDERSON):

S. 2344. A bill to amend the Federal Crop Insurance Act to increase the use of Federal crop insurance by American farmers, and for other purposes; to the Committee on Agriculture, Nutrition, and Forestry.

FEDERAL CROP INSURANCE OF 1977

Mr. HUMPHREY. Mr. President, today I am introducing along with Senator WENDELL ANDERSON legislation to reform and expand the Federal crop insurance program for agricultural producers.

Although our U.S. agricultural system is by far the most efficient and productive agricultural system in the world, American farmers are finding it increasingly more difficult to stay in business.

Costs of production have increased dramatically for farmers over the last few years, while grain prices have steadily dropped. Many farmers, even those with well-managed and efficient operations, have been forced to go deep into debt to pay for the machinery, seed, feed, fertilizer, pesticides, and other materials necessary to produce their crops and maintain their livestock herds.

Yet, farming is an extremely high-risk business, due to the unpredictability and sometimes harshness of the weather. A whole year's labor and a perhaps substantial capital investment can be wiped out by a single freak hailstorm, an early freeze, or any of a host of other disasters.

In fact, we have seen the occurrence over the last few years of perhaps the most devastating natural disaster—drought. Several important growing areas of the country—the Great Plains area, including my State of Minnesota, then California and the Far West, and most recently the tobacco, corn, and peanut growing areas of the Southeast—have been subject to wide-spread drought. Needless to say, thousands of farmers without irrigation facilities in these areas have been hit hard, with either production so small it was barely worth harvesting or no production at all.

As we have suffered through these droughts, we have learned that the Federal disaster programs for farmers are deficient in many areas. As Secretary of Agriculture Bob Bergland said, in testifying before the Committee on Agriculture, Nutrition, and Forestry, "the disaster programs themselves are a disaster." In short, the experiences of the last several years have convinced me that our Federal disaster assistance effort is in need of substantial reform.

Perhaps the most important disaster programs for farmers already in the high cost-of-production credit squeeze are those designed to provide compensation for losses in production due to disaster: First, the disaster payments provisions of the Food and Agriculture Act of 1977; and second, the Federal crop insurance program.

The current disaster payments program under the farm bill has been of some help to farmers hit by disaster, but it has several important flaws and, in any case, it will expire in 2 years.

Federal crop insurance has, to date, been too small to be really effective in providing substantial relief to the agricultural economy when large scale disasters, such as droughts, occur.

Too few farmers take out the insurance because: First, it is not offered in many counties; and second, where it is offered, the high cost of the premiums, in many cases, discourages participation.

However, since the disaster payments program will expire soon, I believe that we must improve the Federal crop insurance program, and make it more attractive to farmers.

Several bills have already been introduced in the Senate this Congress to reform and expand the Federal crop insurance program. These bills offer different approaches to reform of crop insurance and, as such, will enable the Senate to give thorough-going consideration to the possible alternatives when we address the issue next spring.

I am introducing this bill because it contains, I believe, another reasonable alternative, not covered by the other bills, that should be considered. I want to make it clear that I am not necessarily committed, at this point, to any specific approach. However, we must lay out all alternatives before we solicit testimony from farmers and farm groups, the administration, and others, and then act on this important legislation.

Mr. President, I ask unanimous consent that a summary of the major provisions of the bill and the text of the bill be printed in the RECORD at this point.

There being no objection, the bill and summary were ordered to be printed in the RECORD, as follows:

S. 2344

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Federal Crop Insurance Act of 1977".

FINDINGS AND PURPOSE

SEC. 2. (a) Congress hereby finds that an expanded Federal crop insurance system is necessary to—

(1) encourage United States farmers to maintain agricultural production to meet national and world food and fiber requirements, notwithstanding the ever-present threat of disastrous climatic conditions; and

(2) enable farmers, faced with sharply-increased production costs, to protect themselves against the threat of crippling financial losses due to disaster-induced damage to, or destruction of, growing crops.

(b) It is the purpose of this Act to make crop insurance under the Federal Crop Insurance Corporation available to United

States producers of wheat, feed grains, cotton, rice, soybeans, and sugarbeets and sugarcane, and to encourage substantially increased participation by the producers of such commodities in the Federal crop insurance program, and otherwise to improve the Federal crop insurance program for the benefit of all United States farmers.

CAPITAL STOCK

SEC. 3. (a) Section 504(a) of the Federal Crop Insurance Act is amended by striking out "$200,000,000" and inserting in lieu thereof "$500,000,000".

(b) The Federal Crop Insurance Corporation shall report to Congress within three years after the date of enactment of this Act on the adequacy of the capital stock of the Corporation.

COMPENSATION FOR THE BOARD OF DIRECTORS

SEC. 4. Section 505(c) of the Federal Crop Insurance Act is amended by amending the second sentence to read as follows: "The members of the Board who are not employed by the Government shall be paid such compensation for their services as directors as the Secretary of Agriculture shall determine, but such compensation shall not exceed, per day, the daily equivalent of the rate prescribed for grade GS–18 in section 5332 of title 5 of the United States Code when actually employed, and be allowed travel expenses, including per diem in lieu of subsistence, as authorized under section 5703 of title 5 of the United States Code for persons in the Government service employed intermittently.".

PERSONNEL

SEC. 5. Section 507 of the Federal Crop Insurance Act is amended by—

(1) striking out "and county crop insurance committeemen" in subsection (a);

(2) striking out all that follows "title" in subsection (b) and inserting in lieu thereof a period;

(3) striking out subsection (c) in its entirety;

(4) redesignating subsection (d) as subsection (c) and amending it to read as follows:

"(c)(1) The Corporation is authorized to contract with, and transfer funds to, other agencies and offices of the Department of Agriculture, or the county committees established pursuant to section 8(b) of the Soil Conservation and Domestic Allotment Act, for assistance in carrying out this title: *Provided*, That any employees of such other agencies and offices shall be responsible directly to the Corporation without the intervention of any intermediate office or agency.

(2) In order to facilitate the administration of the Federal crop insurance program authorized by this title and assure that producers of wheat, cotton, grain sorghum, corn, rice, barley, oats, rye, soybeans, sugarbeets, and sugarcane have reasonable access to such programs, the Secretary of Agriculture shall, to the extent practicable, make available to the Corporation the personnel and facilities of the Agricultural Stabilization and Conservation Service (or its successor agency) located in counties in which Federal crop insurance under this title is offered to producers of wheat, cotton, grain sorghum, corn, rice, barley, oats, rye, sugarbeets, or sugarcane to assist the Corporation to implement the provisions of this title, subject to the provisions of paragraph (1) of this subsection."; and

(5) redesignating subsection (e) as subsection (d).

EXPANDED CROP INSURANCE

SEC. 6. Effective beginning with the 1980 crop year, section 508 of the Federal Crop Insurance Act is amended to read as follows:

SEC. 508. To carry out the purposes of this title, the Corporation—

"(a) shall for crop year 1980 and thereafter insure producers of wheat, cotton, grain sorghum, corn, rice, barley, oats, rye, soybeans, sugarbeets, and sugarcane, wherever grown commercially, but subject to the limitations herein, and is authorized to insure producers of other agricultural commodities wherever grown commercially, subject to the limitations herein, whenever the Board determines that insurance on any such other agricultural commodity has been developed to the point that it can be offered to the producers thereof. The insurance for any commodity shall be offered under any plan or plans determined by the Board to be adapted to the commodity. Such insurance shall be against loss of the insured commodity due to one or more unavoidable causes, including drought, flood, hail, wind, frost, winterkill, lightning, fire, excessive rain, snow, wildlife, hurricane, tornado, insect infestation, plant disease, and such other unavoidable causes as may be determined by the Board: *Provided*, That, except in the case of tobacco, such insurance shall not extend beyond the period the insured commodity is in the field. Any insurance offered against loss in yield shall not cover more than 75 per centum of the average yield for a representative period of years for the insured farm, or area in which the farm is located, as determined by the Corporation on the basis of recorded or appraised yields, subject to such adjustments as may be necessary to the end that the average yield fixed for farms in the same area, which are subject to the same conditions, may be fair and just. Insurance provided under this subsection shall not cover losses due to the neglect or malfeasance of the producer, or to the failure of the producer to reseed to the same crop in areas and under circumstances where the Corporation determines it was practical to so reseed, or to the failure of the producer to follow established good farming practices. Beginning with the 1983 crop year, the Board may limit or refuse insurance on wheat, cotton, grain sorghum, corn, rice, barley, oats, rye, soybeans, sugarbeets, and sugarcane in any county or area, or on any farm, on the basis of the insurance risk involved. For each crop insured, the Corporation shall not offer insurance on any acreage not suited to the production of such crop or in any county where the planted acreage of such crop is below a minimum county acreage as established by the Corporation, except that the Corporation is authorized, if it is deemed practical to do so, to offer insurance in such county through the office serving another county that meets the minimum county acreage requirement. The Corporation shall report annually to Congress the results of its operations on each commodity insured.

"(b) is authorized to fix adequate premiums for insurance at such rates as the Board deems sufficient to cover claims for crop losses on such insurance and to establish as expeditiously as possible a reasonable reserve against unforeseen losses: *Provided*, That, for the purpose of encouraging the broadest possible participation in the crop insurance program by the producers of basic commodities, one-third of each calculated premium assessed against a participant by the Corporation for the insurance of any wheat, cotton, corn, grain sorghum, barley, rice, oats, rye, soybeans, sugarbeets, or sugarcane crop shall be paid by the Federal Government and the remaining two-thirds of each premium shall be paid by the participant. Such premiums shall be collected at such time or times, or shall be secured in such manner, as the Board may determine.

"(c) is authorized to adjust and pay claims for losses under rules prescribed by the Board. In the event that any claim for indemnity under the provisions of this title is denied by the Corporation, an action on such claim may be brought against the Corporation in the United States district court, or in any court of record of the State having general jurisdiction, sitting in the district or county in which the insured farm is located, and jurisdiction is hereby conferred upon such district courts to determine such controversies without regard to the amount in controversy: *Provided*, That no suit on such claim shall be allowed under this section unless the same shall have been brought within one year after the date when notice of denial of the claim by registered mail is sent to the claimant.

"(d) is authorized to reinsure multiple peril crop insurance risks subject to the limitations of this Act in not to exceed twenty counties.

"(e) notwithstanding any other provision of this title, is hereby authorized, under such terms and conditions as the Corporation deems consistent with sound reinsurance principles, to provide reinsurance on any crop or plantation insurance provided in Puerto Rico by a duly authorized agency of the Commonwealth of Puerto Rico: *Provided*, That no application for reinsurance authorized herein shall be approved, unless the Corporation shall have determined that the reinsurance deemed necessary is not available from recognized private sources at reasonable cost.".

COMPENSATION FOR ADVISORY COMMITTEE

SEC. 7. Section 515 of the Federal Crop Insurance Act is amended by amending the second sentence to read as follows: "The compensation of the members of such committee shall be determined by the Board, but shall not exceed, per day, the daily equivalent of the rate prescribed for Grade GS–18 in section 5332 of title 5 of the United States Code when actually employed, and shall include travel expenses, including per diem in lieu of subsistence, as authorized under section 5703 of title 5 of the United States Code for persons in the Government service employed intermittently.".

APPROPRIATIONS

SEC. 8. Section 516 of the Federal Crop Insurance Act is amended by—

(1) amending the first sentence of subsection (a) to read as follows: "There are hereby authorized to be appropriated such sums, not in excess of $12,000,000 for each fiscal year beginning after June 30, 1938, through the fiscal year ending September 30, 1978, nor in excess of $40,000,000 for the fiscal year ending September 30, 1979, nor in excess of $70,000,000 for each fiscal year thereafter, as may be necessary to cover the operating and administrative costs of the Corporation, which shall be allotted to the Corporation in such amounts and at such time or times as the Secretary of Agriculture may determine: *Provided*, That the direct cost of loss adjustors for crop inspections and loss adjustment and agents' commissions may be considered by the Corporation as being nonadministrative or nonoperating expenses."; and

(2) redesignating subsection (b) as subsection (c) and inserting a new subsection (b) as follows:

"(b) There are hereby authorized to be appropriated annually funds in such amounts as are necessary to cover the cost of crop insurance premium payments made by the Federal Government under section 508(b) of this title.".

TECHNICAL AMENDMENT

SEC. 9. Section 518 of the Federal Crop Insurance Act is amended by inserting "grain sorghum," immediately after "tame hay,".

STUDY OF PRIVATE CROP INSURANCE

SEC. 10. The Secretary of Agriculture shall perform a study to assess the potential for increasing the role of private enterprise in providing crop insurance coverage for agricultural producers. The Secretary shall complete this study and submit to Congress a report setting forth the findings of the study and recommendations for the implementation of these findings within one year after the effective date of this Act.

EFFECTIVE DATE

SEC. 11. Except or otherwise provided in section 5 of this Act, the provisions of this Act shall become effective October 1, 1978.

SUMMARY OF MAJOR PROVISIONS

The major provisions of this bill, which amends the Federal Crop Insurance Act and provides for a study of private crop insurance, are as follows:

(1) Effective for the 1980, 1981, and 1982 crop years, Federal crop insurance would become available to all producers of wheat, cotton, grain sorghum, corn, rice, barley, oats, rye, soybeans, sugarbeets, and sugarcane, wherever these commodities are grown commercially. Beginning with the 1983 crop year, the Federal Crop Insurance Corporation could limit or refuse coverage on these crops in any county or area, or on any farm, based on the insurance risk involved.

(2) The Federal Government would pay one-third of the premium cost for insurance on wheat, cotton, grain sorghum, corn, rice, barley, oats, rye, soybeans, sugarbeets, and sugarcane.

(3) Crop insurance on other commodities would remain in effect under the provisions of current law, except that the limitations on expanding the program into new counties and adding new commodities would be removed.

(4) The authorized capital stock of the Corporation would be increased from $200,000,000 to $500,000,000, and the Corporation would report to in Congress, within three years, on the adequacy of the $500,000,000 level for capital stock.

(5) The authorization for annual appropriations to cover the Corporation's administrative and operating expenses would be increased from $12,000,000 to $40,000,000 for fiscal year 1979 and $70,000,000 thereafter.

(6) The Secretary of Agriculture would be required to make available, to the extent practicable, the personnel and facilities of the Agricultural Stabilization and Conservation Service located in counties in which insurance on wheat, cotton, grain sorghum, corn, rice, barley, oats, rye, soybeans, sugarbeets, and sugarcane is offered, to assist the Corporation to implement the crop insurance program.

(7) The Secretary of Agriculture would be required to perform a study to assess the potential for increasing the role of private enterprise in providing crop insurance coverage for agricultural producers. A report setting out the findings of the study and the Secretary's recommendations for implementing the finding would be due on September 30, 1979.

(8) The provisions of the bill would become effective October 1, 1978.

By Mr. HUMPHREY:

S. 2345. A bill to translate into practical reality the right of all Americans who are able, willing, and seeking to work to full opportunity for useful paid employment at fair rates of compensation; to assert the responsibility of the Federal Government to use all practicable programs and policies to promote full employment, production and real income, balanced growth, adequate productivity growth, proper attention to national priorities, and reasonable price stability; to require the President each year to set forth explicit short-term and medium-term economic goals; to achieve a better integration of general and structural economic policies; and to improve the coordination of economic policymaking within the Federal Government; ordered held at the desk, by unanimous consent.

THE HUMPHREY-HAWKINS FULL EMPLOYMENT ACT: WHAT IT DOES AND DOES NOT DO

Mr. HUMPHREY. Mr. President, I would like to present to my colleagues for their consideration, the revised Full Employment and Balanced Growth Act of 1977, the so-called Humphrey-Hawkins bill. This legislation, which has now been fully endorsed by the Carter administration and a broad coalition of community, labor, church, civil rights, farm and small business groups, is the product of years of study, hearings and debate and months of careful discussion with the Carter administration.

The sponsors and supporters of the Humphrey-Hawkins bill are very pleased with the revised version of it and are hopeful that Congress will act favorably on it early next year.

A great deal has changed in the 30 years that have passed since the Employment Act of 1946 was enacted as the basic economic policy law of the land. The time has come to recognize the changes that have occurred and the experience we have gained in the last 30 years by enacting the Full Employment and Balanced Growth Act of 1977.

Since announcing agreement on the revised Humphrey-Hawkins bill by the sponsors and the White House on November 14, a number of comments and analyses of it have appeared in the press. Some of these commentaries have been based on a thorough reading of the bill and careful consideration of its implications. Some commentaries, on the other hand, appear to have been written prior to a careful reading or without objective analysis of it. Those that are most disconcerting have described the bill as an empty promise or meaningless and, at the same time, presented a list of warnings of its potentially significant impact on the economy. Both of these conflicting claims cannot be correct, and in my opinion and that of the administration and the coalition of supporting organizations, neither conclusion has merit.

In the interest of providing each of my colleagues with the opportunity to analyze this proposal conscientiously and objectively, the complete revised bill will follow my remarks. I am also taking this opportunity to describe what the Humphrey-Hawkins bill will and will not do.

Mr. President, in recent years, tragically high unemployment has sapped the great strength of our Nation, insulted the dignity of millions of American workers and squandered our most important resource, the talent and energy of American workers. Moreover, our failure to keep unemployment even at a 4-percent rate has cost America over $600 billion in lost production and lost income in the 1970's. This represents a loss of about $12,000 during the past 7 years to the typical American family of four. We cannot permit this wasting of America and Americans to continue.

The Humphrey-Hawkins bill is not a panacea for an ailing economy. It is no miracle cure. However, I am convinced that the principles, commitments, policies, and processes that it establishes will help immeasurably in moving our Nation toward a new era of full employment, vigorous economic growth, and relatively stable prices.

The purpose of this legislation is to establish an orderly procedure through which national economic goals and policies can be rationally formulated. Once enacted, it would hold Congress and the President accountable in law, for the first time, for the achievement of these specific economic goals.

If we follow the procedures and live up to the commitment of the Humphrey-Hawkins bill, we can break away from our habitual bits and pieces approach and responses that are too little and too late to restrain an economy running down hill.

Mr. President, to help clarify the understanding of my colleagues regarding the revised Full Employment and Balanced Growth Act, I wish to present the following brief list of what the legislation does and does not do.

The bill would:

Affirm in law, for the first time, the right of every American willing and able to work to useful employment paying decent wages;

Commit the Federal Government to the goal of reducing overall unemployment to 4 percent—3 percent for workers 20 years old and older—within 5 years following enactment and to further reduce unemployment thereafter;

Require the President to annually propose to Congress the short- and medium-term employment, production, and real income goals, together with the comprehensive, coordinated fiscal and monetary policy and program mix aimed at achieving these objectives within the framework of the 5-year unemployment goal of the bill;

Require the Federal Reserve to report annually its intended monetary policy for the years ahead and estimate its impact on the numerical economic goals presented by the President;

Place first emphasis on creating and sustaining the kind of economic climate that will promote maximum activity and job opportunities in the private sector;

State a clear prohibition against interference with private business activity;

Recognize, in law, that unemployment and inflation feed upon each other and that, as a result, methods must be used to reach our goals that reinforce their achievement and do not sacrifice progress on one in the name of achieving the other;

Commit the Government to achieve reasonable price stability as rapidly as possible and call for the use of effective anti-inflation programs designed to monitor prices, stockpile commodities in short supply, encourage increased productivity on the part of both management and labor, enforce—and when necessary—strengthen antitrust laws, and remove or modify counterproductive Government regulations;

Temporarily utilize existing public works, employment and job training programs to fill the gap between private sector employment and established employment targets;

Require the President to propose to Congress new employment programs, if, no sooner than 2 years following enactment, he finds this necessary to reach the 5-year employment goal;

Provide needed flexibility by allowing the President, no sooner than the third year following enactment and subject to congressional approval, to propose modification of the 5-year employment goal in the event that unforeseen circumstances, in his judgment, make such action unavoidable.

Require that the Federal budget be directed toward the achievement of the economic goals provided under the bill and be fully supportive of these goals.

The revised Full Employment and Balanced Growth Act does not:

Require creation of massive new public employment programs;

Dictate to the President and Congress the kinds of policies and programs, nor the mix of such policies and programs, to achieve the purposes of the legislation;

Call for any expansion of government bureaucracy.

Mr. President, to one degree or another, at one time or another, both the administration and Congress have used or tried to use many of the policy and program tools on which the revised Full Employment and Balanced Growth Act relies. However, these efforts have most often been initiated as separate actions, isolated from each other. Decisions were made without an overall understanding of the condition of the economy, how different programs relate to each other or of their collective impact on the economy as a whole. As a result, improvements have often been temporary and of limited impact.

Now, with the Full Employment and Balanced Growth Act, we will have the framework and the procedures to comprehensively assess all the components of the economy and to design policy and program responses so that all the components simultaneously contribute to the whole. This is the fundamental function of the legislation. It does not invent economic ideology or policies or programs. Rather, it provides government with a way of taking these elements, many of which are well known to all of us, and shaping them into a coordinated campaign to achieve and sustain full employment and stable growth.

All of the essential principles, procedures, policy commitments, and goals of the Full Employment and Balanced Growth Act have been retained in the revised version of the legislation. When enacted, the Humphrey-Hawkins bill will be the ambitious, achievable, and binding commitment by our Government to move our economy as quickly as possible to full employment. The bill is as tough as is reasonable to require in a measure designed to be a long-term guide to national economic policymaking.

And it will create the political climate in which the bold and creative initiatives essential to fulfilling these commitments will be undertaken.

Widespread continued and renewed support for the revised bill is evidenced by the forceful public statement of support issued by Mrs. Coretta Scott King and Murray Finley, as cochairpersons of the Full Employment Action Council, representing 32 diverse organizations committed to achieving full employment. Growing support in other quarters, including the business community, is also indicated by editorials and news analyses in some of the Nation's leading publications.

In some instances these comments observe that although still effective, the bill has been weakened. I do not in any way accept this qualification. Rather, the legislation has been streamlined, pared down to its essentials and made more workable.

Mr. President, with this thought in mind, I ask unanimous consent that the statement, on behalf of the Full Employment Action Council, supporting the Full Employment and Balanced Growth Act, be printed in the RECORD, along with the revised bill itself and a brief summary of it, as well as editorial commentaries appearing in the Washington Post on November 17 and December 4, the November 28 issue of Business Week, The Christian Science Monitor of November 16, and the Washington Star of November 21.

There being no objection, the bill and material were ordered to be printed in the RECORD, as follows:

S. 2345

Be it enacted by the Senate and House of Representatives of the United States of America in Congress Assembled, That this Act and the following table of contents may be cited as the "Full Employment and Balanced Growth Act of 1977."

TABLE OF CONTENTS

Sec. 1. Title.
Sec. 2. General findings.

TITLE I—ESTABLISHMENT OF GOALS AND GENERAL ECONOMIC POLICIES

Sec. 101. Statement of purpose.
Sec. 102. Declaration of policy.
Sec. 103. Economic Report of the President and short-term economic goals and policies.
Sec. 104. Full employment and balanced growth: medium-term economic goals and policies.
Sec. 105. Provisions applicable to short-term and medium-term goals.
Sec. 106. National priority policies and programs required for full employment and balanced growth.
Sec. 107. The President's budget.
Sec. 108. Monetary policy.
Sec. 109. Overcoming inflation.
Sec. 110. Council of Economic Advisers.
Sec. 111. Advisory Board or Boards.

TITLE II—STRUCTURAL POLICIES AND PROGRAMS, INCLUDING TREATMENT OF RESOURCE RESTRAINTS

Sec. 201. Statement of purpose.
Sec. 202. Countercyclical employment policies.
Sec. 203. Coordination with State and local government and private sector economic activity.
Sec. 204. Regional and structural employment policies.
Sec. 205. Youth employment policies.
Sec. 206. Job training, counseling, and reservoirs of employment projects.
Sec. 207. Capital formation—private and public.

TITLE III—POLICIES AND PROCEDURES FOR CONGRESSIONAL REVIEW

Sec. 301. Statement of purpose.
Sec. 302. Review of Economic Report by Joint Economic Committee.
Sec. 303. Exercise of rulemaking powers.
Sec. 304. Review of Economic Report by Committees on the Budget of both Houses.

TITLE IV—GENERAL PROVISIONS

Sec. 401. Nondiscrimination.
Sec. 402. Labor standards.
Sec. 403. Authorizations.

GENERAL FINDINGS

SEC. 2. (a) The Congress finds that the Nation has suffered substantial unemployment and underemployment, idleness of other productive resources, high rates of inflation, and inadequate productivity growth, over prolonged periods of time, imposing numerous economic and social costs on the Nation. Such costs include the following:

(1) The Nation is deprived of the full supply of goods and services, the full utilization of labor and capital resources, and the related increases in economic well-being that would occur under conditions of genuine full employment, production and real income, balanced growth, and reasonable price stability.

(2) Insufficient output of goods and services is available to meet pressing national priorities.

(3) Workers are deprived of the job security, income, skill development, and productivity necessary to maintain and advance their standards of living.

(4) Business and industry are deprived of the production, sales, capital flow, and productivity necessary to maintain adequate profits, undertake new investment, create jobs, and contribute to meeting society's economic needs.

(5) Unemployment exposes many families to social, psychological, and physiological costs, including disruption of family life, loss of individual dignity and self-respect, and the aggravation of physical and psychological illnesses, drug addiction, crime and social conflict.

(6) Federal, State and local government budgets are undermined by deficits due to shortfalls in tax revenues and increases in expenditures for unemployment compensation, public assistance, and other recession-related services in the areas of criminal justice, drug addiction, and physical and mental health.

(b) The Congress further finds that:

(1) High unemployment often contributes to inflation by diminishing labor training and skills, under-utilizing capital resources, reducing the rate of productivity advance, increasing unit labor costs, and reducing the general supply of goods and services and thereby generating cost-push inflation.

(2) Aggregate monetary and fiscal policies alone have been unable to achieve full employment, production, and real income, balanced growth, adequate productivity growth, proper attention to national priorities, and reasonable price stability, and therefore must be supplemented by other measures designed to serve these ends.

(3) Attainment of these objectives should be facilitated by setting explicit short-term and medium-term economic goals, and by

improved coordination among the President, the Congress, and the Federal Reserve.

(4) Increasing job opportunities and full employment would greatly contribute to the elimination of discrimination based upon sex, age, race, color, religion, national origin, and other improper factors.

(c) The Congress further finds that an effective policy to promote full employment, production and real income, balanced growth, adequate productivity growth, proper attention to national priorities, and price stability should (1) be based on the development of explicit economic goals and policies involving the President, the Congress, and the Federal Reserve, with full-use of the resources and ingenuity of the private sector of the economy, and (2) include programs specifically designed to reduce high unemployment due to recessions, and to reduce structural unemployment within regional areas and among particular labor force groups.

(d) The Congress further finds that full employment, production and real income, balanced growth, adequate productivity growth, proper attention to national priorities, and reasonable price stability are important national requirements that will promote the economic security and well-being of all our citizens.

TITLE I—ESTABLISHMENT OF GOALS AND GENERAL ECONOMIC POLICIES

STATEMENT OF PURPOSE

SEC. 101. It is the purpose of this title to declare the general policies of this Act; to provide an open process under which economic goals and policies are proposed, reviewed, and established; to provide for yearly review of national economic policies to ensure their consistency with these goals to the maximum extent possible; and generally to strengthen and supplement the purposes and policies of the Employment Act of 1946.

DECLARATION OF POLICY

SEC. 102. Section 2 of the Employment Act of 1946 is amended to read as follows:

"SEC. 2. (a) The Congress hereby declares that it is the continuing policy and responsibility of the Federal Government to use all practicable means, consistent with its needs and obligations and other essential national policies, and with the assistance and cooperation of industry, agriculture, labor, and State and local governments, to coordinate and utilize all its plans, functions, and resources for the purpose of creating and maintaining, in a manner calculated to foster and promote free competitive enterprise and the general welfare, conditions which promote useful employment opportunities, including self-employment, for those able, willing, and seeking to work, and promote full employment, production and real income, balanced, adequate productivity growth, proper attention to national priority needs, and reasonably stable prices as provided for in Section 5(b) of this Act.

"(b) The Congress further declares and establishes as a national goal the fulfillment of the right of all Americans able, willing, and seeking to work to full opportunities for useful paid employment at fair rates of compensation.

"(c) The Congress further declares that inflation is a major national problem requiring improved government policies relating to food, energy, improved fiscal and monetary management, the reform of outmoded government rules and regulations, the correction of structural defects in the economy that prevent or seriously impede competition in private markets, and other measures.

"(d) The Congress further declares that it is the purpose of the Full Employment and Balanced Growth Act of 1977 to improve the coordination and integration of the policies and programs of the Federal Government toward achievement of the objectives of such Act through better management, increased efficiency, and attention to long-range as well as short-range problems.

"(e) The Congress further declares that, although it is the purpose under the Full Employment and Balanced Growth Act of 1977 to seek diligently and to encourage the voluntary cooperation of the private sector in helping to achieve the objectives of the Act, no provisions of the Act shall be used, with respect to any portion of the private sector of the economy, to provide for Government control of production, employment, allocation of resources, or wages and prices, except to the extent authorized under other legislation.

"(f) The Congress further declares that it is the purpose of the Full Employment and Balanced Growth Act of 1977 to maximize and place primary emphasis upon the expansion of private employment, and all programs and policies under that Act shall be in accord with that purpose. Toward this end, the effort to expand jobs to the full employment level shall be in this order of priority to the extent consistent with balanced growth: (1) expansion of conventional private jobs through improved use of general economic and structural policies; (2) expansion of private employment through federal assistance in connection with the priority programs in such Act; (3) expansion of public employment other than through the provisions of Section 206 of such Act; and (4) only when recommended by the President under Section 206 of such Act and subject to the limitations therein, the creation of employment through the methods set forth in such section."

ECONOMIC REPORT OF THE PRESIDENT AND SHORT-TERM ECONOMIC GOALS AND POLICIES

SEC. 103. The heading preceding Section 3 and Section 3(a) of the Employment Act of 1946 are amended to read as follows:

"ECONOMIC REPORT OF THE PRESIDENT AND SHORT-TERM ECONOMIC GOALS AND POLICIES

"SEC. 3 (a) The President shall transmit to the Congress during the first 20 days of each regular session an economic report (hereinafter called the Economic Report), together with the annual report of the Council of Economic Advisers submitted in accordance with section 4(c)(2) of this Act, setting forth:

"(1) the current and foreseeable trends in the levels of employment, unemployment, production, real income, productivity, and prices, and a review and analysis of recent developments affecting economic trends in the United States;

"(2) annual numerical goals for five years for employment and unemployment, production, real income, and productivity. The goals for the calendar year in which the Economic Report is transmitted and for the following calendar year, designated as short-term goals, shall be consistent with achieving as rapidly as feasible the goals of full employment, production and real income, balanced growth, adequate productivity growth, and proper attention to national priorities.

"(3) the program and policies which the President deems necessary to achieve the goals of paragraph (2) of this subsection, and to achieve reasonable price stability as rapidly as feasible as provided for in Section 5(b) of this Act.

"(4) for all of the purposes of the Full Employment and Balanced Growth Act of 1977, the percentage rate of unemployment at any given time shall be the rate of unemployment as a percentage of the civilian labor force as set forth currently by the Bureau of Labor Statistics in the U.S. Department of Labor."

FULL EMPLOYMENT AND BALANCED GROWTH: MEDIUM-TERM ECONOMIC GOALS AND POLICIES

SEC. 104. The Employment Act of 1946 is amended by adding a new Section 4 as follows:

"FULL EMPLOYMENT AND BALANCED GROWTH: MEDIUM-TERM ECONOMIC GOALS AND POLICIES

"SEC. 4(a) In each Economic Report after enactment of the Full Employment and Balanced Growth Act of 1977, the President shall incorporate (as part of the five-year numerical goals in each Economic Report) medium-term annual numerical goals covering the same items and for the same purposes as the goals specified in paragraph (2) of subsection 3(a), but for the three calendar years subsequent to the two years referred to in such paragraph, and the programs and policies the President deems necessary to achieve such medium-term goals, and to achieve reasonable price stability as rapidly as feasible as provided for in Section 5(b) of this Act.

"(b) The medium-term goals in the first three Economic Reports after enactment of the Full Employment and Balanced Growth Act of 1977 shall include (as part of the five-year goals in each Economic Report) the interim numerical goal of reducing unemployment among Americans aged 20 and over in the civilian labor force to not more than 3 percent and to reduce unemployment among the entire civilian labor force aged 16 and over to not more than 4 percent within a period not extending beyond the fifth calendar year after the first such Economic Report, counting as the first calendar year the year in which such Economic Report is issued. Upon achievement of the 3 and 4 percent goals as specified above, each succeeding Economic Report shall have the goal of achieving full employment as soon as practicable and maintaining full employment after it has been reached. In the third Economic Report after enactment of the Full Employment and Balanced Growth Act of 1977, the President shall review the numerical goals and timetables for the reduction of unemployment, report to the Congress on any obstacles to their achievement, and if necessary propose corrective economic measures toward achievement of such goals and timetables: *Provided,* that beginning with such third report and in any subsequent reports, if the President finds it necessary, the President may in his or her judgment recommend modifications in the numerical goals and/or timetables for the reduction of unemployment, and the Congress may take such action as it sees fit by the method set forth in Title III of the Full Employment and Balanced Growth Act of 1977."

"(c) In moving to reduce unemployment in accord with the numerical goals and timetable as called for in subsection (b), every effort shall be made to reduce those differences between the rates of unemployment among teenagers, women, minorities, and other labor force groups and the overall rate of unemployment which stem from any improper factors, with the ultimate objective of removing such differentials to the extent possible. Insofar as these differences are due to lack of training and skills, occupational practices, and other relevant factors, the Secretary of Labor shall take such action as he or she can to achieve the objectives of this subsection; shall make studies, develop information, and make recommendations toward remedying these differences in rates of unemployment, and include these in the annual Employment and Training Report of the President; and, if deemed necessary, make recommendations to the Congress related to the objectives of this paragraph."

PROVISIONS APPLICABLE TO SHORT-TERM AND MEDIUM-TERM GOALS

SEC. 105. The Employment Act of 1946 is amended by adding a new Section 5 as follows:

"PROVISIONS APPLICABLE TO SHORT-TERM AND MEDIUM-TERM GOALS

"SEC. 5(a). To aid in determining the short-term and medium-term goals for employment, production, and real income, analysis shall be presented in the Economic Report with respect to major aspects of the appropriate composition or structure of each goal, and as to the appropriate apportionment of total national production among its major components (private investment, consumer expenditures, and public outlays) as affected by relative income flows and other factors, in order to promote balanced growth, reduce cyclical disturbances, and achieve the other purposes of the Full Employment and Balanced Growth Act of 1977.

"(b) The objective of achieving reasonable price stability as soon as feasible, as set forth in Section 3(a)(3) and Section 4(a), shall be sought by vigorous efforts through the methods set forth in Section 109 and elsewhere in the Full Employment and Balanced Growth Act of 1977, and by such other means as the President may find necessary, including recommendations to the Congress. In choosing means to achieve the goal for the reduction of unemployment and choosing means to achieve the goal of reasonable price stability, those means which are mutually reinforcing shall be used to the extent practicable."

NATIONAL PRIORITY POLICIES AND PROGRAMS REQUIRED FOR FULL EMPLOYMENT AND BALANCED GROWTH

SEC. 106. The Employment Act of 1946 is amended by adding a new Section 6 as follows:

"NATIONAL PRIORITY POLICIES AND PROGRAMS REQUIRED FOR FULL EMPLOYMENT AND BALANCED GROWTH

"SEC. 6. To contribute to the achievement of the goals under the Full Employment and Balanced Growth Act of 1977, the Economic Report shall include priority policies and programs to encourage productive nonwasteful jobs and help to reorder national priorities and employ the jobless in the production of goods and services which add to the strength of the economy, the wealth of the Nation, the well-being of the people, and the restraint of inflation. Such policies and programs shall not be set forth in the programmatic detail developed by specialized Federal agencies, and by others in the public and private sectors, but only sufficiently to furnish an integrated perspective of our needs and capabilities and as a long-run guide to relevant national economic policies and programs. The national priority policies and programs dealt with in the First Economic Report under the Full Employment and Balanced Growth Act of 1977 shall include those listed below, but in subsequent Economic Reports the President may deal with them more selectively as he or she finds desirable.

"(1) development of energy, transportation, small business, and environmental improvement;

"(2) proper attention to the needs of rural America, related to (a) nationwide food and fiber requirements and the labor force and capital needed to meet these requirements, (b) the income needs of farmers to encourage production in accord with the above requirements and moving farm families toward parity of income, (c) encouragement of supplementary nonfarm work and income for farm families, and (d) other policies and programs for rural people outside of agriculture;

"(3) the quality and quantity of health care, education and training programs, child care and other human services, and housing, essential to a full economy and moving gradually toward adequacy for all at costs within their means;

"(4) Federal aid to State and local governments, especially for public investment and unemployment related costs;

"(5) national defense and other needed international programs; and

"(6) such other priority policies and programs as the President deems appropriate."

THE PRESIDENT'S BUDGET

SEC. 107. The Employment Act of 1946 is amended by inserting a new Section 7 as follows:

"THE PRESIDENT'S BUDGET

"SEC. 7(a). The President's Budget shall recommend levels of outlays and receipts which shall be consistent with the short-term economic goals of subsection (a)(2) of Section 3.

"(b) The President's Budget shall provide five-year projections of outlays and receipts consistent with the medium-term goals of subsection (b) of Section 4.

"(c) The basic elements in the President's Budget shall be set forth briefly in each Economic Report, toward the end of making clear the relationship between the President's Budget and the goals and policies set forth in such Economic Report. Both the expenditure and the tax sides of the President's Budget, as set forth briefly in the Economic Report, shall be geared to the purposes of the Full Employment and Balanced Growth Act of 1977. The size of the President's expenditure and tax proposals, and the relationships between the two, shall be determined in a manner which pays due attention to the needs of the economy and the people in the priority areas set forth in Section 6, and the relationship between the President's expenditure and tax proposals shall be guided accordingly.

MONETARY POLICY

SEC. 108. The Employment Act of 1946 is amended by inserting a new Section 8 as follows:

"MONETARY POLICY

"SEC. 8. The Board of Governors of the Federal Reserve shall transmit to the Congress, within one month after the transmission of the Economic Report, an independent statement setting forth its intended policies for the year ahead, and their relationship to the short-term goals set forth in the Economic Report pursuant to subsection (a)(2) of Section 3. The Congress shall then take such action as it finds necessary to insure closer conformity to the purposes of the Full Employment and Balanced Growth Act of 1977.

OVERCOMING INFLATION

SEC. 109. The Employment Act of 1946 is amended by inserting a new Section 9 as follows:

"OVERCOMING INFLATION

"SEC. 9(a). The Congress hereby determines that the objective of achieving reasonable price stability as soon as feasible, as set forth in Section 3(a)(3) and Section 4(a), shall be pursued by the methods and subject to the requirements of Section 5(b).

"(b) The Congress finds that, in addition to the coordinated use of fiscal and monetary policies to combat inflation, structural measures are also needed. The President shall initiate as appropriate, including recommendations to the Congress where necessary, and included within the Economic Report to the extent practicable without excessive delay, structural policies to reduce the rate of inflation, embracing but not necessarily limited to:

"(1) an effective information system to monitor and analyze inflationary trends in individual economic sectors, so that the President and Congress can be alerted to developing inflation problems and bottlenecks;

"(2) programs and policies for increasing the supply of goods, services, labor, and capital in tight markets, with particular emphasis on food, energy, and critical industrial materials;

"(3) the establishment of stockpiles of agricultural commodities and other critical materials to help stabilize prices, meet emergency needs, and promote adequate income to producers;

"(4) encouragement to labor and management to increase productivity within the national framework of full employment through voluntary arrangements in industries and economic sectors;

"(5) recommendations to strengthen and enforce the antitrust laws and such other recommendations as are necessary to increase competition in the private sector;

"(6) removal or proper modification of such Government restrictions and regulations as add unnecessarily to inflationary costs;

"(7) such other administrative actions and recommendations for legislation as the President deems desirable, to promote reasonable price stability."

COUNCIL OF ECONOMIC ADVISERS

SEC. 110. (a) The second sentence of Section 4(a) of the Employment Act of 1946 is amended by inserting "full" immediately after "promote."

(b) Section 4(c)(4) of such Act is amended by inserting "full" immediately after "maintain."

(c)(1) Section 4(e)(1) of such Act is amended by inserting immediately before the semicolon a comma and the following: "and shall consult with the Board or Boards established under Section 11."

(2) Section 4(e) of such Act is amended by striking out the period at the end of paragraph (2) and inserting in lieu thereof a semicolon, and by adding after such paragraph (2) the following:

"(3) In its work under this Act and the Full Employment and Balanced Growth Act of 1977, the Council is authorized and directed to seek and obtain the cooperation of the various executive and independent agencies in the development of specialized studies essential to its responsibilities."

ADVISORY BOARD OR BOARDS

SEC. 111. (a) Sections 4 and 5 of the Employment Act of 1946 are renumbered Sections 12 and 13.

(b) The Employment Act of 1946 is amended by adding a new Section 11 as follows:

"ADVISORY BOARD OR BOARDS

"SEC. 11. (a) The President shall establish, in not less than three months prior to the first Economic Report under the Full Employment and Balanced Growth Act of 1977, an advisory board or boards to advise and consult with one or all of the following periodically at reasonable periods of time as they, respectively, determine: The President, the Council of Economic Advisers, and such other departments and agencies of the Executive Branch of the Government as the President shall determine. Such advisory board or boards shall include appropriate representation of labor, industry, agriculture, consumers, State and local officials, and the public at large, and shall advise and consult with respect to matters related to the Full Employment and Balanced Growth Act of 1977 and other appropriate matters related to national economic programs and policies. The President shall take the steps necessary to provide appropriate compensation to the members of such advisory board or boards.

TITLE II—STRUCTURAL ECONOMIC POLICIES AND PROGRAMS, INCLUDING TREATMENT OF RESOURCE RESTRAINTS

STATEMENT OF PURPOSE

SEC. 201. The Congress recognizes that general economic policies alone have been unable to achieve the goals set forth in this Act related to full employment, production and real income, balanced growth, adequate growth in productivity, proper attention to national priorities, and achievement of reasonable price stability as provided for in Section 5(b) of the Employment Act of 1946. It is therefore the purpose of this Title to require the President to initiate as he or she deems appropriate, with recommendations to the Congress where necessary, supplementary programs and policies to the extent that he or she finds such action necessary to help achieve these goals, including the goals and timetables for the reduction of unemployment. Insofar as feasible without undue delay, any policies and programs so recommended shall be included in the Economic Report.

COUNTERCYCLICAL EMPLOYMENT POLICIES

SEC. 202. (a) Any countercyclical efforts undertaken to aid in achieving the purposes of section 201 shall consider for inclusion the following programmatic entities: accelerated public works, including the development of standby public works projects; countercyclical public service employment; State and local countercyclical grant programs as specified in section 203; the levels and duration of unemployment insurance; skill training in both the private and public sectors, both as a general remedy and as a supplement to unemployment insurance; youth employment programs as specified in section 205; community development programs to provide employment in activities of value to the States, local communities (including rural areas), and the Nation; and augmentation of other employment and manpower programs which would help to reduce high levels of unemployment arising from cyclical causes.

(b) In any countercyclical efforts undertaken, the President shall consider a triggering mechanism which will implement the program during a period of rising unemployment and phase out the program when unemployment is appropriately reduced, and incorporate effective means to facilitate individuals assisted under programs developed pursuant to this section to return promptly to regular private and public employment as the economy recovers.

COORDINATION WITH STATE AND LOCAL GOVERNMENT AND PRIVATE SECTOR ECONOMIC ACTIVITY

SEC. 203. (a) As an integral part of any countercyclical employment policies undertaken in accord with section 202, the President shall to the extent he or she deems necessary set forth programs and policies, including recommended legislation where needed, to facilitate harmonious economic action among the Federal Government, regions, States and localities, and the private sector to promote achievement of the goals of this Act and an economic environment in which State and local governments and private sector economic activity and employment will prosper and essential services will be maintained.

(b) In any efforts under this section, the President shall endeavor to meet criteria that establish programs which are funded to take account of the fiscal needs and budget conditions of the respective States and localities and their own efforts, with special attention to the rates of unemployment in these States and localities.

REGIONAL AND STRUCTURAL EMPLOYMENT POLICIES

SEC. 204. To the extent deemed appropriate by the President in fulfillment of the purposes of section 201, the President shall initiate, and recommend legislation to the Congress if necessary, regional and structural policies and programs. In formulating the regional components of any such programs, the President, to the extent he or she deems it desirable, shall encourage new private sector production and employment to locate within depressed localities and regions with substantial unemployment. Any regional employment proposal of the President shall also include an analysis of the extent to which Federal Government tax, expenditure, and employment policies have influenced the movement of people, jobs, industry from chronic high unemployment regions and areas, and proposals designed to correct Federal policies that have an adverse economic impact upon such regions and areas.

YOUTH EMPLOYMENT POLICIES

SEC. 205. (a) The Congress finds and declares that serious unemployment and economic disadvantage of a unique nature exist among youths even under generally favorable economic conditions; that this group constitutes a substantial portion of the Nation's unemployment, and that this significantly contributes to crime, drug addiction, and other social and economic problems; and that many youths have special employment needs and problems which, if not promptly addressed, will substantially contribute to more severe unemployment problems in the long run.

(b) To the extent deemed necessary in fulfillment of the purposes of this Act, the President shall improve and expand existing youth employment programs, recommending legislation where required. In formulating any such program, the President shall include provisions designed to fully coordinate youth employment activities with other employment and manpower programs; develop a smoother transition from school to work; prepare disadvantaged and other youths with employability handicaps for regular self-sustaining employment; and develop realistic methods for combining training with work.

JOB TRAINING, COUNSELING AND RESERVOIRS OF EMPLOYMENT PROJECTS

SEC. 206. (a) Further to promote achievement of full employment under this Act, the President through the Secretary of Labor shall develop policies, procedures, and programs to provide employment opportunities to Americans aged 16, and over in the civilian labor force able, willing, and seeking to work but who, despite serious efforts to obtain employment, remain unemployed.

(b) In meeting the responsibilities to provide job opportunities under subsection (a) and after full utilization of the Comprehensive Employment and Training Act of 1973 and other relevant provisions of law, the Secretary of Labor shall, as appropriate—

(1) assure that counseling, training, and other support activities necessary to prepare persons willing and seeking work for employment under relevant provisions of law including the Comprehensive Employment and Training Act of 1973 (including use of section 110 of such Act when necessary); and

(2) refer persons able, willing, and seeking work to job opportunities in the private and public sectors through the existing public employment placement facilities and through the United States Employment Service, including job opportunities in any positions created pursuant to sections 202, 204, and 205 of this Act.

(c) Only to the extent that Americans aged 16 and over and able, willing, and seeking work are not in the judgment of the President cannot be provided with private job opportunities nor provided with job opportunities under other programs and actions in being, in accord with the goals and timetables set forth in this Act and/or the Employment Act of 1946, the President shall establish reservoirs of public employment and private nonprofit employment projects, to be approved by the Secretary of Labor, in the form of expansion of CETA and other existing employment and training projects and/or through such new programs as are determined by the President to be needed and which the Congress authorizes and provides funds for. Such new programs as require authorizations under this Act shall not be put into operation less than two years after the enactment of this Act, nor without a finding by the President, transmitted to the Congress, that other means of employment are not yielding enough jobs to be consistent with attainment of the goals and timetables for the reduction of unemployment set forth in this Act. The Congress hereby establishes the policy that such new programs for reservoir projects shall be so designated as not to draw any workers from private employment to the reservoir projects thereunder. The jobs under such new program reservoir projects shall be useful and productive jobs. Nonetheless, such jobs shall be mainly in the lower ranges of skills and pay, and toward this end the number of reservoir jobs under such new programs shall, to the extent practicable, be maximized in relationship to the appropriations provided for such jobs. The projects under this subsection relating to such new programs shall be phased in by the President as necessary, in conjunction with the employment goals under Sections 3(a)(2) and 4(b) of the Employment Act of 1946.

(d) The Secretary, in carrying out the provisions of this section, shall establish such regulations as he or she deems necessary. Such regulations shall include provisions for—

(1) an initial determination of the job seekers' ability to be employed at certain types and duration of work, so that he or she may be appropriately referred to jobs, training, counseling, and other supportive services;

(2) compliance with the nondiscrimination provisions of this Act in accordance with Section 401;

(3) appropriate eligibility criteria to determine the order of priority of access of any person to any new program under subsection (c) requiring authorization by the Congress, including but not necessarily limited to such criteria as household income, duration of unemployment (not less than five weeks), and the number of people economically dependent upon such person; and denial of access to any person refusing to accept or hold a job other than a job under subsection (c) except for good cause as determined by the Secretary of Labor, including refusal to accept or hold a job subject to reference under subsection (b) paragraph (2), in order to seek a reservoir project job under subsection (c); and

(4) such administrative appeal procedures as may be appropriate to review the initial determination of the abilities of persons willing, able, and seeking to work under clause (1) of this subsection and the employment need and eligibility under clause (3) of this subsection.

CAPITAL FORMATION—PRIVATE AND PUBLIC

SEC. 207 (a). The Congress finds that:

(1) promotion of full employment and balanced growth is in itself a principal ave-

nue to high and sustained rates of capital formation;

(2) high rates of capital formation are necessary to insure adequate rates of capacity expansion and productivity growth;

(3) an important goal of national policy shall be to remove obstacles to the free flow of resources into new investment; and

(4) while private business firms are, and should continue to be, the major source of investment, the investment activities of the Federal, State, and local governments play an important role in affecting the level of output, employment, and productivity and in achieving other national purposes.

(b) The Economic Report shall, as appropriate, review and assess existing Federal Government programs and policies which affect business investment decisions, including, but not necessarily limited to, the relevant aspects of the tax code, Federal regulatory policy, international trade policy, and Federal support for research, development, and diffusion of new technologies. In addition, the Economic Report shall assess the effect of the overall economic policy environment and the rate of inflation on business investment. The President shall recommend, as appropriate, new programs or modifications to improve existing programs concerned with private capital formation.

(c) The Economic Report shall review and assess, to the degree appropriate, Federal policies and programs which directly, or through grants-in-aid to State and local governments, or indirectly through other means, affect the adequacy, composition and effectiveness of public investments, as a means of achieving the goals of this Act. The President shall recommend, as appropriate, new programs and policies or modifications to improve existing Federal programs affecting public investment.

TITLE III—POLICIES AND PROCEDURES FOR CONGRESSIONAL REVIEW

STATEMENT OF PURPOSE

SEC. 301. (a) The purposes of this title are to establish procedures for congressional review and action with respect to the Economic Report, the report of the Board of Governors of the Federal Reserve System, and the other policies and provisions of this Act and the Employment Act of 1946.

(b) To provide for comprehensive national policies to meet the objectives of this Act and the Employment Act of 1946, and to provide the Congress with guidance on these matters, the appropriate committees of the Congress shall review and revise, to the extent deemed desirable, the economic goals, priorities, policies, and programs proposed under such Acts by the President and the Board of Governors of the Federal Reserve System. Furthermore, the Congress shall consider the implications of the short-term goals and related policies for the Concurrent Resolutions required under the Congressional Budget Act of 1974. The Congress shall initiate or develop such legislation as it deems necessary to implement these proposals and objectives, after such modification in such proposals as it deems desirable. Nothing in this Act shall be construed to prevent the Congress or any of its committees from considering or initiating at any time action to implement this Act.

REVIEW OF ECONOMIC REPORT BY JOINT ECONOMIC COMMITTEE

SEC. 302. (a) In conjunction with its review of the Economic Report, and the holding of hearings on the Economic Report as required under the Employment Act of 1946, the Joint Economic Committee shall review and analyze the policies and programs recommended by the President and the short-term and medium-term goals for employment, production and purchasing power under Sections 3(a)(2) and Section 4(b) of the Employment Act of 1946.

(b) The Joint Economic Committee shall hold hearings on the Economic Report for the purpose of receiving testimony from Members of the Congress, appropriate representatives of Federal departments and agencies, such representatives of the general public and interested groups, and such others as the joint committee deems advisable. The joint committee shall also consider the comments and views on the Economic Report which are received from State and local officials.

(c) Within thirty days after receipt by the Congress of the Economic Report, each standing committee of the Senate and the House of Representatives and each joint committee of the Congress shall submit to the Joint Economic Committee a report containing its views and recommendations with respect to aspects of the Economic Report which relate to their respective jurisdictions.

(d) Not later than ninety days after the submission of the Economic Report to the Congress, the members of the Joint Economic Committee who are Members of the House of Representatives shall report to the House, and the members of the joint committee who are Members of the Senate shall report to the Senate, a concurrent resolution which shall state in substance that the Congress approves or disapproves in whole or in part the programs, policies, and goals in the Economic Report, and which may contain such alternatives to, modifications of, or additions to the Economic Report as the joint committee deems appropriate and in accord with the purposes of this Act and the Employment Act of 1946. The report accompanying such concurrent resolution shall include findings and recommendations of the joint committee with respect to each of the main recommendations contained in the Economic Report.

(e)(1) When a concurrent resolution referred to in subsection (d) has been reported to the House of Representatives it shall at any time thereafter be in order (even though a previous motion to the same effect has been disagreed to) to move to proceed to the consideration of the concurrent resolution. The motion shall be highly privileged and not debatable. An amendment to the motion shall not be in order, nor shall it be in order to move to reconsider the vote by which the motion is agreed to or disagreed to.

(2) General debate on any such concurrent resolution in the House of Representatives shall be in the Committee of the Whole House on the State of the Union, and shall be limited to not more than ten hours, which shall be divided equally between those favoring and those opposing the concurrent resolution. A motion further to limit debate shall not be debatable.

(3) Except to the extent specifically provided in the preceding provisions of this subsection, consideration in the House of Representatives of any such concurrent resolution and amendments thereto (or any conference report thereon) shall be governed by the Rules of the House of Representatives applicable to other bills and resolutions, amendments, and conference reports in similar circumstance.

(f)(1) Debate in the Senate on a concurrent resolution referred to in subsection (d), and all amendments thereto and debatable motions and appeals in connection therewith, shall be limited to not more than ten hours. The time shall be equally divided between, and controlled by, the majority leader and the minority leader or their designees.

(2) Debate in the Senate on any amendment to any such concurrent resolution shall be limited to two hours, to be equally divided between, and controlled by, the mover and the manager of the concurrent resolution. Debate on any amendment to an amendment, and debate on any debatable motion or appeal shall be limited to one hour, to be equally divided between, and controlled by, the mover and the manager of the concurrent resolution, except that in the event the manager of the concurrent resolution is in favor of any such amendment, motion, or appeal, the time in opposition thereto shall be controlled by the minority leader or his designee. No amendment that is not germain to the provisions of the concurrent resolution shall be received. Such leaders, or either of them, may, from the time under their control on the passage of the concurrent resolution, allot additional time to any Senator during the consideration of any amendment, debatable motion, or appeal.

(3) A motion in the Senate to further limit debate is not debatable. A motion to recommit (except a motion to recommit with instructions to report back within a specified number of days, not to exceed three, not counting any day on which the Senate is not in session) is not in order. Debate on any such motion to recommit shall be limited to one hour, to be equally divided between, and controlled by, the mover and the manager of the concurrent resolution.

(4) The conference report on any such concurrent resolution shall be in order in the Senate at any time after the third day (excluding Saturdays, Sundays, and legal holidays) following the day on which such a conference report is reported and is available to Members of the Senate. A motion to proceed to the consideration of the conference report may be made even though a previous motion to the same effect has been disagreed to.

(5) During the consideration in the Senate of the conference report on any such concurrent resolution, debate shall be limited to two hours, to be equally divided between, and controlled by, the majority leader and minority leader or their designees. Debate on any debatable motion or appeal related to the conference report shall be limited to thirty minutes, to be equally divided between, and controlled by, the mover and the manager of the conference report.

(6) Should the conference report be defeated in the Senate, debate on any request for a new conference and the appointment of conferees shall be limited to one hour to be equally divided between, and controlled by, the manager of the conference report and the minority leader or his designee, and should any motion be made to instruct the conferees before the conferees are named, debate on such motion shall be limited to thirty minutes, to be equally divided between, and controlled by, the mover and the manager of the conference report. Debate on any amendment to any such instructions shall be limited to twenty minutes, to be equally divided between, and controlled by, the mover and the manager of the conference report. In all cases when the manager of the conference report is in favor of any motion, appeal, or amendment, the time in opposition shall be under the control of the minority leader or his designee.

(7) In any case in which there are amendments in disagreement, time on each amendment in the Senate shall be limited to thirty minutes, to be equally divided between, and controlled by, the manager of the conference report and the minority leader or his designee. No amendment that is not germain to the provisions of such amendments shall be received.

(g) Upon adoption of a concurrent resolution under this section with respect to any Economic Report, the concurrent resolution shall serve as a long-term guide to the Congress with respect to legislation relevant to the goals, priorities, policies, and programs recommended in such report, as modified by the concurrent resolution. A copy of the concurrent resolution shall be transmitted to the President by the Clerk of the House of Representatives or the Secretary of the Senate, as appropriate, for such actions as the President deems appropriate.

EXERCISE OF RULEMAKING POWERS

SEC. 303. (a) The provisions of this title are enacted by the Congress—

(1) as an exercise of the rulemaking power of the House of Representatives and the Senate, respectively, and as such they shall be considered as part of the rules of each House, respectively, or of that House to which they specifically apply, and such rules shall supersede other rules only to the extent that they are inconsistent therewith; and

(2) with full recognition of the constitutional right of either House to change such rules (so far as relating to such House), at any time, in the same manner and to the same extent as in the case of any other rule of such House.

REVIEW OF ECONOMIC REPORT BY COMMITTEES ON THE BUDGET OF BOTH HOUSES

SEC. 304. Section 301(a) of the Congressional Budget Act of 1974 is amended—

(1) by striking out "and" at the end of clause (5);

(2) by redesignating clause 6 and clause 7, and

(3) by inserting after clause (5) the following new clause:

"(6) the policies, programs, and goals set forth in the Economic Report of the President, and".

(b) The second sentence of Section 301(c) of the Congressional Budget Act of 1974 is amended to read as follows: "The Joint Economic Committee shall submit to the Committees on the Budget of both Houses its recommendations as to the policies and programs and the short-term and medium-term goals set forth in the Economic Report. These recommendations shall be incorporated by the Committee on the Budget of each House in the first concurrent resolution on the budget referred to in subsection (a) reported by that committee, with modifications if necessary to fulfill the objectives of the Full Employment and Balanced Growth Act of 1977. In the event that the Committee on the Budget of either House modifies the recommendations of the Joint Economic Committee, that Budget Committees shall provide its reasons for such modification in the report accompanying the first concurrent resolution.

TITLE IV—GENERAL PROVISIONS

NONDISCRIMINATION

SEC. 401. (a) No person in the United States shall on the ground of sex, age, race, color, religion, or national origin be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity funded in whole or in part with funds made available under this Act, including membership in any structure created by this Act.

(b) Whenever the Secretary of Labor determines that a recipient of funds under this Act has failed to comply with subsection (a), or an applicable regulation, he or she shall notify the recipient of the noncompliance and shall request such recipient to secure compliance. If within a reasonable period of time, not to exceed sixty days, the recipient fails or refuses to secure compliance, the Secretary of Labor is authorized (1) to refer the matter to the Attorney General with a recommendation that an appropriate civil action be instituted, (2) to exercise the powers and functions provided by title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d), or (3) to take such other action as may be provided by law.

(c) When a matter is referred to the Attorney General pursuant to subsection (b), or whenever he or she has reason to believe that a recipient is engaged in a pattern or practice in violation of the provisions of this section, the Attorney General may bring a civil action in the appropriate United States district court for any and all appropriate relief.

(d) To assist and evaluate the enforcement of this section, and the broader equal employment opportunity policies of this Act, the Secretary of Labor shall include, in the annual Employment and Training Report of the President, a detailed analysis of the extent to which the enforcement of this section achieves affirmative action in both the quantity and quality of jobs, and for employment opportunities generally.

LABOR STANDARDS

SEC. 402. Any new programs provided for and implemented by this Act, and funded in whole or in part through this Act, shall provide that persons employed pursuant to such policies and programs are paid equal wages for equal work, and that such policies and programs create a net increase in employment through work that would not otherwise be done or are essential to fulfill national priority purposes. The President shall insure that any person employed in any such reservoir project undertaken under Section 206(c) as require new authorization by the Congress, or in any other job utilizing funds provided in whole or in part under this Act, shall be paid not less than the pay received by others performing the same type of work for the same employer, and in no case less than the minimum wage under the Fair Labor Standards Act of 1938 as amended. No person employed under Section 206(c) shall perform work of the type to which the Bacon-Davis Act, as amended (40 U.S.C. 276a–276a-5) applies. Any recommendation by the President for legislation to implement any program under this Act, requiring the use of funds under this Act, and submitted pursuant to the requirements of this Act, shall contain appropriate wage provisions based upon existing wage standard legislation.

AUTHORIZATIONS

SEC. 403. There is authorized to be appropriated such sums as may be needed to carry out the provisions of this Act. Notwithstanding any other provisions of this Act, no provision shall be construed to require expenditures in excess of amounts appropriated pursuant to this Act.

HIGHLIGHTS AND DISCUSSION OF THE MAJOR PROVISIONS OF THE FULL EMPLOYMENT AND BALANCED GROWTH ACT OF 1977 AS REVISED NOVEMBER, 1977

PREMISES

The bill is based on the commitment to translate into practical reality the right of all Americans able and willing to work to have a job paying decent wages and under decent working conditions. For the first time, that right would be affirmed in law. However, there is clearly no right to sue for legal protection of the right to a job. Further, the bill recognizes that this objective is possible only in conjunction with achieving balanced growth, full production, growing real incomes, price stability, and adequate growth of productivity. In pursuing these objectives, the conviction is expressed that policies mutually reinforcing price stability and employment are available and should be used. Additionally, monetary and fiscal policies are declared insufficient alone to achieve a healthy economy.

EMPLOYMENT, PRODUCTION, REAL INCOME, AND BALANCED GROWTH

1. Employment target: The initial interim target is an average adult—over age 19—unemployment rate of 3 percent, and overall rate of 4 percent during the fifth calendar year after passage. The President may suggest revision of this target in his third annual Economic Report after enactment, but such a change would require approval by the Congess. After reaching the interim target, the long-term objective shall be achieving and maintaining full employment as soon as practicable.

2. Other numerical objectives: Five year numerical targets shall also be set annually for production and real income.

3. Policies: Those policies which mutually reinforce employment and price stability shall be relied upon. Primary reliance is placed upon the expansion of conventional, private sector jobs, and all programs under the act shall be consistent with this purpose.

4. Job Reservoir: There is no authorization of new temporary public service employment programs to keep the economy on track. Rather, provision is made for expansion of existing programs, primarily CETA, as necessary. New programs, the bill explicitly says, will require Congressional authorization, and may be suggested as appropriate by the President. However, if we are failing to meet our unemployment goals, the President is required to expand existing job creation programs, and/or propose to Congress new programs.

5. Other employment provisions: Other provisions of the bill specifically call for intensified programmatic efforts to deal more effectively with cyclical unemployment problems, including budget problems of State and local government, regional economic development problems, youth unemployment and job training and counseling needs.

6. Labor market discrimination: The bill recognizes that the best way to obviate the effects of discrimination is to have an overall tight labor market. To the extent that differential unemployment rates result from labor market imperfections or discrimination, the Secretary of Labor shall analyze the problem, and make recommendations annually in the already existing Employment and Training Report of the President. The bill sets a commitment to reduce the differential between the unemployment rate of minorities, teenagers, women and other labor market groups, and the overall rate.

7. Labor Standards. The bill institutes the principle of equal pay for equal work for the same employer, subject to wages no lower than the minimum wage, for any employment programs authorized or expanded pursuant to the Act; again, no one so employed shall perform work for which the Bacon-Davis Act was designed.

CAPITAL FORMATION

In a new section, the President is required to identify in his Economic Report, obstacles to adequate private sector and public sector capital formation, including Federal tax and regulatory policies, and to make recommendations to remove such obstacles. This section finds that a major cause of inadequate capital investment has been slow growth and high unemployment.

PRICE STABILITY

As in past versions, a number of specific anti-inflation policies, consistent with attaining full employment, are called for in this legislation. These do *not* include wage and price controls or restraints in any form, but do include:

1. An effective information system to monitor inflation;

2. Programs for increasing supplies, with emphasis on basic commodities;

3. Agricultural stockpiles to meet emergency needs and stabilize prices, consistent with adequate income to farmers;

4. Voluntary labor-management cooperation to increase productivity and assure production incentive;

5. Strengthening and enforcement of antitrust laws; and

6. Curtailment of Government regulations and red tape which add to costs.

THE ECONOMIC POLICY PROCESS

No new bureaucracy is established in the bill. The procedure, which bears some similarity to well proven budgetary practice, is structured to enhance the expression of democratic decisions, and not to supplant the judgment of elected leaders. Clearly stated is the limitation that "no provisions of the Act shall be used, with respect to any portion of the private sector of the economy, to provide for Government control of production, employment, allocation of resources, or wages and prices, except to the extent authorized under other legislation."

The essential elements of the process are:

1. President's Economic Report: The numerical objectives, and other analysis and recommendations mentioned earlier will be included in the President's Economic Report, which already exists, and is sent to Congress every January. No separate planning document, as envisioned in earlier versions of the bill, is required. In addition to those items already mentioned which are covered, the Report will present, in outline form, budgetary policy for the next five years as it relates to the primary economic objectives of the bill.

2. Federal Reserve Report: For the first time, the Federal Reserve will have to submit to Congress within a month of the President's Economic Report, a statement of how its intended policies over the next two calendar years are likely to affect the President's stated numerical goals. Thus, we shall concentrate upon those economic objectives in which we are really interested, rather than solely on monetary policy for its own sake.

3. Congressional Review: As under present law, the President's Report shall be sent to the Joint Economic Committee which shall seek the views, through hearings, of the various legislative committees, State and local officials, and the public-at-large. Within 3 months, the Members of the JEC shall report a concurrent resolution to their respective chambers, modifying as appropriate the President's numerical targets, policies and programs, and recommending alternatives where needed. The JEC shall also report to the Budget Committees about the relation of their recommendations to the First Concurrent Budget Resolution, and that report shall become part of the Resolution with such changes as the Budget Committees deem appropriate. The Budget Committees shall provide their reasons to Congress for such changes.

4. Disposition of Concurrent Resolution: The national economic goals and policies to achieve them, as embodied in the concurrent resolution adopted by Congress, shall "serve as a longterm guide to the Congress with respect to legislation relevant to the goals, priorities, policies, and programs recommended" therein. This new process will offer moral and political discipline in policy formation which is now clearly missing.

STATEMENT OF CORETTA SCOTT KING AND MURRAY FINLEY, CHAIRPERSONS, FULL EMPLOYMENT ACTION COUNCIL, NOVEMBER 22, 1977

The Full Employment Action Council welcomes President Carter's decision to support a revised Humphrey-Hawkins bill. We regard his support as a major victory for advocates of full employment. After reviewing the agreement reached with the White House, our Board voted this legislation full support as an essential first step toward full employment. We will work actively and enthusiastically for its passage in the coming session of Congress.

This legislation, if enacted, will commit this nation and its leaders to specific targets of 3% adult unemployment and 4% overall unemployment by 1983, and mandate the President and the Congress to pursue policies to achieve these targets and genuine full employment. The labor, religious, civil rights and other organizations which make up the Council, have been advocating for several years this kind of comprehensive planning process focused on specific goals and timetables. Its passage would be a major breakthrough.

This legislation, if enacted, will put an end to the cynical process of redefining full employment as 5%, 6%, or even 7% in order to explain the failure of particular economic policies. Instead, this legislation will focus our national efforts on the achievement of specific and mandated targets for reducing unemployment. These provisions will permit us to measure year by year, the progress of particular economic policies against specific goals and will help document the need for the job creating program outlined in the legislation.

Some editorial writers and commentators have suggested that this bill is an empty promise. We could not disagree more. This revised version contains measures which are absolutely essential to any serious attempt to achieve genuine full employment. This legislation includes:

(1) Affirmation of the "right of all Americans who are able, willing and seeking to work to full opportunity for useful paid employment at fair rates of compensation," as a basis for economic policy.

(2) Comprehensive and integrated planning of our national policies and programs to achieve full employment.

(3) Specific quantitative goals and a specific timetable for the reduction of unemployment.

(4) Provisions for reducing and then removing the gap between the rates of unemployment among different sectors of the civilian labor force, i.e., teenagers, minority groups and women.

(5) Strong anti-inflation, labor standard and nondiscrimination provisions as set forth in the previous bill.

In addition, the revision retains all of the tools, including last resort public jobs programs, which were contained in the January 4, 1977 version of the bill. Instead of mandating the President to use all of these measures within a few months of enactment, it mandates him to use the various tools to the extent required to reach the mandated goals and timetable for the reduction of unemployment. While the President could select his own approaches and programs, compliance with the targets and the timetables is not optional. The President could not change the objectives nor modify the goals or timetable, without the approval of Congress.

We are practical people. We know that without the President's support, this legislation would have great difficulty in the Congress. We are pleased that President Carter has agreed to endorse a bill which we can fully support as a major step toward full employment. We would urge those who are evaluating this proposal, to compare it with what now exists, rather than naively comparing it to the ideal without regard for political or economic reality. While this revision may not be as strong as the very early versions of the bill, it would be an enormous improvement over existing law and policy, which is the fundamental test of proposed legislation.

Clearly, no one bill will "solve" our unemployment problem and its tragic human and economic costs. More work will be required to translate this legislation into meaningful jobs at decent wages for all American workers. However, without this legislation, those battles will probably remain unfought and our nation shall grow ever more accustomed to the enormous waste of our material and human resources represented by massive joblessness. Our coalition of labor, religious, civil rights and other progressive organizations is not going to rest until we have genuine full employment in this country.

Clearly, fundamental social legislation such as the Full Employment and Balanced Growth Act will generate substantial opposition. We know that from our battles on other social and moral issues. However, some of the people criticizing this agreement as merely symbolic were even more critical of earlier and stronger versions of the bill. But despite what you may read in the newspapers, no bill can be both an empty promise and terribly inflationary. No legislation can simultaneously offer no help to the jobless and cost the Treasury billions. This revised legislation is neither a meaningless gesture nor a costly, inflationary boondoggle. It establishes this country's commitment to a job for every American able and willing to work and sets in motion a comprehensive planning process. It also lays the foundation for the policies and programs needed to fulfill that commitment. Its passage would be a major step toward a more just, productive and humane America.

[From the Washington Post, Dec. 4, 1977]

THE JOBS BILL: AN "INDISPENSABLE FIRST STEP"

(By HUBERT H. HUMPHREY)

For years, Augustus Hawkins and I have argued, cajoled, conspired, introduced bills and voted for policies and programs to reduce unemployment, lower inflation and move the economy forward.

Despite our best efforts and those of many of our colleagues, unemployment has remained a staggering social and economic problem for America—a situation unworthy of an economic system that, fundamentally, has served our people well for so long.

As active participants in the fight for full employment over three decades, experience has taught us some lessons.

First, while our current jobs programs, economic-development initiatives and tax policies are important tools, they are, in and of themselves, insufficient to reach the full employment, stable price and steady growth objectives that we must achieve.

Second, uncoordinated, unfocused, on-again, off-again economic policies without specific economic goals and timetables are totally inadequate to the needs of a complex modern economy and a business community that requires more predictability on the part of government.

Third, the intentions of Congress and the President can be frustrated inadvertently and by design, unless all of our economic programs and policies, including those of the Federal Reserve, are moving together in the same direction at the same time.

Fourth, recent experience with simultaneous high inflation and high unemployment clearly indicates that traditional approaches to solving our economic problems are insufficient and that any simplistic inflation/unemployment trade-off theory certainly does not explain how our economy operates in today's world.

It is, therefore, our conclusion that something new must be tried. In our view this new beginning is a restatement of national economic policies, new principles, new goals, new commitments to those goals, and a new process through which to address them.

The revised Humphrey-Hawkins bill, fully endorsed by the President and a broad coalition of labor, minority, church, farm, small business and other groups, reflects this shared conclusion.

I believe that a careful reading of the revised bill, which unfortunately the authors of the recent Washington Post editorial did not have available when they criticized it, clearly shows that it is not the empty promise that some have proclaimed it to be.

The revised Humphreys-Hawkins bill would:

Establish as national policy the objective of reducing unemployment to four percent within not more than five years, three percent for adults in the labor force, and require that all economic policy tools be designed to reach this ambitious but reachable goal;

Require a flexible, but effective, process whereby Congress and the President would determine each year, and for a five-year period, the exact mix of programs and polices needed to reach specified economic goals;

Recognize, in law, that unemployment and inflation feed upon each other and that, as a result, methods must be used to reach our goals that reinforce their achievement and do not sacrifice progress on one in the name of achieving the other;

Affirm for the first time in law the right of every American who wants to work and is able to work to a job at decent wages;

Require the close coordination of all national economic policies, including the policies of the Federal Reserve System, directed toward achieving the goals established as national policy;

Place primary emphasis, in achieving our employment goals, on encouraging expansion of private-sector jobs;

Commit the government to achieve reasonable price stability as rapidly as possible and call for a specific set of significant anti-inflation measures to move us toward this goal;

Require the President to establish direct job-creating programs to fill any gap that may exist between the goals established under the bill and the actual performance of the economy; and

Require that the federal budget be directed toward the achievement of the economic goals provided under the bill and be fully supportive of these goals.

When enacted, the Humphrey-Hawkins bill will be an ambitious, achievable and binding commitment by our government to move our economy as quickly as possible to full employment. The bill is as tough as is reasonable to require in a measure designed to be a long-term guide to national economic policy-making. And it will create the political climate on which the bold and creative initiatives essential to fulfilling these commitments will be undertaken.

The Washington Post contends that the best we can hope for is to reduce unemployment at some point far in the future to about 5.5 per cent. Unfortunately, that assessment may be correct, unless we determine as a nation that such a concession is politically, socially and morally unacceptable and economically unnecessary. And I believe that it is.

Can we ask several million of our fellow citizens to stand quietly in line year after year without hope of even the knowledge that their government will do whatever it takes to satisfy their fundamental human right to a means of earning their livelihood? Can we ask a permanent underclass of unemployed Americans to bear the heavy burden of our nation's economic failures?

The Humphrey-Hawkins bill is a first step, but an indispensable one, toward an era of full employment, steady economic growth and reasonable price stability. It is no panacea. It is no miracle cure. With it, national economic policy will be required to be directed toward achieving specific, measurable economic goals. Without it, we are likely to continue to flounder, bounding from recession to slow growth and back to recession again, with all of the tragic waste that such a future holds for all Americans.

[From the Washington Post, Nov. 17, 1977]

What Humphrey-Hawkins Would Do

(By Hobart M. Rowen)

There is more than meets the eye in the compromise Humphrey-Hawkins "full employment" bill that President Carter—after careful negotiation by his lieutenants with congressional leaders—has decided to accept.

It is likely to pack a punch that will contradict the critics who mistakenly jumped all over it as a bit of cloudy rhetoric designed to assuage Carter's black constituency, promising much and yielding little.

Indeed, the vigor of the attack on this latest Humphrey-Hawkins version should suggest to the careful observer that the proposal would, in fact, have an important impact on the economy and the way economic policy is made.

What the bill does is to make a renewed commitment, long overdue, to a national goal of reducing unemployment (within five years of adoption) to 4 per cent. The unemployment level in October was 7 per cent.

Within that overall target, the goal is to reduce adult (20 and over) unemployment to 3 per cent. Also implied, but unstated, is another ambitious goal: a sharp cut in the staggering rate of teenage unemployment. At present it is about 17 per cent, with black teenage unemployment running well over 40 per cent.

The compromise bill does not dictate to the President the precise mix of tax, spending, monetary, manpower or other measures he must take to get unemployment down. Moreover, an order of priorities is set out for job expansion that puts the private sector first and government "last-resort jobs" at the end of the line.

But the essential point is that the President—while he could choose his approach and tactics—would be committed to attaining the full-employment goals. Complying with the targets and the timetables would not be optional.

The President would be required to spell out each year in the economic report numerical targets for employment, unemployment, production, real income and productivity. The budget message would show the expenditure and receipt projections consistent with those annual targets. And the Federal Reserve would have to tell Congress the shape of the monetary policy it intended to follow that would be compatible with the presidential targets.

Sensibly, the bill would allow the President, after two years, to recommend changes in the 4 per cent full-employment objective if economic realities dictated such a step. But the burden of proof would be on any politician who found it necessary to settle for higher unemployment.

As Vice President Mondale has been telling friends, the significance of the Humphrey-Hawkins bill is that by setting out numerical goals, it would place real pressure on any President and Congress. If there's a shortfall in performance, they'd have to explain why.

The old "interim" 4 per cent target set by the Kennedy administration has been allowed to slip backward as a consequence of economic mismanagement by Democrats and Republicans alike.

The Brookings Institution liberals say that inflationary pressures now being at 5.0 to 5.5 per cent unemployment. If that's true, then the answer to reducing the jobless rate is to relay more on specific microeconomic measures (training and education, for example) and less on the general economic tools (tax cuts and easy money).

Moreover, economists who contend that a low unemployment rate guarantees a high inflation rate are ignoring the history of the last decade, which has proved the trade-off theory a failure. We have had unacceptable inflation, ranging from the present 6 per cent level to double digits a few years ago, side by side with unemployment ranging from 7 to nearly 10 per cent.

The conventional liberals, as well as right-wingers like Herbert Stein who treat 7 per cent unemployment as the proper target for "full employment," are putting forth a dangerous dogma. And while the Humphrey-Hawkins bill is no ultimate remedy, and may require the nation to show more guts in controlling incipient inflation problems, it ought to shatter the respectability that lately has attached itself to the idea that society can tolerate high unemployment rates.

The Humphrey-Hawkins bill, as it emerges now, with Carter's cooperation, is worthwhile. Getting to 4 per cent unemployment by 1983 will surely be difficult. But the President can no longer ignore the legitimate demands of the black community for a stronger jobs commitment. The time has come to recognize, as a matter of national policy, that the U.S. economy is really two economies—one affluent white, the other poor black—and to do something about it.

[From Business Week, Nov. 28, 1977]

The Sanitizing of Humphrey-Hawkins

(By Norman Jonas)

Ten years after John Maynard Keynes wrote The General Theory of Employment, Interest and Money, Congress passed a landmark piece of legislation, the Employment Act of 1946, which required the federal government "to promote maximum employment, production, and purchasing power." At the time, few people could have realized that this law established the great English economist's ideas of demand management by government as the paradigm for economic policymaking in the U.S. for the next 30 years.

Keynes's ideas worked well for the first 20 years after World War II. But the inflation-plagued 1970s have demonstrated the perils of relying solely on fiscal and monetary policies to stimulate production and employment. The structural imperfections of both product and labor markets can thwart Keynesian prescriptions for expanding employment opportunities—or for restraining demand to check inflation.

Despite this lesson of the post-Vietnam and OPEC era, the U.S. government is about to try to breathe new life into the old employment act. The Full Employment and Balanced Growth Act of 1977, cautiously endorsed by President Carter this week, will enshrine what the 1946 act simply codified.

AMORPHOUS SUGGESTIONS

The most hopeful thing to be said about the proposal—called the Humphrey-Hawkins bill for its sponsors, Senator Hubert H. Humphrey (D-Minn.) and Representative Augustus F. Hawkins (D-Calif.)—is that its amorphous suggestions for achieving "reasonable price stability" and high employment through structural means may hold a fresh paradigm that will lead economic policy beyond Keynes.

It may be unfair to blame Carter or Congress for not developing what the economics profession itself has been unable to achieve. Since Humphrey-Hawkins authorizes no news employment programs and simply outlines a formal process for specifying national economic goals, the real test of its scope will be in any follow-on legislation.

Still, it would be a mistake to regard Humphrey-Hawkins as a legislative paper tiger. By requiring the President and the Federal Reserve Board to report each year to Congress on how their programs will lead to "full employment" by 1983, the lawmakers will create a commitment that they also must take seriously. The legislative imperative to reach the target unemployment rates of 4 percent for all workers and 3 percent for adults aged 20 and over may eventually stir up some exciting new economic ideas, but it could also pressure impatient lawmakers into pouring more money into old programs of dubious value.

Either way, Carter's acceptance of Humphrey-Hawkins, which Congress will probably pass early next year, puts the nation's unemployment problem squarely at the center of economic policymaking for years to come, and that is a victory for the liberal, black, and labor forces that have backed the bill since it was first proposed almost two years ago.

DEFERRING TO BUSINESS

The official pronouncements by the White House and the offices of Humphrey and Hawkins leave no doubt that the bill is a reluctant compromise. Humphrey-Hawkins, in deference to the fears of business, has now been sanitized of all references to economic planning, eschews government control of any part of the private economy, focuses solely on national production goals without reference to specific industries, and stresses repeatedly that job-creating programs the President may propose shall emphasize employment in the private sector. Government is only implicitly the employer of last resort at the end of a shopping list of other proposals for creating a job "reservoir."

Wages for such jobs shall be those paid by the same employer for the same work, not the potentially inflationary "prevailing wage" of an earlier Humphrey-Hawkins draft. And the bill no longer seeks "to establish the right" of all Americans to jobs, since White House lawyers feared this language would give the unemployed the right to sue the government.

In addition, the President gets an escape clause that Faust would have envied. He can propose a change in the targets after three years. As one Administration cynic puts it: "This bill requires Carter to do nothing he wasn't already planning to do to increase employment."

But there should be no doubt that Humphrey-Hawkins can and will be used to maintain pressure on Carter and future presidents to fight unemployment. The ultimate importance of this measure will depend on whether it also can drive the White House and Congress into designing programs based on that yet-to-be discovered paradigm beyond Keynes.

[From the Christian Science Monitor, Nov. 16, 1977]

THE CHRISTIAN SCIENCE MONITOR PUTTING AMERICANS TO WORK

The Humphrey-Hawkins bill endorsed by President Carter this week is a far cry from the "full employment" proposal originally put forward to lower the nation's unemployment rate and ensure every able-bodied American a job. The original 1975 version, rejected several times by Congress, raised strong objections from business and industry as being potentially too inflationary, as leaning too much toward a government-planned economy, and as potentially too expensive, costing billions of dollars in public service and other government-sponsored work programs.

Some business leaders still oppose the compromise bill and warn that the bill's goals of lowering the overall unemployment rate to 4 percent and the adult jobless rate to 3 percent by 1983 cannot be attained without increasing the inflation rate from the current 6 percent to 10 percent a year. What the compromise legislation does do, however, is recognize the tragic fact that far too many Americans are still without work. The jobless rate rose a tenth of a percentage point in October to 7 percent of the work force, and labor experts warn that, if the current pattern is allowed to persist, joblessness could become an ever bigger problem, because the economy is not producing jobs fast enough to reduce unemployment.

The current Humphrey-Hawkins bill commits the government to specific goals for lowering unemployment but does not authorize particular programs for doing so. At a time when the nation's economic recovery has been sluggish and business expansion has slowed in part because of unease among executives about many of Mr. Carter's legislative proposals, the Humphrey-Hawkins bill rightly gives the President needed flexibility in deciding how best to tackle unemployment.

The compromise bill takes into account the need for "high rates of capital formation" to assure expanded production and growth which, in turn, create more jobs.

The President's plans for a tax cut early next year for business and individuals also should help. Under Mr. Carter the federal government already is financing more jobs than at any time since the New Deal era of Franklin D. Roosevelt.

Humphrey-Hawkins commits the government to build on these initial efforts. The White House will be required to make annual reports on progress and plans for meeting the 4 percent jobless rate goal. The Federal Reserve Board would retain its independence but would be required to keep Congress posted on how its monetary policies relate to the now sometimes contradictory policies of the White House.

Recent studies have indicated that if the U.S. had maintained a 4 percent unemployment rate over the past two decades, Americans last year would have enjoyed 17 percent more goods and services than they actually had. The economy would have produced a cumulative total of $3 trillion more in gross national product. A recent Social Security Administration study indicated that a 5 percent unemployment rate over the next four years would give social security a $10 billion surplus instead of its expected $11 billion deficit.

Thus all Americans—not just the chronic unemployed—obviously have a big stake in lowering the jobless rate. Humphrey-Hawkins is an important step in the right direction.

[From the Washington Star, Nov. 21, 1977]

DO NOT UNDERRATE HUMPHREY-HAWKINS

(By Carl T. Rowan)

President Carter finally has thrown his weight behind a Humphrey-Hawkins bill that would establish a national goal of 4 per cent unemployment.

This has produced a spate of contradictory allegations that (1) the bill is so watered down as to become a meaningless Carter "con job" on the nation's unemployed, and (2) it commits the government to big spending programs that will heap heavy new inflation upon the 90 million-plus Americans who are working.

Let's talk sense about what Mr. Carter's endorsement of the Humphrey-Hawkins compromise means.

It is understandable that black Americans would be skeptical, given the fact that for a quarter-century black unemployment has averaged almost 10 per cent, a level of catastrophic depression. Who can blame them for believing that a president who has been lukewarm to Humphrey-Hawkins for a couple of years is suddenly going to pursue policies that lift blacks out of their state of chronic economic catastrophe?

Likewise, it is natural that business interests who fear inflation should throw up cries of alarm regarding any pledge to reduce unemployment to 4 per cent. Most businessmen are making money these days, and they are perfectly prepared to live with 7 or 8 per cent unemployment in the nation as a whole and 14 per cent in black America.

What Americans must understand is that the Humphrey-Hawkins bill is not a "pump-priming" measure that requires public works programs or authorizes specific job-creating programs. But it does something very important: It establishes the right of all Americans to a useful job at fair wages. We have never before had such a specific national commitment.

The compromise seems to be reasonable in that it recognizes that it may take five years for this country to reach the goal of 4 per cent joblessness.

While Humphrey-Hawkins does not commit the Congress to allocate money for specific projects, it clearly states that if there is a gap between the national goal and the performance of the national economy the president shall establish programs to close that gap.

Some critics offer the snide suggestion that Carter balked until he got Congress to give him an escape hatch—meaning he can promise the American jobless the moon until the 1980 elections are over and then change the national goals in 1981.

You ought to understand what I am sure Jimmy Carter understands: While the compromise gives the president some flexibility, he cannot change the 4 per cent goal without congressional agreement.

Furthermore, the blacks, labor leaders and other groups who agreed to this compromise are expecting a lot from Jimmy Carter even before the Humphrey-Hawkins bill is passed. They expect the budget Mr. Carter submits to Congress in January to reflect his commitment to reduce unemployment sharply.

There is something else the average American must understand, and that is that it is possible to create thousands of jobs in America without adding to inflation. The people who drafted Humphrey-Hawkins point out that billions of dollars could be invested in regional economic development programs in New England, the upper Midwest, rural areas and inner cities where there has been an outflow of people and investment without adding to national inflation.

These people make a valid point. Why give tax cuts and public works programs to Houston, where unemployment is very low, when those economic incentives are urgently needed in Worcester, Mass., or Wilkes-Barre, Pa. both suffering from high unemployment?

One problem is that our politicians have never had the guts to say that when Congress allocates funds for economic development, the pie doesn't have to be sliced evenly on a per capita basis—that it ought to be divided up on a basis of regional need. If Humphrey-Hawkins forces our politicians to show the guts to face this reality, that alone will make Humphrey-Hawkins a boon to the nation.

Having worked in this town for more than 16 years, I know that cynicism becomes a way of life, especially among journalists. Thus the knee-jerk inclination to dismiss Humphrey-Hawkins as merely a political pacifier.

But I hope Congress passes it, and I am willing to wait a couple of years to see if Humphrey-Hawkins offers economic hope to millions of Americans who for more than a generation have had precious little reason to hope.

By Mr. MAGNUSON (for himself and Mr. Pearson) (by request):

S. 2346. A bill to implement the International Convention for the Prevention of Pollution From Ships, 1973, and for other purposes; to the Committee on Commerce, Science, and Transportation, and the Committee on Environment and Public Works, jointly, by unanimous consent.

ACT TO PREVENT POLLUTION FROM SHIPS

Mr. MAGNUSON. Mr. President, I introduce on behalf of myself and Senator Pearson, by request of the Department of Transportation, a bill to implement the International Convention for the Prevention of Pollution from Ships, 1973, and for other purposes.

I ask unanimous consent that the bill be referred jointly to the Committees on Commerce, Science, and Transportation, and Environment and Public Works.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. MAGNUSON. Mr. President, I also ask unanimous consent that the text of the bill and the letter of transmittal be printed in the Record.

There being no objection, the bill and letter were ordered to be printed in the Record, as follows:

S. 2346

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as "The Act to Prevent Pollution From Ships".

Sec. 2. Unless the context indicates otherwise, as used in this Act—

(1) "convention" means the International Convention for the Prevention of Pollution from Ships, 1973, signed at London on November 2, 1973, including the protocols and annexes I and II attached thereto;

(2) "discharge" means, in relation to a harmful substance or an effluent containing a harmful substance, any release from a ship however caused—

(a) including any escape, disposal, spilling, leaking, pumping, emitting, or emptying;

(b) but not including—

(i) dumping within the meaning of the Convention on the Prevention of Marine Pollution by Dumping of Wastes and Other Matter, 1972;

(ii) the release of harmful substances directly resulting from the exploration or exploitation of seabed mineral resources including the offshore processing associated therewith; or

(iii) the release of harmful substances for the purpose of legitimate scientific research into pollution abatement or control;

(3) "harmful substance" means—

(a) a substance subject to control by the convention, or

(b) any other substance which if introduced into the sea is liable to create a hazard to human health, to harm living resources or marine life, to damage amenities, or otherwise to interfere with legitimate uses of the marine environment;

(4) "incident" means an event involving the actual or probable discharge into the sea of a harmful substance or an effluent containing a harmful substance;

(5) "marine environment" means the high seas including the contiguous zone and all waters subject to the jurisdiction of the United States;

(6) "owner" means any person holding title to, or in the absence of title, any other indicia of ownership of, a ship or terminal, but does not include a person who, without participating in the management or operation of a ship or terminal, holds indicia of ownership primarily to protect his security interest in the ship or terminal;

(7) "operator" means—

(1) in the case of a ship a charterer by demise or any other person, except the owner, who is responsible for the operation, manning, victualing, and supplying of the vessel, or

(2) in the case of a terminal any person, except the owner, responsible for the operation of the terminal by agreement with the owner;

(8) "person", means an individual, firm, public or private corporation, partnership, association, State, municipality; commission, political subdivision of a State, or any interstate body;

(9) "Secretary" means the Secretary of the department in which the Coast Guard is operating;

(10) "ship" means a vessel of any type whatsoever operating in the marine environment, including hydrofoils, air-cushion vehicles, submersibles, floating craft whether self-propelled or not, and fixed or floating platforms; and

(11) "terminal" means an on-shore facility or an offshore structure located in the navigable waters of the United States or subject to the jurisdiction of the United States used, or intended to be used, as a port or facility for the transfer or other handling of a harmful substance.

Sec. 3. (a) This Act applies—

(1) to a ship of United States registry or nationality, or one operated under the authority of the United States wherever located;

(2) to a ship registered in or of the nationality of a country party to the convention, or one operated under the authority of a country party to the convention, while in the marine environment, except while on the high seas; and

(3) to a ship registered in or of the nationality of a country not a party to the convention, under subsection (c) of this section.

(b) This Act does not apply to—

(1) a warship, naval auxiliary, or other ship owned or operated by the United States when engaged in noncommercial service; or

(2) any other ship specifically excluded by the convention.

(c) The Secretary shall prescribe regulations applicable to the ships of a country not a party to the convention while in the marine environment, except while on the high seas, to ensure that their treatment is not more favorable than that accorded ships of parties to the convention.

(d) The heads of Federal departments and agencies shall prescribe standards applicable to ships excluded from this Act by subsection (b)(1) of this section and for which they are responsible. The Secretary shall prescribe standards applicable to ships excluded from this Act by subsection (b)(2) of this section. Standards prescribed under this subsection, applicable to ships excluded from this Act by subsection (b), shall ensure, so far as is reasonable and practicable without imparing the operations or operational capabilities of such ships, that such ships act in a manner consistent with the convention.

Sec. 4. (a) Unless otherwise specified herein, the Secretary shall administer and enforce the convention and this Act. In administering and enforcing the convention and this Act, annexes I and II of the convention shall be applicable only to seagoing ships.

(b) The Secretary shall prescribe any necessary or desired regulations to carry out the provisions of the convention or this Act.

(c) The Secretary may utilize by agreement, with or without reimbursement, personnel, facilities, or equipment of other Federal departments and agencies in administering the convention, this Act, or the regulations thereunder.

Sec. 5. (a) The Secretary shall designate those persons authorized to issue the certificates required by the convention. A certificate required by the convention shall not be issued to a ship which is registered in or of the nationality of a country which is not a party to the convention.

(b) A certificate issued by a country which is a party to the convention has the same validity as a certificate issued by the Secretary under the authority of the convention.

(c) A ship required by the convention to have a certificate—

(1) shall carry a valid certificate on board in the manner prescribed by the authority issuing the certificate; and

(2) is subject to inspection while in a port or terminal under the jurisdiction of the United States.

(d) An inspection conducted under subsection (c)(2) of this section is limited to verifying whether or not a valid certificate is on board, unless clear grounds exist which reasonably indicate that the condition of the ship or its equipment does not substantially agree with the particulars of its certificate. Subsection (c)(2) of this section shall not limit the authority of any official or employee of the United States under any other treaty, law, or regulation to board and inspect a ship or its equipment.

(e) In addition to the penalties prescribed in section 9 of this Act, a ship required by the convention to have a certificate—

(1) which does not have a valid certificate on board; or

(2) whose condition or the condition of its equipment does not substantially agree with the particulars of the certificate on board;

shall be detained by order of the Secretary at the port or terminal where the violation is discovered until, in the opinion of the Secretary, the ship can proceed to sea without presenting an unreasonable threat of harm to the marine environment. The detention order may authorize the ship to proceed to the nearest appropriate available shipyard rather than remaining at the place where the violation was discovered.

(f) A person whose ship is subject to a detention order under this section may petition the Secretary, in the manner prescribed by regulation to review the detention order. Upon receipt of a petition under this subsection, the Secretary shall affirm, modify, or withdraw the detention order within the time prescribed by regulation.

(g) A ship unreasonably detained or delayed by the Secretary acting under the authority of this Act is entitled to compensation for any loss or damage suffered thereby.

Sec. 6. (a) The Secretary shall establish regulations setting criteria for determining the adequacy of reception facilities of a port or terminal and shall establish procedures whereby a person in charge of a port or terminal may request the Secretary to certify that the port or terminal's facilities for receiving the residues and mixtures containing oil or noxious liquid substances from seagoing ships are adequate.

(b) In determining the adequacy of reception facilities required by the convention at a port or terminal, the Secretary may consider, among other things, the number and types of seagoing ships using the port or terminal, including their principal trades.

(c) If, upon inspection, the capacity of reception facilities of a port or terminal is adequate to meet the requirements of the convention and the regulations established hereunder, the Secretary shall, after consultation with the Administrator of the Environmental Protection Agency, issue a certificate to that effect to the applicant. A certificate issued under this subsection—

(i) is valid until suspended or revoked by the Secretary for cause or because of changed conditions; and

(ii) shall be available for inspection upon the request of the master, other person in charge, or agent of a seagoing ship using or intending to use the port or terminal.

The suspension or revocation of a certificate issued under this subsection may be appealed to the Secretary and acted on by him in the manner prescribed by regulation.

(d) The Secretary shall periodically cause to be published in the Federal Register a list of the ports or terminals holding a valid certificate issued under this section.

(e) Except in the case of force majeure, the Secretary shall deny entry to a seagoing ship required by the convention to retain on board, at sea, residues and mixtures containing oil or noxious liquid substances if—

(i) the port or terminal is one required by the convention or regulations hereunder to have adequate reception facilities; and

((ii) the port or terminal does not hold a valid certificate issued by the Secretary under this section.

SEC. 7. (a) As soon as he has knowledge of an incident, the master or other person in charge of a ship shall report it to the Secretary in the manner prescribed by article 8 of the convention.

(b) Upon receipt of the report of an incident involving a ship, other than one of United States registry or nationality or one operated under the authority of the United States, the Secretary shall take the action required by article 8 of the convention.

SEC. 8. (a) It is unlawful to act in violation of the convention, this Act, or the regulations issued thereunder. The Secretary shall cooperate with other parties to the convention in the detection of violations and in the enforcement of the convention. To that end, he shall use all appropriate and practical measures of detection and environmental monitoring, and shall establish adequate procedures for reporting violations and accumulating evidence.

(b) Upon receipt of evidence that a violation has occurred, the Secretary shall cause the matter to be investigated. In the investigation under this section the Secretary may issue a subpoena to require the attendance of any witness and the production of documents and other evidence. In case of refusal to obey a subpoena issued to any person, the Secretary may request the Attorney General to invoke the aid of the appropriate district court of the United States to compel compliance. Upon completion of the investigation, the Secretary shall take the action required by the convention and whatever further action he considers appropriate under the circumstances. If the initial evidence was provided by a party to the convention, the Secretary, acting through the Secretary of State, shall inform that party of the action taken or proposed.

(c) While at a port or terminal subject to the jurisdiction of the United States, a ship to which the convention applies may be inspected by the Secretary—

(1) to verify whether or not the ship has discharged a harmful substance in violation of the convention or this Act; or

(2) to comply with a request from a party to the convention for an investigation as to whether or not the ship may have discharged a harmful substance anywhere. An investigation may be undertaken under this clause only when the requesting party has furnished sufficient evidence to allow the Secretary reasonably to believe that a discharge has occurred. If an inspection under this subsection indicates that a violation has occurred, the investigating officer shall forward a report to the Secretary for appropriate action. If a report made under this subsection involves a ship, other than one of United States registry or nationality or one operated under the authority of the United States, the Secretary shall undertake to notify the master of the ship concerned and, acting in coordination with the Secretary of State, shall take any additional action required by article 6 of the convention.

(d) (1) Remedies and requirements of this Act supplement and neither amend nor repeal any other provisions of law, except as expressly provided in this Act.

(2) Nothing in this Act shall limit, deny, amend, modify, or repeal any other remedy available to the United States or any other person, except as expressly provided in this Act.

SEC. 9. (a) A person who knowingly violates the convention, this Act, or the regulations issued thereunder shall be fined not more than $50,000 for each violation or be imprisoned for not more than five years, or both.

(b) In addition to any other penalty prescribed by law, a person who—

(1) violates the convention, this Act, or the regulations issued thereunder is liable for a civil penalty of not more than $10,000 for each violation; or

(2) makes a false, fictitious, or fraudulent, statement or representation in any matter in which a statement or representation is required to be made to the Secretary under the convention, this Act, or the regulations thereunder, is liable for a civil penalty of not more than $1,000 for each such statement or representation.

(c) The Secretary may assess any civil penalty incurred under this section and, in his discretion, remit, mitigate or compromise any penalty. A penalty shall not be assessed hereunder unless the alleged violator is given notice and the opportunity to be heard on the alleged violation. Upon the failure to collect a civil penalty assessed under this section, the Secretary may request the Attorney General to institute a civil action in a U.S. District Court to collect the penalty. In hearing the action, the district court has authority to review the violation and the assessment of the penalty *de novo*.

(d) A ship operated in violation of the convention, this Act, or the regulations thereunder is liable *in rem* for any pecuniary fine or penalty incurred under this section, and may be proceeded against in the district court of any district in which it may be found.

(e) The Secretary of the Treasury, upon the request of the Secretary, shall refuse or revoke clearance required by R.S. 4197 as amended, to any ship subject to the convention or this Act, if the ship, its owner, operator, or person in charge is liable for a penalty under this subsection, or there is reasonable cause to believe that the ship, its owner, operator, or person in charge may be subject to such a penalty. Clearance may be granted in such cases upon the filing of a bond or other surety satisfactory to the Secretary.

(f) Notwithstanding subsections (a), (b), or (d) of this section, if the violation is by a ship registered in or of the nationality of a country party to the convention, or one operated under the authority of a country party to the convention, the Secretary, acting in coordination with the Secretary of State, may refer the matter to that country for appropriate action, rather than taking the actions required or authorized by this section.

SEC. 10. (a) A proposed amendment to the convention received by the United States from the Secretary-General of the Inter-Governmental Maritime Consultative Organization pursuant to article 16 of the convention, shall be accepted on behalf of the United States by the President following the advice and consent of the Senate, except as provided for in subsection (b) of this section.

(b) A proposed amendment to annex I or II, appendices to these annexes, or protocol I of the convention, received by the United States from the Secretary-General of the Inter-Governmental Maritime Consultative Organization pursuant to article 16 of the convention, may be the subject of appropriate action on behalf of the United States by the Secretary of State following consultation with the Secretary, who shall inform the Secretary of State as to what action he considers appropriate at least 30 days prior to the expiration of the period specified in article 16 of the convention during which objection may be made to any amendment received.

(c) Following consultation with the Secretary, the Secretary of State may make a declaration that the United States does not accept an amendment proposed pursuant to article 16 of the convention.

SEC. 11. (a) Except as provided in subsection (b) of this section, any person having an interest which is, or can be, adversely affected, may bring an action on his own behalf—

(1) against any person alleged to be in violation of the provisions of this Act, or regulations issued hereunder;

(2) against the Secretary where there is alleged a failure of the Secretary to perform any act or duty under this Act which is not discretionary with the Secretary;

(3) against the Secretary of the Treasury where there is alleged a failure of the Secretary of the Treasury to take action under Section 9(e) of this Act.

(b) No action may be commenced under subsection (a) of this section—

(1) prior to sixty days after the plaintiff has given notice, in writing and under oath, to the alleged violator, the Secretary concerned, and the Attorney General;

(2) if the Secretary has commenced enforcement or penalty action with respect to the alleged violation and is conducting such procedures diligently.

(c) Any suit brought under this section, shall be brought—

(1) in a case concerning an onshore facility or port, in the district court for the judicial district where the onshore facility, or port is located;

(2) in a case concerning an offshore facility or offshore structure under the jurisdiction of the United States, in the district court for the judicial district nearest the offshore facility or offshore structure;

(3) in a case concerning a ship, in the district court for any judicial district wherein the ship or its owner or operator may be found;

(4) in any case, in the district court for the District of Columbia.

(d) The court, in issuing any final order in any action brought pursuant to this section, may award costs of litigation (including reasonable attorney and expert witness fees) to any party including the Federal Government, whenever the court determines such an award is appropriate.

(e) In any action brought under this section, if the Secretary or Attorney General are not parties of record, the United States, through the Attorney General, shall have the right to intervene.

SEC. 12. On the effective date of this Act—

(a) the Oil Pollution Act, 1961, as amended (75 Stat. 402, 33 U.S.C. 1001, *et seq.*) is repealed. Any criminal or civil penalty proceeding under that Act for a violation which occurred prior to the effective date of this Act may be initiated or continued to conclusion as though that Act had not been repealed; and

(b) the Oil Pollution Act Amendments of 1973, (87 Stat. 428, Public Law 93-119) are repealed.

SEC. 13. (a) Section 4417a of the Revised Statutes of the United States, as amended (46 U.S.C. 391a) is further amended as follows—

(1) in the third subparagraph of paragraph (1) by adding the words ", operating on," between the words "United States" and "or entering";

(2) by amending paragraph (2) to read as follows:

"(2) Vessels Included.—(A) All vessels, regardless of tonnage size or manner of propulsion, and whether self-propelled or not, and whether carrying freight or passengers for hire or not, which are documented under the laws of the United States, operate on, or enter the navigable waters of the United States, except public vessels when engaged in noncommercial service, that have on board—

(i) or which are constructed or adapted to carry, cargo in bulk which if flammable or combustible, or oil of any kind or in any form, including petroleum, fuel oil, sludge, oil refuse, and oil mixed with wastes other than dredged spoil; or

(ii) liquid cargo in bulk which is designated as a noxious liquid substance under annex II of the International Convention for the Prevention of Pollution From Ships, 1973;

are subject to inspection by the Secretary of the department in which the Coast Guard is operating under regulation he may prescribe. To the extent practicable, title 52 of the Revised Statutes of the United States and the regulations thereunder shall apply.

"(B) This section shall not apply to vessels having on board the substances set forth in paragraph 2(a)(i) or 2(a)(ii) above only for use as fuel or stores; or to vessels carrying those cargoes in drums, barrels, or other packages."

(3) in the second sentence of clause (D) of paragraph (7) by striking the phrase ", in his discretion, may" and inserting in lieu thereof the word "shall";

(4) in clause (A) of paragraph (9) by adding the words ", if any," between the words "crew" and "required";

(5) in clauses (A) and (B) of paragraph (11) by striking the period at the end of each clause and inserting in lieu thereof the following phrase "for each violation."; and

(6) in paragraph (13) by adding the phrase "or to any port or terminal under the jurisdiction of the United States" between the words "United States" and "to any vessel".

(b) The Federal Water Pollution Control Act, as amended (86 Stat. 816, P.L. 92-500) is further amended in the first sentence of section 311(b)(3) by striking the phrase "article IV of the International Convention For the Prevention of Pollution of the Sea by Oil, 1954, as amended" and inserting in lieu thereof the phrase "the International Convention for the Prevention of Pollution From Ships, 1973".

SEC. 14. (a) Except as provided in subsection (b) of this section, this Act is effective upon the date of enactment, or on the date the convention becomes effective as to the United States, whichever is later.

(b) The Secretary and the heads of Federal departments, shall have the authority to issue regulations, standards, and certifications under sections 3(c), 3(d), 4(b), 5 (a), 6(a), and 6(c) effective on the date of enactment of this Act.

(c) Any rights or liabilities existing on the effective date of this Act shall not be affected by this enactment. Any regulations or procedures promulgated or effected pursuant to the Oil Pollution Act, 1961, as amended, remain in effect until modified or superseded under the authority of the convention or this Act.

THE SECRETARY OF TRANSPORTATION,
Washington, D.C., October 5, 1977.

Hon. WALTER F. MONDALE,
President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: On behalf of the President, there is transmitted herewith a draft of a proposed bill,

"To implement the International Convention for the Prevention of Pollution From Ships, 1973, and for other purposes."

This legislative proposal is an integral part of the President's program to control oil pollution in the marine environment. It implements the basic articles and other provisions of the International Convention for the Prevention of Pollution From Ships, 1973 (hereinafter referred to as the 1973 Convention) signed at London on November 2, 1973, and repeals or amends existing law made obsolete by, or which conflicts with, the 1973 Convention.

Seventy-nine countries participated in the formulation of the 1973 Convention, which is one of the most significant marine pollution treaties ever developed. The 1973 Convention far surpasses, in both breadth of coverage and in methods of control, the International Convention for the Prevention of Pollution of the Sea by Oil, 1954, as amended (hereinafter referred to as the 1954 Convention) which it is intended to replace for parties to both conventions. For example, the discharge of light refined oil products will be controlled for the first time as will a number of other previously unregulated major sources of marine pollution.

To achieve the desired control over noxious liquid substances, the conferees evaluated all of the major liquid substances currently carried, in bulk, on the oceans of the world and ranked them in four categories of noxious substances or included them on a list of "other liquid substances". To provide for substances which may be carried in bulk in the future, the 1973 Convention has a broad definition of "harmful substances", which has been incorporated in the proposed legislation. When it is proposed to carry any liquid substance, in bulk, which has not been evaluated, a provisional assessment is made by the government concerned. Thus, after enactment of this proposed legislation and the coming into force of the 1973 Convention, the carriage of liquid substances in bulk will be regulated and requirements on discharges will be imposed, ranging from retention on board for disposal at shoreside reception facilities to dilution of the residue prior to discharge.

To insure that the goals of the convention are realized, parties to the 1973 Convention are obliged to apply the requirements of the 1973 Convention to the ships of nonsignatory nations, as necessary, to insure that these ships do not receive more favorable treatment than that accorded the ships of signatory nations. The proposal authorizes the Secretary to prescribe necessary regulations to accomplish this.

The 1973 Convention requires that all new and existing tankers be fitted with equipment intended to ensure conformance to its requirements. Examples of the items made mandatory by the 1973 Convention include oil discharge monitoring and control systems, oily water separating equipment or filtering systems, slop tanks, piping and pumping arrangements, and segregated ballast requirements for all tankers in excess of 70,000 deadweight tons, if contracted for after December 31, 1975, or delivered after December 31, 1979. Certificates issued to vessels which fully comply with applicable requirements of the 1973 Convention are recognized by all parties to the 1973 Convention.

The 1973 Convention includes provisions designed to prevent discharges into the marine environment. This is an extension of the 1954 Convention's prohibition against discharges into the sea. The term "marine environment" was not defined by the conferees due, in large part, to the fact that the issue of the extent of a nation's maritime jurisdiction is, and remains, one of the basic questions being resolved by the Law of the Sea Conference. The approach taken in the implementing legislation is to define the term "marine environment" in a manner which gives the maximum possible application to the 1973 Convention. This approach is clearly consistent with the intent of the conferees, with our national goals, and with our world leadership responsibilities. However, the intent of the conferees that annexes I and II of the 1973 Convention are to be applied only to sea-going vessels is also clear. Therefore, this limited application is provided for in the proposed legislation and when deposited, our instrument of ratification will be accompanied by a memorandum of understanding to that effect. The proposed legislation does not include application of the optional annexes, annexes III (pollution of sea by packages), IV (sewage pollution), and V (garbage pollution). If, at a later time those annexes are determined to be acceptable to the United States, that will be the subject of an amendatory legislative proposal.

The 1973 Convention, as implemented by this proposal, provides for an innovative amendment procedure to make possible the relatively rapid updating of its technical provisions without requiring the traditional, but more cumbersome, treaty revision process. The rapid amendment process will be used to reflect new technology and, therefore, is necessary to ensure effective control of pollution from ships operating in the marine environment.

In addition to implementing the basic provisions of the 1973 Convention, the draft bill imposes criminal and civil sanctions of sufficient magnitude to ensure compliance with the mandates of the 1973 Convention and its implementing legislation and regulations.

Finally, the remaining applicability of the implementing legislation for the 1954 Convention for non-parties to the 1973 Convention is minimal. Therefore, it is being repealed by this legislative proposal. Conforming amendments have also been made to the Federal Water Pollution Control Act, as amended, and to Title II of the Ports and Waterways Safety Act of 1972. However, not all of the amendments to the latter statute are, strictly speaking, necessary to implement the 1973 Convention. Rather, some minor changes are responsive to other problems that have been identified in our administration of that statute since its enactment.

This is not a major legislative proposal within the meaning of Executive Order 11821. The vessel consrtuction standards which will be necessary to implement annexes I and II of the Convention are being promulgated under the Ports and Waterways Safety Act of 1972. The requirements for reception facilities will depend on the extent of the implementing regulations. The inflationary impact will be considered fully at the time regulations are proposed.

Enactment of this legislative proposal will result in additional monetary requirements for the Federal Government as follows:

Fiscal year 1	$350,000
Fiscal year 2	$350,000
Fiscal year 3	$350,000
Fiscal year 4	$350,000
Fiscal year 5	$350,000

It is recommended that the proposed legislation be enacted by Congress.

The Office of Management and Budget has advised that this proposed legislation is in accord with the Administration's objectives.

Sincerely,

BROCK ADAMS.

By Mr. DOMENICI:

S.J. Res. 101. A joint resolution to authorize the President to issue a proclamation designating the Sunday following Fire Service Recognition Day as Memorial Sunday for firefighters who have been disabled or killed in the line of duty during the preceding year; to the Committee on the Judiciary.

MEMORIAL DAY FOR FIREFIGHTERS

Mr. DOMENICI. Mr. President, every year the ravages of fire cause devastation of property, resources and lives.

Firefighters across the Nation have dedicated themselves to protect the lives and dreams of their fellow citizens. Sadly, too often these men are called and lost in the line of duty or suffer permanent disability.

Mr. President, I introduce this resolution to set aside a day of tribute to those who will have been disabled or killed in the line of duty so that each American can offer prayer for their benefit and grateful thanks for their sacrifice.

ADDITIONAL COSPONSORS

S. 1728

At the request of Mr. ANDERSON, the Senator from North Carolina (Mr. MORGAN) was added as a cosponsor of S. 1728, the Domestic Violence Prevention and Treatment Act.

S. 1820

At the request of Mr. METCALF, the Senator from Hawaii (Mr. MATSUNAGA) was added as a cosponsor of S. 1820, a bill to authorize the Secretary of the Interior to assist the States to establish programs for the maintenance of natural diversity, and for other purposes.

At the request of Mr. METCALF, the Senator from Wyoming (Mr. WALLOP), who was originally added by mistake, be removed as a cosponsor of S. 1820, the Natural Diversity Act.

S. 1954

At the request of Mr. CURTIS, the Senator from Texas (Mr. TOWER) was added as a cosponsor of S. 1954, a bill to repeal the estate tax carryover basis provisions of the 1976 Tax Reform Act.

S. 2142

At the request of Mr. PACKWOOD, the Senator from South Dakota (Mr. McGOVERN) was added as a cosponsor of S. 2142, the Tuition Tax Credit Act.

S. 2236

At the request of Mr. RIBICOFF, the Senator from Pennsylvania (Mr. SCHWEIKER) was added as a cosponsor of S. 2236, the Omnibus Anti-Terrorism Act of 1977.

S. 2303

At the request of Mr. MELCHER, the Senator from Nevada (Mr. LAXALT) and the Senator from Montana (Mr. METCALF) were added as cosponsors of S. 2303, a bill to declare a national policy on conservation, development and utilization of natural resources, assurance of resources for economic growth and national security, and for other purposes.

NOTICES OF HEARINGS

SUBCOMMITTEE ON PARKS AND RECREATION

Mr. ABOUREZK. Mr. President, I wish to announce for the information of the Senate and the public, the scheduling of a hearing before the Subcommittee on Parks and Recreation of the Senate Energy and Natural Resources Committee.

The hearing will be held on December 17, 1977, in Gretna, La., and testimony will be received on S. 1829, a bill to provide for the establishment of the Jean Lafitte National Historical Park in the State of Louisiana, and for other purposes.

Those wishing to submit testimony for the record should write the Subcommittee on Parks and Recreation, room 3106, Dirksen Senate Office Buliding, Washington, D.C. 20510.

For further information regarding the hearing, you may wish to contact Mr. Thomas Williams of subcommittee staff at 224-7145.

NOMINATION

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Tuesday, December 13, 1977, at 10:30 a.m., in room 2228, Dirksen Senate Office Building, on the following nomination:

Paul A. Simmons, of Pennsylvania, to be U.S. district judge for the western district of Pennsylvania, vice Ralph F. Scalera, resigned.

Any persons desiring to offer testimony in regard to this nomination shall, not later than 24 hours prior to such hearing, file in writing with the committee a request to be heard and a statement of their proposed testimony.

This hearing will be before the full Judiciary Committee.

NOMINATION

Mr. JACKSON. Mr. President, I wish to announce a hearing on the nomination of Lincoln E. Moses to be Administrator of the Energy Information Administration in the Department of Energy. The hearing will begin at 8:30 a.m., on Tuesday, December 13, 1977, in room 3110 of the Dirksen Senate Office Building.

SUBCOMMITTEE ON CITIZENS AND SHAREHOLDERS RIGHTS AND REMEDIES

Mr. METZENBAUM. Mr. President, the Subcommittee on Citizens and Shareholders Rights and Remedies of the Committee on the Judiciary, will hold 2 days of hearings, January 17-18, 1978, on Rights and Remedies of Insurance Policyholders, Part 1: Fairness in Coverage and Cost. The hearings will commence at 9:30 a.m., both days, in room 2228 Dirksen Senate Office Building.

Anyone wishing to submit testimony for the record, contact Ms. Ricki Tigert, Counsel, 4-B Russell Senate Office Building, Washington, D.C., 20510. Phone (202) 224-4703.

SUBCOMMITTEE ON CITIZENS AND SHAREHOLDERS RIGHTS AND REMEDIES

Mr. METZENBAUM. Mr. President, the Subcommittee on Citizens and Shareholders Rights and Remedies of the Committee on the Judiciary, will hold a hearing on Thursday, January 26, 1978, on S. 2117, the Federal Tort Claims Act. The hearing will commence at 9:30 a.m., in room 235 Russell Senate Office Building.

Anyone wishing to submit testimony for the record, contact Mr. Herman Schwartz, Chief Counsel of the Subcommittee, 4B Russell Senate Office Building, Washington, D.C. 20510. Phone (202) 224-4703.

SUBCOMMITTEE ON INTERGOVERNMENTAL RELATIONS

Mr. GLENN. Mr. President, I wish to announce that on December 14 and 15 at 10 a.m., the Governmental Affairs Subcommittee on Intergovernmental Relations will hold hearings in 1202 Dirksen Senate Office Building. These hearings concern: "Arson for Profit: Its Impact on States and Localities."

ADDITIONAL STATEMENTS

CONGRATULATIONS FOR A JOB WELL DONE

Mr. ROBERT C. BYRD. Mr. President, because Washington is a center of international as well as national significance, it is understandable that this city is often the focus of world attention. At times, however, it is also the stage on which the conflicts and tensions of other nations find an unfortunate expression.

Such an instance of this was witnessed during the recent visit of His Imperial Majesty, the Shah of Iran. Iranian nationals and other persons, both in support and opposition to the policies of the Shah, gathered in large numbers to demonstrate in Washington. The result was that violence broke out near the White House and in several random locations in the city during the Shah's visit, as the opposing groups clashed with one another and with the police units dispatched to maintain order. Many people were injured, and, subsequently, some law enforcement officials have engaged in mutual criticism over the procedures used to handle the disruptions.

But there was one area of the city visited by the Shah that was conspicuous by its relative calm and orderliness, and that was the Capitol itself. In no small measure, this was the result of the excellent preparation and performance of duty by the U.S. Capitol Police. The professional manner in which this force carried out its responsibilities during the Shah's official visit made it possible for that occasion to be almost totally without incident under those rather volatile circumstances.

A few years ago, a decision was made to upgrade the Capitol Police Force, in order to provide the Capitol area with a genuinely professional law enforcement body. The Shah's visit was but another example of the wisdom of that decision, and the success of their performance was a tribute to the outstanding men and women who are serving on our police force.

Mr. President, I have written a letter to Acting Chief William W. Kirby of the U.S. Capitol Police, expressing my appreciation to him, his supervisors, and his officers for their commendable efforts during the Shah's visit. I ask unanimous consent that this letter be printed in the Record.

There being no objection, the letter was ordered to be printed in the Record, as follows:

November 23, 1977.

Acting Chief William W. Kirby,
U.S. Capitol Police,
Washington, D.C.

Dear Chief Kirby: On behalf of the Members of the United States Senate, I am writing to express our special thanks and deepest appreciation to the supervisors and officers of the United States Capitol Police for the exemplary way in which they performed their duties on the occasion of the recent visit to the Capitol by His Imperial Majesty, the Shah of Iran.

The professional manner in which the Capitol Police provided the necessary escort and security assistance almost totally without incident during rather volatile circumstances is a tribute to the outstanding men and women we are so fortunate to have on the Force.

Please extend these expressions of our gratitude and esteem to each and every officer for a job well done.

With warmest best wishes.

Sincerely,

Robert C. Byrd,
Majority Leader.

TRAVELING FIRST CLASS ON UNCLE SAM

Mr. HARRY F. BYRD, JR. Mr. President, in an article distributed to member newspapers for October 15 by United Press International, Reporter Donald Lambro set forth the results of a 4-week investigation into the travel practices of Government officials.

He found that many officials are traveling with luxury accommodations, whereas Government policy requires economy travel in all but a few cases.

Mr. Lambro states that the Government's travel bill runs $2.7 billion a year, and that there is little or no control over travel expenditures.

Believing that Mr. Lambro's findings will be of interest to the Senate, I ask unanimous consent that the text of his article be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

Traveling First Class on Uncle Sam

(By Donald Lambro)

Washington.—When Secretary of Labor Ray Marshall and two aides flew last June to conferences in Geneva and Bonn they traveled—as do many top federal officials on government business—first class.

The spacious seats, champagne and gourmet meals available to Marshall and his aides cost taxpayers $1,484 each. That was almost 42 percent more than economy class, which government officials with rare exceptions are supposed to use.

Marshall is not alone in his preference for the best in travel accommodations, though some top officials like Max Cleland, the triple amputee who heads the Veterans' Administration always travel economy.

A four-week UPI investigation into government travel costs—which now total $2.7 billion annually—revealed that many officials routinely travel first class.

The investigation into the travel practices of more than a dozen departments and agencies also found:

Officials of the World Bank, which receives much of its funds from the United States, took nearly 600 trips this year on the costly supersonic airplane Concorde. It also frequently pays travel costs for officials' wives.

Many federal officials never file a report of any kind with their agency detailing what they accomplished on extensive trips abroad.

Government planes often are used to fly officials to places that could be more cheaply reached by flying commercial. Federal planes transport officials to conventions, air shows, and social events.

Wives often accompany their husbands at government expense for "public relations" purposes, solely to attend social activities.

First class travel is virtually the rule rather than the exception at the World Bank, which administers a $42 billion loan program for the impoverished countries of the world.

More than 7,800 trips in the past year have cost the bank over $12 million. Officials say most of the travel is first class.

When a Bank official flew to London on official business earlier this year he chose the most costly commercial transportation available, the Concorde. Its $1,683 roundtrip fare to London compares to the $678 coach fare for a regular jet.

The Bank defends the Concorde's use, saying the faster flight time reduces lost man hours spent in flight and thus saves money. But a Senate investigator who has examined Bank practices says this rationale is "as phony as it can be. No one else in the government, no matter how important their missions flies the Concorde."

The Bank's allows first class travel when officials fly farther than 5,000 to 6,000 miles. Since most of the Bank's business is in Asia, South America and Africa, at least 98 percent of travel is first class.

A Bank spokesman said officials often spent up to three months of the year traveling and the more comfortable accommodations eased the burden of long distance flights.

"After the first year or two, it's not a joyride anymore," he said.

Yet State Department officials say they travel equally long distances and just as often, but note that 98 percent of their travel is economy class.

Referring to the World Bank defense of first class travel, a State Department official said "That's a lot of baloney. Many State employees travel three months or more each year but we still go economy."

The Bank argues that free transportation for spouses of eligible employees—figured under an elaborate point system based in part on years employed—is needed to keep up "morale". Last year the Bank spent $603,000 on trips for 203 spouses.

When a Bank official took his wife along on a global six-nation business trip to Honolulu, Tokyo, Manila, Jakarta, New Delhi and Rome, the Bank picked up the entire tab for her $3,250 first class airfare.

The Inter-American Development Bank, which receives more than half of its funding from the United States for loans to poor countries, spent $34,131 last year on spouse travel. Moreover, all its top executives are permitted to fly first class.

Last September, for example, it paid $3,999 so an official's wife could accompany him to the Philippines, India, Singapore, Japan and France. On another trip, a wife traveled with her husband to Denmark, Belgium, Spain, Switzerland and Yugoslavia, adding $1,879 in first class fare.

Congress has been unable to curtail the travel of either bank since both were created as autonomous international bodies governed by directors representing member countries. Congressional committees have often found it difficult even to get information about their travel.

A UPI request for a list of trips by World Bank President Robert McNamara was rejected by an officer who said, "I don't think we ought to be accountable in detail to the public at large."

Federal agencies work under strict prohibitions against first class travel. The only exceptions are supposed to be medical disability, unavailability of economy seats, or when first class is "deemed necessary for the conduct of the mission."

It is this last provision that some officials have liberally interpreted to mean first class always, though an official of the General Services Administration, charged with enforcing the rule, says "The general policy is that it (travel) will be less than first class."

An official of the Office of Management and Budget, which wrote the rule last year, said "You don't travel first class unless you have a vital reason to do so."

Yet a random survey found that first class is almost routine for many top officials.

The labor secretary has taken 37 trips this year, virtually all first class. Charles Krapp, Marshall's special assistant, and John Leslie, his chief public information officer, also have accompanied him on most trips first class.

Spokesmen for Attorney General Griffin Bell, Agriculture Secretary Robert Bergland and Treasury Secretary Michael Blumenthal said they almost always fly first class.

Commerce Secretary Juanita Kreps, who has taken 27 trips since February, usually travels first class, while Patricia Harris, secretary of housing and Urban Development travels first class about half the time. Of 282 trips taken by HUD's top 22 officials last year, 86 were first class.

Last year Byron Pepitone, director of Selective Service, traveled first class on 28 out of 65 trips he made, while his deputy director went first class on 32 of 40 trips, or 82 per cent of the time.

The Federal Home Loan Bank Board, with a $4 million annual travel budget, last year took 287 first class trips. Board chairman Garth Marston, and board member Grady Perry, Jr. each flew first class 17 times.

Sen. William Proxmire, D-Wis., whose appropriations subcommittee oversees the FRLBB, says the agency has "an abysmal record" on travel costs and that abuse of first class travel "extends throughout the agency."

Last March the General Accounting Office (GAO), Congress' auditing arm, investigated the travel practices of five departments and agencies and found that 15 per cent of all the trips taken were unnecessary. The House Government Operations Committee calculated that about $375 million in travel costs was being wasted each year.

The GAO found that the largest amount of travel by top government officials was to low priority conferences and seminars, a finding which later led to a CMR directive curtailing such travel.

Despite this, questions continue to be raised about travel to conferences and seminars. There also are numerous instances of officials taking such trips and never filing reports on what they accomplished.

Examples include two Consumer Product Safety Commission officials Bert Simson, who attended an international conference on television set standards in Moscow June 4, and Alan Phrlich, who went to a conference in Paris May 8 to discuss lawnmower standards. CESA does not require reports on such trips and neither man made them through September.

Simson stopped on his way back for two days vacation in Frankfort, Germany. Phrlich was to have returned in eight days but stayed an extra day in Paris. Both used their own funds on the extra days.

One commission member, Barbara Franklin, told UPI, "I must admit that Soviet Union trip I have to scratch my head over. I can't see it did any good whatsoever."

While not requiring formal reports, the commission does require that "logs"—summaries of where officials have been and who they met—be filed on trips considered to be "of substantial interest matter."

Last year George Nichols, who heads the agency's foreign operations, traveled to London, Buenos Aires, Rio de Janeiro, Paris, and Tokyo. A spokesman said he had filed no reports on any of them. Mrs. Franklin said of Nichols' operation, "I can't figure out what that whole damn office does. I don't know what George has been doing."

Commission Chairman John Byington last year and early this year traveled to Brussels, Bonn, Hamburg, Geneva, Tokyo, Hong Kong, and Taiwan, Mrs. Franklin went to Ottawa, Paris, Cologne, London, and Berlin.

Byington attended a European Consumer Leader Group meeting. Mrs. Franklin met with various consumer leaders. Both gave some speeches. Neither of them submitted formal reports. Moreover, Mrs. Franklin, as well as other officials, did not file the logs of her trips, except for one covering two cities she visited.

"I can see from your own standpoint that it looks a little bit furry," Mrs. Franklin said, "but we have no requirement that a report be filed." She said she could not recall ever receiving a report on any of Byington's trips abroad. "I think I screwed up by not having all the logs filed," she added, conceding she "wouldn't like staff people flying around without filing a report of some kind." The commission spends $1.4 million a year on travel.

Many agencies and departments within the government maintain their own fleets of small executive aircraft. They range from two planes, one a jet, used by Coast Guard and Transportation Department officials, to the 72-plane fleet maintained by the Federal Aviation Administration at a cost of $23 million a year.

An examination of flight manifests on trips taken by Coast Guard and FAA officials showed many would have cost much less if they had flown commercial.

On Aug. 2, for example, 16 FAA officials flew from Washington to Oshkosh, Wis. aboard a turbo-prop Gruman Gulfstream to attend the annual Experimental Aircraft Association show for the day. The show is attended by airplane buffs to see planes people have built in their garages or backyards.

FAA spokesman Fred Ferarr said officials visited the show to "get an idea of what's happening in the field," even though regional FAA officers also attended the meeting.

FAA Administrator Largherne Bond also flew to Oshkosh in a FAA Cessna twin jet, which seats five, to speak and present an award. He took Don Waunch, an aide to Rep. Jim Lloyd, D-Calif., a member of a House aviation subcommittee.

A subcommittee official said the panel has never examined the subject of home-built aircraft. However, Waunch, a licensed pilot, said he picked up plans to build a single engine Christer Eagle at the meeting.

The round trip cost FAA $1,381. Commercial tickets would have cost $352.

Another FAA plane trip, which took DOT's number two information officer, Robert Holland, and two other officials to Fond du Lac, Wis., to attend the National Aerobatic Competition cost $1,332. Commercial would have cost $528.

An FAA spokesman said regional FAA safety enforcement officials also were at the aerobatic show.

Last July, Deputy DOT Secretary Alan Butchran flew to Boston on a Friday to inspect the Transportation Systems Center, a DOT funded research and development facility.

After four hours at the center, Butchman flew to nearby Martha's Vineyard where he spent the rest of the weekend. A spokesman said Butchman reimbursed the DOT $32 for the added cost of his sidetrip to the resort island.

A spokesman at the center said four days before Butchman's trip two other top DOT officials had also toured the center in what he described as "a fairly extensive visit."

Civilian and military officials often take their wives on official trips. In some instances, the trips appear to be, in the words of one Coast Guard officer, "less than vital."

Last July 6, a Coast Guard jet flew three top Guard officers and their wives to Seattle and back to attend the Reserve Officers Association convention. Fuel costs alone exceeded $3,000. Wives may travel for public relations purposes, but a Coast Guard official said in this case "these ladies do not satisfy the criteria for official functions."

Or a five day tour of Los Angeles and Seattle last June to inspect Guard installations, Adm. Owen W. Siler, the Guard commandant, and two other rear admirals were accompanied by their wives. Officials said the wives were needed to attend various social affairs with their husbands.

Last August Siler and some aides flew to New York City to speak at a New York Times luncheon. The round trip fuel cost for the Coast Guard jet was $291. The commercial shuttle, which leaves every hour, would have carried Siler for $78.

The Air Force's 89th Military Airlift Wing maintains a fleet of 16 executive aircraft, including Air Force One. The wing had 25 planes until President Carter cut it back.

An examination of Pentagon flight manifests for a two-month period revealed the following use of the fleet by officials, including members of Congress:

Sen. Barry Goldwater, R-Ariz., was flown on Air Force jets at least twice this summer to Sawyer, Mich., and to Yuma, Ariz., to speak at military bases. Cost of both flights: $5,282.

Sen. Daniel Moynihan, D-N.Y., was flown by the Air Force from his home in New York to Washington last July. An aide said Moynihan requested the trip because of a back ailment, and was flown on a stretcher. He added that the senator went to work the next day, appearing in the Senate and chairing a morning hearing. The one-way trip cost $850.

Treasury Secretary Michael Blumenthal and two aides were flown to Cleveland on an eight-seat Jetstart to deliver a speech to a group of businessmen. Cost $1,413.

An Air Force major was flown alone on an eight-seat military jet from Washington to Wilmington, N.C., and back. It cost the government $1,486 roundtrip to fly him there compared to $112 for a commercial flight.

The plane used for many of these trips is the VC140, a small but sleek four-engine jet that seats eight and is described by one Air Force official as "plush."

One officer, who asked not to be named, said there was "no reason in the world why we should keep planes on standby for members of Congress. They should be required to travel commercial unless there is some emergency."

A government auditor who has extensively investigated government travel abuses told UPI "There's just a lot of travel that is unnecessary. They're (agency and department heads) not looking closely enough at it."

Federal travel expenditures have shot up sharply in recent years, rising from $1.8 billion in 1973 to $2.5 billion in fiscal 1977. The price tag is expected to hit $2.7 billion in this fiscal year—up nearly $1 billion in five years.

While a lot of attention is paid to junketing by members of Congress, legislative travel costs less than one percent of the government-wide total.

Most travel is done in the Executive Branch, through the departments and agencies. The military spent $1.4 billion out the $2.4 billion total for travel in fiscal 1976. The bulk of that was for moving military personnel between assignments.

Yet other agencies are also ringing up big travel bills: The Agriculture Department spends nearly $100 million annually; Treasury Department, $95 million; HEW, $86 million; Transportation Department, $81 million; the Veterans Administration, $79 million; with other independent agencies collectively spending over $100 million a year.

Sen. William Roth, R-Del., a critic of government travel, believes costs can be curbed but says it will take "strict guidelines and restrictions" by OMB.

In 1975, Congress enacted Roth's proposal for a mandatory 10 per cent cut in travel spending. Two months later, it quietly repealed the Roth amendment in response to a howl of protest from agencies which claimed they could not function under such strict reductions.

It substituted a milder Roth proposal calling on the President for tighter regulations to cut unnecessary travel.

But despite the new guidelines, travel costs continue to mount. Next year agencies and departments are expected to seek still more money for travel.

Many say only agency heads and supervisors can halt needless travel, but the GAO found that would be putting the problem in charge of the solution.

These are the people who are supposed to be setting an example for the rest of the government, a Senate Appropriations Committee staffer said. Instead, they are among the worst offenders.

For some officials, old habits are hard to break. An assistant to Blumenthal, the former Bendix Corp. board chairman, explained why the Treasury secretary flies first class:

"You see, when he was doing corporate work, he traveled in his own jet. He's become accustomed to something a little better."

IN PRAISE OF A GENTLE MAN

Mr. MATHIAS. Mr. President, the death of a public man is usually and properly followed by tributes to his career and his accomplishments. This is not only an appropriate recognition of his service, but also illuminates an example of service that is important to any society whose continuity is dependent on its members' willingness to serve.

But such eulogies often praise the statement and miss the man. It would be a pity if that were the case with David Bruce, because his career reflected the qualities of his personality and his character.

In my own contacts with David Bruce, I was always struck by his kindness and by his gentle manner. He had a way of making it clear that there was room in his life for the concerns and interests of other people and this was important to the way other people viewed him.

David Bruce lived in a serious world and was taken as a serious man. That never inhibited him, however, from having fun or from enjoying life with a gaiety that was infectious and spread goodwill and pleasure to those who shared his company, even briefly. He knew the tragedies of the world, personal as well as political, but he also knew the beauty that can soften the harsh features of human life, and he was not afraid to embrace art and what might be called good living.

The success David Bruce enjoyed was not accidental. His grades at the University of Maryland Law School were the best any student had received since his father graduated there. He first came to spend time in Washington when his father entered the Senate and he obtained a vantage point for a broader education in the conduct of public affairs. His service with Maryland's famous 110th Field Artillery gave him a host of lifetime friends and a knowledge of people that he never lost.

It is not without significance that David Bruce was taken ill Sunday at the home of his old friends, Mr. and Mrs. Macgill James. He and Mr. James had been boyhood companions, tent mates in World War I, and celebrated peace together with a walking tour of Europe. Although David Bruce walked with kings, he never forgot the people of Maryland and Virginia who were his first friends. David Bruce was never "old" in any sense, but it can otherwise truly be said of him, as it was of a great Englishman, that "the companions of his youth were the friends of his old age."

Mr. President, I ask unanimous consent that the account of Ambassador Bruçe's life published in the Baltimore Sun today be printed in the RECORD together with the Sun editorial entitled "David K. E. Bruce."

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun, Dec. 6, 1977]

AMBASSADOR DAVID BRUCE DIES AT 79

WASHINGTON.—David K. E. Bruce, a native Baltimorean who became a major figure in post-World War II diplomatic history, died early yesterday at the age of 79.

He had a heart attack Sunday evening and died about four hours later at Georgetown University Hospital here.

The silver-haired, sophisticated Mr. Bruce was the only American to serve as ambassador to all three of his country's major European allies—France, Germany and Britain. He also was under secretary of state, chief negotiator at the Vietnam peace talks in Paris, first head of the U.S. liaison office in the People's Republic of China and wartime director of American intelligence operations in Europe, among other assignments.

At the news of his death, other participants in the great events of the past four decades tried to place his career in perspective.

An official State Department tribute called him "one of the most eminent diplomats of his generation."

Dean Rusk, former secretary of state, said Mr. Bruce was "one of the finest public servants in this entire postwar period. He was a brilliant diplomat, able to deal with the most complex and acrimonious problems in high style.

"He was respected by all those with whom he worked, including the other parties to negotiations in which he was involved. His loss is very serious, but we can be grateful that he gave us the long service that he did."

That assessment was echoed by Mr. Bruce's friend, Joseph Alsop, the retired columnist. Mr. Bruce, he said, was "one of the greatest public servants the United States has ever had . . . In every capital where he represented us, he is remembered with intense admiration and affection . . . without having sacrificed a jot or a tittle of America's interests."

By both the style and substance of his earlier service, Mr. Bruce earned such stature that in 1970 he was called out of retirement by President Nixon to lead the American side in the Vietnam negotiations, his personal presence was seen as a sign that Washington wanted progress in the talks. Similarly, when Mr. Nixon asked him out of retirement a second time to go to Peking, his individual prestige was considered so great that it automatically transformed the liaison office there into a major American mission.

Mr. Bruce's first diplomatic experience was a member of the courier service just after World War I, and he did not retire finally until January of last year. At higher levels, he served six presidents over more than half a century.

He earned the accolade of being a "real pro" at diplomacy without being a professional diplomat.

Born in Baltimore February 12, 1898, David Kirkpatrick Este Bruce was the son of Maryland's U.S. Senator William Cabell Bruce and Louise Este Fisher Bruce. He was educated at the Gilman Country School and Princeton University, where his attendance was interrupted by Army service in World War I. Then he attended the law schools of the Universities of Virginia and Maryland.

He was employed first with the Fidelity Trust Company in Baltimore, then with the law firm of William Cabell Bruce & Son, and from 1924 to 1925 with the firm of Semmes, Bowen and Semmes.

From 1924 to 1926, he was in the Maryland House of Delegates—and, uniquely, served in the Virginia General Assembly from 1939 to 1943.

After his brief stint with the courier service following the war, he joined the State Department in 1926 and was posted as vice consul in Rome. But he left the foreign service again and in 1966 married Ailsa Mellon, only daughter of the industrial Andrew W. Mellon, then secretary of the treasury. They were divorced in 1945, and that year he married Evangeline Bell.

In 1928, Mr. Bruce began a business period with Bankers Trust Company and W. A. Harriman & Co. in New York, and during the following years served on the boards of a long list of companies, many of them connected with the Mellon family interests.

In those years he also spent much time at his 4,000-acre estate, Staunton Hall, near Brookneal in piedmont Virginia.

But as World War II approached, his interest in affairs abroad drew him to accept the post of chief representative of the American Red Cross in Britain, then into colonel's rank with the Office of Strategic Services.

With the OSS, forerunner of the Central Intelligence Agency, he became chief of European operations, in charge of a huge network of agents scattered over the continent.

After the war he was called back to government in 1947 as an assistant secretary of commerce under his old New York associate, W. Averell Harriman. That association led him to his subsequent assignments as head of the Marshall Plan mission to France and of the U.S. mission to the European Economic Community.

President Truman gave him his first formal ambassadorial appointment, to Paris, from 1949 to 1952, and there Mr. Bruce solidified his reputation for dignity, discretion, elegance, courtesy, subtlety—virtually a catalogue of the qualities to which diplomats aspire.

Before and during his Paris assignment, he worked closely with the historic men of the time—Churchill, Eden, Macmillan, the French statesmen, later Chou En-lai, and of course each occupant of the White House. It was one of them, Mr. Nixon, who said in 1969 that he and his four presidential predecessors disagreed on many things, but "agree that David Bruce was a giant."

Mr. Bruce played a key role as under secretary of state and on special assignment during the reconstruction of Europe in the early 1950's. Although he was a Democrat, President Eisenhower tapped him to continue that work as ambassador to Bonn—and although some Republicans complained that Mr. Bruce had contributed to the Adlai Stevenson Democratic campaign in 1956, he was confirmed and served in Germany from 1957 to 1959.

It was a Democrat, President Kennedy, who next sent him abroad, to London in 1961, and there Mr. Bruce remained until 1969.

Nominally he had retired, when in 1970 Mr. Nixon asked him to take over the American side at the Paris peace talks on Vietnam. He spent a year there before retiring again, and the President asked him next to lend his senior status to the new opening with China.

After a year there, Mr. Bruce accepted his final assignment, as ambassador to the North Atlantic Treaty Organization in Brussels. He retired, for the last time in January, 1976.

Like his father and his brother, James, who was ambassador to Argentina, Mr.

Bruce carried out a family tradition of public service—but unlike many others who step in and out of government, he carried his role far beyond the level reached by most lifetime professionals.

A connoisseur of art, wine, antiques and sports, he was the first president of the National Gallery of Art and a trustee of the Frick Museum and the Metropolitan Opera Company. President Ford decorated him with the Medal of Freedom, the nation's highest civilian honor.

He is survived by his wife, his brother James, and two sons, David and Nicholas.

Funeral services will be held at St. John's Church, Lafayette Square, Washington, at 2:30 P.M. Friday.

[From the Baltimore Sun, Dec. 6, 1977]

DAVID K. E. BRUCE

"Diplomacy is no longer as picturesque or as mysterious as it once was," wrote a young contributor to *The Sun* in 1921. David K. E. Bruce then went on to explain to his hometown readers that the splendid costumes of yore had given way to "somber black and standard cut" and that couriers were no longer "kidnaped and tortured in remote fastnessess."

This straight-faced introduction to the intrigues of the French in Syria plus some other pieces about bullfighting in Spain, the Bolshevik takeover in Russia and drinking habits in Norway, whence came the ancestors of the author of the Volstead Act, was what one might have expected from a bright, well-educated scion of one of Baltimore's elite families.

After his taste of travel abroad, it was perhaps predictable that David Bruce would tire of a Baltimore law practice to enter the foreign service. True enough, he resigned, after marrying Andrew Mellon's daughter, to go into investment banking. But when World War II broke out, Mr. Bruce moved quickly from Red Cross operations overseas to spy work in Europe for the Office of Strategic Services. His life was cast for public service.

President Truman, the first of six postwar Presidents to use Mr. Bruce's talents, tapped him for a Commerce Department post that led to a Marshall Plan appointment and then the ambassadorship to France in 1949. In those days one had to be rich to hold down the Paris post, which Mr. Bruce was. He pretended the role of an amateur diplomatist, and even managed to fool a few interviewers who concentrated on his unstudied elegance and the hospitality which he and his second wife, Evangeline Bell, offered in the years of postwar reconstruction.

But social graces, while important, could not have been the reason for the diplomatic career that followed. President Eisenhower appointed Mr. Bruce ambassador to Bonn in the days of recurrent Berlin crises. He served under Presidents Kennedy and Johnson as ambassador to Britain in the Sixties. President Nixon put him in charge of the Vietnam peace talks, a frustrating chore that was followed by the prestigious assignment as the first U.S. envoy to China. President Ford named him ambassador to NATO.

All talk about being a professional amateur had, of course, been dropped. Mr. Bruce was a professional's professional and recognized as such. He was one of those patrician patriots (like Averell Harriman) whose personal authority enhances whatever missions their government assigns them. He was called from retirement so often that the "old geezer network" in the State Department could hardly envisage a foreign policy without him. Now, at 79, David Bruce's final retirement has come.

OIL COMPANIES AND THE DEPARTMENT OF ENERGY

Mr. METZENBAUM. Mr. President, I have long been concerned about the "revolving door" that seemed to exist between the former Federal Energy Administration and the major oil and gas companies. I had hoped that the appointment of those close to the oil industry would be studiously avoided when the new Department of Energy was organized.

However, one of the first major appointments announced was that of Mr. Lynn R. Coleman to be Chief Counsel, a highly important and sensitive post. Mr. Coleman is a partner in a Texas law firm whose clients read like a Who's Who of the Oil Industry. Mr. Coleman has spent most of his legal career acting as an advocate for oil companies.

Recently, the Senate Energy and Natural Resources Committee questioned Mr. Coleman at great length about his connections with the oil industry. It is the feeling of myself and several other Senators that there are still many unanswered questions.

I have asked the President to withdraw this nomination because I am convinced the American people are tired of these relationships between the Government and big oil.

In the December 5, 1977, edition of the Washington Star, James R. Dickenson has put the issue in the proper perspective. I ask unanimous consent that the article be printed in its entirety in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Star, Dec. 5, 1977]

ENERGY EQUATIONS THAT DON'T WORK OUT

(By James R. Dickenson)

The refusal last week of Lynn R. Coleman, President Carter's nominee as general counsel for the Department of Energy, to divulge a full list of oil and gas companies represented by his Houston law firm calls to mind a character from the musical "Guys and Dolls"—Big Julie of East Cicero, Illinois (pronounced Illinoiz).

Big Julie, a man whose fearsome reputation extended well beyond the East Cicero city limits, was tapped out in Nathan Detroit's oldest established permanent floating crap game in New York. He attempted to recoup by using his own dice, which had no spots.

Never fear, Big Julie assured the intimidated Nathan Detroit, Big Julie has memorized where the spots were. Purely by coincidence nothing but sevens and his point happened to turn up.

"Ah, huh!" he exclaimed as he rolled the blank dice. "A six. Six is my pernt!" "Ah, huh!" he said on the next roll. "A four and a two. See, I remember they were on those sides."

Coleman's firm is Vinson and Elkins, one of whose partners is former Texas Gov. John B. Connally, and it represents 20 companies that probably will have cases coming before the Energy Department. Among its clients are Exxon, Texaco, Shell, Mobil and Union Oil.

Coleman justified his refusal on the grounds that such disclosure would violate the firm's attorney-client privilege. He assured the members of the Senate Energy Committee, however, that he would disqualify himself when these cases come up.

Not surprisingly this did not entirely reassure all the senators. They objected first of all to the idea that they shouldn't know for sure which cases were involved.

Some pushed a step further and suggested that putting an oil company lawyer in such a sensitive job was a little like locking the fox inside the chicken coop. Incredibly, 77 years into a century in which oil is one of the most important political and social factors, the United States government knows less about our existing and potential resources than the private oil companies do, and often depends on them for information.

This week, House and Senate conferees take up the crucial segments of the controversial energy bill, natural gas pricing and the crude oil equalization tax. The exchange between Coleman and the senators gives many average citizens that old familiar feeling: the itching between the shoulder blades and over the wallet that excites the suspicion that one's pocket is about to be picked again for the benefit of the oil and gas producers.

The question the conferees will struggle over is essentially how much the pending bill will benefit the producers. At issue is how high Sen. Russell Long can drive natural gas prices and how much of the oil equalization tax, which would put the price of newly discovered domestic oil at world levels, he can divert to producers rather than be rebated to consumers.

The justification for higher prices by both the President and industry is that they are needed to stimulate exploration, discourage consumption and therefore reduce the nation's dependence on imported oil.

They probably have a point but they undoubtedly have a problem: A lot of the people who burn the gasoline and natural gas don't quite understand.

The last time a lot of us checked, the oil companies were making a big profit. So, we don't understand why businesses so profitable need higher and higher prices to produce the resources that produce their profits.

You'd think they'd be happy as it is now. The more you produce the more money you make.

The natural gas producers contend that they need higher prices to stimulate exploration because of the risk involved, but when last seen they were out drilling like crazy at the current price and no one suggests that they're doing it for their health.

In the energy conference the House comes down as the defenders of President Carter's proposed bill and of the consumer. The Senate under Long's leadership favors higher prices and incentives for the oil companies.

It's not much of a choice, actually, as some of the House members admit. Defending the President's bill to some of them is just a "holding action," as one put it, against Long.

Carter's proposal of a tax on oil, with rebates to low and middle income consumers, seems a clumsy and jury-rigged scheme whose chief virtue is that it's preferable to the industry subsidies proposed by Long.

How many of us can drive our cars any less or not heat our homes? The problem is not that so many of us are wasteful but that our society is organized around the auto and the assumption of cheap energy.

The chief virtue of Carter's plan is that it's better than Long's alternatives. Several House members are beginning to suspect that, given what they see as Carter's preference for compromising with Long rather than standing fast for his original proposals that were easier on the consumer, the best alternative may be no bill at all.

FDA FAILS TO ACT DECISIVELY ON LIQUID PROTEIN RISK

Mr. PERCY. Mr. President, on November 22, 1977, I urged the Food and Drug Administration to order off the shelves immediately all substances sold as predigested liquid protein because of its possible link to at least 22 deaths and other serious illness. Since that letter, the Center for Disease Control (CDC) in Atlanta has reported nine more deaths that may be linked to use of the liquid protein fast.

The 31 dead persons were from Illinois, California, New Mexico, Minnesota, Washington State, Ohio, Virginia, Florida, New York, Michigan, the District of Columbia, New Jersey, and Ontario, Canada.

Liquid protein is made basically from animal hides, cartilage, and tendons and is used in conjunction with a partial fast designed for persons who wish to lose large amounts of weight quickly. Some persons also use it as a diet supplement. It was popularized by Dr. Robert Linn, in his book, "The Last Chance Diet," which reportedly has sold over 2 million copies.

The CDC has reported to me of documented evidence that 10 of the victims were otherwise healthly young women, between the ages of 25 and 44, who died suddenly of the cause—cardiac arrhythmia, or chaotic, uncontrollable, heartbeats. None had a history of heart disease before starting the fast and taking the liquid. All of these women were under the care of competent physicians, who examined all but one at least once biweekly. Virtually all were taking vitamin and mineral supplements.

The announcement made by the FDA on December 2, 1977, proposing a rule requiring mandatory labeling for protein products—to advise purchasers to consult with a physician before using—would be prudent under normal circumstances. But it is an affront to American consumers to ask them to consult with a physician before using diet liquid protein when those were the precise instructions followed by all 10 of the persons studied whose reported deaths appear to be linked to the liquid protein fast.

Seven physicians who specialize in nutrition have expressed to me their concerns about the easy availability of diet liquid protein for quick weight loss. One physician said there are such significant risks in the liquid protein that he would never give it to an outpatient. Another physician said:

> It can be dangerous, even under closely supervised conditions.

Liquid protein may also be of marginal nutritional value. Specifically:

A recent study by the WARF Institute, Inc., showed that the liquid protein tested had a zero protein efficiency ratio. By comparison, an egg white has a 3.3 PER.

In its natural state, liquid protein lacks tryptophan, an essential amino acid that cannot be manufactured by the human body. It can be added by manufacturers to their product, but laboratory analyses indicate that some manufacturers may have failed to add that amount of tryptophan promised on the label. Without sufficient quantities of tryptophan, the product is of low biological quality.

Use of liquid protein has no scientific basis, according to a University of Chicago Medical School professor.

Quality control is also lax. FDA has recalled two major lots of contaminated liquid protein in the past 3 months.

Liquid protein also may be a ripoff in terms of price. One FDA official estimated that it costs less than $1 a quart in raw materials to manufacture, while consumers are asked to pay between $6 and $15.

The medical community has also provided these arguments against continued use of the liquid as part of a protein-sparing fast:

No scientific followup studies of participants in the fast have been completed. Such studies are usually done before a medical procedure is recommended to the general public. The very physician who pioneered in the development of the diet warned Dr. Linn not to publish his book because it was "ill-advised" and criticized the lack of such studies.

The liquid protein fast is only intended for persons 50 or more pounds overweight, yet is promoted for persons 20 or more pounds overweight.

The liquid protein fast fails to emphasize a meaningful program of exercise, psychological counseling, and the learning of new dietary habits, essential in keeping pounds off after they are lost.

Only an estimated 1 percent of the persons participating in liquid protein fasts are under the supervsion of a physician competent to supervise this type of diet.

An estimated 30 million Americans are overweight; some 15 million of them are considered obese because they are more than 20 percent above their desirable weight. The Senate Select Committee on Nutrition and Human Needs, on which I serve as ranking minority member, heard testimony last February that Americans spend $10 billion annually on weight reduction books, pills, and diet regimens.

It is no wonder that a significant number of overweight persons seek all sorts of ways to shed excess weight. In this context, I have urged that the FDA immediately remove liquid protein products from the market before anyone else dies or becomes seriously ill.

Commissioner Kennedy, for whom I have the highest regard, in his reply to my letter, expressed concern that the vitamin amendment passed by Congress in 1976, limits the authority of the FDA to regulate the sale of predigested liquid protein. The Commissioner also states that I voted in favor of the amendment. The record should reflect that the only time the vitamin amendment came up for a separate vote, on September 24, 1974, I voted against it. The amendment passed 81 to 10. The amendment died at the end of the session and was reintroduced the following session. It was then incorporated as a separate title of the National Biomedical Heart, Blood Vessel, Lung, Blood, and Research Training Act of 1975. That bill passed the Senate on December 11, 1975, 90 to 2. I voted in favor of the entire bill. However, the office of Senator WILLIAM PROXMIRE, chief sponsor of the amendment, said the only real vote on the amendment was taken in 1974.

In addition, I have asked the American Law Division of the Library of Congress to render an opinion on whether FDA has sufficient legal authority to act to remove liquid protein from over-the-counter sales. I expect its response within the next several days.

I shall ask unanimous consent to have printed my letter to FDA Commissioner Donald Kennedy and his reply which I regretfully find to be unsatisfactory, and an official FDA announcement on warning labels for protein products. I firmly believe, in view of the evidence accumulated to date, and the possibility that more Americans may needlessly die from their use of liquid protein in connection with a fast, that the FDA should take immediate steps to remove the product from open shelves pending the submission by manufacturers of proof of its safety and effectiveness.

I consider the FDA announcement requiring warning labels on diet liquid protein a wholly inadequate response to a potentially lethal health problem.

The FDA should order diet liquid protein products off the shelves because of their possible link to deaths of liquid protein users.

My office has now been notified by the Center for Disease Control (CDC), in Atlanta, of 31 deaths which may be associated with use of the liquid protein diet. The CDC reports that one was a 45-year-old Washington, D.C., man who died within the last several days after having been on the diet for 3 months. That was five more deaths than we were aware of last week.

How many more people must die before the FDA orders the product off the market pending proof of its safety?

Six physicians who specialize in nutrition have expressed their concerns to me about the easy availability of diet liquid protein for quick weight loss. One doctor said that there are such significant risks in the liquid protein diet that he would never give it to an outpatient.

Mr. President, I ask unanimous consent that the materials to which I referred previously be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

COMMITTEE ON GOVERNMENTAL AFFAIRS,
Washington, D.C., November 22, 1977.

Hon. DONALD KENNEDY,
Commissioner, the Food and Drug Administration, Department of Health, Education, and Welfare, Rockville. Md.

DEAR COMMISSIONER KENNEDY: I must respectfully take exception to FDA's lack of decisive action to date with respect to the risks inherent in the use of substances known as pre-digested liquid protein. Since your announcement of November 9, 1977, I have become aware of six new deaths that may be attributed to the ingestion of this liquid as part of a partial protein-sparing fast. This adds up to at least 22 deaths in the last four and one-half months associated with this liquid and the fast.

I am also in receipt of new documented data from the Center for Disease Control (CDC) in Atlanta, not yet disseminated to the public, which analyzes the premature deaths since July of 10 healthy women (out of the 22) taking pre-digested liquid protein as part of a so-called protein-sparing fast. Dr. Harold Sours, a CDC epidemiologist, reports that all 10 women were illness-free before fasting and were relatively young—ranging in age from 25 to 44. Yet, they died at an unusually early age from the same cause—cardiac arrhythmia, or erratic heartbeats. It is generally rare for women of this age to die of this cause. While such erratic heartbeats might normally be due to a lack of potassium, all but one of the women were taking a potassium supplement. Just prior to death, some were found to have normal-to-slightly-low potassium levels in their blood. The lower potassium levels were not in the range that should have caused cardiac problems and no damage that could have been caused by low potassium levels was found upon autopsy in the kidneys.

All the women were under the care of competent physicians. All but one was examined by a doctor at least once every two weeks, and some once a week. They all received vitamin supplements. It appears now that there may be a direct cause and effect relationship between the use of this liquid as part of the protein-sparing diet and their deaths.

Because of this data, I urge you, at an absolute minimum, to immediately reclassify liquid protein a prescription drug, not to be available over-the-counter. FDA should carefully stipulate the conditions for its appropriate use. Like other prescription drugs, it should be cleared for use only after proven safe and effective. Pending its approval as a prescription drug, it should be ordered removed from store shelves by the FDA. I urge this action fully cognizant of the announcement that you made on November 9, 1977, that the FDA would ask manufacturers voluntarily to affix warning labels to containers of the liquid protein stating:

"Do not use for weight reduction or maintenance without medical supervision. Do not use without medical advice if you are taking prescription medication. Not for use by infants, children, or pregnant or nursing women."

You further warned that persons contemplating going on the diet:

"* * * should not go on the diet on your own. Close medical supervision is required by a doctor skilled in the use of this kind of diet. The reason is that strict monitoring is required while on the diet, and vitamin and mineral supplements, and especially potassium supplementation, must be carefully prescribed. Too much potassium, as well as too little, can be extremely harmful."

Frankly, I find this action to be an inadequate response to what appears to be a highly serious health danger.

Dr. Sours has informed my office that on the morning of November 9, 1977, prior to your announcement, he told key FDA officials in a three-hour meeting that the women were being treated regularly by physicians and some of them worked in the medical sciences: one was a hospital nurse; another was a medical lab technician; one was married to a physician. Dr. Sours told my office that "I had anticipated finding mediocre care by quack M.D.'s, but I spoke to reasonably competent physicians who encountered an unexpected pathology." Almost all of the patients were carefully monitored and their blood chemistry was checked regularly for abnormalities. None were detected. As mentioned earlier, all but one were taking a potassium supplement.

The FDA's statement advising dieters to seek the advice of competent physicians and to take potassium supplements, if necessary, would be prudent under normal conditions. But these 10 women did seek the supervision of competent physicians whom they saw regularly; in all but one case, they did take potassium supplements. It is difficult to fathom how the FDA could advise liquid protein dieters to seek medical advice and take supplements, when the CDC had informed the FDA that almost without exception the women who died had followed precisely that course.

These were women who started the so-called "Last Chance Diet" out of hopes of losing weight and instead lost their lives. How many more persons must die or become seriously ill before the government moves forcefully in this matter?

The FDA, faced with mounting evidence that exclusive use of the liquid diet as part of a fast may produce disastrous consequences, instead has chosen to meekly ask manufacturers to voluntarily put warning labels on bottles of their product. One manufacturer has already announced that he will refuse to take even that step. But even if the label is affixed and its warning heeded, there is still no guarantee that otherwise healthy users will be spared death or illness if they use it exclusively as part of a protein-sparing fast. In view of the evidence of risk, I personally do not believe that labeling alone—even if made mandatory—is an adequate response.

There are no precise estimates of the number of persons on this diet, but there are known sales of two million copies of the book that popularized it—*The Last Chance Diet*, by Dr. Robert Linn. The liquid is marketed under approximately 50 brand names. The diet consists of a fast broken only by consumption of liquid pre-digested protein.

I understand that liquid protein used in this diet is manufactured primarily from collagens or gelatin obtained from animal hides, bones, and tendons. It is intended to be used as a food substitute by persons seeking large weight loss over a relatively short period of time. The diet is meant to spare the body's protein, which builds muscle tissue and other important structures, while allowing fat to be used up. Because liquid protein looks and tastes somewhat like medicine, proponents claim dieters are less prone to go off the diet because their senses are not tempted by the taste and odor of food. But even that assertion has been challenged. I am told that many of the persons using this diet subsist only on this liquid, while others use it as supplement to solid foods.

I am also reliably informed that besides this liquid being an apparent health danger when used with the fast, it may be of marginal protein value, despite claims by its supporters. A study by the Warf Institute, Inc., in Madison, Wisconsin, completed on October 31, 1977, concluded that the liquid has a zero protein efficiency ratio (PER). The liquid was fed to 10 rats for four weeks, and their growth was negligible. As you know, PER is a method to differentiate bad from good proteins. To qualify under FDA's nutrition labeling requirements, a protein must show a 2.5 PER. (An egg white, for instance, has a PER of 3.3). Thus, there is some question whether liquid protein is of any meaningful nutritional value.

Dr. Irwin Rosenberg, Chairman of the Department of Gastrointestinal Medicine at the University of Chicago Medical School, informs my staff that the hydrolyzed proteins used in liquid protein are inferior to regular proteins and their use has no scientific basis. Several nutritionists and chemists have noted that liquids used in this diet have the same amino acid pattern and same low protein quality as collagens and gelatins. They are virtually devoid in their natural state of tryptophan, which is one of the eight essential amino acids that cannot be manufactured by the human body and is generally supplied by normal diet. Without it, the liquid protein is incomplete and thus held to be of low biological quality. Tryptophan can be added to liquid proteins, but laboratory analyses indicate that some manufacturers claim more tryptophan than is really in their products. This casts doubt on the product's effectiveness, according to FDA nutritionists.

Quality control is also lax. I am told that some 1,700 bottles of liquid protein were ordered off the market by FDA because of potential bacterial contamination on November 16, 1977. Two months previously, some 12,500 gallons of another brand were seized by FDA for similar reasons.

Liquid protein may also be a rip-off in terms of price. Consumers are asked to pay from $6 to $15 a quart for what costs under one dollar in raw materials to manufacture, according to knowledgeable FDA program administrators in the nutrition field.

The arguments against continued over-the-counter distribution of the liquid go beyond even those fundamental issues of safety and product integrity. Specifically:

There is no scientific basis for this specific partial fasting diet. According to Dr. George Blackburn of Harvard University Medical School who has pioneered in this area, Dr. Linn has not even followed minimal medical research standards by carefully studying his own patients. Dr. Linn's book is based largely on Dr. Blackburn's carefully-monitored diets. Yet, Dr. Blackburn had warned Dr. Linn not to publish the book because it was "ill-advised."

Only an estimated one percent of persons on the diet are under the supervision of a physician conversant with this type of diet, despite all contrary warnings according to Dr. Blackburn. This is because no prescription is required and because The Last Chance Diet provides enough information that many believe physician monitoring to be unnecessary. Many think it is another "how-to-do-it" book. Additionally, there are only a few hundred physicians in the country expert in nutritional metabolism. Expert monitoring is necessary because this diet disturbs the electrolyte balance in the body and places stress on the kidneys, according to Dr. Prosky.

This type of drastic diet is intended for only massively obese individuals who are 50 or more pounds overweight, according to Dr. Jean Mayer, eminent nutritionist and President of Tufts University. Yet, the back cover of The Last Chance Diet says it is for persons who are 20 pounds or more overweight. A spokesman for the book's publishers, Bantam Books, Inc., advised my staff that Dr. Linn could have had this promotional message removed upon request.

Diet specialists agree that exercise, psychological counseling, and the learning of new dietary habits should accompany any weight reduction program. The Last Chance Diet hardly touches on any of these subjects: 18 pages out of the 206-page book focus upon behavior modification and new dietary habits. Absent such a program, persons tend to rapidly gain the pounds they have lost, according to Dr. Jeremiah Stamler, Professor and Chairman of the Department of Community Health and Preventive Medicine at the Northwestern University Medical School.

Here is a brief sample of responses to the liquid protein that my office has received in recent days:

"There are no reports on long-term follow-up of large numbers of patients after protein-sparing diets. The assumption that dietary protein in sufficient amounts to maintain a patient in or near nitrogen equilibrium will effectively 'spare' the protein in tissues from being used for fuel during fasting has not been proven." (The Medical Letter on Drugs and Therapeutics, August 26, 1977, published in New Rochelle, N.Y., by a group of 18 physicians, mostly medical school professors.)

"This is another kind of snake medicine, playing on the fears of people. This kind of diet should not even be allowed to be sold over-the-counter. Just putting a label on the bottle is not enough for the consumer to use it safely. It should be used only under careful medical supervision." (Dr. Rosenberg, University of Chicago Medical School.)

"The protein-sparing fast is still in the experimental stages." (Dr. Jean Mayer, President, Tufts University.)

"There are such significant risks in this diet that I would never give it to an outpatient." (Dr. Errol Marliss, clinical researcher into diabetes and obesity at the University of Toronto.)

"This type of liquid shouldn't be sold across-the-counter, no matter whom the diet is directed to, because there are overweight persons who may be sick in other ways and this kind of rigorous fast may be dangerous for them." (Dr. Saul Genuth, Co-Director of the Nutrition Service at Mt. Sinai Hospital in Cleveland, who has treated about 1,400 patients in the last several years for obesity; 75 to 80 per cent of the patients have lost more than 40 pounds within six months.)

Staff has accumulated other expert opinions which I would be happy to provide to you. Dr. Stamler, for instance, said he could not understand why this liquid is not taken off the shelf. I ask that same question.

Some questions about FDA's legal authority have been raised by your own staff on the belief that no medical claims have been made on behalf of the liquid. But, liquid protein is recommended as if it were a medicine. For instance, on page 93 of The Last Chance Diet Dr. Linn writes ". . . it may be easier for you to think of Prolinn as medicine. Obesity is as much a disease as pneumonia or swine flu. You want to be cured. You're going to cure yourself and Prolinn is going to assist you." The FDA has more than sufficient legal authority to act with dispatch in this matter (e.g., Section 505, Food, Drug and Cosmetic Act, as amended).

New information has also been developed by CDC which indicates that four of the eight healthy women who died in the hospital suffered from myocarditis or an inflammation of the cardiac tissue. Deaths from this cause are rare for persons this age. Dr. Sours notes that a check of death certificates in New York City for 1976 showed no women between 25–44 years of age (the age of the deceased) dying of myocarditis. This underscores even more the apparent cause and effect relationship between premature death and use of the liquid as part of the fast.

Because of my numerous concerns over possible commercial exploitation, serious risks to human health, and government inaction associated with this matter, I intend to have the Senate Permanent Subcommitte on Investigations look into this matter to determine whether a full-scale inquiry and public hearings are warranted in the absence of decisive action by FDA.

As you probably know, the Senate Select Committee on Nutrition and Human Needs, on which I serve as ranking minority member, will terminate its activities on December 31, 1977. In February, the Committee heard testimony on one of the nation's most critical health problems—overnutrition and accompanying obesity. We learned that 30 million Americans are overweight and half of them are considered obese because they are more than 20 per cent above their desirable weight. Many of these individuals face shortened life spans and increased chances of developing cardiovascular disease, hypertension, diabetes, and arthritis. Many who are excessively overweight face other additional problems—such as social and employment discrimination.

It is no wonder, then, that a significant number of overweight persons seek all sorts of ways to shed excess weight. Americans spend over $10 billion a year on weight reduction books, pills, diet regimens, and the like.

In this context, I urge that you move with dispatch with respect to the liquid protein diet before anyone else dies or becomes seriously ill.

I look forward to meeting with you in the days immediately ahead to receive a detailed report from you as to the actions you have taken to better safeguard the health of citizens throughout the Nation.

Sincerely,

CHARLES H. PERCY,
Ranking Minority Member.

FOOD AND DRUG ADMINISTRATION,
Rockville, Md., November 25, 1977.

Hon. CHARLES PERCY,
Ranking Minority Member, Committee on Governmental Affairs, U.S. Senate, Washington, D.C.

DEAR SENATOR PERCY: In your letter of November 22, 1977, you ask that the Food and Drug Administration (FDA) "ban" the liquid protein diets.

Before FDA can "ban" anything, it must have a firm legal basis upon which to proceed. Congress has carefully framed FDA's authority to regulate, and it has done so in different ways for different products. In order to proceed against a particular product FDA must show (1) that it belongs to a class of products over which FDA has statutory authority; (2) that FDA has proceeded according to the provision of the law. Whenever we fail to meet these responsibilities, the courts refuse to permit the actions we propose.

In the case of the liquid protein diet products, and other low calorie protein diet products, the legal picture is complex. They do not appear to be represented as drugs, and Congress and the courts have been wary of past FDA efforts to force substances into that status. For example, FDA lost a recent case on appeal in which it argued that certain dosage forms of vitamins A and D should be regulated as drugs because of toxicity. And Congress in effect rejected similar arguments when it declared a moratorium on FDA's regulation of saccharin after we had proposed to regulate it as a drug.

The low calorie protein preparations actually are special dietary foods, regulated under the same part of our law as are dietary supplements of vitamins and minerals. Eighteen months ago our legal position on an unsafe dietary supplement would have been clear: such an item would have been subject to the provisions of our law that apply to food additives generally. But in 1976 Congress, in response to strong pressure from the health food industry, exempted vitamins and minerals from much of FDA's authority and required FDA generally to regulate such products as foods. The result of this legislation—authored by Senators Proxmire and Schweiker, and for which you voted along with many others, and strongly opposed by FDA—may be to make the low calorie protein preparations very much harder to reach: In a case now pending before the United States Court of Appeals for the Second Circuit, the "health food" industry is arguing that special dietary food preparations are not subject to the food additive provisions of the Federal Food, Drug, and Cosmetic Act.

We are examining our options carefully, and in the meantime we are continuing to collect case reports and analyze them in collaboration with the Center for Disease Control (CDC). It should be emphasized that none of the deaths reported since our original action of November 9 has as yet been definitely associated by CDC with the use of the liquid protein diet.

In summary: the regulatory jurisdiction of FDA over the low calorie protein diet is not a simple matter. The problem presented by the diet is a problem of process more than of product. In addition, recent legislation in the Congress has put in question the extent of our authority over the product. Finally, even if our authority were unclouded, a swift and universal ban would not be possible under the law; FDA would have to propose regulations or seize products on a lot-by-lot basis.

In the meantime we are continuing to emphasize that the diet may be very dangerous to health and, indeed, may in some cases cause death, that people on the diet should see their doctors immediately, and that people thinking about going on the diet should consider other means of weight control.

Sincerely yours,

DONALD KENNEDY,
Commissioner of Food and Drugs.

[Department of Health, Education, and Welfare, Food and Drug Administration]

[21 CFR PART 101]

[Docket No. 77N–0404]

PROTEIN SUPPLEMENTS WARNING LABELING

Agency: Food and Drug Administration.
Action. Proposed Rule.

SUMMARY

This proposal would establish label warning requirements for protein supplements that may be used in weight reduction or weight maintenance programs. The Food and Drug Administration is proposing these requirements on the basis of evidence that, without proper medical supervision, very low calorie diets consisting primarily of protein may cause serious medical problems, including death. The purposes of this proposal are to ensure that consumers are alerted to the potential health hazards associated with consumption of protein supplements for purposes of weight control and to inform consumers that the advice of a physician should be sought before using these products for weight control.

The agency is asking for the submission of any additional data relating to the safety of these products, and is also inviting comment with respect to whether the agency should take any other action concerning these products, including removing them from the market.

Dates: Written comments by (insert date 30 days after date of publication in the Federal Register); the proposed effective date of a final rule based on this proposal is 30 days after publication of the final rule in the Federal Register.

Address: Written comments to the Hearing Clerk (HFC–20), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, Md. 20857.

For further information contact: Victor P. Frattali, Bureau of Foods (HFF–200), Food and Drug Administration, Department of Health, Education, and Welfare, 200 C St. SW., Washington, D.C. 20204, (202–245–1561).

Supplementary information: The Commissioner of Food and Drugs is concerned about potential hazards for consumers who use certain protein formulations for weight reduction, particularly those who do so without close medical supervision. There are readily available to consumers a number of protein supplements which are being promoted for use in weight reduction programs. Many of these do not bear adequate statements advising that there are conditions under which use of the products is contraindicated and that strict medical supervision is required for their safe use. Other protein products are not expressly promoted for use in weight reduction programs, but nevertheless are used by some consumers for that purpose. The protein supplements currently available appear to be derived from whole sources or are hydrolysates of proteins, most of which are of low nutritional value, such as collagen or gelatin. Some of the products are fortified with various essential amino acids, vitamins, and minerals, but many do not supply a complete spectrum of nutrients necessary for sustaining normal body functions during extended periods of usage. The products are marketed as aqueous, "liquid protein" solutions or as powders with instructions for mixing with a liquid. Although frequently labeled as "supplements," the protein products are commonly used to replace whole meals and are often promoted as the sole source of nourishment.

The Commissioner believes that large quantities of these products are being sold nationwide and that a significant number of consumers are using these products for weight control or maintenance. Diets consisting primarily of protein have been, and continue to be, widely promoted. One such diet is the subject of a best-selling book.

An ad hoc advisory group consisting of five clinicians internationally recognized for their studies on obesity and weight control measures met with FDA representatives on October 20, 1977 to review the safety for consumer use of the various liquid and dry preparations composed primarily of protein or protein hydrolysates. A copy of a memorandum of the meeting has been placed on file with the Hearing Clerk, FDA.

The advisory group reviewed and discussed several cases of illnesses and deaths which involved individuals who were apparently utilizing these protein products as their primary source of nourishment. The side effects described in accounts of the illnesses include nausea, vomiting, diarrhea (particularly with "predigested" or partially hydrolyzed liquid preparations), constipation (particularly with whole protein preparations), cold intolerance, fatigue, irritability, euphoria, postural hypotension, faintness, muscle weakness, gout recurrence, hypokalemia, cardiac arrhythmias, and dehydration. Since it is known that diets that consist primarily of protein can elicit these dysfunctions, it is absolutely critical that persons receive adequate medical counseling from professionals knowledgeable in nutrition and the physiology of weight control, and aware of the symptoms associated with these dysfunctions, before using the protein supplements in a very low calorie diet regimen.

Members of the advisory group expressed concern that promotion of these protein products did not adequately inform consumers of potential health hazards associated with protein diets, and they concluded that these protein products should not be used without careful supervision by specially trained medical personnel. The advisory group pointed out that use of very low calorie protein diets is particularly hazardous for individuals who are taking diuretics, antihypertensive drugs, oral hypoglycemic agents, insulin, adrenergic medications, corticosteroids, thyroid preparations, digitalis, or other prescribed medications and that very low calorie protein diets should not ordinarily be used by patients with significant renal, hepatic, or cerebrovascular disease; by patients with cardiovascular disorders; by psychiatric patients with suicidal tendencies; or by infants, children, or pregnant or lactating women.

The Commissioner has considered the evidence discussed by the advisory group and is concerned that many individuals are using these protein products for weight control without any awareness of the possible consequences. The Commissioner, therefore, believes that consumers should be alerted to the potential health hazards associated with use of these products and should be informed of the need to consult a physician for advice on the appropriateness of this type of strenuous diet. To ensure that consumers are provided this information, the Commissioner proposes to require that labeling for protein supplements intended for weight control bear the following warning statement:

Warning—Very low calorie protein diets may cause serious illness or death. DO NOT USE FOR WEIGHT REDUCTION OR MAINTENANCE WITHOUT MEDICAL SUPERVISION. Do not use for any purpose without medical advice if you are taking medication. Not for use by infants, children, or pregnant or nursing women.

The Commissioner recognizes that this proposed warning differs from the one FDA asked manufacturers to use voluntarily. The changes in the language of the warning are necessary, however, to ensure that consumers are adequately apprised of the hazards associated with the use of these protein supplements. The Commissioner advises that manufacturers who have already taken action to adopt the warning suggested at the Commissioner's November 9, 1977 press conference or who adopt the proposed warning above, will be given a reasonable period of time after a final rule is issued, to adopt the language of the warning in the final rule.

It appears that many protein supplements which are not labeled for use in weight control are nevertheless used for this purpose by consumers who have heard of the diet. For example, the current labeling of one product that has been associated with a death does not mention weight control. A copy of this label is on file with the Hearing Clerk, FDA. To protect such consumers the Commissioner proposes to require the following warning on protein supplements not intended for use in weight control:

Warning—Very low calorie protein diets may cause serious illness or death. DO NOT USE FOR WEIGHT REDUCTION OR MAINTENANCE.

The Commissioner requests that any person who has data or information that might be useful in assessing the safety of protein supplements for weight control submit such data or information to the Hearing Clerk for consideration by the Commissioner in this proceeding. In addition, the Commissioner asks that any reports of illness or death associated with the use of these products be made promptly by telephone or by writing to Richard Swanson, Epidemiological Investigation Section (HFO–120), Rm. 13–62, Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, (301–443–4667).

The Commissioner is also considering whether the risk to human health presented by these products is so great that he should seek to remove some or all of them from the market, instead of requiring warnings. The Commissioner invites comments on this subject including scientific comment on the need to remove the products from the market.

The Commissioner also invites the legal community to comment on the most appropriate statutory basis for a partial or total ban. Would it be appropriate, for example, to deem all protein products intended for use in weight control or maintenance regimens to be "unfit for food" and thus adulterated within the meaning of section 402(a)(3) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 342(a)(3))? Should the protein components of such products be deemed unapproved food additives, pursuant to sections 201(s), 402(a)(2)(C), and 409 of the act (21 U.S.C. 321(s), 342(a)(2)(C), and 348), making such use illegal? Additionally, would it be appropriate to deem all protein supplements intended for use in weight control or maintenance regimens to be new drugs within the meaning of section 505 of the act (21 U.S.C. 355)?

The Commissioner advises that, instead of the warnings proposed below, he may decide to remove the products from the market, if he concludes that they present a substantial risk to public health that cannot adequately be controlled by the use of warnings. After a final rule prescribing a warning is issued, protein supplements would be misbranded under sections 403(a) and 201(n) of the Federal Food, Drug, and Cosmetic Act if the label and labeling do not bear one of the prescribed warning statements.

The Commissioner has carefully considered the environmental effects of the proposed regulation and, because the proposed action will not significantly affect the quality of the human environment, has concluded that an environmental impact statement is not required. A copy of the Environmental Impact Analysis Report has been filed with the Hearing Clerk.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 201(n), 402(a), 403(a), 505, 701(a), 52 Stat. 1041 as amended, 1046–1047 as amended, 1052–1053 as amended, 1055 (21 U.S.C. 321(n), 342(a), 343(a), 355, 371(a))) and under authority delegated to him (21 CFR 5.1), the Commissioner proposes to amend Chapter I of Title 21 of the Code of Federal Regulations in Part 101 by adding new paragraph (d) to § 101.17 to read as follows:

§ 101.17 Food labeling warning statements.

* * * * *

(d) Protein supplements. (1) The label and labeling of any product composed essentially of protein or protein hydrolysates which is intended for use in a weight reduction or maintenance dietary regimen shall bear the following warning:

Warning—Very low calorie protein diets may cause serious illness or death. DO NOT USE FOR WEIGHT REDUCTION OR MAINTENANCE WITHOUT MEDICAL SUPERVISION. Do not use for any purpose without medical advice if you are taking medication. Not for use by infants, children, or pregnant or nursing women.

(2) Special dietary food products which are essentially of protein or protein hydrolysates, or which use the word "protein" in their statement of identity, or otherwise emphasize the word "protein" in their label or labeling, shall bear the following warning if they are not intended for use in a weight reduction or maintenance dietary regimen:

Warning—Very low protein calorie diets may cause serious illness or death. DO NOT USE FOR WEIGHT REDUCTION OR MAINTENANCE.

(3) The warning statement required by paragraph (d)(1) or (2) of this section shall appear prominently and conspicuously on the principal display panel of the package and on any other labeling. The warning shall be printed in bold letters and shall be enclosed by lines forming a rectangle in an area separated from other written, printed, or graphic matter. The capitalized sentences in paragraph (d)(1) and (2) of this section shall be capitalized on all labels and labeling. The height of the printed letters comprising the warning statement shall not be less than one half of the height of the largest type appearing on the label of the product. In no case shall the warning statement be printed in letters less than 1/16 of an inch.

Interested persons may, on or before (insert date 30 days after date of publication in the Federal Register) submit to the Hearing Clerk (HFC–20), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, written comments regarding this proposal. Four copies of all comments shall be submitted, except that individuals may submit single copies of comments, and shall be identified with the Hearing Clerk docket number found in brackets in the heading of this document. Received comments may be seen in the above office between the hours of 9 a.m. and 4 p.m., Monday through Friday.

The Food and Drug Administration has determined that this document does not contain a major proposal requiring preparation of an economic impact statement under Executive Order 11821 (as amended by Executive Order 11949) and OMB Circular A–107. A copy of the economic impact assessment is on file with the Hearing Clerk, Food and Drug Administration.

Dated November 30, 1977.

SOUTH KOREA: LOW PAY, LONG HOURS

Mr. SASSER. Mr. President, I want to bring to the attention of the Senate an article from the Sunday, November 27 Washington Post. This article entitled "South Korea: Low Pay, Long Hours," indicates that workers in South Korean manufacturing plants, particularly textile mills, earn as little as $2.50 a day for supervisory positions, and that nonsupervisory workers earn even less. Additionally, they work 9 to 10 hours a day, 6 or 7 days a week.

It is no wonder that South Korean goods compete effectively, and unfairly, with American products. For good reason, American workers make twice as much an hour in some instances as South Korean workers make in a day. It is incumbent upon us to maintain the high standard of living American workers deserve. To do this requires firm Government control of the flow of inexpensively produced goods into this country.

Our textile industries are in dire circumstances now because for too long Washington ignored the need to control the flood of imported goods which compete unfairly with American products. Finally, this administration, after years of neglect under the previous administrations, negotiated trade agreements. If the agreements do not succeed, it will be necessary for Congress to act to correct this serious economic problem.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOUTH KOREA: LOW PAY, LONG HOURS

(By William Chapman)

SEOUL.—Two-and-a-half years ago, Miss Lee came to Seoul from her parents' farm to work in a textile plant.

She quickly became skilled at her work and now supervises 50 machines that produce cloth sold on the international market.

Miss Lee is paid $2.50 a day.

Her company, moreover, often illegally demands that she work nine or 10 hours a day, and pays her no overtime. Until she and a group of friends engaged in some mild agitation, Miss Lee was forced to work seven days a week when her company had a backlog of orders.

Many of Miss Lee's co-workers still do not get a day off each week—only the monthly menstrual leave.

Miss Lee's low wages, and her lack of bargaining power to raise them in a country where strikes are forbidden, are the other side of South Korea's bright economic picture.

While Korea has gleaming new factories and a growing middle class, it remains a land of miserable poverty and Dickensian wages and employment conditions for the working class.

One academic expert feels that restlessness is growing among South Korea's poor over how little of their country's new prosperity is trickling down to the low-paid workers.

Tame as it may seem by Western standards, agitation in the mills is increasing, he points out.

So far, this has not consisted of anything much more daring than an occasional slowdown. Bus drivers in Seoul recently protested by meticulously observing all traffic rules—thereby delaying trips and costing the company money.

For the more obstreperous, government agents are an ominous presence. Miss Lee, the textile worker, asked that her real name not be used in this story because she already receives regular visits from the Korean Central Intelligence Agency.

KCIA agents and local police also appear routinely to caution leaders of the Urban Industrial Mission, a Presbyterian church-sponsored organization that tries to advise mill workers of their rights under the national labor law.

Labor unions in South Korea are generally ineffectual. One of President Park Chung Hee's 1972 "emergency" laws prohibited strikes. If a union seeks more than a company is willing to give, a government panel arbitrates and its decision is binding.

Even if unions were free to strike and bargain in Korea, most economists feel they would not have much clout. With 400,000 new workers pouring into the job market annually, abundant cheap labor will be available for years.

Big business, meanwhile, attempts to fight unions with big doses of paternalism. The Hyundai Group companies give every worker a free lunch, and they build hospitals and schools for their employees at Ulsan.

"Unions are not necessary," says H. W. Paik, a Hyundai Motor Co. executive. "Chairman Chung (Hyundai board chairman Chung Ju Yung) is like a grandfather to us."

Statistically, the gains Korean workers have made over the past 17 years are striking. Between 1963 and 1975, average real wages increased by 7 per cent annually. In 1961, per capita income in South Korea was about $100. Last year, it was about $700.

Moreover, there is some evidence to support the government's claim that income is distributed more evenly in South Korea than in other developing countries.

A 1970 study published in Great Britain showed that the poorest 40 per cent of South Korea's population earned 18 per cent of the country's income—far better than the same group fared in such Latin American countries as Honduras or Ecuador, better than in the Philippines, and about the same as in Taiwan.

"There is little doubt that there has been a substantial improvement in the income and welfare of the entire population," a World Bank study recently concluded.

In some of the newer industries that mark Korea's next stage of development, the wages are far above the standards of the old textile mills and shoe factories. An average auto worker in the Hyundai Motor Co. plant, for example, earns about $200 a month. Skilled workers earn considerably more.

Management and government officials argue that wage rates cannot climb too rapidly or South Korea industries will lose their competitive advantage in international markets. Low wages in the shoe and textile factories helped launch the country's economic boom in the 1960s, and they are still very much a factor as the big move is made to heavy machinery and more sophisticated export products.

South Korea has begun to cut into Japan's shipbuilding markets because, in part, its wage-scale in shipyards is only about one-third that of Japan.

But the pressure from below for a bigger slice of the pie will continue to grow, according to those who have watched the stirrings of textile workers. One scholar who has long studied the workers' scene said that despite the gains of the past 15 years, there is a sharper sense of inequality today among those who have made the smallest advances.

"The general standard of living is going up, but the aspirations are going higher," he said. "There is a greater sense of deprivation when the people see that some are living in homes that are like castles."

MANDATORY RETIREMENT

Mr. PERCY. Mr. President, when I voted for passage of H.R. 5383, which would raise the mandatory retirement age from 65 to 70, I did so because I believe it is unfair to meet the employment needs of younger workers by denying those of older workers. Many people are able to work beyond age 65, and although the trend today is toward early retirement, those older workers who are able to work and desire to do so should not be denied that option.

However, although I voted for H.R. 5383, I did so with grave misgivings. I was, and still am, deeply concerned about the possible adverse impact this bill could have on the employment and advancement prospects of younger workers and on business productivity. I am sure that many of my colleagues who voted for H.R. 5383 share my concerns. We feel more information is needed on the possible impact of this bill on younger workers. For that reason, I ask unanimous consent that material sent to me by Mr. Arthur M. Wood, chairman of the board of Sears, Roebuck & Co., be printed in the RECORD at the conclusion of my remarks. I am sure that my colleagues will find Mr. Wood's material interesting, and I hope that they will keep it in mind when the conference report on this bill comes before us.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EMPLOYMENT IMPACT STATEMENT—INCREASING THE MANDATORY RETIREMENT AGE TO 70

The Congress is considering legislation (H.R. 5383, S. 1583 and others) which, among other things, would prohibit mandatory retirement prior to the age of 70 in private employment.

Present Sears, Roebuck and Co. policy permits voluntary retirement as early as age 60 (55 with 20 years service) and provides for mandatory retirement at 65 (63 for certain executives).

QUESTIONS

1. What impact would the legislation have on Sears employment opportunities for:
   (a) Full time non-exempt employees
   (b) Exempt (management) employees
2. What impact would the legislation have on the national labor force unemployment rate?
3. What other factors should be considered?

SEARS FULL-TIME NONEXEMPT EMPLOYEES

In an average year approximately 3,100 full-time non-exempt employees retire from Sears. If the mandatory retirement age were increased from 65 to 70, it is likely that as many as one third of these employees would choose to continue working.

If proposed present legislation were to become law, it would take 5 years before normal retirements in full force would reoccur. Over this period there would be 5,100 fewer full-time job openings for new entrants into the Sears workforce. This would reduce the Company's full-time new hire rate by about 7 percent. In addition, each retirement in the past has triggered approximately four promotional opportunities. As a result, the net effect of the five-year extension would be the loss of 20,000 job change opportunities. This would reduce the total number of non-exempt level job moves within the Company by 8.3 percent. Particularly affected, as far as promotional opportunity is concerned, would be minority employees who have been joining the Company full-time workforce at ever increasing rates, and female employees who, in recent years, have earned an increasing share of Company promotions.

This data, of course, assumes that only one third of those employees over 65 continue working, the reduction in the full-time new hire rate would rise to 10.3 percent and the reduction in job change opportunities would rise to 12.5 percent.

SEARS EXEMPT EMPLOYEES

In a normal year approximately 285 exempt employees retire. By increasing the average mandatory retirement age of Sears' exempt employees from 64 (which it is today) to 70, it is again assumed that as many as one-third of these employees would continue working. Effective with the passage of this legislation, it would take 6 years before normal retirements in full force would reoccur. Over this period there would be 560 fewer exempt openings for new employees to fill. This would reduce the rate at which the Company assimilated new exempt employees into its workforce by 7 percent. In addition, each exempt retirement in the past has generated approximately six promotional opportunities.

Consequently, the net effect of the six-year extension would be the loss of 3,800 job change opportunities, and would reduce the total number of job moves by 12.0 percent. Again, those most acutely affected as far as promotional opportunity is concerned would be the middle management minority and female employees. These figures, of course, are assuming that only one-third of those employees over 64 continue working. If as many as one-half continue working, the reduction in exempt employee assimilation into the Company would be 10.2 percent and the reduction in job change opportunities would be 13.1 percent.

EFFECTS ON NATIONAL LABOR FORCE UNEMPLOYMENT RATE

Currently there are 4,158,000[1] employed workers in the age range of 60–64. Of this group roughly 2,040,000[2] normally would be expected to retire by the age 65. However, if the mandatory retirement age were extended to 70 in 1978 a certain proportion of these employees could be expected to retain their jobs. If this proportion were one-third, the net effect would be a reduction in job openings of 136,000[2] a year for each of the five years between 1978 and 1982, the time at which the normal retirement flow would begin to reoccur. In 1978 this would raise the national unemployment rate by .14%. This tendency to increase the rate of unemployment would, of course, be cumulative and become greater each year.

By 1982, this longer working life would have eliminated 680,000[2] job openings and increased the unemployment rate by .6%. Of course, this projection assumes that only one-third of the potential retirees continue working. If one-half continue working the additional five years the potential increase in the unemployment rate by 1982 and beyond could exceed 1.0%.

Thus far only employed people in the 60–64 age range have been consiedred. Currently, of the 24,000,000[2] people over 60 who are nonparticipants in the labor force, roughly 8,000,000[3] are retirees. It is impossible to determine how many may decide to re-seek employment if the retirement age were extended. However, if only 5% decide to seek jobs, this alone could increase the unemployment rate in 1978 by .4%. Figure 1 illustrates how both the reduction in job openings due to fewer retirements and the increase in job seekers as people come out of retirement could potentially affect the nation's rate of unemployment.

FIGURE 1

Date	Estimated civilian labor force [1]	Estimated reduction in job openings if ⅓ of employees who would have retired at 65, continue work	Estimated labor force reentrants if 5 percent of current retirees seek employment	Increased unemployment rate by extending retirement age to 70 (percent)
1978..	99, 183, 000	136, 000	400, 000	0. 5
1979..	101, 464, 000	272, 000	400, 000	. 7
1980..	103, 798, 000	408, 000	400, 000	. 8
1981..	106, 185, 000	544, 000	400, 000	. 9
1982..	108, 627, 000	680, 000	400, 000	1. 0

[1] Assumes 2.3 percent annual growth rate from 1976 base.

---

[1] Employment in Earnings (BLS), January 1977, Table 1, pg. 138–9.

[2] Derived from Employment in Earnings (BLS), January 1977, Table 1, pg. 138–9.

[3] Derived from Handbook of Labor Statistics (BLS), 1976, Table 8, pg. 44.

In 1978, the impact of extending the mandatory retirement age could increase the unemployment rate by one-half of one percent. This indicates that if 1978 unemployment is estimated at 6.5 percent, the enactment of this legislation could well raise this estimate to 7.0 percent. In 1982 and beyond the accumulated effect could increase the unemployment rate by as much as 1 percent.

IV. ADDITIONAL FACTORS

In addition, other oft-mentioned factors which, while difficult to quantify at the moment, can undoubtedly be anticipated, such as—

1. Reduced employee morale and increased litigation as a result of the termination of those older employees who are no longer able to perform job responsibilities,
2. Increased costs of life insurance coverage, disability pay and medical/hospital coverage,
3. Reduced productivity due to increased illness absence at higher age levels.

SUMMARY

In summary, this legislation, if passed as proposed, would—

1. Over time, probably extend the average retirement age for Sears—

exempt employees from 60 to 66,

non-exempt employees from 62 to 67,

2. Reduce substantially the number of new entrants into the work-force, both in Sears and nationally, thereby increasing pressure on the unemployment situation,
3. Reduce quite significantly, advancement opportunities for those presently employed because of fewer job openings,
4. Severely hamper affirmative action programs to recruit and advance minorities and women.

FAMILY FARMERS COMMENT ON PROPOSED INTERIOR DEPARTMENT REGULATIONS FOR THE SALE OF EXCESS LAND

Mr. ABOUREZK. Mr. President, the Interior Department's proposed regulations for the sale of excess lands in Federal reclamation projects have caused a great deal of controversy and confusion. Many people have been claiming that the regulations would allow the Secretary of the Interior to confiscate land, set acreage limitations that would make farming impossible, and violate individual property rights. In fact, the regulations are rather mild. Federal reclamation projects involve billions of dollars in Federal tax subsidies. All too often, these subsidies are going to wealthy nonresident investors, rather than to the small family farmers the law was intended to benefit. This week, a group of farmers in South Dakota—United Family Farmers—sent in their comments on the proposed regulations. UFF is a large organization of family farmers in South Dakota that has taken an active and effective interest in reclamation projects. Their detailed comments on the regulations show that family farmers, contrary to what some groups are saying, do favor the regulations. In fact, UFF believes the regulations do not go far enough. I believe that anyone interested in this subject should read their comments carefully. I ask unanimous consent that their comments be printed in the RECORD.

There being no objection, the comments were ordered to be printed in the RECORD, as follows:

COMMENTS OF UNITED FAMILY FARMERS, INC.

United Family Farmers, Inc. is a South Dakota non-profit corporation. At the present time its membership is comprised of more than 500 farm members. During the past several years more than 1000 people have contributed time and money to achievement of the organization's purposes.

The corporate purposes are stated as follows:

"To encourage careful and prudent soil, water, air and other resource conservation;

"To cooperate with appropriate local, state and federal agencies and with individuals and other associations engaged in activities and purposes likely to preserve and improve that social structure and climate in which the family size farm will flourish as an economic and social unit;

"By all lawful means to oppose and defend against the practices and policies of those local, state and federal agencies and those individuals and other associations which appear likely to threaten the continued health and vitality of the family farm unit."

For the past four years the United Family Farmers has taken an active interest in questions relating to the enforcement of the acreage limitation and residency requirement in reclamation law. The organization, at the direction of its membership, has been closely involved with the planning of the proposed Oahe Diversion Unit, South Dakota, and other federal reclamation projects in North Dakota, South Dakota and Nebraska. Pursuant to this interest it has observed the effect that reclamation programs appear to have on family sized farms. In addition, it has become knowledgeable concerning the Bureau of Reclamation's attitude toward acreage limitation and residency. Especially with the Oahe Project, UFF has continually attempted to gain enforcement of these legal requirements at early stages. To this end, it has pursued litigation against the Bureau to the Eighth Circuit Court of Appeals. These activities along with the corporate purpose of preserving family farms makes United Family Farmers, Inc. particularly qualified to speak to the need of the proposed regulation and to critique them.

The proposed regulations regarding excess land sales and enforcement of the residency requirement receive the hearty and enthusiastic support of the United Family Farmers, Inc. As an organization and as individuals we have for years watched with dismay as the Bureau of Reclamation and the large landowners who form the constituency of that administrative agency, actively subverted the clear and honorable purpose of reclamation law. Viewing this subversion is particularly painful to our members, the majority of whom have grown up enjoying the great benefits of an economy and a society based upon family-size farms. That the federal executive has the courage, understanding and forthrightness to undertake enforcement of these laws is encouraging beyond words.

The comments that follow include a number of specific criticisms of these regulations. In several situations we feel that the regulations inadvertently create large loopholes through which the large landowners will slide. We have indicated these. We have also pointed out the strong points of the regulations.

United Family Farmers is particularly pleased that the regulations contemplate enforcement of the residency requirement, which requirement we feel to be the most important single provision in reclamation law. Farms are meant to be farmed by people who live on the land. They do not exist for the benefit of absentee investors. A broad based land tenure system creates strong democracies. A widespread system of farm tenancy is an evil which the United States government and the American people have resisted throughout this century. Our organization stands with that policy.

COMMENT

That ". . . power always follows property [is] an infallible . . . maxim in politics." John Adams, *Works*, Vol. *IX*, p. 376; quoted in Coker, "American Traditions Concerning Property and Liberty," 30 Am. Pol. Sci. Rev. 1 (1936).

"National land policy from the start right down to this day has attempted to structure land policy in a way to encourage 'family-size' farms and owner-operatorship." M. Kelso, "National Land Policy and the Development of Agriculture: The American Experience," in *National Land Policy In America* (1956).

"[T]he form of agricultural organization that maximizes profit may not necessarily be the form desired for society." United Nation's Food and Agricultural Organization, World Land Reform Conference, Country Paper: Unitel States of America 3 (1966).

Lord Macauley said we never would experience the test of our institutions until our public domain was exhausted and an increased population engaged in a contest for the ownership of land. That will be the test of the future, and the very purpose of this bill is to guard against land monopoly and to hold this land in small tracts for the people of the entire country. . . . Convey this land to private corporations and doubtless this work would be done, but we would have fastened upon this country all the evils of land monopoly which produced the great French revolution which caused the revolt against church monopoly in South America, and which in recent times has caused the outbreak of the Filipinos against Spanish authority." Congressman Francis G. Newlands, 35 Cong. Rec. 6734 (1902). Debate on Reclamation Act of 1902.

"Public policy in the United States has favored wide distribution of the rights of ownership in land. Prospective farmers have been encouraged to acquire, develop, and operate individual farms. This policy is still being followed. However, the great bulk of the area that can be profitably developed and used for agriculture has already been brought into use." Libby & Barlowe, "Policy Choices Affecting Access to Farmland," in *Who Will Control U.S. Agriculture?* at 23 (1972).

"It is argued by some that as wealth grows larger in a few hands the opportunities of the laboring classes to secure employment are multiplied. . . . [B]ut looking a little beyond immediate benefits, it appears that the tendency under such a condition is to dwarf self-reliance in the masses and to make the mere service of opulent employers by the great army of breadwinners the fulfillment of all human ambition. I think it is the duty of the legislator to pursue a policy under which the greatest possible number of our people may be provided with the means of independent employment, by which the aspirations of the individual may be encouraged and developed." Sen. Hansbrough, 35 Cong. Rec. 1386 (1902). Debate on Reclamation Act of 1902.

"It has been demonstrated historically and is true in many countries today that those who control the land end up controlling the country." Sen. G. Nelson. Hearings Before Subcommittee on Monopoly of Senate Select Committee on Small Business, 90th Cong. 2d Sess. 199 (1968).

"Acreage limitation is, in every respect, the most important part of reclamation law. The excess-land provisions are the most economically significant, the most controversial, the most frequently litigated—and the most violated." J. Sax, "Federal Reclamation Law," 2 *Waters and Water Rights* § 121, p. 209 (Clark, ed. 1967).

RESIDENCY

United Family Farmers, Inc., considers full enforcement of the residency requirement to be the critical provision of reclamation law, and urges that the regulation not be compromised on this point.

The acreage limitation, if properly implemented, can break up large land holdings. The residency requirement guards against speculative investment in those lands and insures that only bona fide farmers receive the heavy federal subsidy. The acreage limitation without the residency requirement cannot work.

Without residency, subsidized water will certainly go to absentee investor owners. That is, the acreage limitation will break up large holdings, but these will be divided into parcels, or "shares" for outside absentee investors—a result not intended by Congress. However, when the acreage limitation is joined with residency, it follows that as large land holdings are broken up, they will necessarily be sold to bona fide resident farmers. Then and only then, will the objectives of Congress be achieved.

The acreage limitation laws are not mere surveying laws dictating the size of tracts in irrigation districts; rather, they have a purpose and that purpose is to put people on the land in family size units. Without a residency requirement we will have little more than a technical requirement, as loopholes are readily available to the sophisticated. Examples of these loopholes may be found in section 426.7 and section 426.8 of the proposed regulations. However, when a strict residency requirement is imposed upon the acreage limitation the overall system takes on the logic of the clear goals manifested in the legislation.

Discussion of the various forms of joint ownership available to landowners in federal irrigation districts, such as partnership, co-ownership, trust ownership and the like, highlight the absolute need for the residency requirement. It is very likely that, despite the finest efforts of the Department of Interior to anticipate by regulation the sophisticated forms of common ownership that will be used in attempts to subvert the excess land law, ingenious counsel will continue to develop new legal forms that will not fall within the proscriptions of the regulations. Anyone who has observed development of federal tax law, and certainly the development of acreage limitation enforcement, is well aware that the technical ingenuity of attorneys is without limit. The proposed regulation should deal with this fact realistically. The best way to deal with it is to enforce the residency requirements strictly. The achilles tendon of joint ownership forms is that the investors in them, and upon whom they are dependent, are not farmers and do not intend to go to the land and farm the land. As Sax states in his work titled "Federal Reclamation Law" at p. 222:

"Accomodations of the legitimate need for such forms of ownership and protection against the dangers they create for the integrity of acreage limitation policy must be found, not only in the excess land provision, but—even more important—in the revival of the virtually forgotten residency requirement. The danger presented by such entities as trusts is not one of mere aggregation of ownership; as we have seen, such ownership may be consistent with the excess land law. The danger is that water may be supplied for ownerships which are merely investment interests rather than true working interests in the farms. It is submitted that the problems of forms of ownership would be substantially diminished if the residency requirement—which is, after all, a federal law that has never been repealed—were enforced along the lines suggested in the paragraphs following and in the later discussion of the residency provision."

If each beneficial owner of a legal form met the residency requirement every recipient of project waters would have a working relationship to the land rather than an investment relationship. This is what the residency does—it undertakes to insure that the acreage limitation can work.

Unduly restrictive regulations upon the forms of ownership that can exist creates the potential of actually damaging family farm ownership. That is, under modern tax law, numerous forms of ownership actually make it easier to acquire capital and move into family farms. The "Sub-Chapter S" corporation is one example.

If the regulations are aimed at eliminating all common forms of ownership, there is a risk that they will make this attractive legal form unavailable to legitimate family farmers. But, the regulations need not be unduly restrictive in this matter if the residency requirement is there. Across the midwest many legitimate family farm operations are organized as corporations, partnerships, Sub-Chapter S corporations and the like. The purpose of forming the corporation is to facilitate intergenerational transfers, and to make it possible for one generation to transfer operational farms to the next generation during the lives of the senior generation. These goals are important—and they have a great deal to do with the survival of family farms—and these regulations should not ignore them. Again, the way to allow these useful legal forms to co-exist with reclamation projects is to strictly and enthusiastically enforce the reclamation residency requirements. In fact, we believe that the acreage limitation will remain unenforceable so long as the residency requirement is not enforced.

RESIDENCY: THE "NEIGHBORHOOD" ISSUE

Sections 426.4(j), (k), and (l) defining "neighborhood" for purposes of the residency requirement provide a large loophole for those seeking to subvert the regulations. These sections must be made more restrictive if the purpose is to be achieved.

Sections 426.4(j), (k), and (l) represent a major loophole inadvertently placed in these regulations by the Secretary. First, they allow unrestricted speculation in vast acreages of lands receiving federal water; and, second, they do nothing to insure that the resident of a farm is a bona fide farmer. We feel that the definition of "neighborhood" must be made more strict and that the definition of a resident must make reference to bona fide farmers.

If these sections are not made more restrictive, we can readily imagine real estate salespersons in the towns and cities of the midwest using their compasses on land maps to chart fifty mile circles around the towns and cities in which potential investors reside. The lands within the circle will be coveted "speculation lands" for investors. It will be these lands that the real estate agents will attempt to acquire and resell to investors for speculative purposes. For these lands the acreage limitation will be a sham. And, we note, that a circle with a radius of fifty miles encompasesses a vast acreage.

In South Dakota and other midwestern states the population is not concentrated in a few large cities. Rather, we enjoy a dispersed commerce found in a number of medium sized and small towns and cities. These towns and cities all contain considerable numbers of people who would qualify and be anxious to participate as investors for speculation purposes. It will be very difficult to draw 50 mile circles in South Dakota without encompassing one or two or three of these towns.

In addition, the sections encourage further abuse by families who establish "non-farm family compounds," in rural areas for purposes of complying with the regulations.

Thus, we see that in this area the regulations that are proposed have departed from the clear purpose of the statute—to provide family farm opportunities, not investment opportunities. Whenever this goal is forgotten the loopholes open. What is essential is that the regulations be revised to require that the resident be a *bona fide farmer*, actually farming on a day to day basis, the residency is close to the farm, and the residency has not been established in order to subvert the clear purpose of the law.

We should add that a 10 to 15 mile radius for purposes of defining a "neighborhood" would be acceptable, provided the Secretary is required to make an independent validation in each case where the farmer does not live on his farm. Anyone who lives more than 15 miles from his farm, to our experience as farmers, is probably not a bona fide farmer. You cannot commute to a farm business the way you can commute from the suburbs of Virginia to downtown Washington, D.C.

Our specific proposal is that Section 426.4 (k) be revised to state a maximum fifteen mile radius from the particular tract of land. In addition, a sentence should be added to that section stating: "whenever a resident owner does not reside on the particular tract of land receiving water from a federal project governed by reclamation law, the Secretary shall make an independent validation to insure that the resident is a bona fide farmer, operating the land on a day to day basis, and relying on the farm as a principal source of family support." In addition, Section 426.4 (1) should add an additional requirement to the definition of "eligible non-excess owner." That additional requirement should be that the owner is "a bona fide farmer, operating the land on a day to day basis, and relying upon the farm as a principal source of family support."

We have examined the law of federal reclamation to determine whether the fifty mile radius is somehow mandatory as a definition of neighborhood". We find nothing to support this possibility, although the annotations to § 5 of the Reclamation Act of 1902 make mention of the departmental decision of January 20, 1909 that the term "in the neighborhood" is held to mean within 50 miles. As we explained above, we feel that this definition defines the clear and certain purpose of reclamation law. That being the case the Secretary would be in error to rely upon the ancient and misguided administrative decision which has, apparently, never been subjected to legal scrutiny.

RESIDENCY

The residency requirement is still in force.

The issue of whether the residency requirement is still in legal force is critical, but it is only critical because the Bureau of Reclamation and the large landowners that benefit from project subsidies can point to a history of steadfast resistance to the residency requirement. The argument that residency is repealed is supported only by bureaucratic resistance and inertia and the greed of large landowners. Professor Sax probably put it most accurately at p. 240 of his work when he said that the residency requirement was "administratively emasculated." Our review of the law leaves no doubt in our mind that the residency requirement is in full effect. Whenever it has been independently reviewed it has been upheld.

Apparently the Bureau and the landowners have argued that § 46 of the Omnibus Adjustment Act of 1926 in some way repealed the residency requirement of § 5 of the Reclamation Act of 1902. The 1926 Act requires the Secretary of Interior to contract with irrigation districts directly for the construction of reclamation projects and the repayment of construction costs. The contract must provide that landowners be required to sign recordable contracts wherein they agree to sell their land holdings in excess of 160 acres as a prerequisite to the receipt of project water for their excess land. Apparently the argument is that since residency was not mentioned in § 46, that section takes the place of § 5 of the 1902 Act and effectively deletes reclamation. This argument is more wishful thinking than legal argument.

The only recorded adjudication of the issue is the case of *Yellen v. Hickel*, 335 F. Supp. 200 (S.D. Cal. 1971). That case arose from a suit seeking to compel the Secretary of Interior to enforce the residency requirement of the Reclamation Act of 1902. The court clearly upheld the residency requirement against the best argument of the United States government. At page 203, the Court said:

"Statutory construction of § 5 and § 46 reveals no repugnancy whatever. Section 5 requires that there is no right to use water on tracts of any one owner of over 160 acres and that no water shall be sold to anyone not occupying the land or residing in the neighborhood. Section 46 establishes a system whereby the Secretary no longer sells to individuals, but to irrigation districts instead, and provides for a situation not contemplated in the original Act where water would be supplied through the irrigation district to private landowners of more than 160 acres in addition to settlers on public lands opened up for entry under the original reclamation law. There is no inconsistency in applying the requirements of § 5 at the same time with those of § 46. The latter merely provides for the sale of excess lands over 160 acres if the private owner wants reclamation project water. Section 5 requires that you be a resident to get water at all. A literal reading of both statutes then reveals no implied intent on the part of Congress that the earlier statute would be repealed by § 46. Since both can stand by reasonable construction, that construction must be adopted. . . .

* * * * *

"The Reclamation Act of 1902 was enacted after a long history of monopoly of and speculation in the arid lands of the west. This background resulted in a national policy of anti-monopoly and anti-speculation which found expression in reclamation law. It is this policy which provides possibly the strongest rationale holding the residency requirement in force. From its very inception reclamation policy had been to make benefits therefrom available to the largest number of people. The 1902 Act contained a 160 acre limitation, required that users be bona fide residents, required that the reclamation water right be appurtenant to the land, and provided that right to the water be limited by beneficial use . . . These devices were incorporated into the bill in order to prevent land monopolization and profiteering by large corporations to the detriment of the intended beneficiaries of the Act . . . the idea was to create a class of self-reliant family farmers. . . .

* * * * *

"National policy, as expressed in reclamation laws is to provide homes for people. Homes are possible only where speculation and monopolization are not possible . . . the residency requirement in Section 5 is a sound expression of that national policy. It's repeal by implication would be contrary to the purpose for which Section 5 was enacted. Early in reclamation history events showed that "under the private project where residence is not required, the developments have been very largely along the lines of the creation of tenant farms." . . . *Failure to enforce residency subverts excess land limitations which Ivanhoe, supra, specifically upheld.* Through the use of corporations, trusts and co-tenancies, flagrant violations of the purposes of this limitation are possible. Each of these farms may be used to bypass the acreage limitation. The policy behind reclamation law to aid and encourage owner operated farms requires enforcement of the residency requirement to prevent these violations. 335 F.Supp. 200 at 207–08." (Italics added)

In his work titled "Federal Reclamation Law," in *Waters and Water Rights* (Clark, ed.) at page 121, Professor Sax, generally recognized as the leading scholar on reclamation law in the United States, makes the following comments with regard to residency:

"Unfortunately, the residency provision has been administratively emasculated so that today it is virtually inoperative. Originally the residency-occupancy requirement was applied not only to the first applicants for project water, who were required to live within 50 miles of the project, but to all users, as long as construction charges remained unpaid. But in 1916 it was ruled that the provision was applicable only at the time the original water-rights application was made. It is most difficult to see the justification for so narrow a reading of the restriction. *Without question this interpretation should be abrogated, and the provision should be restored to its original importance.* If this were done, water would be supplied only to farms that were owner-operated, and water would be denied to all farms operated by lessees and owned by absentee landlords with only an investment interest in the farm." (emphasis added).

The section dealing with residency requirements from the Sax work are attached hereto as Appendix A.

Section 508 of the Soldiers and Sailors Civil Relief Act of 1940, 54 Stat. 1189, 50 U.S.C. § 568, October 17, 1940 states:

"The Secretary of the Interior is hereby authorized, in his discretion, to suspend as to persons in military service during the period while this Act remains in force and for a period of six months thereafter or during any period of hospitalization because of wounds or disability incurred in the line of duty that provision of the Act known as the "Reclamation Act" requiring residents upon land in private ownership or within the neighborhood for securing water for the irrigation of the same, and he is authorized to permit the use of available water thereon upon such terms and conditions as he may deem proper."

This important statute makes specific reference to the residency requirement. Apparently the author of the statute found the residency requirement of sufficient importance in 1940 that a separate section of this statute was dedicated to addressing the impact of the residency requirement upon members of our armed services. It is unlikely that such an effort would have been directed at a requirement that was not law.

During the 80th Congress, 1st Sess. in 1947, S. 912 was introduced. That Act would have exempted a number of projects from "land-limitation" provisions, which were defined to include provisions "relating to residency and occupancy." The Act was not enacted, but it was debated. The interesting point concerning that statute is that the projects that would have been exempted were authorized after 1923. This suggests that those Congressmen associated with the Act assumed residency applied. It is noteworthy that the Senator introducing the bill was Sheridan Downey of California, an individual who had a reputation for sophisticated understanding of western water problems.

The General Accounting Office apparently agrees that the residency requirement was never repealed by Congress. In their November 30, 1972 Report to the Congress, titled, "Congress Should Reevaluate the 160-Acre Limitation on Land Eligible to Receive Water From Federal Water Resources Projects," they state:

"Although the Reclamation Act of 1902 required that no project water be sold to a landowner for use on his land unless he was an actual bona fide resident on the land, the *residency requirement was enforced less and less over the years and finally its enforcement was discontinued.*" (emphasis added).

And in the end, perhaps the strongest argument against those who oppose the residency requirement is simply that their argument is based upon repeal by implication. That is, they admit that Congress did not expressly repeal the residency requirement, but that the repeal must be implied from subsequent legislation. The standard rule of statutory interpretation is that repeals by implication are not favored. In the case of *Posadas* v. *National City Bank,* 296 U.S. 497, 503 (1963), the Supreme Court of the United States laid down the principal:

". . . The intention of the legislature to repeal must be clear and manifest; otherwise, at least as a general thing, a latter act is to be construed as a continuation of, and not a substitute for, the first act, and will continue to speak, so far as the two acts are the same, from the time for the first enactment."

EARLY ENFORCEMENT REQUIRED IN NEW PROJECT CONSTRUCTION

The proposed regulations should be expanded to require enforcement of the residency and acreage limitations at the outset of new project construction.

". . . [S]peculative fever is principally a product of the early years of a projects life." Sax, "Federal Reclamation Law" in *Waters and Water Rights* 228 (Clark ed.).

United Family Farmers, Inc. recommends that the proposed regulations be revised to include procedures that will insure that the numerous new projects now under construction, or being considered for initiation, will be subject to early enforcement of the residency requirement and acreage limitation.

Section 426.2(b) states that these regulations ". . . apply to all existing excess lands." The objective is admirable, but any attempts to correct the long-term breach of the laws of federal reclamation must also cut-off the problem at its source—new projects. The reason the problem of non-resident ownership and excess lands exists is because the Bureau of Reclamation failed to enforce the law during early stages of major project construction. Without specific regulations it is fair to assume that the Bureau will continue to delay initial enforcement until the latest possible stages in a project's history.

It is the belief of United Family Farmers, Inc. that the Bureau develops projects in a way that makes ultimate enforcement of the residency and acreage laws—enforcement which is the goal of the proposed regulations—extremely difficult, if not highly unlikely. First they gain political support for a particular project by minimizing the effect and applicability of acreage and residency limits. *Without question the Bureau, during early efforts to create enthusiasm for a planned project, assures large landowners that "There are ways to get around the law."* Once project authorization is secured and construction moneys are flowing, the Bureau delays acquisition of recordable contracts until water is ready for delivery. This is often a matter of years—usually decades. During this extended period speculation in project lands is often widespread, and unchecked, contrary to the purpose and intent of reclamation law.

This speculation allows project benefits to leave the project even before water is delivered. There is a direct correlation between speculation in project lands and the ability of farmers to purchase irrigated lands. Similarly, there is a direct correlation between speculation in project lands and the ability of farmers who have bought lands to retire their debt and pay interest (land purchase, land improvement, and project repayment), all essential prerequisites to financial survival. William E. Warne, former Assistant Secretary of the Interior, in "Land Speculation . . ." The Reclamation Era 176, 180 (August 1947:

". . . [I]n the main those projects on which the greatest amount of speculation occurred in their formative years had, a few years later, the most delinquency. The delinquency on projects which had had relatively little speculation was negligible.

"Studies have shown that even a 70 and 80 percent rise in the price of land would increase payments on farms on the Frenchman-Cambridge Unit of the Missouri Basin Project in Nebraska and on the Ogden River Project in Utah to a point at which the ability of the farmers to pay for irrigation construction would be wiped out."

The next development that we have observed is that projects are substantially constructed before recordable contracts are required. This delay has two impacts. First, by it the Bureau has created conditions under which it is highly unlikely that water delivery to excess landholders will be terminated because to do so would be to cut off the source of revenue needed to pay for the project. Second, by this stage in project development control over local contracting boards, i.e., water user's associations, has typically passed to the large (excess) landowners. These landowners, who have every reason to resist enforcement of residency and acreage limitation laws, are then asked by the Bureau to enforce acreage limitation, as required by the terms of the master contract. Thus, by a series of calculated steps during the early stages of project development, the Bureau puts the non-enforcement "bunny in the hat," and contributes to the pattern of law-breaking with which the Secretary of the Interior is now attempting to deal.

Non-enforcement during early stages of reclamation projects also encourages speculation by those who might benefit from replenishment of the groundwater by delivery of federal water. This occurs because individuals in project areas may find that due to replenishment of groundwater by surface delivery, and reduced pumping of groundwater by surface delivery, and reduced pumping of groundwater by surface users, they do not need to call for water delivery and therefore don't need to sign a recordable contract. If these individuals were compelled to sign recordable contracts, they would have to weigh their desires for the project against the prospect of losing their excess lands. As it is they run no risk. They may speculate freely in advance of water delivery. They get project benefits without calling for water delivery, and they incur no financial obligation to pay for the project.

United Family Farmers, Inc., has observed this process at work with the proposed Oahe Diversion Unit in South Dakota. Pursuant to our corporate purposes we requested the Bureau to activate anti-speculation efforts before construction began. This they vigorously refused to do. In the case of *United Family Farmers, Inc.* v. *Kleppe,* 552 F. 2d 823 (C.A. 8, 1977) [Appendix B], we asked the federal courts to enforce Section 12 of the Reclamation Extension Act of 1914, 38 Stat. 689, which requires execution of recordable contracts prior to initiation of project construction. The purpose of this litigation was to reduce land speculation in the Oahe project area and thereby increase the family farming opportunities there. The U.S. Circuit Court of Appeals for the Eighth Circuit held that Section 12 had been repealed by Section 46 of the Omnibus Adjustment Act of May 25, 1926, 44 Stat. 649.

As a result of our inability to compel the Bureau of Reclamation to pursue early execution of recordable contracts, speculation in Oahe project lands did occur. Evidence of this is obtainable from real estate experts in the project area. It is also made apparent as a project motive in a letter from Mike McHugh to the members of Friends of Oahe, an organization of project supporters, included as Appendix C to these comments. In that letter McHugh notes that among the effects of Oahe Project termination is that ". . . your land values which had begun to reflect the Oahe Project will begin to drop."

It is our opinion that present legislation—Section 46 of the Omnibus Adjustment Act of 1926—authorizes the Secretary to call for the execution of recordable contracts at any time before project water is delivered. We strongly recommend that the regulations under the consideration be revised to require the Bureau to call for recordable contracts prior to initiation of project construction. This will avoid land speculation and insure that the project is not supported by large landowners having no intention of complying with acreage limitation or residency laws.

RESPONSIBILITY FOR ENFORCEMENT

The proposed regulations should be revised to include rules that make responsibility for enforcement clearly that of the Secretary, not the various water user's association's with whom the Secretary contracts.

As already suggested earlier, one of the devices relied upon by the Bureau of Reclamation to insure against effective implementation of acreage limitation laws has been delegation of authority. By making acreage limitation a condition of the master contract with water users associations the Bureau can claim to have delegated the authority for enforcement. The fact that the authority and responsibility for enforcement has been delegated to organizations serving the interests of excess landowners is not usually included by the Bureau as part of its claim.

This process is well described in a letter of July 8, 1976 from G. G. Stamm, Commissioner of Reclamation to the Honorable Teno Roncalio:

"The enforcement of acreage limitation provisions is accomplished through the irrigation district which is obligated under a contract with the United States to withhold delivery of water to ineligible lands. The various irrigation districts in the Upper Missouri Region, in which ineligible excess lands are being served, have been advised of the problem many times in the past but have not carried out their contractual obligation in this regard, and the problem has persisted."

Later in the same letter the Commissioner, describing recordable contracts, says "the form of a recordable contract . . . [was made] . . . available to the various irrigation districts in that region, . . . for consideration by each excess landowner who wishes to comply with Reclamation law by entering into such a contract." (A copy of the full letter is Appendix E.)

The point is that if enforcement of residency and acreage limitation is ever to be achieved it will be necessary for the Secretary to assume responsibility for enforcement, and cease the practice of delegation to excess landowners acting through water user associations.

DEFINITION OF FAMILY AND BENEFICIAL OWNERSHIP

The proposed regulations should be revised to restrict the definition of family ownership so that it more realistically reflects the obvious intent and purpose of the Act.

The proposed regulations at §§ 426.4(b), 426.7, and 426.8 are not consistent with the clear purpose of acreage limitation law and policy and provide a mechanism for ready circumvention of the law by large landowners. United Family Farmers strongly recommends that these provisions be revised to apply the limitation to families, rather than to individuals.

According to the terms of § 426.4(b), 320 acres owned by husband and wife is considered non-excess. Section 426.7 allows each family member to "own" 160 acres as non-excess. Section 426.8 allows one person to lease 160 acres.

What this means is that the average family of two adults and two children can own 640 acres of land not subject to treatment as excess land. Moreover, each of these family members is eligible to lease 160 acres. Thus a family of four can farm 1280 acres in a federal reclamation project without violating the proposed regulations. If we were to calculate the rate of federal subsidy per acre at $2000 (a conservative figure) this would mean that one family of four will be subsidized in the amount of $1,560,000 less the sum of repayment. More importantly, however, this means that the concept of family farm as intended by Congress is stretched to non-recognition. The purpose of the reclamation law is to provide farming opportunities for families. The proposed regulations distort this goal by applying the acreage limitation to individuals rather than families. We believe that this misses the point of the statute and defies common sense.

A farm family is normally comprised of several adults and several children. The adults are farmers. The minor children are not farmers, but rather live with their parents in the family home. The proposed regulations, however, assume that minor children are farmers and therefore should receive irrigation water for 160 acres of land. The truth is that they are children in the home and not farmers; they are no more entitled to federal farm subsidies than the minor children of the Commissioner of Reclamation are entitled to the perquisites of that office by reason of being raised in that individual's home.

Minor children of a farmer are just that—minor children. To authorize them to receive project water for 160 acres is merely to employ a shallow fiction that will enable the Bureau to continue its long-standing practice of delivering water to its constituency—the excess landowners. When a minor child of a farmer grows up and wishes to go into farming, we would hope that meaningful opportunity will await him or her. But the opportunity should be that arising from status as a new and independent farmer, not as the recipient of project water through a family connection.

We challenge the Secretary to provide statutory authority for an application of the acreage limitation law that allows a family of four to own 640 acres in a project and lease an additional 640. Further, we find no authority for the provision in § 426.4 that allows a husband and wife 320 acres.

We believe that a motivating factor in the passage of the Reclamation Act of 1902 was a desire to avoid the land monopolizing effects of the Homestead Act of 1862. In the years before 1900, despite the fact that the federal government transferred millions and millions of acres into private hands, relatively few family farms were established and the rate of tenancy on western farms increased regularly. The land and water monopolies gave rise to a political movement that was determined to provide family farming opportunities in the West. The purpose of providing family opportunities so completely pervades the history of this movement that we are hard-pressed to see how the Secretary has converted "family" into "individual".

LEASING

A landowner-recipient of project water should not be allowed to receive water for leased lands.

Again we must bring to the Secretary's attention the fact that the purpose of the laws which he, by these proposed regulations, undertakes to enforce, is to increase family farming opportunities. To allow non-excess landowners to double the amount of acres they farm by way of a lease seems to be regulatory legislation, i.e., in the face of a clear legislative acreage limit, the effect of the rule is to double the statutory limit. How does this rule serve the purpose and intent of the statute, and what is its legislative authority?

The proposed regulations fail to make clear whether the residency requirement applies to lessees of non-excess and excess lands. We recommend that this point be clarified.

Leasing can provide a valid method to assist individuals entering farming. In the midwest it is a common method of obtaining an entree to farming, and, therefore, may have a role to play in providing opportunities. That is, a new farmer entering an irrigation district may not be able to raise the capital to purchase land outright. He may, however, be able to move on land and live on it as a tenant-lessee with the hope of ultimately purchasing the land. We feel that leasing should be limited so that it serves only this goal. The lessee should be a bona fide farmer who is actually residing on the farm or in the neighborhood of the farm. He should be entering the district as a new farmer and should have a reasonable prospect of ultimately purchasing the farm that he is leasing. He must be farming the leased farm as an independent business unit. Leasing should not be used as a device to supplement existing farms. Rather it should be used as a device to initiate new farms, and to provide farming opportunities that might not exist otherwise. The leasing section of the proposed regulation should be thoroughly revised to reflect thinking of this type.

RECORDABLE CONTRACTS

The proposed regulations should be revised to include a requirement that recordable contracts contain a sliding scale for the gradual disposition of excess lands.

The proposed regulations, at § 426.5(2) require that a landowner "shall dispose of his excess land at an approved price . . . within five years." We believe this time period is reasonable but that it's administration can be improved upon substantially. Attached as Appendix F to these comments is a draft recordable contract for use in the Missouri River Basin. This draft contract requires a gradual disposition of excess acreage. That is, a designated acreage of land must be sold the first year, a designated acreage the second year, third year, etc., until by the fifth year of the disposition period all lands are disposed of. This procedure has several advantages. First, it requires that the landowner act in good faith from the beginning. Any failure to sell vests the Secretary's power of attorney as to the land scheduled for sale in that year. Second, it is a convenient device for dividing land into logical parcels for resale to family farmers. Third, it regulates the flow of acreage to the land market, helping to alleviate somewhat the problems that potentially arise when large parcels reach the market at once. Fourth, the provision can be a vehicle for assisting the good-faith excess landowner to achieve a reasonable sale of lands, with reduced impact on his ongoing farm business.

APPRAISAL

Appraisals should be made when the recordable contracts are signed and recordable contracts should be signed prior to or at an early stage of project construction.

Section 426.12(b) of the Regulations requires that appraisals of excess land be made upon request of the landowner or a prospective buyer, or when power of attorney, provided for in recordable contract, vests in the Secretary. We strongly oppose this provision.

The purpose of the appraisal is to determine the land's value without reference to the reclamation project. The reasonable meaning of this is the value of the land as dry land rather than as irrigated or potentially irrigated land. There is only one time when this goal can be achieved with accuracy. That is the time when information on the value of the land as dry land is available. The further along project development has gone, the more difficult it will be for appraisers to place a value on the land that does not reflect the large scale federal investment. When appraisals are postponed for long periods of time, accurate appraisals become virtually impossible, and dry land values become mere speculation.

Moreover, requiring appraisals at an early stage in project development will insure that excess landowners are informed early in the project's history that the excess land laws and residency requirement are going to be enforced as to the particular project. This will result in a standard appraisal of the project by all parties concerned at a time when that appraisal can be translated into decisions.

APPRAISAL

In appraising lands that have been theretofore irrigated by pumping ground water, the appraiser should take into consideration the fact, where applicable, that without project construction the ground water supply would have been depleted and the land without value attributable to irrigation.

The purpose of the appraisal is to determine the land's value without reference to the reclamation project. A particular issue that arises has to do with the fact that a great many reclamation projects are constructed as the result of landowner concerns that the available supply of ground water for irrigation is being depleted. This is the present motivation for many of the proposed irrigation projects in the Northern Great Plains, for example. The lands to be irrigated by federal water are, at the initiation of project construction, under irrigation from pumped ground water. This might suggest that the federal appraisal should appraise the lands at irrigated-land values. But such a value would be highly deceptive in the situation where the ground water supply will in the foreseeable future be depleted, causing the land to be without any value attributable to irrigation. A fair appraisal of the land in situations such as this should be required to take into consideration the rapidly depleting ground water resource. Special procedures to address this problem could be made mandatory for all projects where ground water depletion problems constitute one of the rationales—economic and otherwise—for project construction.

Unless a precaution is taken with regard to this problem, persons owning land at the time of project construction will receive a major bonus in the form of land values that are artificially high and not reflective of the true situation.

CLASS I EQUIVALENCY

Where lands are abnormally unproductive, resulting in the application of a Class I equivalency concept, the Secretary should not recommend project construction.

Of the various methods Congress has employed to exempt or modify acreage limitations, we find Class I equivalency the most acceptable if the residency requirement is strictly enforced. However, we feel that a comment is in order. The Class I equivalency concept purports to deal with that situation where the lands are abnormally unproductive. Projects that involve as much money as reclamation projects simply should not be built where the lands are abnormally unproductive.

DEFINITION OF PROJECT WATER

The definition of project water should be revised to take into account the enhancement of groundwater as a project benefit.

One of the better understood facts of reclamation development is that projects are often built in order to rescue existing irrigation regimes that have improvidently depleted their groundwater source. In response to such depletion Congress exercises its spending power to provide water. Under the proposed rules, however, it is only the recipients of surface water from the federal project that are bound by residency, acreage limitation and other restrictions. Those landowners in the area that do not come into the project, and do not call for delivery of surface water, can receive the greatest benefit of the federal subsidy. This is so because first, fewer people will be irrigating out of the groundwater, and, second, the groundwater source will be replenished by seepage from the federally supplied surface supply. If this is the case, there is a potential group of irrigators who are receiving project water free of any cost or limitation. Those who receive and use federal reclamation water should be subject to these requirements.

The definition of project water should be expanded to include all water taken from federal reservoirs for irrigation purposes in the western reclamation states.

Section 426.4(m) of the proposed regulations defines project water as ". . . water that is furnished by or through federally financed facilities to a District pursuant to a water service or repayment contract with the United States." It is our opinion that this definition is too restrictive and excludes from coverage a potentially large group of farms that receive irrigation benefits from federal water projects of all types. More specifically, we assert that any person who irrigates from a federal reservoir should be subject to the acreage limitation and residency requirement. In support of this assertion we include as Appendix G a copy of a letter dated April 27, 1970 from Assistant Secretary of the Interior James R. Smith to Governor Farrar of South Dakota, along with several supporting documents.

While making this recommendation we must state the most obvious point, less there be a misunderstanding. That is, the acreage limitation and residency requirement apply only to waters taken from federal reservoirs *in western reclamation states*. There is no basis for the contention that § 5 of the 1902 Act, and § 46 of the 1926 Act were meant to apply outside reclamation states.

PUBLIC RESPONSE

The Secretary should, prior to final implementation, seek to foster public understanding of the purposes of the residency and acreage limitation requirement.

The Bureau of Reclamation has available to its extensive resources for educating and informing the public. Members of United Family Farmers, Inc., have personally observed this skill at work as the Bureau has sought to develop public and political support for the proposed Oahe project.

The owners of large acreages who seek to defeat the proposed regulations are taking advantage of the fact that the public does not understand the purpose of residency and acreage limitation. These programs appeal to commonsense when explained. The Secretary should see that the explanation is taken to the people.

SUBSEQUENT SALES

Subsequent sales of excess land should be regulated to insure that profits are not taken out of projects to the detriment of statutory purposes.

Sections 426.5(b), 426.9(b) and 426.10 limit the time period during which the Secretary will regulate subsequent sales of excess lands. We strongly recommend that the Secretary retain price control over subsequent sales for so long as necessary to insure that benefits of the project remain in the project. If this is not done it is certain that the Congressional purpose will be defeated. If early purchasers are allowed to sell out at a higher market value the effects will be two. First, the early purchaser will receive a windfall profit. Second, a potential family farmer seeking to enter the project area will have much higher capital costs, thus making entry or ultimate success less likely. Both results are patently in conflict with the legislative purpose.

The Secretary has the authority to regulate subsequent sales of excess lands, and must do so. Sax, at page 228 of his work on federal reclamation law states:

"The duration of this limitation on control of the price at which lands are sold seems quite explicit. But the provision should be examined with the purpose of determining whether its literal terms adequately cover the problems with which Congress has, in other places, indicated it wants to deal. The idea behind the time limitation is that speculative fever is principally a product of the early years of a project's life. But general reclamation policy might suggest that speculation is not the only problem; the draining off of the reclamation subsidy by nonspeculator sellers of land, at the expense of buyers of land, presents a separable problem which is not mitigated by the passage of time.

"It might be argued that the time limitation is meant to apply only to speculative sales; that the reaping of incremental profits at the expense of new persons coming on the projects, as opposed to sales by mere speculators, is a practice that was not brought to the attention of Congress when the time limitation was imposed and thus Congress cannot be said to have intended to permit such sales so long as they are made after repayment is half completed. Thus it would be appropriate to conclude that the Secretary can exercise control over land sale prices, despite the fact that construction costs have been more than half repaid.

THE PANAMA CANAL ISSUE

Mr. CURTIS. Mr. President, the Senate Republican policy committee, under the able leadership of the senior Senator from Texas, JOHN TOWER, has been very active during this session of the 95th Congress.

Under the chairmanship of the Senator from Texas, the policy committee and staff have reviewed and analyzed numerous public policy issues including the economy, energy, tax policy, election reform, welfare reform, and foreign policy and national security. The studies addressed by Senator TOWER and the committee staff to date have all been important national issues. Without exception, these studies have made a significant contribution to the debate on the issue, both in the Senate and in the Nation.

As chairman of the Republican conference I am most grateful to Senator TOWER for his effective and farsighted leadership and for the excellent work of the policy committee. The Republican conference and the policy committee have enjoyed a close and effective working relationship during this Congress.

Recognizing that the Panama Canal treaties are a major issue facing the Senate and the American people, Senator TOWER directed the policy committee staff to do a detailed analysis of the "Panama Canal Treaty" and the "Treaty Concerning the Permanent Neutrality and Operation of the Panama Canal." The study is one of the best analyses I have seen on the issue of the Panama Canal. It is balanced and fair. It carefully considers the arguments of the major articles in both treaties pro and con.

I commend Senator TOWER and the committee staff for this excellent analysis. I feel it would be helpful to all Members of Congress and, therefore, ask unanimous consent that the study entitled "The Panama Canal Issue" be printed in the RECORD.

There being no objection, the study was ordered to be printed in the RECORD, as follows:

THE PANAMA CANAL TREATY

PREAMBLE

Analysis: The long disputed issue of whether the United States or Panama is sovereign over the Panama Canal and the present Canal Zone is dealt with quickly and simply in the Preamble. The United States, "Acknowledging the Republic of Panama's sovereignty over its territory," agrees with Panama to establish a new relationship. This provision is intended to resolve permanently the confusion over which nation holds sovereignty stemming from Article III of the 1903 Treaty between the United States and Panama. It reads as follows:

"The Republic of Panama grants to the United States all the rights, power and authority within the zone mentioned and described in Article II of this agreement and within the limits of all auxiliary lands and waters mentioned and described in said

Article II which the United States would possess and exercise if it were the sovereign of the territory within which said lands and waters are located to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power or authority."

Pro: Recognition by the United States of Panama's sovereignty is timely and long overdue. The colonial era ended years ago, and the continued exercise of sovereign rights in the Canal Zone by the United States is a vestige of a bygone era. Testifying before the Senate Foreign Relations Commission on September 27, 1977, General George Brown, Chairman of the Joint Chiefs of Staff, emphasized the need to end American colonialism in Panama:

"I would say as a factor one of the elements that leads to our support of these new treaties is the impact, the favorable impact, ratification would have on all Latin America and the acceptance of the United States as living by the moral principles that we espouse in divesting ourselves of this last appearance of colonialism in Panama."

No one can honestly dispute the circumstances under which the United States acquired its "sovereign rights" under the 1903 treaty. It was gunboat diplomacy at its finest. Panama was in no position to resist the granting of those rights in 1903, but times have changed. It is now time for the United States to redress that infamous page in our history and restore to Panama is full sovereignty over the Canal Zone.

This is a time when foreign control and dominance by great powers is no longer tolerated by even the smallest nations. The Panama Canal Zone is the territory of Panama and should be turned over to the people and Government of that country. In today's world, what nation would accept a foreign presence that dominates its economy, cuts its territory in half and renders untold damage to its national pride. The United States wouldn't tolerate it for one day. As the colonial era has faded into history, the U.S. has shown great sensitivity to other nations where it held substantial treaty rights. These include, Japan, Okinawa, the Marianas, Spain, Libya, Greece and the Philippines. Why not in Panama?

Con: The 1903 Convention between the United States and Panama gave the U.S. sovereign rights over the Panama Canal and the Canal Zone "in perpetuity". The United States may well have conducted some gunboat diplomacy, but it was that very diplomacy which created the nation of Panama. Without it Panama would still be a province of Colombia today. It is difficult to measure all the benefits which came to Panama as a result of American involvement. The private French Company was bankrupt and incapable of completing the project. Only with American financing, engineering and resources was it possible to build the Canal. Since 1903 the United States has largely eradicated malaria and other serious health problems in the Isthmus. From the time the Canal opened the United States has operated it fairly, efficiently and without serious financial loss. Since it opened the Canal has returned approximately $642 million to the U.S. Treasury in interest on the original debt which has never been amortized. The American Government and the American taxpayer paid roughly $387 million in 1904–1914 to build the Panama Canal. The building, financing and operation of the Canal is something Panama or any other government could never have accomplished.

Panama has benefited financially from the Canal. For example, it is estimated that Panama is now receiving, directly or indirectly $250 million per year from Canal and Canal related operations. Since 1963 these benefits total $1.8 billion.

There is some question that the Canal will continue to be operated efficiently and fairly if Panama gains control of it. Since General Torrijos came to power in 1968 he has increased the national debt of Panama from $167 million to $1.5 billion. Certainly the economy of Panama is not strong enough to maintain the Canal should it become a big money loser.

The left-wing bias of certain Panamanian Government officials and the dismal human rights record of General Torrijos should be a warning to the United States Senate that the future of the Panama Canal is questionable at best.

In testimony before the Subcommittee on Separation of Powers of the Committee on the Judiciary Harold Parfitt, the Governor of the Panama Canal Zone, stated:

"I believe the general consensus is that the Panamanian Government itself is not Communist-leaning, but advisers in various places within the Government are in fact Communists."

In the field of human rights Panama is practically a total failure. In the view of Freedom House, an internationally respected organization which deals with human rights worldwide, Panama has a record worse than Argentina, Chile and even Cuba. In fact their record is the worst in all of Latin America.

The rights of sovereignty must be maintained by the United States if the Canal itself is to remain free, open and efficiently operated.

Several Supreme Court decisions including *Wilson* v. *Shaw* [204 U.S. 24 (1907)], lower court decisions and ruling of Federal agencies show that the Canal belongs to the United States. The 1903 Treaty is a valid binding document under international law. It grants to the United States the full rights of sovereignty and precludes the exercise of those rights by Panama. To replace the 1903 Treaty with a new one turning the Canal over to Panama will prove to be a serious mistake by the United States.

Article I: Abrogation of prior treaties and establishment of a new relationship

Analysis: Paragraph 1 of Article I stipulates that upon ratification, the new Panama Canal Treaty terminates and supersedes the following treaties:

(a) The Isthmian Canal Convention between the United States of America and the Republic of Panama, November 8, 1903.

(b) The Treaty of Friendship and Mutual Understanding and Cooperation, March 2, 1936.

(c) Memorandum of Understanding reached between the United States and Panama, January 25, 1955.

(d) All other treaties, conventions and exchange of notes between the two countries and all provisions covering the Panama Canal which appear in other treaties unless specifically retained by other provisions of this Treaty.

Under paragraph 2, Panama as the territorial sovereign grants to the United States "the rights necessary to regulate the transit of ships through the Panama Canal, and to manage, operate, maintain, improve, protect and defend the Canal." This authority is probably sufficient for the United States to operate, maintain and defend the Canal, although it is far from the total authority now held by the United States.

Paragraph 3 states that Panama "shall participate increasingly in the management and protection and defense of the Canal . . ."

Pro: The abrogation of previous treaties is necessary if a new relationship between the United States and Panama is to be established. The previous treaties, especially the 1903 Treaty, were unequal and unfair to Panama. There has been conflicting interpretation by the signatories over the sovereignty issue. It is timely and fitting that the old treaties be terminated. It is a long overdue magnanimous act by the United States.

Paragraph 2 of Article I adequately protects the rights of the United States to operate and defend the Canal through 1999 when the Treaty expires.

Under Paragraph 3 a good working relationship is established between the U.S. and Panama that will prepare Panama to operate the Canal after December 1999.

Con: Abrogation of the 1903, 1936, and 1955 Treaties by Article I is a mistake. The United States under this article gives up one of its most important economic and strategic assets. Furthermore, it terminates the American position in Panama without any compensation to the United States Treasury.

Paragraph 2 once again recognizes the sovereignty of Panama over the Canal and the Canal Zone. Since Panama is the grantor of the rights to the United States, the position of the U.S. is not unlike our position in other countries where the sovereign from time to time has chosen to terminate the grant of rights prematurely.

The joint relationship established under Paragraph 3 may well prove to be a source of friction between the signatories, especially in light of Panama's growing nationalism and deep-seated resentment about the American role in Panama.

Article II: Ratification, entry into force, and termination

Analysis: This treaty shall be be ratified in accordance with the constitutional procedures of the signatories. Instruments of ratification shall be exchanged in Panama at the same time the Treaty concerning the Permanent Neutrality and Operation of the Panama Canal is ratified.

The Panama Canal Treaty goes into force six calendar months from the date when the instruments of ratification are exchanged.

Paragraph 2 stipulates that this Treaty terminates at noon Panama time, December 31, 1999.

Pro: This article meets the requirement under Article II Section 2 of the United States Constitution requiring that all treaties be approved in the U.S. Senate by ⅔ majority of all Senators present and voting.

There is no requirement for this treaty to be approved by the House of Representatives. The Supreme Court rulings on this subject have all applied to Federal-State relations. The Court has never addressed the question of this power as a limitation on the treaty making powers of the President and the Senate. There are many precedents, both legislative and legal that clearly show the President may dispose of Federal property by treaty and by action of executive agencies. To cite one of many examples, the U.S. ceded the Ryukyu and Daito Islands to Japan in 1972 by treaty without House of Representative approval of the transfer.

Con: The wisdom of the founding fathers in giving the Senate the constitutional responsibility of approving treaties is vindicated once again by the treaties on the Panama Canal. The major responsibility of the Senate in this case is to determine if American interests regarding the Panama Canal have been adequately protected in the two treaties submitted by the Carter Administration. Clearly the treaties are inadequate, and it falls to the United States Senate to bring these inadequacies to the attention of the American people.

A major constitutional requirement that the Carter Administration is attempting to ignore is Article IV, section 3, clause 2. which grants to Congress the power to dispose of Federal property:

"The Congress shall have power to dispose of and make all rules and regulations respecting the territory or other property belonging to the United States . . ."

There is no question that the United States holds and owns property in the Panama Canal Zone. While the Carter Administration has chosen to ignore this constitutional requirement, it should be remembered that the House of Representatives has not. Recently 50 members of the House filed suit in the Supreme Court to protect the constitutional right of the House to vote on the disposal of U.S. property. Once this right is asserted by the House, it cannot be constitutionally denied. In a treatise on the treaty and property disposal power of Congress published August 4, 1977 the Congressional Research Service of the Library of Congress said:

". . . the Supreme Court has constantly ruled that Congress' power to dispose of federal territory and property is exclusive."

Whatever power the President has to convey property by treaty is delegated by Congress and is not exclusive to the treaty making power. Such authority can be withdrawn by the Congress. Finally as the Congressional Research Service points out, transfers of property to Panama have occurred in the past and almost without exception, these transfers have been approved by the House of Representatives.

Article III: Canal operation and management

Analysis: Paragraph 1 restates the rights granted to the United States by Panama whereby the U.S. will manage, operate and maintain the Panama Canal and the subsidiary works, installations and equipment. The U.S. agrees to exercise these rights in accordance with this Treaty and related agreements.

Paragraph 2 allows the United States to exercise the following key powers:

(a) Use all the necessary installations and areas without cost except as provided in this Treaty, to carry out its responsibilities in operating and maintaining the Canal.

(b) Make such improvements and alterations as it deems appropriate.

(c) Make and enforce all rules pertaining to the passage of vessels through the Canal and other rules respecting navigation and maritime matters. Panama may lend its cooperation when necessary to enforce these rules.

(d) The U.S. has the right to establish, modify, collect and retain tolls for use of the Panama Canal.

Paragraph 3 creates a new governing body, the Panama Canal Commission to operate the Canal through 1999. The Commission shall be a United States Government Agency:

(a) The Panama Canal Commission is to be supervised by a 9 member board, five of whom shall be U.S. nationals and 4 of whom shall be Panamanian nationals nominated by the Government of Panama for appointment to the Board by the United States.

(b) Under subparagraph (b) the Republic of Panama may request the removal of a Panamanian member from the Commission and the United States is obligated to honor the request. If the U.S. wishes to remove a Panamanian member, the two signatories will consult in advance to reach agreement covering the removal.

(c) From the time the Treaty goes into force until December 31, 1989, the Administrator of the Panama Canal Commission shall be an American, with a Panamanian serving as Deputy Administrator. From January 1, 1990 until December 31, 1999 the Administrator shall be a Panamanian and the Deputy shall be an American. Panama shall propose the above Panamanian nationals to the United States for appointment by the U.S.

(d) Should the United States remove the Panamanian from his position as Administrator or Deputy Administrator, Panama shall propose another of its nationals for appointment by the U.S.

Paragraph 5. The Panama Canal Commission shall reimburse the Republic of Panama for costs incurred by that Government in providing the following public services which are currently provided by the Canal Zone Government: police and fire protection, street maintenance, traffic management and garbage collection. The Commission shall pay $10 million annually for the above services. Every three years during the life of the Treaty this sum shall be reexamined by the signatories to determine if readjustments are required.

Paragraph 6 reserves to Panama the responsibility to provide customs, immigration, postal, court and licensing services.

Paragraph 7 requires the U.S. and Panama to establish a Panama Canal Consultative Committee composed of an equal number of high-level representatives from each country. This committee shall advise the U.S. and Panama on matters of policy affecting the Canal's operation including general tolls, employment and training programs to increase the participation of Panamanians in the operation of the Canal.

Paragraph 8 requires that there shall be growing participation of Panamanian nationals at all levels to prepare, in an orderly and efficient way, for the assumption of full operating control of the Canal by Panama upon the termination of this Treaty.

Paragraph 10 stipulates that upon entry into force of this Treaty the Panama Canal Company and the U.S. Canal Zone Government shall cease to operate within the Republic of Panama territory that formerly constituted the Canal Zone.

Pro: Paragraph 2 gives to the United States all the necessary power to operate the Canal as well as the necessary use of installations and facilities. Under subparagraph (b) the U.S. is free to make the necessary improvements or alterations for efficient management of the Canal. Subparagraph (c) is an important grant in that the United States is empowered to make and enforce all rules pertaining to passage of vessels and the rules of navigation. This power gives the United States the dominant role in operating the Canal. Under subparagraph (d) the U.S. is given near exclusive control over the setting, modification and collection of tolls which will protect American shipping from unwarranted fare increases for the duration of the Treaty. This is a critical right and properly protects U.S. interests through the end of the century.

Paragraph 3 which creates the Panama Canal Commission establishes a balanced workable relationship between the two signatories. The U.S. maintains a voting edge, with 5 members compared to 4 for Panama. No Panamanian can be appointed to the Commission without U.S. approval. The role of Administrator and Deputy Administrator is balanced and will go far in preparing key Panamanian nationals to administer and operate the Canal after December 31, 1999. Again the U.S. is protected because it has final approval authority over the appointment of Panamanians to both positions for the duration of the Treaty.

Paragraph 5, in keeping with the Treaty's recognition of Panama's sovereignty over the Canal, properly transfers to the Government of Panama the responsibility to provide police and fire protection and to operate the legal system under which the Commission and its employees will operate. The $10 million annual payment for the services appears to be reasonable and fair.

Paragraph 7 gives to Panama a joint consultative role in determining the policy governing operation of the Canal and the setting of tolls. This will be a useful learning experience for the Panamanians.

Paragraph 10. The termination of the Panama Canal Zone and the Canal Zone Government heralds the end of a bygone era. This action will be applauded by all Panamanians, by the nations of Latin America and by the third world. It will signal the beginning of a new and more trusting relationship between the United States and Panama.

Con: Article III contains several contradictions.

Paragraph 1 appears to give the United States a unilateral right to manage, operate and maintain the Canal for the duration of the Treaty.

Subparagraphs (c), (d) and (g) of Paragraph 2 appear to reinforce the sole right of the United States to (c) "Make and enforce *all* rules pertaining to passage of vessels through the Canal and other rules with respect to navigation and maritime matters . . ." Likewise the U.S. is empowered to (d) "Establish, modify, collect and retain tolls for the use of the Panama Canal . . ."

Paragraph 3 and subsequent paragraphs then proceed to dilute and reduce the powers granted the United States in Paragraph 1 and 2. Among these are:

(a) Creation of a Panama Canal Commission governed by a Board of 9 members, 4 of whom shall be Panamanians, apparently with full voting rights.

(b) The United States must "reach agreement" with Panama before it can remove a Panamanian board member.

Paragraph 5 and 6 give to the Government of Panama control over the police, courts, immigration and customs. Regardless of what powers are granted to the United States under the Treaty, other more critical powers granted to and reserved to Panama could be used at some future time to harass U.S. operations and presence in the Canal Zone. Advocates of the Treaty will say that interference of this kind is prohibited under the various articles in the Treaty. Such idealistic pronouncements are quite meaningless should Panama choose to negatively exercise these newly acquired powers. *Who* holds the *police* and *judicial powers* is more critical than treaty provisions describing their use.

Paragraph 7 sets up a Consultative Committee of high ranking representatives from both sides which *"shall"* advise the signatories "on matters of policy affecting the Canal's operations" and "on matters such as general tolls policy . . ." This Committee, unlike the Board that governs the Commission, has *"equal"* representation. Its advice is not described as something that *may* be given, but something that *"shall"* be given. Thus, what first appears to be a unilateral right of the U.S. to operate and manage the Canal and set and collect tolls for the duration of the Treaty is modified by giving Panama a significant role in the entire scheme of things. Treaty advocates will undoubtedly argue that this special relationship will work, and one hopes it will. However, it must be recognized that Panama now has legal standing as part of the machinery of Canal operation and government. Under certain political circumstances, that status, combined with the newly acquired police and legal powers, could be used very effectively against the United States. Finally, in a dispute over toll policy the U.S. can point to paragraphs 1 and 2 as the source of its authority, but Panama can point to paragraph 7 claiming that it has a role in toll policy as well. As in most other provisions of the Treaty, the language is imprecise, unclear and quite contradictory.

Article IV: Protection and defense

Analysis: Paragraph 1 commits both the U.S. and Panama "to protect and defend the Panama Canal". Such action shall be pursuant to each nation's constitutional process and covers "the danger resulting from an armed attack or other actions which threaten the security of the Panama Canal or of ships transiting it."

This appears to be a general and blanket right for both parties to take whatever actions necessary to defend the Canal.

Paragraph 2 specifies that "For the duration of this Treaty, the United States of America shall have *primary* responsibility to protect and defend the Canal."

Paragraph 3, "In order to facilitate the participation and cooperation of the armed forces of both parties in the protection and defense of the Canal . . ." the Treaty establishes a Combined Board "comprised of an *equal* number of senior military representatives of each Party."

"The Combined Board *shall* provide for coordination and cooperation concerning such matters as:

(a) The preparation of contingency plans for the protection and defense of the Canal based upon the cooperative efforts of the armed forces of both Parties;

(b) The planning and conduct of combined military exercises; and

(c) The *conduct* of the United States and Panamanian military operations with respect to the protection and defense of the Canal."

This provision of subparagraph (c) appears to give Panama through the Combined Board, the right and the responsibility to jointly and equally participate in the *"conduct"* of military operations carried out for the purpose of protecting the Canal.

Pro: Article IV is designed to give Panama a role in protecting and defending the Canal while reserving to the United States the *"primary"* defense role through December 1999. It would be unrealistic to exclude Panama from any defense role for the duration of the Treaty. Panama has an equal interest, perhaps a greater interest than the U.S. in keeping the Canal free, open and operating efficiently. Directly related to that interest is Panama's desire to protect the Canal from any kind of attack either foreign or domestic. By agreeing to give the Government of Panama a direct role and specified treaty rights under paragraphs 1 and 3, the United States has done more to protect the Canal against internal attack and subversion than any other defense arrangement could provide. Conversely, if Panama were completely excluded from any defense role, the domestic frustration and damaged pride of the Panamanian people would undoubtedly lead to internal attacks and sabotage against U.S. personnel in Panama or the Canal itself.

The role of the Combined Board is a workable and cooperative arrangement that will involve Panama in all aspects of defending and protecting the Canal.

Con: Like so many other provisions of the treaty Article IV is contradictory. Paragraph 1 gives the United States and Panama an equal role in defending and protecting the Canal. This shall be done according to the constitutional processes of both countries. Suffice it to say, the constitutional process of a left-wing dictator is considerably more flexible than it is for the United States.

The "primary responsibility" to defend and protect the Canal granted to the U.S. in paragraph 2 runs head-on into the "equal" role given Panama in Paragraphs 1 and 3. The membership of the Combined Board is equal. It does not favor the United States numerically nor is the U.S. given removal powers over the Panamanian members of the board. Furthermore, subparagraph (c) gives Panama through the Combined Board an equal role in the "conduct" of all military operations. The potential for mischief by Panama under these conflicting arrangements is enormous. It is not unthinkable that Mr. Castro may someday activate or support a guerilla movement in the Isthmus. He has, after all, done that in several Latin American countries and in Africa. The object of attack could be the Canal itself. With the defense arrangement under Article IV, Panama is in a position to thwart and sabotage any defense effort of the United States. Should Panama oppose a U.S. defense strategy or action, it will probably solidify Panamanian public opinion against the United States and make that defense effort very difficult and perhaps impossible.

Paragraph 2 which gives the U.S. "primary responsibility" is mere window dressing. Article IV, when read in its entirety, makes the defense and protection of the Panama Canal an equal and joint responsibility for the two signatories. To claim that the U.S. has the major or primary responsibility, as does the Carter Administration is simply not supported by the facts.

Paragraph 5 requires the U.S. to maintain its forces in "normal times" at a level not to exceed the number in the Canal Zone immediately prior to the time when this Treaty goes into force.

The Joint Chiefs of Staff told the Senate Armed Services Committee that the two signatories have not decided what the U.S. force level shall be after the treaties are ratified. The word "normal" is not defined and may well become a serious conflict after ratification.

Article VIII: Privileges and immunities

Analysis: Paragraph 1 stipulates that installations, instrumentalities, archives and documents owned or used by the United States Government in Panama "shall be inviolable". "The two Parties shall agree on procedures to be followed in the conduct of any criminal investigation at such locations by the Republic of Panama."

Paragraph 2 states that the agencies and instrumentalities of the U.S. Government operating in Panama pursuant to this Treaty "shall be immune from the jurisdiction of the Republic of Panama." Paragraph 3 allows the U.S. to designate 20 officials of the Panama Canal Commission who with their dependents shall enjoy diplomatic immunity under international law and practice.

Pro: Article VIII protects the United States during its remaining 23 year tenure in Panama. Paragraphs 1 and 2 provide that U.S. installations, instrumentalities, archives and documents "shall be inviolable" and "immune from the jurisdiction of the Republic of Panama."

This provides adequate protection for the United States and its personnel who will continue to reside and work in Panama.

Since the United States has recognized the sovereignty of Panama over all its territory, including the Canal and the present Canal Zone, it would be inconsistent not to define the legal status of U.S. instrumentalities and agencies in Panama.

Con: The enunciation that U.S. installations, instrumentalities, archives and documents will be "inviolable" and "immune from Panamanian jurisdiction" is welcome. However, Article VIII does not exempt U.S. personnel from Panamanian jurisdiction for the duration of the treaty. Although Article XI provides that United States personnel shall be subject concurrently to U.S. and Panamanian law during the 30 month transition period, at the conclusion thereof Americans working in Panama become subject to Panamanian law, police and courts. The inviolability and immunity of U.S. agencies, instrumentalities and installations should have been applied as well to U.S. personnel. With Panama's sorry human rights record American personnel will undoubtedly be subjected to police harassment and a judicial process that will fall far short in protecting their U.S. constitutional rights.

Article IX: Applicable laws and law enforcement

Analysis: Paragraph 1 states, "In accordance with the provisions of this Treaty and related agreements, the law of the Republic of Panama shall apply in the areas made available for the use of the United States of America pursuant to this Treaty."

The question arises as to whether this is a general application of Panamanian law to the areas under U.S. control and whether it conflicts with paragraphs 1 and 2 of Article VIII which make all U.S. instrumentalities "inviolable" and "immune" from Panamanian jurisdiction.

Pro: This provisions is a blanket application of Panamanian law to U.S. operations and facilities. Paragraph 1 is qualified by the phrase "In accordance with the provisions of this treaty and related agreements . . ." What appears to be a conflict with paragraphs 1 and 2 of Article VIII does not follow because of the qualifier. The inviolability and immunity of U.S. operations and facilities from Panamanian law is thus protected by the qualifier.

Con: Again the draftmanship is unclear and imprecise. Obviously the United States wanted complete inviolability and immunity from all Panamanian law, while Panama hoped during the negotiating process to subject all U.S. operations, facilities and personnel to Panamanian jurisdiction. Consequently the language was compromised and purposely obscured. What should not be forgotten is that both powers will interpret the provisions of Articles VIII and IX to serve their own interests. Paragraph 2 of Article VIII should read that the U.S. shall be immune from the jurisdiction of the Republic of Panama notwithstanding any other provision of this treaty, but it doesn't. Article IX, paragraph 1 should specify that U.S. operations and agencies shall be inviolable and immune from Panamanian jurisdiction regardless of the general coverage listed in the paragraph, but it doesn't. The contradiction and imprecise drafting could well prove to be a serious source of contention at some future date.

Article XII: A sea-level canal or a third lane of locks

Analysis: Paragraph 1 commits both parties "to study jointly the feasibility of a sea-level canal in the Republic of Panama . . ."

Paragraph 2(a) stipulates that no new interoceanic canal shall be built in the Republic of Panama during the lifetime of this treaty, except in accordance with the provisions of this treaty or "as the two parties may otherwise agree . . ."

Paragraph 2(b) provides that the United States "shall not negotiate with third states for the right to construct an interoceanic canal on any other route in the Western Hemisphere, except as the two parties may otherwise agree."

In paragraph 3 the Republic of Panama grants to the United States the right to add a third lane to the existing Canal at any time during the lifetime of the treaty. The only requirement is for the U.S. to provide copies of the plans to Panama. There is no provision for meeting the cost of building the third lane of locks.

Paragraph 5 prevents the United States from using nuclear excavating techniques to build the third lane of locks or a new sea-level canal.

Pro: A new sea-level canal may one day be necessary to meet the shipping needs of world commerce and to accommodate super tankers and giant ore ships. In 1970 the Atlantic-Pacific Interoceanic Canal Study Commission concluded that the most feasible site for a new sea-level canal would be Route 10 through the Republic of Panama. Thus, the prospect of building a sea-level canal in a third country is not very high. If such a Canal is built in Panama, it is only proper that Panama be a party to the process. Furthermore if a new sea-level canal is built, the U.S. under Article XII is given the right through 1999 to build it jointly with Panama. No other nation, such as Russia can be part of this process without U.S. approval.

Paragraph 5 stands on its own merits. No nation can allow another power to use nuclear devices within its borders without its consent.

Con: The real mistake and unwarranted concession in Article XII is the agreement by the United States for the duration of the treaty, not to negotiate with third states for the right to construct a new sea-level canal elsewhere in the Western Hemisphere without the approval of Panama.

This provision unduly binds the U.S. The Panama Canal may become obsolete and very unprofitable much sooner than expected. The Panamanians may try to nationalize the Canal, leaving the U.S. the option of invading Panama or doing nothing. The U.S. has no assurance that Panama will give its approval for a new Canal within its territory.

Should the United States attempt to get Panama's approval for a sea-level canal outside of Panama, one must assume that approval will not be forthcoming. Why should Panama approve a competitive canal when it can retain a monopoly as long as the new canal is not built?

Finally, the longer the U.S. waits, the less likely that a sea-level canal will be built. If Panama withholds its approval, the U.S. cannot even start negotiations until the 21st Century begins. Such a delay will probably make the cost prohibitive.

Article XIII

Analysis: Paragraph 1. Upon termination of the Panama Canal Treaty Panama assumes total responsibility for management, operation and maintenance of the Canal. It must be turned over by the United States, in operating condition and free of liens and debts.

Under paragraph 2, "The United States of America transfers, without charge, to the Republic of Panama all rights, title and interest the United States of America may have with respect to *all* real property, including non-removable improvements thereon. . . ." This transfer takes place generally at the time the treaty goes into force. Under subparagraph (d), certain other properties to be used by the United States pursuant to the provisions of this Treaty and for its duration are transferred at the time the Panama Canal Treaty is terminated.

Paragraph 4 states that Panama shall receive from the Panama Canal Commission "a just and equitable return on the national resources which it has dedicated to the efficient management, operation, maintenance, protection and defense of the Panama Canal . . ."

Subparagraph (a) requires the Commission to pay Panama $0.30 (based on U.S. dollar) per net Panama Canal ton for each vessel transiting the Canal once the Treaty goes into effect. This shall be adjusted periodically to reflect changes in the U.S. wholesale price index. Subparagraph (b) requires a fixed annuity of $10 million (U.S. dollars) to be paid to Panama out of Canal operating revenues. This figure shall be a fixed expense of the Panama Canal Commission.

Subparagraph (c) requires an additional payment of $10 million (U.S. dollars) to Panama to be paid out of Canal operating revenues to the extent such revenues exceed expenditures of the Commission. Should such revenue surpluses not be available in any given year, "the unpaid balance shall be paid from operating surpluses in future years in a manner to be mutually agreed."

Pro: Paragraphs 1 and 2 of Article XIII are the heart of this Treaty. Panamanian control of its own territory and its greatest single national asset and resource will be realized by this article. Panama's long occupation by a foreign power will begin to terminate when the Treaty goes into effect. It should be remembered, however, that Panama must wait 22–23 more years before it acquires complete control over its own territory. In the words of General Torrijos, "Panama must walk for 23 more years with a stone in its shoe in order to remove the dagger from its heart."

Panama has been extremely patient particularly during the post-war era. When compared with past sacrifices made by Panama, the financial payments going to that government under this treaty are not excessive.

Some have argued that the United States should receive compensation for transferring to Panama the Canal, the Canal Zone and associated properties. While the worth of the overall investment is indeed significant, it should not be forgotten that the United States has realized tremendous economic benefits from the Canal since it was opened. The savings in shipping costs alone are probably incalculable. Likewise, until 1975 the Canal produced a revenue surplus, most of which has been reinvested in the Canal.

It should not be forgotten that the U.S. is transferring to Panama a Canal with a questionable economic future. Now that the Canal is losing money and incapable of handling an increasing percentage of ocean going vessels, it may well turn out to be an economic liability for Panama especially if the U.S. and or Panama are forced to raise tolls to the point where alternative systems of transportation become more competitive.

Con: Article XIII specifically and the Panama Canal Treaty generally constitute one of the biggest giveaways in American history. The book value of the total American investment in the Panama Canal is $561 million, while the replacement cost of the Canal and its facility in today's dollars would be $9.8 billion. All this is turned over to Panama without reimbursement to the United States Treasury and the American taxpayer.

On top of the property transfer, the U.S. has agreed to pay Panama up to $20 million per year out of Panama Canal Commission revenues plus the $.30 per each Panama Canal ton transiting the Canal. Since the Canal is now losing money, one would hope that the $10 million to be paid to Panama as a fixed cost of the Commission can be raised from an increase in tolls. If not, will the United States Congress be required to appropriate this money as an operating expense of the Commission or under a treaty obligation which has become the law of the land?

Article XIII, paragraphs 1 and 2, transfer U.S. assets and property to the Government of Panama in an outright violation of Article IV, Section 3, paragraph 2, of the U.S. Constitution which reads as follows:

"The Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States."

The argument by the Carter Administration that this transfer of U.S. property can take place through the treaty process alone is a clear case of ignoring the Constitution of the United States.

THE TREATY CONCERNING THE PERMANENT NEUTRALITY AND OPERATION OF THE PANAMA CANAL

Article I

Analysis: "The Republic of Panama declares that the Canal, as an international transit waterway, shall be permanently neutral in accordance with the regime established in this Treaty."

The declaration of neutrality is made unilaterally by the Republic of Panama and excludes the United States.

Pro: Panama is the only nation which can declare the neutrality of the Canal. It is exclusively in Panamanian territory and under the Panama Canal Treaty the undisputed sovereignty of Panama over the Canal is fully recognized by the United States. Thus the U.S. as a foreign power has no role in the neutrality declaration.

Con: The United States should have been a joint partner in the neutrality declaration contained in Article I. The Canal is designated as an international waterway. The United States has a major role in the defense of the Canal under the Panama Canal Treaty and, one would hope, a responsibility to maintain its neutrality beginning January 1, 2000. Panama, as a small weak nation, is not in a position to effectively protect the neutrality of the Canal against larger nations. As the builder, long-time operator, primary defender and the guarantor (the role of primary defender and guarantor is quite unclear, however) of the Canal's neutrality, the United States should have been a party of the declaration of neutrality.

Article II

Analysis: "The Republic of Panama declares the neutrality of the Canal in order that both in time of peace and in time of war it shall remain secure and open to peaceful transit by the vessels of all nations on terms of entire equality . . ."

The purpose of Article II is to keep the Canal open to all nations, belligerents and non-belligerents alike in time of peace and in time of war.

Pro: The only way to protect the Canal from attack, reprisals or sabotage in time of war is to assure that it will be completely neutral. To do otherwise would invite attack upon it by belligerents or nations which are denied neutral passage through the Canal.

As an international waterway, the Canal must be open, freely and equitably, to all nations of all political persuasion in times of peace and war. As a practical matter, the United States would not need to violate the Neutrality Treaty to keep Soviet vessels from going through the Canal in time of war. Soviet vessels trying to transit the Canal would be sitting ducks for the U.S. Navy which could sit outside the entrances of the Canal in international waters and block their passage or sink them if they tried to enter the Canal. Also in a time of hostilities with the U.S. it is unrealistic to assume that the Soviets would even attempt to transit the Canal.

Con: The guise of neutrality in time of war ignores the lessons of history. During World War II the United States effectively closed the Canal to Japanese and German shipping and the Suez Canal was closed to German shipping by the British. In a drawnout worldwide conflagration involving the United States and the Soviet Union, the Panama Canal would be a very critical choke point. Natural resources going to American ports would transit the Canal in much greater quantity than at present. Naval warfare between the two super powers could be very intense as the Soviets tried to stop the flow of raw material to the United States. The U.S. Navy has a lot of eggs in a few baskets (aircraft carriers) which may require considerable movement of non-carrier naval forces from ocean to ocean. If the naval battle becomes critical, the United States may find it necessary to close the Canal to all Soviet vessels. Under such conditions the United States would find itself in violation of the Treaty. From a strategic point of view, no one in his right mind would advocate that the U.S. politely stand aside while Soviet men-of-war transit the Canal during a naval war on the high seas involving the world's two super powers.

It is argued that the U.S. Navy could station itself beyond the territorial waters of Panama and in effect prevent the Soviet Navy from using the Canal during hostilities between the two super powers. This argument has two glaring flaws. First, nothing will prevent the Soviet Union from doing the same thing to the U.S. Navy. Secondly, as the Soviet Navy grows, its ability to engage the U.S. Navy in its own backyard will also increase. To assume that the U.S. Navy could station itself near the Canal's entrances and block or destroy Soviet ships attempting to transit the Canal without facing a major naval battle is terribly naive.

Article III

Analysis: The key provision of Article III is subparagraph (e) of paragraph 1. "Vessels of war and auxiliary vessels of all nations shall at all times be entitled to transit the Canal, irrespective of their internal operation, means of propulsion, origin, destination or armament, without being subjected, as a condition of transit, to inspection, search or surveillance."

Subparagraph (e) apparently does the following:

1. Naval and auxiliary vessels of all nations shall be permitted to transit the Canal at all times including wartime.

2. No naval or auxiliary vessel of any nation shall be subject to inspection, search or surveillance at any time.

3. The transit of nuclear powered vessels through the Canal whether they be war vessels, auxiliaries, or merchantmen, is protected by the phrase "irrespective of their internal operation, means of propulsion. . . ."

4. The transit of nuclear armed naval vessels through the Canal is protected by the phrase "irrespective of their . . . armament. . . ."

Pro: Article III, paragraph 1, subparagraph (e), further establishes the neutrality of the Panama Canal. If the Canal is to be completely neutral, transit through the Canal by war and auxiliary vessels during hostilities is absolutely necessary. Anything less would destroy the neutrality of the Canal.

Vital transit interests of the United States Navy are protected by subparagraph (e) as follows:

1. All U.S. naval vessels are permitted to transit the Canal in time of war and peace without inspection, search or surveillance.

2. U.S. nuclear powered and nuclear armed ships are also permitted to transit the Canal without inspection, search or surveillance.

Con: There may come a time when the national security interests of the United States require that the Panama Canal be closed to the naval vessels of the Soviet Union or other nations. History has shown that in time of war or belligerency, neutrality declarations are breached almost as frequently as they are respected. The Panama Canal is vital to the security of the United States. In times past, the U.S. closed it to enemy shipping. Under subparagraph (e) the U.S. no longer has that right.

Article IV

Analysis: Article IV is the heart of the controversy over whether or not the U.S. has the right to intervene in Panama for the purpose of defending and protecting the Canal. It reads as follows:

"The United States of America and the Republic of Panama *agree to maintain the regime of neutrality established in this Treaty, which shall be maintained in order that the Canal shall remain permanently neutral,* notwithstanding the termination of any other treaties entered into by the two Contracting Parties."

Unfortunately the above language is ambiguous, imprecise and confusing. Circumstances surrounding it clearly point to the fact that it was deliberately drafted this way because of the serious differences which the negotiators had concerning the defense role of the United States after the year 1999. It is very important to note, therefore, what the article says and what it does not say.

1. It says that the United States and Panama "agree to maintain the regime of neutrality established in this Treaty." From this language it is clear that the United States does have some kind of role in maintaining the neutrality of the Canal.

2. It does not say how this neutrality is to be maintained.

3. It does not say which of the two parties shall determine how and when the neutrality of the Panama Canal is violated.

4. It does not say what mechanism, procedure, policy or action can or shall be taken to protect the Canal's neutrality.

Pro: The regime of neutrality will be properly maintained by the United States and Panama. This was a crucial issue in the negotiations but it has been satisfactorily resolved.

Mr. Sol Linowitz, the former U.S. Chief Negotiator during the Panama Canal Talks, clarified the U.S. position before the Senate Foreign Relations Committee on September 27, 1977:

"Under the Treaty, the United States is in a position to assure that the Canal's permanent neutrality is maintained, and there is not, as Secretary Vance has said, any limitation on our ability to take such action as we may deem necessary in the event the Canal's neutrality is threatened or violated from any source. . . .

"Thus, the Treaty provides for the United States maximum freedom to determine how to carry out its responsibility for Canal neutrality. We are under no obligation to consult with or seek approval from any other nation or international body before acting to maintain the neutrality of the Canal nor does the Treaty in any other way limit our ability to act."

Also in his testimony Mr. Linowitz put to rest some of the confusion coming from the Panamanian negotiators who on occasion have given differing interpretations of Article IV from that given by U.S. officials. He stated:

"In signing the treaties at the Pan American Union here in Washington on September 7, 1977, General Torrijos told the people of Panama, the people of the Hemisphere and the people of the world; 'We have agreed upon a neutrality treaty that places us under the protective umbrella of the Pentagon. This pact could, if not administered judiciously by future generations, become an instrument of permanent intervention'."

Secretary Vance likewise takes the position that under Article IV the U.S. has unlimited freedom of action. In his testimony before the Senate Foreign Relations Committee on September 27, he said:

"This means there is no limit under the treaties on the freedom of the United States to assure permanently the canal's neutrality."

If there was any question about what right the United States has to defend the Panama Canal under Article IV, it was resolved on October 15, 1977 by Mr. Carter and General Torrijos:

"Under the treaty concerning the permanent neutrality and operation of the Panama Canal (The Neutrality Treaty), Panama and the United States have the responsibility to assure that the Panama Canal will remain open and secure to ships of all nations. The correct interpretation of this principle is that each of the two countries shall, in accordance with their respective Constitutional processess, defend the Canal against any threat to the regime of neutrality, and consequently shall have the right to act against any aggression or threat directed against the Canal or against the peaceful transit of vessels through the Canal.

"This does not mean, nor shall it be interpreted as a right of intervention of the United States in the internal affairs of Panama. Any United States action will be rerected at insuring that the Canal will remain open, secure and accessible, and it shall never be directed against the territorial integrity or political independence of Panama.

"The Neutrality Treaty provides that the vessels of war and auxiliary vessels of the United States and Panama will be entitled to transit the Canal expeditiously. This is intended, and it shall be so interpreted to assure the transit of such vessels through the Canal as quickly as possible, without any impediment, with expedited treatment, and in case of need or emergency, to go to the head of the line of vessels in order to transit the Canal rapidly."

Thus the various clarifications have settled the issue.

As General Maxwell Taylor has pointed out, this was a very hotly contested issue between the two parties; the language in Article IV is the best obtainable and to meddle with it now could very well doom the Treaty to defeat.

Con: The basic problem with Article IV is that both the United States and Panama have been unwilling to give up their respective positions regarding the right of intervention by he United States.

Consequently, he language is deliberately ambiguous. This might be necessary for political reasons in the United States and Panama, but the ambiguity and confusion must also be considered in a long-range context. Should the time ever come when the U.S. finds it necessary to intervene to protect the Canal for whatever reason, it will not be the intent of negotiators, or their interpretations that will count. It will be the language of Article IV. If Panama is unwilling to concede this right today, it is certain the Panamanians will oppose American intervention in the future under any circumstance which they do not support or approve. And they can point to the language of Article IV and accurately say the right of American intervention is not specified.

The interpretations given by key Panamanian officials show this to be true. It is not necessary to list all their pronouncements, but a few will clearly show that they do not concede the right of intervention to the United States.

In a speech before the Panamanian National assembly on August 19, 1977, Dr. Romula Bethancourt the Chief Panamanian negotiator said:

"They said that they wanted the Panama Canal to be neutral and we said we entirely agreed with them. Differences then arose only in what they understood by neutrality and what we understood by neutrality. They proposed that Panama and the United States declare that the Canal was neutral and that the United States would guarantee that neutrality. Panama was opposed to this concept, explaining that we did not want the United States to maintain a guarantee over the State of Panama, using the neutrality issue as an excuse. This was another source of debate that kept the negotiations stalled until the United States gave up the idea of its guaranteeing the Canal's neutrality.

The criticism made of it—some that you have heard or have read—indicate that we give the United States the right to intervene in our country after the year 2000. These critics think that rights of intervention are granted in the treaty. To the great powers, no one gives the right of intervention; they intervene whenever they feel like it with or without a treaty. When they (the Americans) landed in Santo Domingo, they had no military treaty with Santo Domingo, nor had any right of intervention in Santo Domingo, and they landed anyway. But there are people here who think that it is in the articles of a code (law code) that tell a country if it has the right to intervene or not, and they don't know that it is the bayonets, the guns, and the atomic bomb that gives a country the strength to intervene. And so a country like the United States can land in Panama whenever it feels like it after the year 2000 with or without a neutrality pact. But it cannot land, for example, in Russia, even if Russia tells it to land. Those are the facts of the matter so that with the neutrality pact, we are not giving the United States the right of intervention. What we are giving is an assurance that the Canal will be permanently neutral, that we are not going to close the Canal so that their ships or this ship or that ship cannot go through. Why this neutrality pact? Because they are thinking, By the year 2000 this country (Panama) may have gone socialist and become our (U.S.) enemy and we now want to make sure that even if they become socialist, they cannot close our passage.' "

On August 22, 1977, Dr. Bethancourt held a news conference wherein he said:

"The Neutrality Pact does not provide what the United States will say when neutrality is violated. . . . That is not provided here. There is an article which reads that Panama and the United States will maintain the neutrality pact with the purpose that the Canal remain open peacefully for all ships of all flags of the world. That is all it says. It does not say that it falls to the United States to decide when neutrality is violated or not." [Quoted by Senator Howard Baker in the Senate Foreign Relations Committee Hearings on the Panama Canal Treaty, September 26, 1977]

Let us turn now to the Carter-Torrijos statement issued October 15, 1977 after their meeting at the White House. The first two paragraphs are critical:

"Under the treaty concerning the permanent neutrality and operation of the Panama Canal (The Neutrality Treaty), Panama and the United States have the responsibility to assure that the Panama Canal will remain open and secure to ships of all nations. The correct interpretation of this principle is that each of the two countries shall, in accordance with their respective Constitutional processes, defend the Canal against any threat to the regime of neutrality, and consequently shall have the right to act against any aggression or threat directed against the Canal or against the peaceful transit of vessels through the Canal.

"This does not mean, nor shall it be interpreted as a right of intervention of the United States in the internal affairs of Panama. Any United States action will be directed at insuring that the Canal will remain open, secure and accessible and it shall never be directed against the territorial integrity or political independence of Panama."

Supporters of the Treaty will point to the first paragraph of the Carter-Torrijos statement and argue that the U.S. does have "the right to act against any aggression or threat directed against the Canal. . . ."

Whatever rights, if any, that are granted to the United States in the first paragraph of the Carter-Torrijos statement are negated and destroyed by the second paragraph, which states: "This does not mean, nor shall it be interpreted as a right of intervention of the United States in the internal affairs of Panama. Any United States action . . . shall never be directed against the territorial integrity or independence of Panama."

After December 31, 1999, the United States must get out of Panama lock, stock, and barrel. There are no base rights, no military rights and no presence except the regular Embassy and consular representation. The only right is Article IV of the Neutrality treaty which, in reality, is no right at all. For the United States to protect the Canal after the year 2000, it must intervene in an internal affair of Panama. Nothing in that country after 1999 will be more "internal" than the Panama Canal. Secondly, there is no way the U.S. can move into Panama to protect the Canal without violating Panama's territorial integrity especially if Panama does not agree to the intervention.

The Carter-Torrijos statement runs true to form—Now you see it now you don't. Yes, the United States has the right of intervention to protect the Canal. No, the United States does not have the right to intervene.

General Torrijos could no more agree to the right of intervention than Mr. Carter could agree to give it up. Consequently, when General Torrijos arrived back in Panama after his White House meeting, he held a short press conference reported in the Washington Post on October 16:

"Omar Torrijos, fresh from a meeting with President Carter on the Panama Canal treaties; has denied reports here that he signed a pact giving the United States the right to military intervention in the canal.

"'I haven't even signed an autograph.' Torrijos said yesterday when his flight from Washington landed at the Rio Hato air force base, near his beach house. He said he was too tired to make further comments."

It should be pointed out that the Carter-Torrijos statement was not signed by either principal. It has no binding effect upon the two parties under international or constitutional law since it is not part of the treaty.

The most obvious circumstance requiring U.S. intervention would be closure of the Canal by Panama for economic reasons. It should be remembered that the Canal has lost money since 1975; that Panama is a poor nation which could not sustain a Canal deficit for any length of time; that the administrative skills of the Panamanians remain unproven; and that Panama refused during the negotiations to commit itself to keep the Canal open should it become unprofitable. Dr. Bethancourt explained the position of his government very explicitly in his August 19, 1977, address to the Panama General Assembly:

"The third possibility was that the Canal could become unprofitable for Panama; in such a situation, Panama could not be tied down to keeping open a canal which was not earning revenue. They (United States negotiators) accepted the first two reasons—natural causes and temporary disruptions—but they did not accept the third reason, lack of profits. This, too kept the negotiations stalled for a long time.

They argued that if the Canal was not profitable, Panama could obtain money from the United States or other countries that use the Canal to keep it open. We told them that when the new treaty with the United States ended, we did not want Panama to be under either direct or indirect obligation to turn to the United States or any other country to request money to keep the Canal open. Our respective positions remained unchanged until we reached the agreement I am about to describe. They said, we can't present to our Congress an article that states you will close the Canal because of insufficient revenues. And we said we could not present an article committing us to operating the Canal permanently when we have no way of knowing if the Canal someday will yield no profit. We finally agreed to eliminate that article, and so Panama was freed of the obligation to maintain the Canal open permanently."

Thus, two things are clear. The most logical circumstance requiring U.S. intervention to protect the Canal would be closure of the Canal by Panama for economic reasons. This prospect is more probable than most treaty advocates care to admit. The second factor is that if and when this occurs, the United States does not have the clear right to step in and operate the Canal.

Article VII

Analysis: "The United States of America and the Republic of Panama shall jointly sponsor a resolution in the Organization of American States opening to accession by all States of the world the Protocol to this Treaty whereby all the signatories will adhere to the objectives of this Treaty, agreeing to respect the regime of neutrality set forth herein."

This article will allow all nations of the world to become a party to the Treaty through the protocol. The protocol itself consists of the three articles which do the following:

1. Article I, "The contracting Parties hereby acknowledge the regime of permanent neutrality for the Canal established in the Treaty . . ." and ". . . associate themselves with its objective."
2. Article II, "The Contracting Parties agree to observe and respect the regime of permanent neutrality of the Canal in time of war and peace . . ."
3. Article III, states that "This Protocol shall be open to accession by all states of the world . . ."

Pro: This article will strengthen the neutrality of the Canal. It is hoped that most nations of the World, especially the maritime nations and the great powers, will accede to the treaty, thus binding them to respect the neutrality of the Canal in time of war and peace. Should the Soviet Union accede to the treaty, it will prevent that nation from meddling or interfering in the internal affairs of Panama or the administration of the Canal, especially after 1999.

Con: Should the Soviet Union or other Communist Bloc nations accede to the Treaty, they become a party to it and will then be in a legal position to challenge as signatories the actions of any other signatory, especially the United States. If the United States ever finds it necessary to intervene to protect and defend the Canal, the Protocol of accession will open it up to challenges by other signatories before the United Nations, international courts, and the world press, where America has not faired well in recent years.

DOES THE UNITED STATES POSSESS FULL SOVEREIGNTY OVER THE PANAMA CANAL AND THE CANAL ZONE?

Article IIII of the 1903 Convention between the United States and Panama addressed the sovereignty issue as follows:

Article III

"The Republic of Panama grants to the United States all the rights, power and authority within the zone mentioned and described in Article II of this agreement and within the limits of all auxiliary lands and waters mentioned and described in said Article II which the United States would possess and exercise *if it were* the sovereign of the territory within which said lands and waters are located *to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power or authority.*"

The above article has been the subject of intense debate over the past several years and is the major source of divided opinion concerning which nation is sovereign over the Panama Canal.

Those who say the U.S. is not the full sovereign point to the phrase in Article III "if it were the sovereign of the territory" arguing that the words "if it were" qualify the grant to the United States. The words "if it were" can only mean that in fact the U.S. is not the sovereign. Those who argue that the U.S. is the full sovereign point to the words "to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power or authority". This phrase they argue denies sovereignty to Panama and when taken in the context of the entire article (III) proves that the U.S. is the sovereign in the Canal Zone.

Chief Justice Taft noted these diverging opinions in his opinion in *Luckenbach S.S. v. United States*, decided in 1930:

"Whether the grant in the Treaty amounts to a complete cession of the territory and dominion to the United States or is so limited that it leaves at least titular sovereignty in the Republic of Panama, is a question which has been the subject of diverging opinions. . . ." [280 U.S. 173, 177 (1930).]

No: "Sovereignty is perhaps the major issue raised by opponents of a new treaty. It is clear that under law we do not have sovereignty in Panama. The Treaty of 1903 did not confer sovereignty, but speaks of rights the United States would exercise as 'if it were the sovereign.' From as early as 1905, United States officials have acknowledged repeatedly that Panama retains at least titular sovereignty over the Zone." [Ellsworth Bunker, U.S. Ambassador-at-Large, Address before World Affairs Council, Los Angeles, December 2, 1975. Quoted in Congressional Digest, April 7, 1976, p. 119.]

Yes: "The executive and judicial branches of the Government of the United States have always exercised, and are now exercising, the powers and rights of sovereignty within the Canal Zone. . . .

"There can be no question that the Canal Zone was acquired and is held by the United States under a perpetual grant which, for all practical purposes, conferred upon and vested in the United States all the rights, powers, and authority of a sovereign, and that the United States has exercised full sovereign rights over the Canal Zone ever since the strip of land was acquired." [Arguments for the United States by Assistant Attorney General Sisson and Solicitor General Hughes in *Luckenbach S.S. Co. v. U.S.* 280 U.S. 173, 174–175 (1930).]

No: ". . . the one question of the flag has never been specifically placed before me, no decision has ever been made about it; but I do in some form or other believe we should have visual evidence that Panama does have titular sovereignty over the region." [The

President's News Conference, December 2, 1959, Public Papers of the President, Dwight D. Eisenhower, 1959, p. 794.]

Yes: "To such an extent, indeed, are we sovereign in the Canal Zone that Panama has been granted special commercial rights only by express and formal concession, and this Court has reviewed the history of the acquisition and concluded that the title of the United States is complete and perfect. [Justice Jackson dissenting, *Vermilya-Brown and Co. Inc. et al.* v. *Connell et al.*, 335 U.S. 377, 402 (1948).]

No: "It does not depend upon sovereignty in the political or any sense over the territory. So the administrator of the Wage-Hour Division has issued a statement of general policy or interpretation that directs all officers and agencies of his division to apply this Act to the Canal Zone, admittedly territory over which we do not have sovereignty." [Mr. Justice Reed in delivering the opinion of the Supreme Court in *Vermilya-Brown and Co. Inc. et al.* v. *Connell et al.*, 335 U.S. 377, 381 (1948).]

Yes: "The Government would never recede from the position which it had taken in the note of Secretary Hay in 1904. This Government could not and would not enter into any discussion affecting its full right to deal with the Canal Zone under Article III of the Treaty of 1903 as if it were the sovereign of the Canal Zone and to the exclusion of any sovereign rights or authority on the part of Panama. . . . This must be regarded as ending the discussion of that matter" [Memorandum of Conversation, Secretary of State Charles Evans Hughes, *Foreign Relations*, 1923, Vol. II, p. 684.]

IS THE PANAMA CANAL ZONE, INCLUDING THE CANAL, A POSSESSION OR TERRITORY OF THE UNITED STATES?

Yes: "We should end those negotiations and tell the General: We bought it, we paid for it, we built it and we intend to keep it." [Governor Ronald Reagan, *Wall Street Journal*, April 29, 1976.]

No: "But let us look at the truth about ownership and sovereignty. The United States does not own the Panama Canal Zone. Contrary to the belief of many Americans, the United States did not purchase the Canal Zone for $10 million in 1903. Rather, the money we gave Panama then was in return for the rights which Panama granted us by Treaty. We bought Louisiana; we bought Alaska. In Panama we bought not territory, but rights." [Ellsworth Bunker, U.S. Ambassador-at-Large, Address before World Affairs Council, Los Angeles, California, December 2, 1975. Quoted in *Congressional Digest*, April 7, 1976, p. 119.]

No: "It is proper to remark that the Zone has not been sold, transferred, or alienated by the Republic of Panama to the United States in full ownership. That which was ceded is the use, occupation, and control of the Zone for the specific needs of the construction, conservation, operation sanitation, and protection of the Canal. If the Canal were abandoned by the United States, the United States would have no legal ground for occupying the Zone, title to which it has not acquired either by purchase, transfer, or conquest. Further, the Canal Zone has not been even leased to the United States because the annual payment of two hundred and fifty thousand dollars which it undertook to make under the Canal Treaty was not stipulated as a fee for the use of the Zone." [Letter from Panamanian Minister Alfara to Secretary of State Hughes, January 3, 1923 cited in Whiteman, Marjorie, *Digest of International Law*, Volume 3, 1964, Department of State, p. 1143.]

Yes: "Ever since it was acquired, the Canal Zone has been considered and treated by the legislative branch of the Government as a possession of the United States and not as a foreign country." [Argument for the United States by Assistant Attorney General Sisson and Solicitor General Hughes in *Luckenbach S.S.* v. *United States*, 280 US 173, 175 (1930).]

No: ". . . on September 8, 1909, 27 Op. Atty. Gen. 594, the Attorney General, in an opinion given to the Secretary of War, held that the Canal Zone was not a possession of the United States within the meaning of the Tariff Act of August 5, 1909. . ." [Opinion of the Court delivered by Mr. Chief Justice Taft in *Luckenbach S.S. Co.* v. *United States*, 280 U.S. 173, 178 (1930).]

Yes: "It is hypercritical to contend that the title of the United States is imperfect, and that the territory described [the Panama Canal Zone] does not belong to this Nation, because of the omission of some of the technical terms used in ordinary conveyances of real estate." [Mr. Justice Brewer delivering the opinion of the Supreme Court in *Wilson* v. *Shaw*, 204 U.S. 24, 33 (1907).]

No: "I would never give up complete control or practical control of the Panama Canal Zone, but I would continue to negotiate with the Panamanians . . ." [Governor Jimmy Carter in Presidential Debate on Foreign Policy, October 6, 1976, in San Francisco, California.]

Yes: "*Acknowledging* the Republic of Panama's sovereignty over its territory . . ." [Preamble of the Panama Canal Treaty signed September 7, 1977 by President Jimmy Carter and General Omar Torrijos in Washington, D.C.]

Unclear: "A cursory examination of legal sources indicates that the words 'Canal Zone' have received various interpretations for United States legislative purposes. For purposes of extradition, it is considered an organized territory (37 Stat. 569, 48 U.S.C. 1330); for purposes of customs duties, it is treated as foreign territory (33 Stat. 843, 19 U.S.C.); as to transportation of mail, its ports are considered foreign ports (Luckenbach Co. v. U.S., 280 U.S. 173); as to the authority of the Government to engage in (*Wilson v. Shaw*, 204 U.S. 24) . . ." [Assistant Legal Adviser Snow to John R. Kelly, letter, June 19, 1950, MS. Department of State, file 611.1913/6–1550. Cited in Whiteman, Marjorie, *Digest of International Law*, Volume 3, 1964, Department of State, p. 1171.]

IS THE PANAMA CANAL CRITICAL TO U.S. NATIONAL SECURITY?

Yes. Every ship in the U.S. Navy except the 13 aircraft carriers can transit the Canal. This includes American nuclear submarines. Also, the trend in naval shipbuilding is toward smaller ships, most of which will be able to transit the Canal by the turn of the century. The United States in reality does not have a two ocean navy. With only 476 ships in the active fleet, America at best has only a one and a half ocean navy. The ability to move units of the fleet between the Atlantic and the Pacific will be critical to the United States for decades to come.

In a June 6, 1977 letter addressed to Mr. Carter, former U.S. Navy Admirals Arleigh Burke, Robert B. Carney, George Anderson and Thomas H. Moorer, explained the strategic importance of the Panama Canal:

"Our experience has been that as each crisis developed during our active service—World War II, Korea, Vietnam and the Cuban missile crisis—the value of the Canal was forcefully emphasized by emergency transits of our naval units and massive logistic support for the Armed Forces. The Canal provided operational flexibility and rapid mobility. In addition, there are the psychological advantages of this power potential. As Commander-in-Chief, you will find the ownership and sovereign control of the Canal indispensable during periods of tension and conflict."

During America's involvement in Southeast Asia, ⅓ of all U.S. sea-going cargo destined for that part of the world passed through the Canal. Japan continues to rely upon the United States for its primary defense and for this reason alone we must remain a Pacific Power.

The importance of Latin American natural resources to the United States economy is increasing with the Western Hemisphere becoming more economically interrelated each year. Much of this trade transits the Panama Canal in at least one direction.

The United States has critical strategic, defense and energy interests in the Caribbean area. We are a major buyer of Venezuela oil. Soviet influence in Cuba and Peru is not diminishing. Panama itself may well be a target of Soviet influence and probing. The Panama Canal Zone is the headquarters of the U.S. Southern Command. It provides the best available facilities anywhere in the world for jungle warfare training. It gives the U.S. a presence in a part of the world which has always been important to the United States and this importance is growing.

Finally, the United States must stop its long series of foreign policy defeats and setbacks. From the Bay of Pigs to Angola the U.S. has retreated around the world and to give up the Panama Canal which is critical to U.S. economic and national security interests would cause serious political ramifications for the U.S. and its key allies. It could further convince America's adversaries that we have lost our will and are no longer willing to stand up for our vital national interests.

No: The Canal has lost its strategic and military importance to the United States. Aircraft carriers are the heart of the U.S. fleet. Most other Navy ships serve as part of the Carrier Task forces. The carriers cannot transit the Panama Canal. Thus the ability of the smaller ships attached to a carrier task force to do so is quite meaningless. For U.S. Navy attack or missile launching submarines to pass through the Canal requires surfacing. which in time of war would be a decided threat to any sub doing so. American military presence in Panama is a lasting and irritating vestige of colonialism. It is not needed to protect U.S. interests because the presence does more damage than it does good. It is a bone of contention to most of Latin America.

The real interest of the United States is to maintain open and unhindered passage through the Panama Canal for the naval and commercial vessels of all nations. With the Canal such an emotional issue in Panama, the best way to achieve this free passage is through a new arrangement between the U.S. and Panama.

While the United States can presumably protect the Canal from most foreign attacks (a sea or air launched missile attack against the Canal would undoubtedly be impossible to stop in its entirety and would close the Canal for a long period of time), the real military threat to the continued operation of the Canal comes from sabotage and guerrilla type operations within Panama. The best assurance against such attacks would be a new arrangement with Panama giving that nation a dominating interest in keeping the Canal open and free from internal attack.

With jungle terrain more difficult to fight in than Viet Nam, the U.S. would have to send 100,000 troops into Panama to put down a domestic or guerrilla attack on the Canal. Such military action would undoubtedly last for many months, causing serious domestic disruptions among the American people.

IS THE PANAMA CANAL IMPORTANT TO THE ECONOMY OF THE UNITED STATES?

Yes: The Canal shortens the sea route from New York to San Francisco by 8,000 miles and 30 days and from New York to Yokohama, Japan, by 3,000 miles. Japan, America's second largest trading partner after Canada sends approximately one-third of its sea borne commerce through the Canal. According to the White House fact sheet on the Treaties, 7% of all foreign trade going in and out of U.S. seaports passed through the Panama Canal in 1976. The Library of Congress estimates this to be 12% In FY 1976 12,280 ocean going vessels transited the Canal. Also, 96% of the U.S. merchant fleet can go through the Canal.

The energy needs of the United States are becoming increasingly linked to the Panama Canal. Although super tankers cannot use it, the United States is soon expected to be sending 200,000 barrels or 29,000 long tons of Alaskan crude oil through the Canal daily. This figure is expected to reach 70,000 long tons by 1980. For the period FY 1973 to FY 1976 42,494,000 long tons of petroleum shipments passed through the Canal going to or from U.S. ports according to testimony of Howard Casey, Deputy Assistant Secretary of Commerce for Maritime Affairs, before the House Subcommittee on the Panama Canal on July 25–27, 1977.

No: The Panama Canal is losing its economic importance to the United States. The overall percentage of U.S. import and export sea-going tonnage is declining, and the 7% of U.S. tonnage going through the Canal is minimal. In FY 1975 total transits of the Canal numbered 14,735. In FY 1976 this figure had fallen to 12,280. Ships exceeding 950 feet in length, 106 feet in width and having a draft of more than 40 feet cannot use the Canal. This eliminates super tankers and giant ore ships which are moving an increasing percentage of U.S. produced goods or purchased raw materials on the high seas. Alternative means of shipping goods between the East and West Coasts of the United States, like the combined sea-railway system, have become more competitive with the cost of shipping through Panama. Since 1975, the Canal has lost money. The lock system is over 50 years old, and maintenance costs will continue to go up. If the United States retains control of the Canal, it faces the prospect of much higher maintenance costs and declining revenues. This difference can only be made up by higher tolls, which will make the Canal less competitive as a means of transportation, or by congressional appropriations. The Canal is becoming an economic liability for the United States. Under these conditions, it makes sense to transfer it to the Government of Panama, which wants it very badly.

TOWARD TRUE PEACE IN THE MIDDLE EAST

Mr. **METZENBAUM**. Mr. President, there has been a great deal of controversy in recent weeks about some of the Carter administration's policy initiatives in the Middle East. Recently, the Jewish Federation of Cincinnati passed a resolution on American Mideast policy which summarizes very well some of the concerns that a great many Americans have. The resolution also offers some very useful suggestions for future U.S. policy in that troubled area of the world.

Mr. President, I ask unanimous consent that the "Resolution on the Middle East" by the Jewish Federation of Cincinnati be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

RESOLUTION ON MIDDLE EAST

We applaud President Carter's efforts to bring about peace in the Middle East and his firm commitment to support Israel. However, we are concerned about some aspects of the policy developments in our country's efforts to achieve a Middle East peace, dependent as it is on Arab recognition of Israel's legitimacy and direct negotiations between the parties.

We perceive American policy moving towards acceptance of the Palestine Liberation Organization as an equal participant in the Geneva Peace Conference. Together with the joint U.S./Soviet communique, this has profoundly dangerous implications.

The joint U.S./Soviet communique's language "the legitimate rights of the Palestinian people" is interpreted in the Arab world as national rights for Palestinians, meaning creation of an independent, separate Palestinian entity between Israel and Jordan. The Arab world knows this could only be done if the United States and the Soviet Union impose their will upon Israel and not in a bargaining process between the Arab states and Israel.

In any case, as the P.L.O. has stated, such an entity would still not solve the crucial issue of permanent settlement of Arab refugees.

Far-reaching implications for the Middle East and the world result from the creation of such an entity. It would give the P.L.O. a springboard from which to carry out its declared purpose of destroying Israel. It would give the Soviet Union a new power base in the area and serve as a center for revolutionary, radical agitation against Jordan, Saudi Arabia, and Egypt, countries which now are relatively U.S. oriented.

The Soviet aim in the Middle East is to deprive the U.S. of influence in the area. Soviet actions in continuing a massive arms supply to the Arabs are designed to intensify conflicts, not ease them. The U.S. should not legitimize Soviet acts detrimental to our own and Israel's interest in peace. The quest for peace in the Middle East is a vital part of American foreign policy which we all fervently support. In encouraging a short-term solution, we must not advocate or support the creation of a P.L.O. dominated Palestinian entity which would contain seeds certain seeds certain to bring chaos and war over a longer term.

Rather, the U.S. should use its good offices to bring the states involved—Israel, Egypt, Jordan, Syria, and Lebanon—to Geneva on the basis of U.N. Resolutions 242 and 338, and permit those states to negotiate the terms of a peace among themselves. It should not vary from this position, except with Israel's approval, as agreed to in the "Memorandum of Agreement," dated September 1, 1975.

We think U.S. involvement is essential to bring about direct peace negotiations between Israel and the Arab states. We ask you to support U.S. efforts towards that end without U.S. pressure on Israel to make substantial concessions before such negotiations start.

We request that you make your position known to the President and to your constituents.

SMALL IS STILL BEAUTIFUL

Mr. **PERCY**. Mr. President, I would like to draw the attention of my colleagues to an excellent article which appeared last month in the Washington Post entitled "Small is Still Beautiful." The article, a moving tribute to the late E. F. Schumacher, was written by Barbara Ward, a well known British economist and humanitarian. While Barbara Ward mourns the loss of a friend and colleague, her deepest regret is for the world and what it has lost.

We are all indebted to Fritz Schumacher. He taught us that the western path of development—typically large scale, capital intensive technology—is not necessarily appropriate for the developing world where labor abounds and capital is short.

But more than teaching us a new economics, E. F. Schumacher taught us a new humanism. He taught us that people count—their traditions, culture, language and history—and that economics should be tempered and molded to fit their needs.

Mr. President, I ask unanimous consent that the Washington Post article by Barbara Ward be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SMALL IS STILL BEAUTIFUL

(By Barbara Ward)

Anyone fortunate enough to have known Fritz Schumacher, who died last month, will now be chiefly mourning the loss of a friend who combined a remarkable innovating intelligence and rigor of mind with the greatest gentleness and humor. But what the world has lost is of far greater importance.

It was in the 1960s, at the height of the euphoria about "stages of growth" that would lead the developing world, in the wake of Western prosperity, to the same ultimate felicity of high technology and high consumption, that Schumacher first sounded a warning note. He began asking, for countries desperately short of capital and endowed—even overendowed—with an abundant and growing labor force, how anyone could expect that high-cost technology, largely replacing manpower, could lead to anything but economic and social disruption. He was the first Western expert to argue that in such areas as India (and, by implication, China) the prime needs, especially in the rural areas where most people lived, were workplaces which could be established at, say, $100 to $1,000 in capital costs and tools and machinery which would use to the full the manpower and the human skills locally available.

This "intermediate technology"—which has come to be generally known as "appropriate technology"—would conform to local requirements and permit the most rapid and socially acceptable forms of growth. Schumacher foresaw that undue priority given to, say, the petrochemical complex—which can demand $10 million in investment and provide just 150 jobs—or to the auto assembly line or the "Green Revolution" in agriculture would lead in the Third World to huge debts abroad and spreading underemployment and deepening maldistribution of income at home.

What was prophecy in 1965 is certainty in 1977. But Schumacher was not content to be a prophet. His best known book, "Small Is Beautiful," belongs in some measure to the category of exhortation, but his literal invention of the concept of "appropriate technology" and his establishment of an institution—the Intermediate Technology Development Group—to study its implications and encourage its widespread use has revolutionized the policies of international lending agencies and—though more slowly—of governments throughout the world.

The sheer scale of the impact is almost unbelievable when it is seen to be what it is—the inspiration of a single man. For instance, by 1982 the U.N. Environmental Program hopes to have "a global network of institutions to test, apply and publish advice on appropriate and environmentally sound technology." The World Health Organization has introduced a new program entitled "Appropriate Technology for Health." The technology and employment branches of both the International Labor Organization and the U.N. Industrial Development Organization are developing appropriate technology programs.

Several agencies, realizing that rural water supplies and sanitation are virtually inconceivable without small-scale technology and full local involvement, are concentrating on "appropriate technology" in these areas. The U.N. Development Program is working in the irrigation sector, and the World Bank recently helped sponsor a seminar at Oxford on appropriate technologies for sanitation.

These signs of a new direction in development thinking also can be found in national aid programs. Britain's Overseas Development Ministry has set aside over $2 million for work on appropriate technology. America has gone further. A special unit has been set up in this area within the U.S. Agency for International Development, with a starting fund of $20 million.

The Dutch and Swedish governments are also increasing their interest in this sphere, and it is perhaps of melancholy interest to note that in the very week of Schumacher's untimely death, the Asian Development Bank published a study of the effects in Asia of the Green Revolution (supported by so many aid agencies), which reported on its general failure to increase food production on the needed scale and its tendency to increase social disruption, the flight from the land, and the swelling of vast urban megalopolises where adequate employment, education and even the minimum decencies of life are not available for at least a third of the inhabitants.

There are those in the Third World who see "appropriate technology" as one more Western plot to ensure that the main instruments of power in modern production are kept from the poorer countries so they may continue in abject dependence. It is probably for this reason that developing nations rejected a resolution at the ILO World Employment Conference in 1976, proposing the establishment of an International Institute for Appropriate Technology.

But the fear is basd on misapprehensions, as can be seen from several examples. The first is, of course, the degree to which a vast country like China has based most of its crucial rural development on "appropriate technology" and thereby has increased its independence from more industrialized societies.

The second can also be illustrated from the Chinese experience. To begin with, labor-intensive techniques and technologies can lay a secure basis for a later more elaborated use of what is valuable in more sophisticated technology and science. The stronger the base—in employment, skills and the satisfaction of basic needs—the higher the pyramid of capital expansion and scientific research that can be raised up later. And not all modern "breakthroughs" are valuable simply because they are modern. If appropriate agricultural technology helps minimize the use of a range of lethal pesticides, herbicides and fungicides, people will not only have enough to eat—they also will avoid the deaths and injuries to which so many Third World farmers and laborers have succumbed through use and misuse of these chemicals.

Finally, one should not forget the degree to which Schumacher's own thinking was profoundly shaped by his experience in the Third World. It was after serving as economic adviser first to Burma in the 1950s and in India in the early 1960s that, influenced by Buddhist thought and Gandhian philosophy, he began to evolve his concepts of a technology appropriate to each people's cultural tradition and his "economics as though people mattered." In a very real sense, his thought was a gift from the Third World to the first, and the lessons he devoted his life to teaching may turn out, sooner than we expect, to be as relevant to New York City as to Lagos or Bombay.

POWER PLAY

Mr. METCALF. Mr. President, the General Services Administration in its attempt to hold down spiraling utility rates has intervened before State and Federal regulatory commissions throughout the Nation, saving the Federal Government millions of dollars. I applaud the GSA for its efforts and ask unanimous consent that a recent article from the Wall Street Journal pertaining to this subject be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEDERAL AGENCIES FIGHT ELECTRICITY RATE BOOSTS IN A BID TO SAVE MONEY

(By James C. Hyatt)

BALTIMORE.—Baltimore Gas & Electric Co. wants to raise its rates by $120 million a year. As usual, its customers are trying to short-circuit that plan.

The higher rates are being opposed by such heavyweights as General Motors Corp., General Electric Co. and the Peoples' Counsel, a Maryland state office that claims to represent homeowners. And battling alongside them, in proceedings before the state Public Utility Commission, is another formidable consumer: Uncle Sam.

The reason is plain dollars-and-cents. Last year the federal government's electricity bills from Balitmore G&E totaled $14,692,693, ranging from $15,168 at an Army Reserve center to $5,189,406 for Fort Meade, Md. If the proposed rates take effect, technicians figure, Uncle Sam will be stuck for an additional $3.2 million a year.

Much the same thing is happening to other federal utility bills around the country. So, in self-defense, the government increasingly is becoming its own consumer advocate before state and federal regulatory commissions. Its lawyers, economists and utility rate experts—a force now totaling about 100—are moving in to uphold the taxpayer's interest and limit, the drain on the U.S. Treasury. At last count, these operatives were fighting no fewer than 171 proposed rate rises for electricity, gas, telephone or other service.

A VICTORY IN ILLINOIS

They are winning victories. On Oct. 12, the Illinois Commerce Commission granted Commonwealth Edison Co. a rate increase calling for a return on its common stock of about 12 percent. That was about what the federal government had recommended, and it was significantly less than the 14.5 percent to 15 percent the company had sought. (Each additional percentage point yields about $28 million in increased revenues to the company.) The government was the only major customer challenging Commonwealth Edison's requested rate of return.

Though utility executives don't like to talk on the record about the government's rate-fighting attempts, some privately express irritation. "They're always out there with a hammer to knock you down," complains one Midwest utility's financial officer. "Trying to figure out the lowest rate they can recommend gets to be a technical game with them."

But the federal intervenors contend they are doing an essential job, and they boast of some clear-cut savings. Last year Public Service Electric & Gas Co. of New Jersey proposed to double, to $2 from $1, a special charge per kilowatt for certain major customers whose sudden surges in power consumption require availability of extra generating capacity. The change would have cost a Navy air-propulsion test center an additional $1 million a year. The government, the only party in the case to oppose that provision, prevailed. "We were able to convince the commission that the charge wasn't justified," Attorney James Ellis says.

SAVINGS ADD UP

Since the federal government's annual power bill exceed $1 billion, and telecommunications services cost it another $3 billion or $4 billion, the savings in successful rate fights can add up impressively. "Conservatively, in the last year we've saved the federal government better than $50 million in all kinds of key services," says Spence Perry, who heads the Regulatory Law Division of the General Services Administration, the governments' chief purchasing agent and chief intervenor in rate cases. Jay Solomon, the GSA administrator, declares, "I think we do a pretty good job of protecting the government's pocketbook."

It isn't only the government that gains, though. When Uncle Sam successfully attacks a utility's broad plea for a higher return on investment, all customers from homeowners and storekeepers on up share in the immediate benefits. "When we do get together on an across-the-board kind of proposition, such as rate of return, we win it for everybody, no matter who the customer is," says Donald F. Rogers, who is serving as Deputy Assistant People's Counsel in the Baltimore G&E case.

But utility executives naturally are nettled, particularly when the government representatives argue for a lower rate of return on investment than the companies consider necessary. One company official says "we've never felt they've presented a reasonable case" taking proper account of a utility's need to raise capital under today's market conditions.

"A VICIOUS CIRCLE"

Adds a spokesman for one Eastern utility: "There is a vicious circle here. We're trying to protect our revenues. And when our earnings improve, we pay more taxes. The government might not be as injured as one would think." An executive of another company insists: "In the end, GSA intervention will cost the government money because tax revenues go down."

For their own protection, some utilities have tried to keep the government out of rate cases. And during the Nixon era, the Treasury Department unsuccessfully urged the GSA to stay out of electricity-rate proceedings; it insisted that low returns on investment were jeopardizing utilities' financial health.

Nowadays, utilities have an added talking-point: The Carter administration's push for redesign of utility rates to encourage energy conservation may clash with the government's effort to hold down its own utility bills. One company executive notes that energy officials have suggested "that utilities consider novel approaches to rate-making in order to change habits in the use of energy." He adds: "Then what happens is that the GSA stands up and complains that they'll wind up paying more for electricity."

As one conservation measure, federal energy officials and many utilities have been pushing "time-of-day" pricing, which grants reduced rates for power used during low-consumption periods, such as nighttime. But because federal offices are daytime operations, Uncle Sam's bills would be hard-hit by a pricing plan penalizing daytime usage. So the GSA is urging a cautious approach.

Recently, in an Ohio case, the agency won a delay of time-of-day pricing. Dayton Power & Light Co. wanted to adopt such a rate structure. But government witnesses argued that there's little Uncle Sam can do to move its workload to nighttime operations and gain the benefit of lower rates. (Many big private employers, of course, might face the same difficulty.)

During the hearing, Col. Fred M. Blum, a personnel officer at Wright-Patterson Air Force Base, said adoption of night-work schedules would mean "our recruitment of new people would be dealt a heavy blow." The base employs thousands of civilian scientists and technicians in research projects, and moving them to night work "would probably steer them elsewhere to pursue careers," he said. In its opinion, the Ohio Public Utilities Commission decided the record was insufficient to justify adoption of time-of-day pricing. It ordered more study of how such rates should be designed.

SOME MIXED EMOTIONS

Environmentalists, for their part, have mixed feelings about the government's rate intervention. "We see the GSA's involvement as both a help and a hindrance to us," says Richard E. Morgan, a utility researcher for the Environmental Action Foundation, a Washington-based public-interest group. Environmentalists applaud when everybody's energy bills are held down. But when the GSA tries to keep rate structures "as favorable as possible to the government as a large customer, that's where we get into conflict," Mr. Morgan says. Environmentalists prefer considerably higher rates for big users, to help discourage energy consumption.

The critics notwithstanding, federal representatives have increased their intervention as utilities' rate-rise requests have multiplied. But Uncle Sam lacks the money and manpower to intervene in every case. So officials pick and choose, depending on their assessment of the effects. They consider not only possible savings for the government but also broad economic and social goals.

One such question is whether the poor or the elderly should pay lower rates than other customers. If so, which other classes of customers should be hit with higher rates to provide the subsidy?

A rather typical proceeding in which the government has intervened is the Baltimore G. & E. case. The company argues that it has consistently failed to achieve the rates of return on investment allowed by past PUC decisions, and that its stock price and ability to raise capital have suffered as a result.

"One of the major factors for our stock's selling below its book value is investor concern over whether we will receive sufficient rate relief," the company's chairman, C. Edward Utermohle Jr., testified early in the current case. "BG&E's history of inadequate earnings throughout this decade has not been a record to inspire the confidence of investors, and understandably, they are waiting for proof that regulation in Maryland is constructive."

In terms of common stock equity, the company is seeking a 14.25 percent after-tax rate of return, up from the 12.74 percent authorized in the last rate case. Instead, a GSA witness appearing before the commission called for a reduction, to a range of 11.72 percent to 12.09 percent.

And John W. McCabe III, a utilities consultant hired by the Defense Department, challenged Baltimore G&E's request for a $120 million revenue boost. Only an additional $15.2 million from electric and $13.2 million from gas operations are "required in order that the company have the opportunity to earn a minimum return," he told the PUC.

EXAMINER'S RECOMMENDATION

So far, the company isn't faring as well as it would like. On Oct. 27, a hearing examiner for the commission recommended that Baltimore G&E raise its rates to produce an additional $87 million in annual revenue, instead of the requested $120 million. That recommendation, which will take effect Nov. 25 if it isn't altered by the commission, calls for a 12.7 percent return on common stock equity, slightly more than the GSA has proposed but significantly less than the company has requested. "We are disappointed," a Baltimore G&E spokesman says.

Much of the government's case involves rate design, the way the company apportions its revenue needs among various classes of customers. The key issue is how to treat Fort Meade, a 13,486-acre post near Baltimore that houses 43,000 people in 2,127 buildings.

Terry J. Kolp, a Defense Department attorney participating in the case, calculates that while natural-gas rates provide the company a 7 percent return on residential service, the rates paid by the Army, which is classed as a commercial user, generate a return of more than 14 percent. "We'll ask that the increases be allocated to reflect cost of service more accurately," he says.

Unlike other major customers, Mr. Kolp argues, the government bears the heavy expense of installing and maintaining the electricity and gas distribution system on the Army base; that system, installed at a cost of $12 million, includes 1,154,866 feet of overhead power lines, according to a government witness, George E. Cunningham, who heads Fort Meade's utilities division.

Sometimes, of course, the government's witnesses miss the mark. One day during the Baltimore G&E proceedings, a GSA representative was challenging the company's requested increase in its rate of return on common-stock equity. He calculated that return as 14.14 percent in 1976.

J. A. Biddison Jr., the company's general counsel, hardly could suppress his glee. He declared that the government's witness had failed to take into account the company's dividend on its preferred stock. A proper calculation, he concluded, would work out to only 11.66%—indicating the utility is doing less well than the government had argued.

But Baltimore G&E executives decline to speak out pro or con the government's participation in the case. They explain that any favorable comment might influence the Public Utilities Commission to give more attention to the government's arguments, and any negative statement would unnecessarily create hard feelings.

CITY OF MESA, ARIZ., OPPOSED TO EXTENDING ERA RATIFICATION TIME

Mr. BAKER. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from Arizona (Mr. GOLDWATER), and the material attached thereto.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT OF SENATOR GOLDWATER

The proposed legislative extension of the deadline for ratification of the Equal Rights Amendment raises the proverbial "can of worms." Frankly, it is my opinion that such a move would not be constitutional.

At the very least, there is so much sharp division among constitutional scholars on the question that Congress would be most unwise to act on the proposal. In other words, this just is no way to amend the Constitution.

The fact of the matter is that Congress has never before extended the ratification deadline of any proposed constitutional amendment and the courts have never considered the question of whether it has power to do so. Assuming for the sake of argument that Congress has such a power, a multitude of additional questions are raised.

Must Congress pass the extension by a two-thirds vote of each House as it did in the case of the amendment itself? Or can Congress act by a simple majority vote?

If a later Congress should choose not to accept a time extension granted by the present one, is the action of this Congress binding on its successor or can the later Congress repeal the time extension?

If Congress can reopen the issue by extending the date for ratification, does this allow the States to reopen the question by rescinding their past approval?

These are the kinds of questions that surround the proposed time extension, and these serious doubts are reason alone to oppose it.

This is the opinion of the vast majority of Arizonans who have expressed their opinions on the subject to me. Representative of local opinion in Arizona is a Resolution of the City Council of Mesa which I have just received expressing opposition to the time extension and which I have attached hereto.

A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF MESA, MARICOPA COUNTY, ARIZ., EXPRESSING OPPOSITION TO EXTENDING TIME FOR RATIFICATION OF THE EQUAL RIGHTS AMENDMENT

Whereas, proponents of the Equal Rights Amendment, with the assistance of huge Federal subsidies, have lobbied extensively for the adoption of the Equal Rights Amendment by the requisite number of States; and

Whereas, unless the amendment is ratified by the requisite number of States by March of 1979 the time for its ratification will have expired; and

Whereas, proponents of the amendment are now seeking congressional action to extend the time period for ratification, with the understanding that additional efforts to secure its ratification will be subsidized by Federal funds; and

Whereas, in the opinion of the City Council, it is not in the best interests of the City of Mesa or of the United States of America that the time for ratification should be extended;

Now therefore, be it resolved by the City Council of the City of Mesa, Maricopa County, Arizona, as follows:

Section 1: That the City Council of the City of Mesa does by this resolution express its opposition to the extension of time for the ratification of the Equal Rights Amendment, and it dces hereby request the Arizona Congressional Delegation to use all available means to secure the defeat of any proposed extension of time.

SURVIVAL

Mr. ABOUREZK. Mr. President, I ask unanimous consent that an article written by Marcus Raskin of the Institute of Policy Studies, which was published in Society magazine issue dated November/December 1977, be printed in the RECORD. Mr. RASKIN's paper is an important contribution on the subject of human rights.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SURVIVAL

(By Marcus G. Raskin)

Practical concern with human rights is the life instinct of civilization. Without a shared consciousness and means for their application, there is little chance that humanity and civilization will be able to survive the next fifty years without horrifying and devastating tragedies. It goes without saying that any progress which human civilization might make is utterly tied to the meaning that human rights is given in the daily practice of nations and peoples.

Some will say that there is nothing "new" in the collective horror of this century, where reason is detached from personal feeling and subjective understanding. But they would be wrong. Our sophisticated, calculative intelligence is translated into military technologies of violence in being, like missiles, thermonuclear weapons, smart bombs, prisons, torture chambers.

Others will say that there is nothing new in huge bureaucratic structures where people are reduced to roles of processor and processed, joined together in a Kafkaesque embrace waiting for each to exchange roles. But there is a difference between this and other times. By virtue of what technology allows, there do not have to be limits to behavior. And that is what has happened.

DEFINING HUMAN RIGHTS

There is another side. Silently people cry out "enough," in a world gone morally and legally mad, where few either speak for humankind or with a human face. But a half-awakened consciousness of people is slowly becoming aware of a membrane which holds civilization together. It is this membrane, human rights, which is our task to nurture and strengthen, bringing intellectual and political sustenance to those rights. This task is not easy because the very nature and definition of human rights is ambiguous.

In our time the concept of human rights emerged from World War II, where cruelty and abomination had reached stunning proportions. It emerged from a period in which human beings had been the "objects" of Great Powers with virtually no standing in international law, and where the individual person's life was open to intrusion and destruction by states or the games which statesmen play with each other. The League of Nations took no notice of the internal affairs of state no matter how brutal the result, and leaders were not thought to be responsible for their actions in international law. It took World War II to recognize that there is a link between respect for freedom within the state and the maintenance of peace betwen states. The UN Charter reflects this point of view and recognizes human rights in the preamble.

It is important to remember the historical, moral, legal, and even psychological relationship between the Charter of Nuremberg (which attempted to develop a definition of personal responsibility), the United Nations Charter, and the later Human Rights Declaration. The Charter of Nuremberg, which was narrowly interpreted by judges, had sweeping and high purposes. The articles themselves either overlap or deal with those questions which *in practice* are human rights questions, questions which determine whether a state is something other than the means to organize people into submission or violence. The tribunal sought individual responsibility in three areas: crimes against peace, war crimes, and crimes against humanity.

As Richard Wasserstrom has pointed out, the principle of vicarious liability, which would hold members of a conspiracy responsible regardless of whether they had committed a particular act, was also introduced. Thousands of people were brought to justice under this charter and a similar one in Japan. Nuremberg is a stubborn fact of international affairs; it is a precedent that will not go away. Indeed, it is critical to our present understanding of international politics and law.

PROMOTING HUMAN RIGHTS

Simultaneous to the emergence of the Cold War and the breakup of old empires, the need appeared to forge some other, more positive direction which would limit the destruction of man's institutions upon people themselves. Nuremberg and the UN Charter were such imperfect instruments. The objective of the United Nations as laid out in the charter did not mean that there was a list of formal obligations in human rights which were a condition precedent to membership in the United Nations. Nevertheless, even without an explicit provision dealing with formal obligations, it would be absurd to think that the members of the United Nations did not formally accept the principles of respect for human rights. But respect, of course, is not the same as legal commitment.

The question of how to promote human rights in practice foundered on the rock of political sovereignty, legal imprecision, and bureaucratic fear and the Cold War. With the passage of the Universal Declaration of Human Rights in 1948, the world's people learned how limited—if any existed at all—were the obligations of the states to either apply or sign and implement by treaty the declaration's provisions. Mrs. Roosevelt, as chairwoman of the Commission on Human Rights, stated prior to its passage that the declaration was not a treaty or agreement; yet the declaration carried moral weight with the mass of people.

The declaration made clear that human rights were more than a "luxury." The declaration was more than the culmination of the ideologies which centered around natural law or those which centered around the cartoon of the inevitability of progress, a conception which had so gripped the pre-World War I socialist and liberal thinkers. The miracle of that document was that people with opposed ideologies had agreed on a basic list of rights although they could not state why they favored those rights as basic, how the definition of those rights would operate in practice, or a common philosophical understanding of the world.

AMERICAN AMBIGUITY

Disagreement about first principles made it very difficult to develop a series of practices which would cause the enforcement of the Universal Declaration. While the document was predicated on many American notions, such as those laid out in the American Declaration of the Rights and Duties of Man (Bogota Conference of American States, 1948) and the thoughts of President Roosevelt's New Deal, and while diligent efforts caused the declaration to be quickly adopted, the United States did not accede to the document as a legally binding one, claiming that it had no such force. The document was seen by nations as an exercise in moral oughtness. The Soviets, however, appeared to want to give the declaration greater legal weight, as did the French and Belgians.

Early on the United States faced a hornet's nest with the passage of the declaration; and by the time that Eisenhower and Dulles came to power in 1953, the stage was set for the United States to withdraw any sort of support for effective human rights treaties. The reason the United States took this position during the time of Eisenhower is a complex one. In part, it was related to the conservatives in Congress and the Republican party who feared that the United Nations, and other nations as well, would upset the internal social system of the United States with "socialistic" ideas. There had been evidence that the U.S. courts were referring to the UN Charter in various of their decisions.

There was also a more complicated foreign policy reason. Dulles had enunciated the doctrine of liberation for Eastern Europe in the 1950–54 period. Except for covert operations, this reflected Cold War rhetoric more than the actualities of military intervention. Dulles feared that human rights covenants and declarations could be used by those to his political right or liberal interventionists to insist that the United States use such treaties as legalistic instruments for military action in Eastern Europe, a direction which he had no interest in implementing by force—as shown in the 1956 event of the Hungarian Revolution.

HELSINKI ACCORDS

But a generation is a long time in the history of international affairs. Friends become enemies, disputes which are thought of as settled flare up, ideas and goals thought of as too difficult to achieve become important questions to discuss and negotiate. The Helsinki Conference on Security and Cooperation in Europe set the diplomatic terms of reference for future U.S. diplomatic policy regarding Eastern Europe and human rights in Europe. Politically it is seen as a fine line between disengagement and liberation and means to reintegrate Europe. On the Western side, what could not be done by the spice of "rollback" was to be accomplished by the sugar of détente.

For our purposes, however, the human rights aspects to the Helsinki Accords are critical. The same secretary of state who objected to the American ambassador giving "political science lessons" to the Chilean junta when he complained about Chilean torture, accepted the human rights sections of the Helsinki Accords. The language of this document is similar in purpose and intent to the Universal Declaration, tracking the ideas of that document.

The more specific meaning of this section of the accords has been interpreted to apply to increased human contacts between Warsaw and NATO bloc nations. But the Helsinki Accords do nothing to point up the criminal nature of the arms race, calling instead for "confidence-building measures" such as "prior notification of major military maneuvers, exchange of observers" which "by their nature constitute steps towards the ultimate achievement of general and complete disarmament under strict and effective international control, and which should result in strengthening peace and security throughout the world."

What can we conclude from this litany of new good intentions? Moral pretension plays an important role in the statements, if not in the actions, of states; and while such pronouncements may be pronounced as cynical, it is also true that governmental energy is often spent explaining how the action of the particular state is in the path of moral righteousness and decency. This is understandable since most statesmen recognize, consciously or unconsciously, that both a state and the law which it uses and lives under require a moral basis if either the particular law or the state is to have any lasting significance—especially during a period of great transformation and turbulence. Without a moral basis which can be recognized as such by those who are not part of that particular system of beliefs, one may be sure that such laws or that state will become casualties of social transformation and world opinion. We see this phenomenon operating in southern Africa, and we saw it as well in the thirty-five year struggle against outside domination waged by the Vietnamese people.

HUMAN RIGHTS AND THE ARMS RACE

Certain rights have stood the test of time and the test of modern revolution as the basis upon which the people's freedom, and their own hopes, are to be staked. These freedoms can be added to and deepened in meaning as people discover more clearly the needs necessary to help them in their active subject role in history. The human rights of any particular period are rights necessary for people to exist and thrive in that particular historical period. But rights also are cumulative. Free speech or assembly is no less important because economic security is guaranteed in a society. Nor is it the case that the rights of economic security cease to exist because there is free speech and assembly. Rights in this sense are additive, not contradictory.

These rights, critical as they are and central to our present dilemma, are merely the beginning of understanding the problem of human rights as we should now come to consider it. In this sense we are confronted with an irony. The declaration, which should have been translated from "oughtness" to legally binding treaties a generation ago, is not adequate to face the present turbulent world because of the generally limited or ambiguous definition of human rights which is seen as applying to individuals, but not to individuals as part of a collective or class that can seek relief prior to an action of states. Thus it would seem that genocide has to be completed before there is acknowledgement that genocide has occurred.

The United States is in an even more troubling situation conceptually and morally. The Genocide Treaty has yet to be ratified by the U.S. Senate. Nor is the arms race and arms preparation recognized as part of the way that human rights are violated, or a crime nationally or internationally committed. Instead, nations see arming only as "defense."

The question of human rights must be linked to issues concerning the arms race and war. The direct nexus between the idea of human rights and the existing law of war was not envisaged until World War II was over. The nexus that the charter framers saw between the criminality of state aggression by armed forces and the denial of human worth within the frontiers of such states, and then repeated and increased in the areas that military adventures subjected to their occupation, rammed home in a way that mankind was not likely to forget the connection between aggressive war, the way it is waged, and the total disregard of the individual. In the modern technological context this formulation gives rise to the question of genocide.

Cataclysmic social and political events serve as a catalyst to ideas which are "in the air" but have not crystallized because the events have not occurred to force the reconsideration of basic conceptual frameworks, which usually set the terms of debate in international affairs. It is only now that we begin to see the direct relationship between the work of the Nuremberg judgments and a new understanding of human rights. The Nuremberg trials and judgments grew out of principles of accountability and responsibility from the laws of agency, democratic, and socialist theory. However, this conception of personal accountability and individual human rights has consistently avoided the relationship of the powers of national leaders to make war either on their own people or on people of other lands. Consequently, international law has been silent on the importance of human rights as a line of defense by the individual person, the family, or the community against the state's leadership and its activities as they relate to war preparations, or the more specific question of participation in warlike acts.

In this sense human rights should be seen as a condition precedent to the penumbra of policies which states follow that shade into war, cold war, arming, and covert war. It is a conceptual and moral error to assert that humanitarian rules should be found in the context of armed conflict. Instead, the "human rights" rules should be seen as governing actions of governments precedent to any particular policies which they intend to pursue. They are required to ask what effect the government's foreign and defense policies have on innocent populations. This question goes to the very nature of the arms acquisition and arms race process, a more euphemistic phrase for the preparation of mass murder and genocide.

The legal formulations and judgments to emerge from Nuremberg and the Asian war crimes trials, as well as the moral suasion of the Universal Declaration, the charter, and later resolutions of the General Assembly on war and disarmament, are in direct conflict with the types of weapons which states acquire or make. Besides being a horrifying tragedy, their use sets the stage for considering those who prepare, acquire, and use such weapons as criminals. In this sense, if the killing cannot be legitimated by the laws of war, then surely the actions of leadership fall more within the context of domestic and international criminal concern than high policy. Municipal law becomes the means of bringing action against leadership once the proper legislation is passed to bring leadership to justice for denying the security of the person through the means of weapons chosen to defend the citizen.

MAKING GOVERNMENT ACCOUNTABLE

Obviously the question of bringing such actions against governments falls in the psychological area of political will coupled with existing legislation. Will is usually exercised where there is an aroused and organized citizenry which sees a means to bring such pressure to bear against its government by championing already existent principles. Such a stance, which uses an emerging consensus of international legal doctrine against the excesses of states, needs to find a double constituency: one is among diplomats and international civil servants; the other is among groups in other countries who see that their own liberties are directly tied to those people who are prepared to challenge state law that has no basis in universally accepted principles, while their challenge is legitimated and codified in UN Charter covenants, provisions, resolutions, and international law generally.

In some cases municipal legislation may not exist, and policymakers may think that because there is no law which abjures their action, they are not covered by the domestic criminal law. In this regard, the Kastenmeier Bill is a significant piece of legislation which would commence the tedious but necessary process of holding government officials in the foreign and national security policy areas personally accountable for their plans and practices. Kastenmeier's bill uses as a standard the norms laid on Germany and Japan at the end of World War II, stating that such legislation should be internalized in U.S. law. It also calls for internalizing the charter as well as other international legal structures against war crimes. The bill is grounded on the principle that the person's security is robbed in the case of war, and fundamental human rights are therefore violated in the process.

WAR PREPARATION AND GENOCIDE

The nature of war preparation should now come under direct scrutiny. There is little doubt that a person's security and, therefore, human rights are directly violated by the nature of weaponry adopted. In modern states huge organizations enter into a series of activities on a daily basis which may not appear to be crimes or violations of anyone's rights. But in reality—once we are able to remove the conceptual blinders from our eyes—those actions are crimes in situ, crimes in being. The armaments race, given the nature of the arms made and the war plans fashioned, is criminal in nature when compared to laws of war or peace, the criminal laws of individual nations, and the Nuremberg and Asian trial standards. It would seem to fall within the framework of the first four articles of the Nuremberg charter.

Once we begin our understanding that we are living in an event of genocide which has not, thankfully, played out the final notes of civilization's götterdämmerung, we are able to evaluate an entire spectrum of negotiations and talks on arms control and disarmament from a somewhat different perspective than we usually use. The participants in the SALT talks, favoring great secrecy, eschew necessary moral, legal, and criminal questions when discussing armaments. When these talks are divorced from the fundamentally criminal nature of the weaponry or strategies under discussion, arms control talks are reduced to a narrow exercise between state representatives on the character and size of genocidal forces.

Unfortunately, the SALT talks give the appearance of legitimacy to the entire field of weapons of mass destruction because they create the mind-set among elites in the media and the universities, as well as the public as a whole, that such weapons are "needed" and that they should be considered in the card catalogues of libraries and treasury accounts under the heading of "Policy and Diplomacy" rather than "Crime and Criminal Behavior." There can be no successful discussion which is meant to comprehend the character and gravity of the weapons, and to limit and eliminate them, without that discussion beginning from accepted international legal principles about genocide, population safety, and the Nuremberg judgment of personal accountability of public officials to either municipal or international tribunals.

During the past several years, under the sponsorship of the International Red Cross, more than a hundred states have been negotiating a new set of rules for the laws of war which are to partially take the place of the 1949 Geneva protocols on the war. The negotiators have excluded weapons of mass destruction from their rather intriguing set of talks on the ground that they are being dealt with in another forum. The critical question remains whether all weapons will be subjected to the same standards laid down in this almost successfully negotiated treaty.

If the negotiators have intentionally excluded weapons of mass destruction, then the document will end up as another cynical exercise of governmental duplicity. There is talk among members of the Department of State that it will have criminal sanctions attached to it. But the question of sanctions must also apply to weapons and their acquisition if there is to be much substantive meaning to the treaty. It is ludicrous to work out laws of war that in fact neither touch the nature of arms acquisition nor the major weapons in one's arsenal, which are criminal by nature and which are harmful to any basic human rights.

IMPLEMENTING HUMAN RIGHTS

Some natural law philosophers argue that human rights attach to the human personality and therefore are more important than states themselves. They tend to argue that the raison d'être of the state is to promote human rights of the people; otherwise it has no positive purpose. Regardless of whether this point of view is accepted, it is time for worldwide meetings horizontally between city, neighborhood, and non-governmental representatives of different nations to consider the substantive meanings of human rights in the context of the problems which humanity now faces.

The purpose of such a reconsideration is not to undo the painstaking work already accomplished, but exactly the opposite. It is to make clear that human rights are the inescapable ground upon which international relations exist, not in the sense that human rights become a cloak for busybody intervention and imperialism. Instead, they are to be the ground upon which nations, diplomats, statesmen, and people come to understand the essential need of rights in practice in questions concerning the international economic order, the arms race, the relations of their states to other states, and the internal rights of their own citizenry.

I would suggest an international, nongovernmental monitoring agency which permanently reported on the question of human rights violations, as defined according to the covenants and the Universal Declaration, the Nuremberg Charter, and the UN Charter. It would seek and receive information from governments, nongovernmental organizations, and individuals. It would also fashion economic standards and comment on major technological and military systems and their effect on human rights and individual and group security. It would aid groups in various countries. Human rights in this framework would assert that international economic actions must be in furtherance of aspirations which are stated in treaties and General Assembly resolutions that seek to set out a framework in such matters as disarmament and apartheid.

A major purpose of the UN declaration was to reach the mass of people and clarify their rights. But it is necessary for the people to have access to information and groups in their own countries or in other countries which will help in asserting the "right of human rights." Thus serious relationships which can develop, as outlined in the Helsinki Accords, for the protection of human rights and the establishment of a common understanding of them, will have the effect of strengthening concern and awareness of human rights questions. These groups should work to make operational the language of treaties, charters, and General Assembly resolutions. On a state level treaties and resolutions should be written with an eye to their effect on human rights and the consequences which any particular actions or series of actions would have on human rights.

I have in mind problems which are already recognized as human rights problems, whether torture in Chile or apartheid in South Africa, and problems which have not yet been conceptualized or politicized as such (environmental poisoning, uncontrolled scientific research, military developments). Such questions require a new consideration of human rights by nongovernmental organizations, the General Assembly, and the Security Council, with the purpose of finding means of binding states to declarations and resolutions while providing ways that people can successfully assert internationally accepted rights in their own respective nations.

CHRISTINE M. KNEIFL

Mr. CURTIS. Mr. President, one of Nebraska's outstanding women, Mrs. Christine M. Kneifl, has expressed herself on the equal rights amendment in a manner that I believe deserves the attention of the entire Congress. Mrs. Kneifl has been a long-time teacher of speech and debate in the Omaha public schools, is knowledgeable in public affairs, and her opinion is worthy of consideration.

Mr. President, I ask unanimous consent that her article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CURB FEDERAL CONTROL OF LIFE

(By Christine M. Kneifl)

Mayor Veys is justified on his stand in regard to the Mayor's Commission on the Status of Women.

If there is to be such a commission, it should be representative of all the goals of all the women in his city. If public tax money is to support such a commission, a record of how that money is spent should be in his hands.

There should be as many non-business career women (those committed to total family careers) as there are business and professional career women if the results are to be fair to our society.

There should be a recognized balance between those members with a liberal view and those with the conservative view. We should also have a variation in the economic status in the members of this commission.

Problems confronting women should be worked out in local and state commissions, rather than women limiting their freedoms by welcoming the limits and controls of a bureaucratic federal government which already limits too much of our freedoms at too great a price.

TIME TO RESCIND

Last Wednesday's World-Herald stated that the Congress was voting to extend the time for the passage of ERA but was not going to allow the three states to rescind their vote.

The public should fight for justice in this. If the time is extended, then the states who wish should have the right to rescind. If our federal government is truly interested in fairness to its citizens, rather than grabbing unnecessry power, the Congress should be willing to extend the right to rescind as well as the longer ratification period.

ERA will limit the rights of women and American women should fight this loss of freedoms. The efforts of career women have made all of society more aware of the needs of women in general.

Women will protect and maintain this progress by local and state efforts, not by tying their hands with federal regulations and expense.

In my lifetime, economic conditions of the country have limited the choices and opportunity of women more than specific discrimination against women.

WORST ENEMY

I have been a professional woman in Nebraska since 1924, a business woman since 1932, and a mother, (my No. 1 career) since 1935.

I know America is a place where women have the best opportunity to do as they please, to become what they want to become more than anywhere else in the world.

Society does not limit women. It depends on how she reconciles her life to the acceptance of the nature and purpose of women if she is to feel fulfilled and successful. One learns that we have to make choices and the price or compensations have to be taken into consideration.

I have been a member and often an officer in many women's organizations in my business and public life, and I have found that a woman's problem is not believing in the capabilities of other women.

We are our worst enemy when it comes to recognizing that women have the ability to handle high office in business and government.

We need less control by federal laws, rather than limiting our freedoms with the passage of ERA. For instance, the age discrimination by government against both male and female has been hard for me to accept. There should be no age limit for work opportunity if you have the ability and health.

I wish women could be persuaded not to seek protection through federal control of their lives, but to leave opportunity wide open for them without the control of ERA.

We would know then that America was still marching forward to greater opportunity for all men and women with the local and state citizens (men and women) in the management of their lives.

God gives us our lives. What we do with them is what we give back to God.

SPRAWLING DEVELOPMENT IS TREADING UPON THE APPALACHIAN TRAIL

Mr. ABOUREZK. Mr. President, as you know, on November 1, 1977, the Parks and Recreation Subcommittee of the Energy and Natural Resources Committee held a hearing on S. 2066, sponsored by Senator MATHIAS and 14 cosponsors and H.R. 8803 had previously passed the House of Representatives overwhelmingly by a vote of 409 to 12. Both measures amend the National Trails System Act of 1968 to provide necessary additional protection for the Appalachian Trail.

I ask unanimous consent that an article from the New York Times regarding the Appalachian Trail be printed in the RECORD for the benefit of my colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPRAWLING DEVELOPMENT IS TREADING UPON THE APPALACHIAN TRAIL

(By Philip Shabecoff)

HARPERS FERRY, W. VA.—The hikers trudging the Appalachian Trail as it snaked along the top of the Blue Ridge paused a few minutes for a look at the long valley spreading far beneath them. Bathed in the late morning sunlight, the treetops glowed warmly in red, yellow and russet tints as far as the eye could see.

Steven Golden, the National Park Service's project assistant for the Appalachian Trail, had a sly look in his eye as he gestured toward the shimmering mass of color. "People don't realize," he said, "what a lot of work that takes. Volunteers had to paint every one of those leaves by hand."

It was a fine day for hiking "The Trail," as those familiar with the path call it. The sky was clear blue after several days of rain and the air was mild but bracing. Leaves crunched underfoot and the wet earth gave off a fragrant smell. As the group walked through the columns of oaks, hickories and maples, it was easy to imagine being in a wilderness instead of on the heavily used footpath only an hour away from the nation's capital.

DEVELOPMENT AROUND THE EDGES

But as the path curved sharply, the illusion was quickly dispelled. There, crowding right up to the edge of the trail, was a clearing filled with an unpainted house, ramshackle trailers, a rusting old stove, and piles of used rubber tires. A German shepherd snarled and strained at its chain as the hikers passed by.

The Appalachian Trail is in trouble.

For much of the 2,030-mile length of the Maine-Georgia route, particularly in the crowded mid-Atlantic and New England states, developers, road builders and industry are lapping around the edges.

Already, 181 miles of the trail require walking along roads instead of through woods. Housing developments are springing up along the trail's right-of-way. Second-home builders are snapping up private lands through which the trail passes.

"It's not much of a hiking experience when you can see into people's backyards and swimming pools as you go," said Henry W. Lautz, executive director of the Appalachian Trail Conference, which coordinates the volunteer efforts to maintain the trail.

The pressures for the land have continued to build along the crowded Eastern Seaboard. "If we don't do something soon," said Mr. Lautz, "we won't have an Appalachian Trail."

Last month, the House of Representatives passed amendments to the National Trails Systems Act that would permit the Federal Government to condemn and buy up to 125 acres for every mile of trail. The House also voted to make $90 million available for land acquisition.

With this authority, the Government would be able to create a buffer zone of 500 feet on each side of the trail, enough to preserve the natural character of the route.

Currently, the Government is authorized, with $5 million, to acquire only 25 acres for each mile of trail, which could provide a protective strip of just 50 feet on each side of the path.

The new legislation passed the House by a vote of 409 to 12. The Senate is considering similar amendments and is likely to adopt them.

"As a political issue, the Appalachian Trail is like apple pie," Mr. Lautz said. "Nobody is against it." He added: "This is as good a chance as we've ever had. If this goes through, it will be enough to preserve the trail and the hiking experience it can give indefinitely."

A TOUGH HURDLE

But funding measures for the land acquisition, even after the legislation was passed by both Houses, would still have to go through the appropriation process on Capitol Hill, and Congress has repeatedly demonstrated that that can be a tough hurdle.

Some four to five million people hike the trail each year, not counting the millions more who come just to walk for a mile or two during the day in some accessible areas.

About 300 people a year hike the entire Maine-to-Georgia route, taking three months or more to do so.

The trail is considered one of the most valuable outdoor recreation areas in the East, all the more so as 70 percent of the available recreation land is in the Western part of the country while 60 percent of the population is in the East.

In part because of its proximity to major urban centers, including New York and Washington, the trail has been increasingly subjected to uses for which it was not intended.

MOTOR BIKES AND BEER CANS

Motor-bikes illegally disturb the tranquillity that the long path was meant to offer. A pile of beer cans and other garbage at a shelter near Harpers Ferry gave testimony of a party by nonhikers. Graffiti scrawled on the shelter noted that it had been used for an "Elvis Presley memorial party."

The trail, a hodgepodge of Federal, state and private ownership, is maintained largely by an army of volunteers, some of whom have been at it since the trail opened more than 50 years ago. In the South, much of the trail runs through national or state parkland and needs no buffer zones to insulate it.

But more than 650 miles of the footpath, which Mr. Lautz says is the world's longest trail, is without any legal protection.

Unless the Government acquires the land soon, Mr. Lautz warned, the trail could vanish before the pressures of soaring land values and sprawling development.

WHAT'S THE HURRY? LIVING WITH THE SPEED LIMIT

Mr. PERCY. Mr. President, a recent editorial in the Washington Post spoke to an issue too often ignored: Our abused 55 mph speed limit. The dramatic declines in gasoline consumption and highway fatalities that followed the imposition of the 55 mph speed limit seem to have lost their persuasive impact. State by State, average highway speeds have crept up, attended by increased fuel consumption and more traffic deaths. In their hurry to get some place, motorists seem to have forgotten what a good idea it is to drive at reasonable speeds.

As the Post points out, voluntary compliance has failed. Law enforcement efforts therefore need to be stepped up, and Congress must support a nationwide crackdown on violators of the 55 mph speed limit.

Mr. President, I ask unanimous consent that the Washington Post editorial of November 30, "Living With the Speed Limit," be printed in the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

Living With the Speed Limit

A Department of Transportation study has documented what many drivers already know: The 55-miles-per-hour speed limit on the nation's highways is being widely ignored. Worse, average traffic speeds, which dropped dramatically when the 55-mph law was imposed in 1974, have started inching up again. According to DOT's survey of speeds on rural interstate highways earlier this year, drivers in Virginia are the slowest-paced of all; only 30 per cent of them were measured traveling faster than 55. In Maryland, which ranked 11th among the states, nearly half of the vehicles counted were exceeding the limit. The highest averages, DOT found, were in Wyoming and Connecticut, where 77 per cent of the vehicles were speeding—and about one of every six was going faster than 65.

Why is this worrisome? Because speed kills. The advent of the 55-mph limit was the major reason why highway fatalities dropped by more than 9,100, or over 16 per cent, from 1973 to 1974. Even more telling, the highway death rate (fatalities per 100 million miles traveled) went down about 15 per cent in 1974. Other factors also come into play, including vehicle and road design, terrain, weather, traffic patterns, the ages of drivers and the use of seat belts.

Thus while most states with higher average speeds also have higher death rates, with Wyoming's being the worst of all, the carnage in Connecticut, for instance, is much less than its speeds might suggest. Despite such anomalies, though, the general relationship between speed and danger is so clear that the 55-mph limit could turn out to be the most important public-health measure in years.

Slower driving also saves gas. While an individual driver may hardly notice the difference, DOT estimates that the 55-mph limit is producing fuel savings of around 1½ billion gallons of gasoline a year—and that if everyone obeyed the limit, the savings could be twice as great. Moreover, a number of studies have disproved the common claim that many vehicles, notably trucks, operate more efficiently at higher speeds.

So it is worrisome that speeds and deaths and fuel consumption are all going up again. The ideal remedy would be voluntary compliance with the limit by all drivers. Since that has obviously not been attained, most states' law-enforcement efforts need to be stepped up. Maryland's tough, ingenious, well-publicized anti-speeding campaign has obviously had a real effect, as has Virginia's banning of radar-detection devices. Other states, though, are much less committed to slowing their drivers down. According to DOT, the maximum fine for speeding in Idaho is $5. Seven states have reduced their penalties for speeding since 1974—and legislatures in several others, mostly in the West, keep trying to do the same. Other states lack resources; the chief of Montana's highway patrol told a DOT team that he can put no more than 30 troopers on the state's roads at any one time.

Congress has empowered DOT to cut off highway construction aid to states that fail to enforce the 55-mph limit. That drastic power has never been used, although warnings from DOT Secretary Brock Adams last spring did encourage four governors to veto measures reducing speeding penalties. Such threats may keep the states' performance from getting worse. Real improvements in law enforcement, though, will probably require more federal support. Secretary Adams recommends $30 million to $50 million a year in new aid to the States, coupled with a strong public-education campaign aimed at getting 85 per cent of all drivers down to 55 mph or less by 1982. Congress should support such a program. The speed limit is, as the slogan says, "a law we can live with"—but only to the extent that it is observed and enforced.

PRACTICAL WAYS TO SAVE ENERGY TODAY

Mr. METZENBAUM. Mr. President, I rise to call to the attention of the Senate a forum on energy conservation recently conducted by the Washington Action office of the Council of Jewish Federations and Welfare Funds at their 46th general assembly in Dallas, Tex. Having been deeply involved with the development of national policy in the vital area of energy conservation, I was particularly struck by the hard-hitting, practical nature of the papers presented at this important forum.

Upon investigation, my office learned that the Council of Jewish Federations and its constituent federations and agencies throughout the country have been grappling with the dilemma which every American public service group is currently facing of how to continue to provide vital services to millions of persons within the restrictions of their ever tightening budgets.

To begin to meet this crucial problem with practical solutions, papers were developed and presented from three separate but interrelated aspects of energy conservation for those who are responsible for the operation of community facilities. The first paper was presented by Dr. William Rice, a Washington-based energy conservation consultant. His task was to outline the nature of the energy crisis and the massive level of consumption of foreign source oil. He then outlined clearly how leaders in each community could rationally assess present levels of energy consumption building by building. Finally, he presented a cogent plan to reduce that level of consumption of energy through straight-forward readily available techniques which then result in significant reduction in the consumption of energy, thus making available funds for service programing which otherwise had to be used for energy.

The next presentation was by Mrs. Billie Tisch and Mrs. Rachel Lieberman of the Federation of Jewish Philanthropies New York City. This presentation consisted of a detailed report of the experiment actually run in eight different federation buildings and the results in terms of energy reduction and the cost savings involved in each case. When an energy coservation program is developed in the manner described in this New York experiment, the dollar and energy savings can be enormous. Several of the buildings in this New York example are now back to a 1974 level of energy consumption and overall cost notwithstanding enormous cost increases during the past few years. These cost and energy reductions are attributable in full to the implementation during the past year of this very significant energy conservation experiment.

Finally, the Dallas Jewish Community Center director, Harry Rosen, presented a paper outlining the philosophy, and actual planning which went into the construction of a new community facility for their JCC utilizing the most up-to-date energy conservation techniques. Mr. Rosen's paper provides a "How To" manual for those contemplating new construction.

In each of these instances, the Council of Jewish Federations has brought the general discussion on energy conservation down to the most practical level. The two papers prove clearly that serious local application of basic principles of energy conservation will produce significant energy reduction with concurrent dollar savings which then can assist in providing services when agency budgets are so universally tight.

I extend my hearty congratulations to the Council of Jewish Federations and the participants in the energy forum for their excellent contribution to the Nation. It is my sincere hope that by placing these papers in the Congressional Record that others will benefit from this fine work. I ask unanimous consent that they be printed in the Record.

There being no objection, the papers were ordered to be printed in the Record, as follows:

A Talk on Energy Management For Federations and Their Agencies

(By William L. Rice, Ph.D.)

I. INTRODUCTION

The Arab oil embargo of 1973–74 exposed the extreme vulnerability of the United States to an interruption in its supply of imported energy, particularly Middle Eastern oil. A major element of the national policy to reduce this dependence involves conservation of all energy resources. The members of the Council of Jewish Federation along with other Jewish and non-Jewish organizations and individuals can support this effort through direct, specific energy management programs.

This talk, after briefly discussing the present national energy situation, introduces the principles of energy management and conservation for existing buildings, with an emphasis on health care facilities. These principles include administrative leadership, high-level and continuing; collection and analysis of data both in energy terms (i.e. Btu's) and dollars; and the setting of an energy reduction goal from a base-period consumption level. Because of the present high energy prices, energy conservation is cost-effective. It saves money—money which can be used for priority programs.

II. NATIONAL ENERGY SITUATION

The U.S. continues to be highly dependent on imported oil. Almost 45 percent of domestic demand was met by imports in 1976, compared to about 35 percent of demand at the time of the embargo in 1973–74. Perhaps more significantly, however, 18 percent of this domestic demand was met by Arab OPEC nations (Saudi Arabia, Kuwait, Iraq, United Arab Emirates, Qatar, Libya, and Algeria). This is three times the 1973–74 level.

The continuing high level of imports is producing a major balance of payments problem. Payments for oil have gone from $10 billion in 1973 to more than $30 billion in 1976 and are forecast to increase again by more than 33 percent in 1977 to $45 billion. The 300 percent in oil prices since 1973 has been the main cause of these increased payments. Prices have gone from about $4 per barrel in 1973 to about $13 per barrel today.

U.S. consumers, however, do not pay the world price of $13 per barrel. This is because of the large quantity of price-controlled domestic oil which is sold at about $8 per barrel. When averaged with the $13 per barrel for U.S. refiners. The insulation of U.S. consumers from high world energy prices leads to greater U.S. consumption than would othewise be the case, thereby exacerbating the dependence and payment problems. Voluntary domestic conservation to reduce imports is a direct way of meeting these two problems.

III. COST-EFFECTIVE ENERGY CONSERVATION

There are a number of interdependent steps needed for an effective conservation program. There are:

Management leadership—High level continuing leadership is needed to motivate the entire organization in energy conservation. This leadership must be visible, systematic and continuing.

Data Collection and Analysis—Data for post energy consumption on an Btu, energy, basis should be collected and analyzed. This is obtainable from utility bills.

Conservation Goal—A goal of reduced energy consumption (on a Btu basis) should be formulated to provide a benchmark for achieving energy savings.

Action—After analysis as to cost, payback period and energy saving potential, implementation of energy saving actions is needed to achieve the conservation goal.

Management leadership is probably the most critical ingredient in achieving a successful conservation program. It must, however, overcome a number of problems. These include the reluctance of personnel to assume "one more headache," the need for all occupants to cooperate, and the relatively low percent energy costs are of overall budgets. This last situation is documented by the Veterans' Administration which estimates that energy costs are less than three percent of gross medical costs.

A conservation program can be administered through an interdepartmental committee. This committee should have high-level members and have representatives from the engineering and maintenance staff, the administration, and the medical or other professional staffs in the building.

Any effective management program requires good information. An energy information system is needed to establish a baseline of past energy consumption and to provide a yardstick to measure the actual savings. As shown on the table, "Annual Energy Use and Cost Survey," (not included in Record) data are assembled from past bills on energy consumption and cost. It is then necessary to convert, the kilowatt hours of electricity, the cubic feet of gas, and the gallons of oil to a common unit—the British thermal unit (or Btu) using the conversion factors shown. Btu's of energy are analogous to calories in food and are the primary measure of the effectiveness of an energy conservation action. Money saved is a secondary requirement, albeit a very important one.

One of the important reasons in using Btu's in energy analysis and not just dollars, arises from the wide variations in U.S. energy prices due to regional differences and government regulation. Specifically, interstate natural gas is often cheaper than oil or electricity on a Btu basis because of Federal price controls. Thus, switching to gas and possibly increasing consumption because it is cheaper would not itself lower Btu consumption and would almost surely aggravate the gas shortages of recent winters.

The data from the table should be analyzed for comparative costs per unit of energy, overall $/Btu and Btu/square foot. Immediate energy savings may be possible to identify. For instance, if two similar facilities have significantly different energy consumption in Btu/square foot, the lower consumer might be able to offer assistance to the higher consumer.

The historic data is the base for formulation of the conservation goal. This can be a 10 percent reduction compared to the average of the past three years, or any other reasonable target. The monthly progress toward meeting this goal is recorded in the "Energy Consumption Monitor" table. This provides for month-by-month and cumulative Btu and dollar comparisons with the base period. These data can also be plotted graphically.

Weather is of course one of the major variables in energy consumption, with the demand variable felt in the heating, ventilation, and air conditioning (HVAC) system. However, it has been found that in spite of wide variations in monthly energy consumption, there is no net climatological effect for similar facilities on a Btu/square foot basis over a full year. That is, the heating energy demand in the north is balanced by the cooling energy demand in the south, with the middle areas having approximately balanced winter/summer demands.

The HVAC is usually the most energy intensive system in a building. Thus, major saving can often be realized not only through better, more efficient operation, but also by shutting HVAC systems down completely when particular space is not occupied and health and safety are not affected. This can be the source of a "no-cost" savings along with the free equipment tune-ups offered by dealers and manufacturers.

The building and equipment survey, or "energy audit" is an important part of any conservation program. A number of checklists have been published in the literature (see Appendix). These lists typically include the minimal expense items such as rehanging doors, weatherstripping doors and windows, resetting thermostats, installing spray faucets and eliminating waste steam plumes. More costly possibilities include the reduction of unnecessary lighting, and the decentralization of hot water heating and air conditioning so that a large unit is not used inefficiently where a smaller unit can meet the need.

A cost/benefit analysis is desirable for any actions requiring a significant capitol expenditure. A ranking based on the simple payback period (SPP), takes into account the cost, and the Btu's and dollars saved. It is the ratio of the capitol cost over the dollars saved per year:

SPP (years) = capitol cost/dollars saved/year

The shorter the SPP, the more desirable the energy saving action. It should be pointed out that as energy prices continue their predicted rise, the SPP becomes an increasingly conservative estimate of the benefits from an investment. The Btu's saved would otherwise have to be purchased at higher prices and the SPP gets shorter.

The SPP analysis highlights the present situation wherein high energy prices mean "you can get something for nothing." In part energy saving investments often have SPP's of less than two years thus freeing monies almost immediately for other program needs.

Two government programs have been successful in encouraging conservation and can serve as examples for private programs. The Veterans Administration has saved large amounts of energy in its hospitals and health care facilities. Under Executive Order 12003, the VA and all other agencies are under a mandate to reduce, by 1985, consumption from existing buildings by 20 percent, and from new buildings by 45 percent from 1975 levels. The VA effort has involved improved housekeeping, actions by resident engineers, seminars for these resident engineers on energy conservation, and energy surveys by architectural and engineering consultants specializing in conservation. These surveys, currently under way, appear to be very cost/effective with SPP's of about one half year. Overall, the VA estimates that from 1974 to 1977 it has saved 7.1 billion Btu's, worth $37 million, at a cost of about $10 million—a better than three-to-one return.

The Voluntary Industrial Energy Conservation program is the second Federal program which can serve as a model for private energy management. In this program, industrial trade associations and the Department of Energy have developed, on a strictly voluntary basis, targets for energy conservation for the industry represented by the particular association. The target are reductions in Btu/output compared to a 1972 base year. Besides requiring that a reporting system be introduced, the program relies on the publicly disseminated energy consumption data as encouragement for the member companies in the associations to meet the conservation goal. Other groups, not only in the social welfare area, but throughout the community, can also formulate similar energy conservation targets and publicly monitor progress in meeting the objective.

In conservation effort involving buildings as the principal energy consumer, architecture and engineering consultants specializing in energy conservation can provide significant, useful, help. However, these consultants are usually best utilized *after* there has been in-house data collection and analysis. This will enable the client to better direct and supervise the consultant and measure the energy savings and the effectiveness of the program.

III. SUMMARY

Energy conservation requires high-level and continuing administrative leadership; the collection, analysis, and utilization of energy data based on Btu's, as well as dollars; and the implementation of energy saving actions. These actions have short payback periods and can save significant amounts of money.

IV. APPENDIX

Energy conservation pamphlets

Below is a brief description of some energy conservation publications.

Health Care Facilities

"Practical Energy Management in Health Care Institutions" contact:

Douglas H. Worrall, Sr.
Blue Cross of Greater Philadelphia
1333 Chestnut Street
Philadelphia, Pa 19107
Tel: 215/448-5232
Price: $2.50

A manual for administrators and operating personnel. Includes practical guidelines for gathering and analyzing information, as well as basic energy saving ideas.

Note: This pamphlet appears to be out-of-print, but has been widely distributed previously.

"Total Energy Management for Hospitals" and "Total Energy Management for Nursing Homes" available from Department of Health, Education and Welfare, Energy Action Staff, Health Resources Administration, Rockville, Md. 20852.

Buildings—General

"Total Energy Management" available from:

National Electrical Manufacturers Association
7315 Wisconsin Avenue
Bethesda, Md., 20014
Attention: Miss Stohecker
Price: 75¢

A guide for owners and managers of office buildings and small stores.

"Energy Cost Reduction for Apartment Owners and Managers" available from:

Institute of Real Estate Management
430 North Michigan Avenue
Chicago, Illinois 60611
Price: $3.00

Short case studies of dollar savings from various energy saving actions.

Includes cash flow analysis.

"Identifying Retrofit Projects for Buildings" available from:

U.S. Government Printing Office
Washington, D.C. 20402
Stock No. 041-018-00129-8
Price: $2.20

Overview guide to energy management and detailed examination of savings possible in major building systems.

ENERGY SAVING PROGRAM: NEW YORK CITY CASE STUDY

(By the Federation of Jewish Philanthropies of New York City, Mrs. Lawrence A. Tisch, and Mrs. Rachel R. Liebeman)

Re: Paper on Energy Savings Case Study at Council of Jewish Federations and Welfare Funds—46th General Assembly of CJF, Dallas, Texas.

I. BACKGROUND

In early 1975, faced with a 120-percent increase in energy costs in 1974, the Federation of Jewish Philanthropies of New York determined to take emergency measures to achieve the maximum savings in the use of electricity, gas and heat. Two steps were taken; a memorandum to the members of the Federation staff about efforts to be made at the Federation Building in mid-town New York; and the convening of key lay leaders in the field of real estate to develop a comprehensive program for energy saving by Federation agencies. Each of the lay leaders brought a technical expert and the group recommended that Federation solicit a proposal from the engineering firm which serves as a consultant to Federation and its agencies.

II. RATIONALE

Several factors combined to bring Federation to a heightened awareness of the need for immediate energy savings:

Most immediately was the concern that scarce communal resources not be siphoned off for unnecessary and wasteful energy costs at a time when community needs were increasing at a faster rate than dollars raised. Federation was most anxious that its funds be used for services rather than utility bills;

Federation felt that its steps toward energy savings were equally important as an expression of patriotic concern;

In terms of its support for Israel, Federation felt that it had a direct interest in helping to lower demand for foreign sources of energy so that the United States support of Israel would never be prejudiced by its dependence on foreign oil;

At a time when Federation's allocations to its agencies could not keep up with inflation or the demands for services, the availability of a Consultant who would be able to advise on a more efficient use of funds was viewed as a most important supportive service from Federation to its agencies.

III. OBJECTIVES

By embarking on an energy saving program, Federation hoped to demonstrate two basic objectives:

1. to stabilize rapidly rising energy costs:
2. to demonstrate energy savings approaches which would be replicable in other social service agencies within the Federation network, in New York City, and across the country.

IV. METHODS

A. Proposal approval

The proposal developed by Federation's consulting engineers was based on a careful survey of 7 Federation agency buildings and suggested that very worthwhile savings could be obtained in two ways: by relatively modest changes in fixtures or equipment, and by changes in operating procedures. The original Ad Hoc Committee, Mr. Fred Rose, Mr. Irving Schneider, and Mr. Alan Tishman, recommended that a demonstration project be undertaken in the 7 institutions studied by the consulting engineers, and that if the projected energy savings could be achieved, the Distribution Committee of Federation should then consider expanding the program to other Federation agencies as well.

The proposed project consisted of two parts: first, the engineering work and resulting fees; and second, the material and labor involved in making the structural and/or equipment changes. The Ad Hoc Committee recommended that a reserve of up to $20,000 be set aside for the engineering work, and that the Federation Revolving Loan Fund (a fund available at no interest for agencies undertaking projects for capital purchases which would result in demonstrable savings to the agency) be made available for equipment and/or structural changes related to the recommendations of the engineering consultants.

The recommendations of the Ad Hoc Committee were approved by the Distribution Committee and the Distribution Committee requested that an advisory committee of the three key lay leaders who had formed the Ad Hoc Committee continue to review and evaluate the program.

Approval was also given to the involvement of seven agencies in this first stage:

1. The YM and YWHA of Washington Heights-Inwood.
2. The Samuel Field YM-YWHA.
3. The YM-YMHA of Mid-Westchester.
4. The Moshulu-Montefiore Community Center.
5. The Hebrew Educational Society of Brooklyn.
6. The Jewish Institute for Geriatric Care.
7. The Greenwall Pavilion-The Jewish Home and Hospital for Aged.

B. Identification of problems and recommended energy saving steps

The proposal to the Distribution Committee discussed general suggestions which would apply to most or all buildings plus individual preliminary recommendations that were applicable to one or possibly several buildings. The overall suggestions were divided into savings with regard to

Fuel

1. More efficient generation of steam and hot water;
2. Better use of steam and hot water by correcting deficiencies in the distribution systems;
3. Reduction of wasted heat by installation of proper control equipment to monitor heat quantities, installation of insulation including storm windows and doors where feasible, correction of building defects such as ill-fitting doors;
4. Determination of how much fuel each structure should use assuming an efficient operation and then strive to reduce fuel consumption to that level;
5. Education of the maintenance staff and frequent review of operating procedures in each institution.

Electricity

1. Establishment of new lighting standards for various types of occupancies and reduction of lighting loads where possible;
2. Substitution of more efficient lamps and existing fixtures for less efficient fixtures in other areas and for overall energy consumption. As an example, a fluorescent fixture in a stair corridor giving the same quantity of light will save over $15 per year per fixture in electrical charges over an incandescent fixture;
3. Educating the agencies about demand charges and scheduling of equipment use. An example of this is to schedule the operation of air conditioning and other heavy electrical uses to avoid unnecessary peak demands.

The proposal stated that some of the work would require one-time changes of plant, while other work would require a continuing relationship with each agency and the time required would depend in large measure on the competancy of the agency engineer or maintenance person and on the cooperation of each individual director. The proposal stated that systems such as air conditioning might require redesign which would probably necessitate additional engineering fees, but that in each instance, the engineering consultants would first provide budget figures of needed capital expenditures, the anticipated savings and the engineering costs.

With regard to individual, specific problems and steps at the five community centers and two geriatric residences, the following points were raised:

The need to inquire about the possibility of having co-incident billing of two electric services. Co-incident billing could save $10 per month;

Stairway and hallway incandescent lights equipped with 150 or 225 watts of bulbs could be changed to fluorescent of 40 watts which would provide the same light and save about $14 per fixture per year based upon 14 hour illumination 5½ days per week;

Newly installed electric cooking equipment cost about $37 per month to operate. Gas equipment would cost about $5 per month to operate;

A sauna used 15 KW with the demand charge of $121 per month just to turn on and usage resulted in a cost of 60¢ per hour. Conversion to a gas-fired boiler would cost approximately $3000 and $25 per month to operate;

Lights in a gymnasium used 9 KW operating 8 hours per day 5½ days a week. This cost about $145 per month and the substitution of General Elecrtic Lucalox bulbs (high pressure sodium bulbs—150 watts each) with input of 200 watts would cut the electric cost by 60 percent or $87 per month. The cost of changing these fixtures would be about $160 each which would cost about 3 years to pay out. The color of the lights would be somewhat different but not harmful or interfering with gym use;

A leak in a boiler was a major energy waster;

Installation of a control so that the heating system pump could be cycled would cost $100 and result in a savings of $200 per year;

Change of incandescent lights in the stairways to fluorescent would cost $200 and result in a savings of $120 per year;

Installation of steam unit heaters in a recently completed basement room would cost approximately $900 and result in a savings of $1,500 per year;

Arrangements for automation for 15 KW of kilns to reduce demand would result in a savings of approximately $1,000 per year;

In a lounge containing a combination of fluorescent and incandescent lighting, incandescent lights provided little light and could be disconnected;

In an auditorium containing 35 300 watt down lights in use at most 10 hours per day should substitute fluorescent lighting at a cost of about $1,500 for savings of approximately $1,500 per year;

In a lounge, men's locker room, a corridor outside a boiler room, and other meeting areas, skylights measuring 4 feet times as much as 50 feet had considerable heat loss from these lights in winter, many of which were cracked. The skylights could be covered over on the interior without significant change in the appearance of the building at a cost of $2,000 with the resulting savings of about $1,000 per year in heating and air-conditioning costs;

Pool and locker rooms were heated and cooled with oil-fired air handling units containing chilled water coils that ran 24 hours per day. Better scheduling with automatic timers would save a substantial amount at a cost of approximately $500;

An electric heater near a main entrance door should be disconnected;

A kitchen containing duplicate refrigerators, stoves (18 KW) and two large (4 KW) coffee makers could be replaced with gas stove units at a cost of $3,000 with savings of $2,000 per year and the use of the coffee makers should be scheduled so that only one is in use at a time;

A hot water circulating pump could be reduced to roughly one-quarter the size at a cost of $1000 with a savings of approximately $1500 in electricity costs per year;

All meter readings should be checked frequently to make sure that the reported figures coincide with the meter and that readings are done accurately;

Boiler tubes should be cleaned on a regular schedule—approximately every three weeks—to prevent soot buildup which impedes heat transfer from the burner flame to the boiler water.

The above are illustrative of some of the consultant's initial suggestions. The specific recommendations made for the community centers and geriatric residences can be had upon request. These include specifications for types of timers, the model number, price estimates and types of materials. Suggestions also included reference to particular lights and building procedures, and sketches for more efficient use of equipment were provided to several of the agencies.

C. Project followup

In September, 1975, Federation asked both the engineering consultants and each individual agency for a progress report. Each agency had received an assessment of its energy problems from the engineering consultants and had agreed to try and accomplish some or all of the tasks recommended.

The engineering consultants reported that with the exception of one of the community centers much of the recommended work was in progress. One of the community centers showed, according to the consultant, no interest whatsoever, even though substantial savings were possible. The consultants reported that the work at the geriatric residences was extremely complex and that they were working closely with the chief engineers on the replacement of oversized fan motors, simplification of control equipment, etc.

The agencies were asked to indicate the following:

1. Nature and status of projects recommended by the consulting firm. If applicable indicate why the agency has decided not to implement any of the recommended projects;
2. Estimated cost of project(s) which are to be undertaken and/or actual cost of project(s) if completed;
3. Anticipated annual savings and actual savings, if any, as of the date of this report;
4. Does the agency anticipate making a request of Federation's Revolving Loan Fund? If so, what would be the nature and amount of the request?
5. Any problems encountered by the agency in connection with this program.

The agency reports indicated varying degrees of cooperation and participation. One interesting reply from one of the geriatric residences indicated that they were required to obtain approval from the New York State Board of Health before replacing approximately 1,520 100 watt incandescent light bulbs and fixtures with approxiamtely 550 50 watt fluorescent bulbs and fixtures which would result in a considerable savings to the institution.

The consulting engineers indicated that overall the agencies were extremely pleased with the changes and that several of the agencies visited other agencies where changes were made and that this has served as an incentive for the reluctant agencies to agree to recommendations necessary to save energy.

In January of 1976 the consulting engineers reported that for several of the community centers demand for electricity had been reduced to approximately 75 percent of the demand ni 1974 and that electrical use was close to 70 percent of the use in 1974. This resulted in savings between $300 and $500 per month, as compared to 1974 bills or up to $700 per month considering the increase in Con Edison rates. In each case the consultant felt that the savings to be realized could be increased even further in the months to come. At one community center the consultant felt the results were disappointing, because little interest had been shown by the agency in reducing overall use of power. In addition, he indicated that the maintenace staff seemed to lack the competence needed to operate the agency's plant and implement the recommendations.

With regard to the two geriatric residences, the consultant indicated that major savings had already been achieved. At one geriatric residence savings were approximately $4,000 per month in electricity bills; in the other residence, fuel use had been reduced approximately 30 percent.

In April of 1976 the consultant updated information on annual savings. He indicated that the estimated annual savings at the completion of the recommended changes would run from a minimum of $4,500 a year at one community center to $15,000 at another community center with the average savings being around $6,000; in each case the savings amounted to between 20 and 50 percent of the 1975 costs for electricity. The savings anticipated for the geriatric residences ranged from $20,000 at one to $125,000 at the other. These figures also represent savings of between 20 and 50 percent of the 1975 costs. These dollar figures are the actual charges and were not adjusted to reflect the 20 percent increase in Con Edison rates before 1976 over 1975.

Also, in the spring of 1976, the engineering consultants held a seminar for interested agency executives and engineers to discuss some of the findings of the consultants, some of their recommendations, and some of the problems encountered by the agencies in implementing these recommendations. As a result of this meeting, the engineering consultants received many additional inquiries and requests for services under the projects to other federation agencies.

D. Continuing the energy saving project

Representatives of the Advisory Committee met with the consultant and Federation staff in the spring of 1976. The purpose of this meeting was to review the work of the consultants and to make a recommendation on the request for an additional reserve of $20,000 to enable the consultant to work with a larger number of agencies.

At this meeting the committee recommended that "an additional $20,000 be made available for the continuation of the energy saving program and that during the course of the second stage, guidelines for an acceptable level of energy consumption for each participating agency, and 'how to' material concerning energy saving measures should be developed which can be shared with the Distribution Committee and Federation agencies."

In arriving at that recommendation the committee noted the following:

That any work done by the consultant is undertaken only after it is clearly determined that any expenses incurred will result in cost savings over and above the cost of the work:

That a major problem is getting the directors of agencies and their staffs to take the problem of high energy costs seriously. This is translated into a lack of cooperation, and indifference to suggested changes in operations, and a reluctance to keep and forward records and other information which would help the consultants form an accurate comparison as to the effects of the recommended changes;

That in continuing to work with agency personnel it is also necessary to incorporate techniques, such as timeclocks and other mechanical devices which monitor the use and availability of energy;

That much of the work being done is aimed at removing the human element so that energy saving will not depend entirely on the caliber of an agency's director and/or staff;

That whenever building changes are to be undertaken as a result of a suggestion by the consultant, each agency is requested to be in contact with the consultant to verify the specifics so as to confirm that the proposed work is in line with the original recommendations. Several agencies had not done so and might not realize the full extent of the potential savings because of the purchase of the wrong or inadequate equipment;

That it would be possible and highly desirable to develop a set of guidelines for each agency which would indicate the reasonable cost for energy cost as a goal for both the agency itself and as a signal to the Distribution Committee, as to which agencies are keeping energy costs as reasonable as possible and which agencies are not adhering to measures necessary for significant savings.

The recommendation was reviewed and approved by the Distribution Committee and the consultant carried on with Stage Two of the project.

V. LESSONS

With all of the apparent successes of the energy saving project, there are still major problems which have been brought to the Federation's attention by the consultants on several occasions. One of the most serious of these problems was the lack of interest or understanding on the part of agency directors as to the significance of the project. When executive directors indicated indifference, this attitude was readily transmitted to any maintenance staff who were involved with implementation of the recommendations and this resulted in half-hearted participation in the project.

Even where agencies had been most cooperative in implementing recommendations, and seemed to be seriously concerned with reducing energy costs, it was often difficult to maintain the interest and the necessary attention to details over and above the initial period. As a result, agencies which showed an initial major saving, sometimes report an increase in cost which can be attributed largely to neglect or lack of maintenance of effort.

One final problem which has serious implications for the entire community emerged in relation to an agency which receives much of its money from a public funding source. Because money was reimbursed to this agency on the basis of its operating costs, and any capital investments would have to come from the agency's own budget, the agency saw no point in investing in improvements which would reduce the operating costs of its utilities. While Jewish communal funds were not directly involved in the situation, the attitude expressed by this agency raised very serious questions about how it reviewed its responsibilities to the taxpayers of the United States, and demonstrated its total indifference to the potential impact on policies toward Israel if energy dependence on foreign sources of oil continued to grow unchecked.

VI. CASE STUDIES

Case Study 1: Jewish Institute for Geriatric Care:

Electric power usage is coming down, the results of changes in the operations of various systems. The work of the consultants began in the summer of 1975 and by the end of 1975 all the electrical usage and demand had dropped about 15 percent. During 1976 additional operating changes reduced consumption approximately 10 percent further. In dollars, taking into consideration the several intervening Con Edison rate increases, the savings are averaging just under $10,000 per month.

The changes include installation of flourescent lighting to replace incandescent lighting; operation of some refrigeration to maintain a temperature of 0° F. rather than −40° F; substitution of steam-heated kitchen equipment for electrically heated equipment; programming of kitchen operations; improvement of supply and exhaust ventilation, etc. One specific example of what has been done to reduce electric consumption is a change made with the ventilation system. By reducing friction and pressure losses in one of the ventilation systems, the consultant was able to substitute a 25 h.p. motor for a 50 h.p. motor and ventilation was considerably improved. Cost of implementing the above changes to date is approximately $20,000.

Although demand has levelled off at approximately a reduction of 15 percent, and consumption is down by approximately 25 percent, energy conservation is not a "one time" thing. Recently the consultant noticed that consumption started to rise again when compared to like months of previous years. The reason for the turnabout, the consultant determined, was that the chief engineer was no longer following some of the schedules set up for him and top management had to become involved. Constant surveillance has been needed to impress staff and employees with energy conservation.

The approximate cost of electricity paid by the institution each year for the past three years is $365,000 in 1974–75, $349,000 in 1975–76, and $311,000 in 1976–77. These figures are not adjusted to reflect the several substantial rate increases awarded Con Edison during this time period.

There are several remaining energy saving recommendations to be implemented, including:

Redesign of the well pump used for air conditioning;

Installation of turning vanes in the air-conditioning duct work;

Additional changes to the refrigeration serving kitchens, storage boxes; and

Speed adjustments on several fans.

These items will be implemented slowly because they represent rather major operating changes.

Case Study 2: YM & YWHA of Washington Heights-Inwood:

Since 1975 the electrical demand and consumption at the Y has steadily decreased on a month-to-month basis as compared to previous years, with the exception of this past summer when demand in consumption took a drastic jump forward.

The work done that resulted in a 10% drop of both demand and consumption involved changing the incandescent light fixtures in the gym to high pressure sodium fixtures, replacing the inadequate incandescent lighting in many of the corridors and rooms with fluorescent lighting, and installation of time clocks on a number of ventilating fans.

This past summer, however, there was a substantial increase in both demand and consumption which is unexplainable, particularly since the central air-conditioning unit was inoperative during one of the summer months. The consultant is endeavoring to determine the reason for the increase including contacting the Con Edison company regarding their readings.

All in all, with the exception of the three summer months, the dollar outlay for electricity is approximately the same today as it was in 1975, despite the several interim rate increases.

Disregarding the rate increases the Y paid $17,000 in 1974–75, $17,300 in 1975–76, and $17.600 in 1976–77.

Case Study 3: Jewish Child Care Association—Central Building:

Electrical usage in this building has come down by the amount of the rate increases during the period of the energy saving project. In 1974 the central office used $40.304 of electricity. In 1976 the cost was $40.104. The monthly cost in 1977 was running under the comparable monthly charges for 1976 until July and August of this year, when there was a prolonged hot spell and usage, and the cost increased substantially. The amount of increase, however, the consultant believes indicates a defect in the operation of the air-conditioning system which the consultant has brought to the attention of the agency and arrangements are being made to correct the trouble.

The work that was done to reduce electric costs included correction of defects in the air-conditioning condensing units. The consultant also found the lumin output for each fluorescent light fixture to be only a fraction of what it should have been. Changing the diffusers and cleaning the fixtures substantially increased light output.

The results at this building clearly demonstrate the need for continuing surveillance of energy use.

Case Study 4: A Major Residential Child Care Facility:

Some institutions are not concerned with reducing the use of energy. A major child care residential facility could significantly reduce its use of power without in any way curtailing its activities but because of an unusual situation, the agency has claimed it would be penalized if it took steps to reduce electric usage.

A few examples of ways in which electric use could be reduced are:

a. two gynmasia are lighted with incandescent lamps. Gym lighting could be improved and the quality of electricity reduced to approximately 25 percent of its present consumption by substituting high pressure sodium lamps for the incandescent lamps;

b. one large building is heated electrically. If hot water heat were installed, savings in electricity would pay for the hot water installation in approximately one heating season;

c. in 1976–77 the agency planned to replace gas-fired stoves in each cottage with electric stoves, a change that would have increased operating costs, without considering the capital charges, by approximately $1,500 per year. The consultant was able to dissuade the agency from taking this course, at least temporarily.

One area where the consultant has been able to influence electrical consumption is with the agency's outdoor lighting. Last year the agency planned to install new incandescent exterior lighting around all cottages. The consultant redesigned the lighting that was originally planned and substituted high pressure sodium fixtures for the incandescent fixtures. Because high pressure sodium lighting produces far more lumen per watt of electrical input, the redesign resulted in higher lighting level using fewer fixtures at lower initial cost and for approximately 20 percent of the operating cost as compared with the original design. The consultant also substituted high pressure sodium lighting for some existing quartz lighting around the central building but reduced the electrical cost to about 15 percent of what was previously needed.

As mentioned above, an interesting yet distressing reason is offered for the agency's reluctance to reduce use of power. The agency's operating costs are defrayed by New York City whereas no capital costs are paid by the City. Were the agency to strive for more efficient operation any costs would have to be borne by them yet any savings would revert back to the city.

VII. CURRENT STATUS

Currently there are more than 20 agencies involved in the energy saving project using the services of the engineering consultant. The consulting engineers are continuing to have some problems with agencies being indifferent to their recommendations and also not being fully cooperative about submitting monthly reports on demand, usage, and costs.

This monthly reporting is considered especially important by the consulting engineers so that trends can be established and any problems can be caught before they become costly. However, in spite of the problems and the reluctance of some agencies to maintain energy savings, a report from the consultants in the early part of 1977 clearly demonstrated that those agencies cooperating in a modest or complete way were realizing significant savings over and above the cost of improvements.

VIII. NEXT STEPS

The reports of the engineering consultants are being made available on a regular basis to the subcommittees of the Distribution Committee which have the responsibility of agency visits, budget hearings and budget recommendations. The material to these committees includes a summary of the consulting engineers experience with each agency and wherever possible the savings, the cost of the improvements necessary to effect these savings, and the willingness or lack thereof of agencies to make an effort to maximize savings. This material will be used at site visits and budget hearings with the understanding that because money is so precious, it would be helpful for members of the Distribution Committee to know which agencies are aggressive in seeking savings, which are less so, and what levels of savings are possible.

In addition, the whole question of reimbursements from public sources for operating as opposed to capital costs is being brought to the attention of the Public Policies and Programs Committee at Federation. Where it can be clearly demonstrated that such a policy on the part of public agencies is wasteful, every effort will be made on the part of Federation and its lay leaders to save scarce communal resources and to remedy this situation.

Federation has Functional Committees with lay and professional representatives from agencies in a common functional area which meet periodically. Every effort will be made on the part of the Federation Consultant to that Functional Committee to see that there is full understanding of the measures necessary for energy savings and for compliance with recommendations of the engineering consultant.

The energy saving program has more than justified the $40,000 expenditure for the program. Efforts will now be made to survey other institutions to determine which should participate in the program so that the benefits of the project are brought to as many agencies as possible.

It is our hope that this presentation will give professional and lay leaders a better understanding of how one Federation set about to save scarce communal resources and to strengthen United States support for Israel by undertaking an intensive effort to achieve energy savings at its social service agencies. Any of the lists of recommendations or subsequent reports are available to any of you who would like to institute a similiar program in your community.

Thank you all very much for your attention and interest.

Energy Conservation Planning in a New Jewish Community Center

(By Harry R. Rosen)

Several years ago, at the outset of the planning process for the new Dallas JCC, our annual utility bills to heat and cool the present 25,000 sq. ft. of building amounted to some $15,000. Our planning took place coincidentally with the oil crisis and this motivated us to begin to give some special thought to conserving fuel. We established a special program to conserve energy within the facilities and adhered to it quite rigidly. Despite this, our fuel costs shot up from $15,000 to $22,000 annually. A consultant from Dallas Power & Light Company estimated that upon completion of our 105,000 sq. ft. building, combined with escalating energy costs, we could expect to be paying somewhere between $100,000 and $120,000 annually for our utilities. This startling news caused us to reconsider our basic concept for the building and redesign, based on energy conservation considerations.

I must say that in addition to giving consideration to how we could conserve on gas and electric we also were looking for a design that would permit us to save on the number of staff required to maintain this larger facility.

We eventually arrived at a concept and design which we think will save the community considerable moneys in operating costs.

Almost all institutional buildings are built on a multifunctional basis. That is to say that each facility within the buildng is planned to have a variety of uses and not just one function alone if this is possible. The concept is based on the thought that having each facility used maximally minimizes your building costs, the size of the building, and therefore the operating costs.

We first did a very careful cost analysis on each of the various functions and departments the Center operated. We arrived at the feeling that we could save considerable labor and energy costs if certain departments of the Community Center were established as semi-independent wings and were used on a limited basis for their department use only, rather than as a multifunctional facility where several departments would use them. We, therefore, will be heating and air conditioning wings on a much more limited schedule than if they were multifunctional. We feel that there are certain facilities within the Center, such as the Physical Education area and the central facilties which need rather constant energy; whereas the extremities (wings) will not. This same concept will allow us to maintain these facilities, as far as cleaning and room setups go, with fewer janitorial staff because we have more latitude and flexibility in the use of staff time. We will not be involved in room setups whereby juvenile furniture is moved out and replaced with adult size tables and chairs. These wings will have permanent room setups. The furniture, carpeting and wall coverings will take much less abuse and in the long run save us replacement costs. The concept also provides similar wing facilities adjacent to each other so that compatible programs can expand from one wing into an adjacent wing if they outgrow, at any time, their own facilities. That is to say it makes more sense to place the Preschool and Children's wings next to each other than placing the Preschool next to the Adult or Senior Citizen wing since this hampers growth expansion.

A huge volume of space is required both in an indoor swimming pool and a fixed seat theatre, both of which had been in our original plans. There were, of course, other considerations, but we decided to eliminate both of these facilities because of the very high per capita cost of maintaining programs in them in relation to the numbers served. Both of these facilities have very high ceilings and take a very large volume of energy to cool or heat.

As we got into the specific design of the building, energy saving was the focus in the design and in the materials used. We placed our power plant as close to the center of the building as we could so our ducts had shorter distances to run. Our air conditioning was zoned in such a way as to consider the movement of the sun hitting various sides of the building at different times of the day. Therefore, all of the air conditioning does not go on at one time; it is zoned. The southeastern portion of the building goes on automatically in the morning as the sun hits that part of the building first. In insulating the building throughout we used a two-inch solid styrofoam sheeting because we were convinced that this was superior to other forms of insulation. We also insulated our basement walls with this same material. Throughout the building we have used double glass windows with a ½" thermal barrier. These very heavy windows were installed with a plastic liner between the window frame and the brick and the aluminum and the glass so that there is no heat transfer. In designing our building the architects placed operating windows in such a way as to take advantage of the direction of the prevailing breezes so that we could get more natural ventilation when the weather permits. The air conditioning and heating system was also designed to circulate fresh air when the outside temperature permits. In addition, outside air is brought into the building through a damper system when it is advantageous to use outside air, rather than cool recirculating air from within the building with the central energy plant. This is called the "economizer cycle" in the air conditioning trade.

The brick used on the building is an off-white to reflect the sun, and for the same reason a white gravel is being used on the roof. Double sets of entry doors are being used in all vestibules to minimize loss of treated air. We have minimized the amount of existing outside doors to just those needed for safety or in case of an emergency. In this way we also hope to better control building traffic and security. We have used double glass ceiling domes to bring in natural light in a number of areas where it is appropriate and needed, and we have put a concrete canopy over the windows on the south side where the sun is constant. On the east side of the building, where we get early morning sun, we are installing louvre window blinds of a reflective aluminum color. For roof insulation, one inch styrofoam sheeting is sandwiched between two layers of a special asbestos cement to a total thickness of 5".

Even landscaping was included in our energy considerations. Fast growing trees will be planted on that side that gets the most direct sun to further shade the building. At the present time we are considering how the changing of the schedules of activities and meetings can affect energy savings. We are asking ourselves if we can effectively change the pattern of community leisure time activities and communal meetings. The Jewish Community Center is currently open some 92 hours a week; we are thinking that cutting back on evening time during the winter and, perhaps afternoon activities during the hotter months, may, indeed, be a way of cutting down on energy use. Executive and maintenance staff have to be tuned into how our utility companies charge not only for power consumption, but also for demand and not turn electricity on and off without due regard for this consideration.

For whatever it is worth, we have passed a policy minimizing areas in which smoking will be permitted to one or two central lounges. The possibility exists that smoking will be eliminated altogether by the time the building is completed. This will provide cleaner air and as such has a significant impact on energy savings.

In the design of the building, we have placed most of our staff offices at the Center in modules of three. There are, at the entrances to the wings, two program staff workers with one secretary. Aside from the operational efficiency this provides, it permits us to zone smaller areas for heating and air conditioning without having to turn on the entire wing.

Lastly, I want to refer to our consideration of solar energy. We hired a solar energy consultation firm who helped us think through our needs and actually develop the solar energy fund application which we submitted to Washington. Mark Talisman and the C.J.F.W.F.'s Action office in the Capitol can be very helpful here. Our initial application for the design and utilization of solar energy collectors to completely air condition, heat and provide hot water for our Preschool wing was accepted by the Energy Research & Development Administration (ERDA). Unfortunately, there are too few contractors around who have had experience in the installation of solar energy units and in order to protect themselves our local contractors bid the plan very high. This caused the government to eliminate us from consideration. We do plan to reconsider this application once our building is complete. I am sure that many of you know that there is a good deal more technology necessary to make solar energy efficient enough for general use. It would take an enormous amount of collectors just to take care of one of our wings and so at this point in time we cannot give consideration to total solar energy utilization, but want to begin to experiment.

No one can accurately determine the future costs of energy, but we feel we have protected the community's limited funds to a very significant degree by planning whatever was conceivably possible in energy protection for this major community facility. We have learned that there is much more to consider than was originally thought and that there are still further options available. We learned that with intensive planning and open minds, we can save considerably on other operating costs as well. On behalf of the Jewish Community Center of Dallas, we are very pleased to share our experiences with you.

ZERO ENERGY GROWTH

Mr. PERCY. Mr. President, Folke Dovring, a professor of land economics at the University of Illinois, has been kind enough to send me his unpublished essay, "Energy Doubling by Year 2000?" It warrants careful scrutiny by my colleagues.

In his paper, Professor Dovring questions an assumption often uncontested. Must our economic growth necessitate energy growth? Professor Dovring thinks not. He finds that simple extrapolation of current energy growth rates leads to an unfeasible situation by the year 2000. Energy growth would by then be so expensive it would absorb all our economic growth and then some.

He recommends a policy of zero energy growth. He argues that such a path is both economically and technically feasible. To match a rate of economic growth of 4 percent per year, energy use efficiency, rather than energy supply, would have to increase at the same rate.

Professor Dovring's article is timely and interesting. I recommend it to all, but especially to those who have never questioned the marriage between energy growth and economic growth.

Mr. President, I ask unanimous consent that Professor Dovring's essay be printed in the Record.

There being no objection, the essay was ordered to be printed in the Record, as follows:

Energy Doubling by Year 2000?—Critique of a Growth Perspective

(By Folke Dovring)

Economic forecasts for this country generally assume that the supply of energy will have to go on growing. This would appear necessary to backstop the rising flow of goods and services which is the purpose of continued economic expansion.

Even modest goals of long-term economic growth, such as the 4-percent per year target now being pursued, assume growth in energy supply close to 3 percent per year. Only a slow rate of increase in the productivity of energy use is allowed, in most discussions.

The following will question whether substantial increase in energy supply in the United States, from now until year 2000, is physically and economically feasible. The answer to this question should have profound consequences for the kind of economic policy which the country can pursue toward realistic goals.

A QUARTER-CENTURY PERSPECTIVE

The Statistical Abstract of the United States, in a table repeated and revised in the 1976 issue (Table 907, p. 549) falls in line with the assumption of about 3 percent annual growth in energy supply, as follows (data in quadrillions of BTU):

	1970	1975 [1]	Projections		
			1980	1985	2000
Gross energy	67.1	71.1	87.1	103.5	163.4
Net energy	56.2	57.5	68.9	77.5	110.2

[1] Estimate.

Recently discussed projections sometimes include optimistic assumptions on the success of policies to reduce energy demand. The more cautious forecasts still come close to the figures cited.

The difference between gross and net is defined as reflecting conversion losses (as in thermoelectric power stations, but also the thermal requirements to generate the equivalent of nuclear-generated electricity).

The implicit growth rates, 1975–2000, come to 3.3 percent for gross energy and 2.6 percent for net energy.

Some of the assumptions of the Statistical Abstract table are not realistic. Gross energy supply is specified as follows (data in quadrillion BTU):

	1970	1975	1980	1985	2000
Coal	12.7	13.4	17.2	21.3	34.8
Petroleum	29.5	32.7	41.0	46.4	56.9
Domestic	(22.1)	(20.1)	(24.0)	(30.1)	(33.5)
Supplemental [1]	(7.4)	(12.6)	(17.0)	(16.3)	(23.8)
Natural gas	22.0	20.2	20.6	20.1	19.6
Domestic	21.2	19.2	19.5	18.8	17.0)
Imports	.8	1.0	1.1	1.3	2.6)
Nuclear power	.2	1.7	4.5	11.8	46.1
Hydropower and geothermal	2.6	3.2	3.8	3.9	6.0
Total	67.1	71.1	87.1	103.5	163.4

[1] From imports, shale oil, coal liquefaction, etc.

The composition of projected supply in year 2000 is clearly unrealistic in regard to domestic production of petroleum and natural gas. By that time we have no reason to expect any domestic supply at all of these two main energy sources, nor is there any reason to believe that imports of any consequence will be available at the time. Liquid and gaseous fuels will have to come entirely from processing of coal—that is the only safe assumption.

As petroleum and natural gas fade out of the energy picture, our entire supply—whether increased or not—will have to come from three main domestic sources: coal, hydropower, and nuclear power. New sources such as solar power, wind power, et cetera, cannot safely be counted upon to deliver large quantities of usable net energy until a great deal more of research and development has been done.

At present, petroleum and natural gas deliver about ¾ of our energy supply; coal, hydropower and nuclear power about ¼. This continuing energy base would thus have to be increased by a factor of 8 from now until year 2000. This even understates the investment needs, because the current stock of power stations will for the most part have been worn out by year 2000, so that most of them also need to be replaced.

NUCLEAR POWER

The data discussed above assume that nuclear power would grow faster than any other source of energy. The projected growth rates come to 21½ percent per year 1975–85 and almost 9½ percent per year 1985–2000. The former of these growth rates means a doubling time of about 3½ years, the latter, of 7 years.

An important reason for wanting to accept rapid growth in nuclear energy would be to spare us the spectacle of having coal production rise by a factor of 10 or more in 25 years. As long as we are debating this, we can as well give nuclear energy all of the future electricity production (other than from hydropower), thus a capacity of 70 q. BTU rather than just the 46.1 shown in the data quoted above.

From the gross energy target of 163 q. BTU we subtract the hydropower target of 6.0 q. BTU, and find 157 q. BTU to be filled by coal and nuclear power. Giving nuclear energy 46 or 70 q. BTU still leaves 111 or 87 q. BTU to be filled by coal and sundry sources, against 13.4 in 1975.

Neither the published target of 46 q. BTU nor the alternative one of 70 q. BTU should however be related to the estimate for 1975. There is now a lull in start-up of nuclear power station construction. The projection for 1980 of 4.5 q. BTU of nuclear power may not be reached either; 3 q. BTU is a more realistic base figure for 1980. Then the target of 46.1 q. BTU in 2000 means a growth rate of over 14 percent per year, or a doubling time of 5 years; the target of 70 q. BTU would require a growth rate of over 17 percent per year or a doubling time of 4 years. For every year after 1980 that an accelerated buildup is delayed, the growth rates would increase and the doubling times become shorter.

What might be the fuel source of such growth? Fusion energy is not even invented and cannot be counted upon within the next quarter century. Plutonium fission, even if it were an acceptable option, could not become a large factor before year 2000, that much is clear by now. Thorium is little developed in this country and nuclear fuel imports late in the century will be no more realistic than oil and gas imports by that time. This leaves us essentially with fissionable uranium (U_{235}) as found in the United States.

The Bureau of Mines (in *Mineral Facts and Problems,* 1976) gives data on uranium reserves (imputed as well as confirmed) which show high-grade uranium ores to be in limited supply, should uranium fission be called upon to supply a large part of our energy. Ores of high yield (3000 parts per million) would in fact cover only a few years' consumption on the level of 46 q. BTU projected for year 2000. Going to ores of lower yield, we would have to explain which ones among them are a resource and which ones are not.

NET YIELD IN NUCLEAR ENERGY

Net yield is the energy produced over the energy consumed in the process of producing it. The rate of net yield in nuclear energy production has been the subject of some controversy. Different writers will give different answers depending on what accounting conventions they follow. The choice of accounting conventions depends in part on the planning horizon and the scope of anticipated development.

Energy used up in the construction and initial fueling of nuclear power stations has been computed by Peter F. Chapman (in *Energy Policy,* December 1975). His data indicate that in most power stations, the thermal equivalent of all energy invested in the power station would be about equal to two years of power production from the station. With rapid expansion (short doubling times), the system would for a long time work as an "energy sink", supplying no net additions to the supply of the country. For short-run analysis, Chapman and others find a way out by using the accounting convention that what counts is not the thermal equivalent, but the electricity equivalent of the energy invested in the station. In other words, not the coal and oil used up, but the amount of electricity that would have been obtained, had these quantities of coal and oil been used to generate electricity instead of investing them in a nuclear power station. By this convention, the result looks optimistic: the payback time would be a mere fraction of a year, and the nuclear system would produce net energy almost at once.

The fallacy of using this "electricity equivalent" accounting convention is in the short-run perspective As of now, society has a preference for electricity; electricity is at a premium, it is more valuable than the heat energy in oil and coal—as it should be, because using coal and oil to generate electricity means large conversion losses. As long as electricity is used to do work (and not to supply mere heat), electricity is also more efficient than coal and oil, and thus the conversion losses are made good.

But all of this assumes the present scene, with the present mix of energy sources. In the quarter-century perspective discussed here, the mix of sources would change a great deal. Electricity would no longer be at a premium; oil would. Coal probably, too, because of the upheaval of vast increases in mining. As a basic source, nuclear-generated electricity would be used to supply heat, and on a large scale. Then we should no longer use an accounting convention based on present conditions. Nor could we change the accounting conventions gradually over the period. Knowing, as we do now, that oil will be at a premium toward the end of the century, we should now treat it—in economic planning if not in actual pricing—by its future opportunity cost (the cost of making synthetic oil from coal, including the future higher scarcity value of water used in such production).

For a large nuclear-power industry, this means that all the energy invested in the building and supplying of nuclear power stations should be treated as if it were electricity generated by nuclear power stations. The nuclear energy sector should be treated as a "closed subsystem", supplying all its energy requirements from its own electricity output.

Then we are back to Chapman's basic findings: the energy input in the investment of a power station is of the order of 1–2 years, depending on how much of the energy consumed in the investment is electricity to begin with, and how large is the initial nuclear core.

But this is all on the assumption of rich uranium ores—yield of 3,000 parts per million. With yields falling, the energy used in mining and milling uranium goes up—not in proportion, but it goes up substantially. When the yield goes to 1,000 parts per million (the largest category, according to the Bureau of Mines), energy input per ton of uranium doubles (Chapman). At 100 parts per million or less (Chattanooga shales) the energy input would be definitely prohibitive.

But even this is too optimistic. When the nuclear-power industry is treated as a closed subsystem, we also must reckon with a snowballing effect from the use of lower-yield ores. To explain this, let us first say that mining and milling of a ton of uranium takes certain energy quantities, partly heat, partly work by electric motors; part of this is direct (in the milling and mining) and part is indirect (in the making of the tools, chemicals, etc. used in the process). But all of this is a "first-order" requirement. Behind such a requirement is a "second-order" requirement which is what was used (directly and indirectly) in mining and milling the uranium which generated the electricity used in the first-order requirement. The second-order requirement is smaller than the first-order requirement, a third-order requirement still smaller, and so on. For instance, when first-order requirements are 10, 20, 30, 40 and 50 percent (of the output of the power station) respectively, then the following total requirements will come up:

1-order	0.10000	0.20000	0.30000	0.40000	0.50000
2	.01000	.04000	.09000	.16000	.25000
3	.00100	.01600	.02700	.06400	.12500
4	.00010	.00640	.00810	.02560	.06250
5	.00001	.00256	.00243	.01024	.03125
6	.00000	.00051	.00073	.00410	.01563
7	.00000	.00010	.00022	.00164	.00781
Total[1]	.11111	.26557	.42848	.66558	.99219

[1] Approximately.

These numbers relate not only to the initial investment and the payback-and doubling times of nuclear power stations. They also relate to the lifetime requirements of the station. First-order requirements of 50 percent are out of the question, those of 40 percent would be very hard to live with—after all, energy production has other costs besides energy.

Now it appears that the present lifetime annual requirements can be computed to be about 15 percent of annual output—a little more for light-water reactors, a little less for gas-cooled reactors. Thus it also appears that doubling the energy input in mining and milling of uranium (as when we get to ores yielding 1000 parts per million) will be as far as the industry can take it; trebling the cost (ca. 500 ppm) would already approach the prohibitive.

Thus we are forced to conclude that the rapid buildup of uranium-fission power industry, to meet 25 to 40 percent of the gross energy need by 2000, is not only not feasible for reasons of "expansion logistics", but also because the basic resource simply will not carry such a volume of uranium-fission power development.

As a practical matter, cash-flow and investment problems would arrest extensive nuclear-power development even sooner than indicated by the resource requirements. Coal would be clearly more economical than uranium, possibly already at the ore level of 1000 ppm.

With the possible development of nuclear power down considerably below the 46 q. BTU estimate—say, to about half of that, or 25 q. BTU—the logistics and resource-economic difficulties of uranium-fission power would largely subside, but the advantage of nuclear-power development would also be much reduced. A similar reduction of forward estimates came from ERDA in the fall of 1976 (the Hanrahan report). 25 q. BTU is a mere 13 percent of the projected gross energy supply, and only ⅓ of the projected electricity supply in year 2000. Coal would have to carry nearly as large a burden as if there were no nuclear energy.

COAL MINING AND CONVERSION

We have found that doubling energy supply by year 2000 would require coal to provide about 135 q. BTU, or 100 times the volume of coal extraction in the early 1970s—going from 600 million tons to 6000 million tons a year—or more, depending on the rate of conversion losses when oil and gas are produced from coal.

Such expansion is fraught with problems no less than that of nuclear power. On the positive side, there would be no "snowballing effect", since for a long time we would not have to face the equivalent of ores with lower and lower yields. The cost of building coal-fired power stations has so far been lower than for nuclear power station, and the construction times are shorter. But the cost advantage is lost when the station has adequate "scrubbers". The need to open up many more mines in short order, supply them with overheads and (to a large extent) recruit new workers for underground mining, represent an additional heavy investment burden.

A large increase in coal-fired power stations also necessitates special measures to mitigate the magnifying effects of water pollution (through sulphuric acid from coal mines). The consequences of such measures, for cost and for fuel efficiency, are not altogether clear.

Equally important, the technologies for converting coal into liquid and gaseous fuels are as yet so relatively untested despite 30 years of R & D that a rapid buildup of such plants could not start for some years yet—not until the early 1980s. Too little is known by now of the energy and other resource requirements of such conversion plants. Water is a likely bottleneck, unless a large part of this activity were to become located in Alaska, an option which could entail unusually large costs for infrastructure investments. It is unlikely that these "synfuel" resources could be built up in less than two decades, in the quantities that would be required to replace the fading supplies of petroleum and natural gas, and without doing irreparable damage to the physical and human environment of the country.

INVESTMENT COSTS AND EMPLOYMENT

For nuclear power, the most recent data available to me are those regarding the Clinton (Illinois) power plant, where construction started in the late part of 1975. Total cost is now given as $1.7 billion, for a net capacity of 1870 megawatts, thus close to $900,000 per megawatt of installed capacity. The projection of 46.1 q. BTU nuclear capacity by year 2000 would mean nearly 1 million megawatts, thus an investment of $900 billion (1977 dollars), to supply ¼ of the projected gross energy requirements for year 2000.

The costs of investments in coal mining and conversion cannot even begin to be estimated, but they must be assumed similar to those for nuclear capacity. In addition to plant construction and new mining operations, there would have to be large overheads for additional services and for environment protection.

It is not in any way fanciful to suggest that doubling energy by year 2000 would cost upwards of $3½ trillion, or most of the industrial investments in the normal course of events could come out of a doubling economy in the same time span.

The effect on investment and production in general would be dramatic. Many other activities would be under-supplied with investment funds and goods, and so the generating of national income would lag behind that of energy, and the normal economic demand for the increased production would not be forthcoming.

It is easy to suggest that, instead of displacing other investment, the exceptional effort in energy production should be financed from a heightened rate of savings and capital formation in the economy. Yes, this is easy to say but a good deal more difficult to do. Such an increase in the rate of saving and capital formation would also mean that labor's share in national income would have to go down, which again would undercut the expected increase in demand of goods and services, including energy.

The investment perspective itself shows that such a gigantic effort in building up the energy complex would be not only trying but also self-defeating. This conclusion is all the more justified since the reason usually given why the economy should continue growing at a rate of 4 percent (or more) per year is so that employment can be kept up and gradually improved.

Energy industries are among the least employment creating that we can think of. In recent years, the capital cost of employment in manufacturing has been about $30,000 per employee ($40,000 per production worker). In petroleum extracting and refining, the same figures were $190,000 per employee and

$300,000 per production worker. In electric and gas utilities, the figure is close to $200,000 per employee. These figures are for existing capital stock; for new investments, the price tags per job created is considerably higher. Expenditures of $3½ trillion for energy would support only a fraction of the jobs reduced in the rest of the economy, above all the manufacturing sector. A system of greatly increased savings and investment would in fact pull in the same direction, because the capital creating industries generally also have higher than average capital requirements per employee.

The switch toward higher capital intensity which would be implied in the effort at doubling energy by year 2000 would boost employment mainly in the higher-paying job categories and would leave ever larger numbers of low-skilled and light-industry workers unemployed. Thus, not only would the job-creating purpose of economic expansion be defeated; but with a generally undesirable increase in the cleavage between the well-paid and the poor, the general purchasing power of the population would be undercut, and the economic effort itself become self defeating.

CONCLUSION: ZERO ENERGY GROWTH

If there were no other way to solve the nation's economic problem than to double energy supply by year 2000, then we would find ourselves in a true impasse, unable to go either forward or backward. The ambitious task might have been less forbidding if it had been taken in hand long ago, say, in the 1950s; but America's political leadership then refused to lead the nation's economy. What makes the projected energy supplies for year 2000 impossible is above all in the time dimension, the fact that, due to lags in investment and in research and development, the whole enormous task of replacing petroleum and natural gas would have to be accomplished in two decades or less.

But there need not be an impasse if the problem is formulated in a different way. We already have enough studies to show that substituting for energy (and materials) by ingenuity is far less expensive than the meat-ax approach of always going it bigger. Higher productivities of energy and materials can add to the supply of goods and services for final consumption at lower cost. Steam-and-power co-generation, heat pumps, design features in buildings, and a more rational traffic system, these and numerous other innovations can give us continuing improved leverage on nature and supply our real income at less expenditure in terms of natural resources and capital.

If the target were merely to maintain the current level of energy supply from now until year 2000, then the investment needs can be met by an expanding economy without overstraining the system. And this again can be reached by improving productivity in the use of energy at a rate of 4 percent per year.

SUMMARY

1. Large increases in energy supply above the current level in the United States are not feasible because of the resource and capital requirements for replacing petroleum and natural gas. The attempt to double energy by 2000 would be economically self-defeating because of capital shortage and low employment.

2. It is assumed (a) that petroleum and natural gas will no longer be available to the United States in significant quantities around 2000; (b) that neither fusion energy nor plutonium fission will make large contributions by that time; and (c) that consequently the energy now supplied by coal, hydropower, and uranium-fission would have to increase by a factor of 8 by year 2000. (Solar energy is disregarded because the capital requirements appear higher than for coal).

3. Fission energy would take $900 billion, to supply one fourth of the doubled energy budget by year 2000. Because high-grade uranium ores are limited, even such a target is not realistic, at most half of it could be economically viable.

4. The bulk of energy development until year 2000 would have to rely on coal, which would have to increase by a factor greater than 10. Investment needs would likely come to more than $3½ trillion, or most of the industrial investment in the last two decades of the century.

5. Because of investment costs in the energy sector, consumer demand for energy would not be enough to absorb the increased supply. At the same time the energy industries would, during the build-up period, consume larger than normal portions of their own output.

6. Unemployment would rise because energy development is very capital intensive and would create fewer jobs per million dollars' investment than lost in those parts of the economy which would be starved of capital during the build-up period.

7. In conclusion, a policy of zero energy growth is recommended as being both economically and technologically feasible. To match a rate of economic growth of 4 percent per year, productivity in the use of energy would have to rise at the same rate. This can be done at far less cost than needed for continuing energy growth. It can be done on condition that the nature of the problem is recognized and a clear policy shift in this direction is started without further delay.

NATURAL GAS DEREGULATION CONSEQUENCES

Mr. JACKSON. Mr. President, a Washington State independent oil man, Mr. Victor D. Alhadeff, chairman of ENI Corp., recently made a very interesting public statement on natural gas pricing. Unlike many proponents on both sides of this intensely emotional issue, Mr. Alhadeff has analyzed the facts.

He points out that current gas prices are providing an adequate incentive for new production. He notes that "There is a shortage of rigs in a year that the industry has cried the loudest over price controls."

Mr. Alhadeff concludes that it would be in the industry's best interest to have Federal regulation of both inter- and intrastate natural gas markets as opposed to having deregulation or a phased-in deregulation. He fears that deregulation in any form would lead to very high prices for a small amount of gas production which will lead to a consumer backlash followed by very strict controls over the industry. I agree with his analysis.

Mr. President, I ask unanimous consent that the text of Mr. Alhadeff's remarks be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GAS DEREGULATION COULD CAUSE CONSUMER BACKLASH

(By Victor D. Alhadeff)

I would like to share with you some facts that I have on the current legislation relating to pricing of oil and natural gas.

By way of background, I am president of the ENI Corp. and managing general partner of ENI Exploration Co., which is a non-operating independent oil company. As one who operates an independent oil company and gets involved in drilling, like this year of over 200 separate and distinct oil wells, one develops an individual perspective of the industry and what I found happening over time is that my own perception of the industry varied quite a bit from what I was reading in the newspapers, and what the industry groups were telling us was reality.

While representatives of the industry gas groups or gas producing groups would be speaking about tremendous shortages, I would find that we were discovering excellent quantities of natural gas, producing natural gas and finding that the utilities would not buy our natural gas because of a surplus condition.

For an example, we have wells in both Oklahoma and Texas which are capable of substantially greater production than we are experiencing on those wells simply because there is a surplus of oil and gas or of natural gas in those states.

So, as a result of that, I started to formulate some different opinions than the industry and I will share some of them with you.

First of all, as all of you are aware, the Senate has recently proposed that the price of natural gas be set at 2.48 per thousand cubic feet (mcf) and that that $2.48 be a lid and at the end of two years, that it be removed and we should have a free market.

The House, on the other hand, has approached a control price of $1.75 and sometime in the next couple of weeks, hopefully, the House and Senate conferees will come to a compromise and some legislation can be proposed.

What I would suggest happen or what I would like to see happen is that the federal government control both the inter and intra state markets for natural gas at a regulated national price of $2.00 to $2.25 per mcf, as opposed to having deregulation or a phased-in deregulation.

Now, I know that the position of supporting controls is contrary to the industry, but I have some pretty strong feelings about it and the reasons why I think it is an appropriate course of action.

First of all, when I started in the business in 1971, instrastate gas in Texas was selling for 20 cents per mcf. Today it is selling for $2.00 per mcf, that is about a ten-fold increase in that price already.

In 1976, interstate gas was regulated at 52 cents per mcf. Today, it is regulated at $1.46 per mcf; so, we have already experienced almost a 300 percent increase in the price of regulated interstate natural gas prices in a year.

We are constantly receiving a tremendous backlash from the industry, from consumer groups and from certain of the gas companies themselves and, in fact, when the Administration allowed the FPC to change the price of gas from 52 cents to $1.46, that ruling was tied up in the courts and it took about a year and a half for that to become effective.

My big concern about deregulation is that if there were deregulation, a small percentage of the natural gas in this country, maybe only two to three percent of the natural gas, would sell at three to four dollars per mcf, and potentially, some gas could be selling as high as five dollars per mcf simply due to the fact that a certain industry who needs production will pay a premium because as a function of their total operating costs, their energy costs are a minor percentage.

If it ever happens that gas starts selling at four or five dollars per mcf, the backlash that type of pricing would cause, I think, could result in a consumer reaction that would result in more serious, more punitive legislation than we have the ability to obtain at this time.

Secondly, I think it is important to understand that even if the price of natural gas were four dollars per mcf today, we could not drill any more natural gas wells in the U.S. today because there is a constraint, other than price, in our ability to drill, and that is rigs. You can't drill a well if you don't have a rig, and currently there are—let me get my figures straight here—2,077 rigs running in the U.S. This was the count for last week. This rig count of 2,077 was the highest rig count since 1959. As recently as two years ago, there were only a little over 1,600 rigs.

It is estimated that there are 200 rigs, new rigs, which will come on each year for the next several years; however, many of the 2,077 rigs that are running now are older rigs which can drill to only very shallow depths and they will have to be replaced, so net gain may be only 75 to 100 rigs per year and nowhere keeping pace with the existing demands for rigs.

Currently, when we commit to drill a well onshore U.S., we normally have to wait at least six months to get our hands on a rig to drill that particular well; so, rigs become a constraint as much as price.

The other reality of the industry that I am starting to see is that the loudest voice for deregulation seems to come from the weakest link in the chain. Basically, most independent oil companies—and I might re-emphasize that independent oil companies account for ninety percent of drilling onshore U.S.—most independent oil companies are making spectacular profits off the two dollars per mcf price which they are getting on an intrastate basis and they are emphasizing drilling in intrastate markets.

In fact, within the intrastate markets, such as Texas, it is stated that by 1980, there will be a trillion feet of cubic feet a year surplus of gas. A trillion feet of cubic feet a year surplus of gas, in effect, while we are having an overall shortage of natural gas is absolutely ridiculous.

To give you some perspective on what a trillion cubic feet is, we produced in the U.S. 19.5 trillion cubic feet in 1976, and in 1973, we were producing about 24 trillion cubic feet of natural gas a year; so, we have seen our production of natural gas decline tremendously from 24 trillion cubic feet to 19.5 trillion cubic feet; yet, we are projecting surpluses of gas that simply will not be produced in the U.S., such as Texas, and the absolute identical condition exists in Oklahoma.

Meanwhile, the highest level of new activity and the biggest drilling discoveries in the U.S. have been in the Rocky Mountains—not in Texas—where gas is controlled at the $1.46 price. If the ceiling was taken off the $1.48 price and raised to two dollars, you would see as much activity as a rig situation would allow for.

The question that arises over and over again is: Are there, in fact, reserves remaining to be discovered in the U.S. and currently, according to many industry groups, only two percent of the prospective natural gas acreage in the U.S. has, in fact, been drilled upon, and as a result there are currently 260 trillion feet of proved natural gas reserves in the U.S.

However, the industry groups and the United States Geological Survey vary dramatically as to what undiscovered natural gas potential is. For an example, the U.S.G.S. in 1972 estimated that there was 2,100 trillion feet of natural gas left to be discovered, today, they only estimate that there is 524 to 857 trillion cubic feet of natural gas to be discovered.

These types of tremendous variances cause me concern because basically there is no accurate method of forecasting the undiscovered natural gas reserves in the U.S.

Recently, the natural gas industry formed a group called the Potential Gas Committee and they estimated that there were 973 trillion cubic feet of undiscovered natural gas with a rock bottom minimum of about 646 trillion cubic feet from field extension and possible reserves, again, a substantial variance from the U.S.G.S., and I quite frankly put no reliance on any of these statements.

The reality is there is money available for drilling. There is no shortage of geological concepts, and there is a shortage of rigs in a year that the industry has cried the loudest over price controls, it had the highest level of drilling activity in the U.S.

By comparison, we drilled 45,000 wells this year versus 25,000 wells two years ago and this is the year when everybody is crying poverty. It is incongruous. It simply does not make sense. The incongruity of this was causing controversy and attack on the industry.

For an example, Congress recently came up with a study that estimated that deregulation of natural gas would add $25 billion a year to the consumer's natural gas bills. In this statement, Congress is estimating a $25 billion a year addition to the gas bills; the industry groups are saying that deregulation would cause $123 billion savings. The variance there is phenomenal, and the industry groups, when they assumed that $123 billion savings, assumed an average price of natural gas over the next several years of $2.50 per mcf and I see no reason why we can't start at the two, and a quarter level and have a gradual savings and avoid the risk of attack from consumer groups. I think certainly it is the key here to stimulate the producers.

In addition to natural gas issues, we are also facing a time when we are having a piece of legislation called Crude Oil Equalization Tax, which is one of the most absurd pieces of legislation I have ever seen in that it calls for increasing the price of oil through the form of a tax and finding some way to rebate that tax back to the consumers.

The interesting thing, however, is that the industry groups have the tenacity to say that all of the price increases on new oil should go to the producers, without any type of plowback provision.

I do feel, however, that the industry should have access to those increased dollars in the form of a plowback provision; in other words, the price of oil could increase, let's say, from $11.50 a barrel to $14.00 or $15.00 a barrel and there should be a tax on that money with a tax credit for that which is redrilled.

I think if this type of legislation was enacted, we would minimize the amount of negative publicity, and we would minimize the amount of continued uncertainty and the industry would be in a position of saying we know exactly what your financial incentives are and those capable of remaining will and the weak links will get out of the business.

There is no reason why the weakest link should stay in the business, especially when the reality of this entire increase was not worldwide supply and demand, but the Arab oil embargo, because currently on a worldwide basis there is a surplus of oil. And currently, on a worldwide basis only about ten percent of the natural gas has been discovered to date.

So, although we have national priorities to concern ourselves with and I am very keen on those. I think from the consumer's viewpoint, while he sees a surplus of the product, we have to be careful in how we develop our national supplies.

WOMEN IN INDIA

Mr. PERCY. Mr. President, Hobart Rowen has written an excellent article on women in India that I commend to the attention of my Senate colleagues. The article, which appeared in the December 4 issue of the Washington Post, will be of particular interest to those who have supported my initiatives to encourage U.S. bilateral aid programs to advance the role of women in economic development. The economic role of women in the development process has interested some people for many years, but it has never received as much notice as it has recently as a result of International Women's Year.

Without objection, I ask unanimous consent that Mr. Rowen's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDIA'S SUBMERGED WOMEN

NEW DELHI.—It doesn't take long for the visitor to India to become aware of the sharp gap between the rich and the poor, between the cities and the rural areas, and between the northern and southern parts of the country.

Here in Delhi, one of the more (relatively) affluent Indian cities, migrant construction workers squatting right in front of the government's rehabilitation center provide an ironic contrast between the well-fed and housed bureaucracy and the less fortunate.

But less apparent is what may be the biggest gap of all in India—the gap between men and women.

Mrs. Rami Chhabra, a highly regarded journalist and spokesperson for women's rights, described to a meeting here of the International Press Institute a shocking system of discrimination against Indian women.

"Indian society has built a halo around woman, and then they put her on a crucifix," she told an audience of Western and Indian reporters. The poorest of the poor "are always women—they have become a submerged mass of drudges and peasants," she said.

I have run her account of the place of women in Indian society past government officials and private observers. While some argue with a statistic here and there, no one contests the basic thrust.

This is a story that has been ignored by the Indian press, although the basic research for it was published in a 1975 report by a National Committee on the Status of Women. The discrimination scenario begins with deliberate neglect of baby girls, because boys are likely to be more of an economic asset to the family. It stops only technically short of female infanticide.

Thus from birth to well beyond childbearing years, there is a higher rate of female mortality—a reverse of the pattern in the rest of the world. India is now one of the few countries where the female population is less than the male, and has been declining sharply. From 970 women per 1000 men in 1900, the figure is now about 930 women per 1000 men.

"There is obviously something more than mere poverty at work if malnutritional disease hits more girls than boys," says Rami. According to figures of the Indian Council of Medical Research cited by her, hospital records for treatment of the most virulent forms of malnutrition show admission for males only. Why? "Few girls are brought to the hospital for treatment," she says.

Although the government had a woman prime minister for 11 years, Rami accuses the state of acquiescing in the attitude of "expendability" of women. For example, hospital beds in a major province are allocated two-thirds for men, although a logical tilt would be the other way around to deal with maternity cases.

The real crunch comes on the economic front. In 1917, there were 525 women for every 1,000 men in the labor force. Sixty years later, the ratio was only 210 to every 1,000 men. "In the context of rising numbers of poverty-stricken, this phenomenon of fewer women working is obviously not the result of increased prosperity leading to a voluntary withdrawal of women from work in preference for more leisurely activities," says Rami.

"Rather, it is a case of acute deprivation leading to extreme destitution and of disintegration of families, in a measure giving rise to an increase in criminal and anti-social activities, including prostitution."

The male-dominated media in India and much of the government bureaucracy tend to scoff at Rami as a professional feminist trumpeting a cause. But she seems to have the facts on her side.

Some government planners take the issue seriously, for they are aware of the loss of national economic potential. But they don't expect to be able to satisfy the demand of women's groups for more and better jobs, or equal pay.

In the villages, women and young girls can be seen doing the routine but tough jobs, balancing on their heads dung-cakes for fuel, fodder for animals, or heavy jugs of water. There are lots of female construction workers, too.

As I write these words in Delhi, female construction laborers make their way up a wooden ramp with headloads of brick, mortar or rock to the third level of an addition to my hotel. Their kids are nearby—tiny tots taking care of infants.

A study of female construction workers done in 1975 by S. N. Ranade and G. P. Sinha suggests that these women probably are illiterates recruited from rural areas. Many are likely to be in debt to money lenders or to their recruiters. According to Vina Mazumdar of the Indian Council of Social Science Research, the relationship "sometimes amounts to bondage."

The attitude I found among many Indian men is that the general problem of poverty in India is so overwhelming that they can't get too worked up over the special problem of women. Rami seems to be saying not only that there is no justification for the degradation of women, but that the extraordinary system of discrimination from infancy through later life is a contributory factor to the grim overall economic picture. And no one is doing anything about it.

RECONFIRMATION OF FEDERAL JUDGES

Mr. HARRY F. BYRD, JR. Mr. President, in its November 20 edition, the Roanoke Times and World-News published an editorial endorsing the concept of requiring congressional reconfirmation of Federal judges every 8 years.

As is noted in the editorial, this is a change of editorial position for the newspaper, whose editorial page editor is Harold Sugg.

The new position of the newspaper is based upon its perception that "Federal judges are making law and they are administrators; lawmakers and administrators should be accountable."

I have urged this constitutional change for a number of years. Nine Senators joined as cosponsors this year when I again introduced legislation to require reconfirmation by the senate.

Interest in this proposal is growing. The State legislatures of Virginia, Alabama and Michigan have endorsed it.

Federal judges now serve for life, subject only to a rare impeachment. In recent years, some judges have gone well beyond the sphere of interpreting the law and into the domain of making the law.

Reconfirmation for Federal judges would parallel the system in Virginia, which certainly has worked well. In fact, all States except Rhode Island limit judicial tenure in some way, and there is no evidence that the judiciary has been compromised in any State because of fixed terms.

As the editorial in the Times and World-News states:

> Most Federal judges would survivie a reconfirmation process. It would help all of them to be reminded, formally, once every 8 years, that they are mortal and accountable.

I ask unanimous consent that the text of the editorial from the Roanoke Times and World-News be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RECONFIRM THE JUDGES

Today we change an editorial position of the last six years. We now favor—and vigorously favor—a constitutional amendment proposed by U.S. Sen. Harry F. Byrd Jr. to subject federal judges to the reconfirmation process every eight years.

We have always understood the purpose of the Byrd amendment and sympathized with its objectives. Our opposition was based on history during bad times: the massive resistance movements of the 1950's and early 1960's. In those days some federal judges were the rocks and pillars of law and decency. Except for lifetime tenure, some of them might not have withstood the abuse heaped upon them.

The traumas of the 1950's, however, cannot be permitted to permanently thwart the history of the nation. The federal judiciary itself has drastically changed since the 1950's. Taking the lead (in a sense, the orders) from the U.S. Supreme Court, the judges are running prisons when they are not running schools when they are not running personnel offices in City Hall. The federal court system—set up to decide grave constitutional issues and suits and crimes involving more than one state—has invaded every nook and cranny of life. The federal judges are making law and they are administrators; law-makers and administrators should be accountable.

Judge John H. Pratt, of the U.S. District Court, District of Columbia, should be asked to tell a Senate judiciary committee, in a reconfirmation hearing, just how he justifies giving integration orders involving dozens of states and scores of school districts: all at the same time.

The confused, disagreeing-within-itself, majority of the Supreme Court, each member at a time, should be asked to explain how they decided that a sheriff must appoint as deputies those who campaigned against him for the office. There are scores of opinions that suggest the federal judges should be required to explain themselves as other people do.

We would prefer an amendment limiting federal jurisdiction to plainly federal matters; a host of lawyers says it cannot be obtained. We would prefer even more a Supreme Court willing to restrain itself and thus restrain the lower federal courts; the outlook for that is not favorable. The Byrd amendment is the only feasible corrective at hand and we urge its adoption. Most federal judges would survive a reconfirmation process. It would help all of them to be reminded, formally, once every eight years, that they are mortal and accountable.

TROOP WITHDRAWALS FROM KOREA

Mr. PERCY. Mr. President, I would like to call the attention of my colleagues to an editorial that appeared in the November 17, 1977, issue of the Indianapolis News. The editorial, entitled "What Kind of Asia?," asks some tough questions about President Carter's program of ground troop withdrawals from South Korea. I, too, have serious doubts about the wisdom of the current withdrawal plan.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT KIND OF ASIA?

"Key questions are posed by President Carter's plans to withdraw American ground forces from South Korea.

"What kind of Asia would it be without the presence of American military personnel in South Korea? Would it be less hostile or more hostile to U.S. interests? Would it be a less dangerous or more dangerous place?

"It is clear that the United States has sufficient forces and facilities in the region to defend its interests without forces on the ground in South Korea. But a withdrawal of personnel from South Korea would cast considerable doubt on whether the United States has the *will* as well as the capability to meet its defense commitments to South Korea or counter threats to its other Asian allies.

"If South Korea, Japan, the Philippines, and other allies observed U.S. withdrawal from South Korea (following closely upon the collapse of South Vietnam after the U.S. exist) and concluded that the U.S. was no longer a reliable partner, a chain of events could be set in motion that could make Asia a much more dangerous region than it is now.

"The most immediate impact, of course, would be on Korea. An arms race between the North and the South could result in a replay of 1950, when North Korea decided it had sufficient strength to overwhelm the South. This time, however, South Korea has the industrial and scientific sophistication to produce a nuclear bomb; the uncertainties of the U.S. troop withdrawal would be a powerful temptation to go nuclear.

"Korea is separated from Japan by a narrow strait, roughly the distance between New York and Philadelphia. Events there would affect Japan in a similar way that news of Soviet missiles in Cuba jolted the United States in 1962. If Japan doubted American credibility, the result could be a lurch into nationalism and rapid rearmament—either that, or an accommodation with the Soviet Union. Either development would be detrimental to U.S. interests and the peace of the region.

"China, too, might decide to scuttle the 'normalization' process with the United States and patch up its relations with the Soviet Union.

"For over a generation, the American presence in Asia has served to submerge old nationalisms and provide the framework for peaceful cooperation. But if that presence is no longer credible, if our Asian allies come to believe we will never use it, the forces which have produced countless Asian wars over the centuries could re-emerge.

"The prospect of a nuclear South Korea or a rearmed Japan is sufficiently real and alarming that it should give pause to President Carter in his plans to withdraw U.S. troops from South Korea."

RESOLUTION OF THE COMMITTEE ON ENERGY AND NATURAL RESOURCES

Mr. JACKSON. Mr. President, the Department of the Interior has informed the Committee on Energy and Natural Resources that it intends to grant rights-of-way over Federal lands for the Sohio crude oil pipeline.

At a business meeting on December 6, the committee passed a resolution waiving the 60-day waiting period for committee review of the rights-of-way required by section 28(w)(2) of the Mineral Leasing Act of 1920.

I ask unanimous consent that the text of the resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION OF COMMITTEE ON ENERGY AND NATURAL RESOURCES

The Department of the Interior has notified the Committee that it intends to grant a right-of-way permit over Federal lands to the SOHIO Transportation Company for a crude oil pipeline from Long Beach, California to Midland, Texas.

Subsection 28(w)(2) of the Mineral Leasing Act of 1920 (30 U.S.C. 185) as amended, provides that no right-of-way across Federal lands shall be granted for a pipeline 24 inches or more in diameter until after 60 days notice of intention to grant such right-of-way has been given to the House and Senate committees with jurisdiction.

The Committee hereby resolves that, pursuant to subsection (w)(2), the waiting period required by such subsection of the Mineral Leasing Act of 1920, as amended, is waived for the granting of Federal rights-of-way for the Long Beach-to-Midland pipeline.

CANAL: FACTS, NOT EMOTION

Mr. CASE. Mr. President, recently George Meany, president of the AFL–CIO, spoke out on the Panama Canal Treaty.

One of the outstanding leaders in the country, Mr. Meany succinctly makes the case for ratification. I ask unanimous consent to be printed in the RECORD the editorial that appeared in the November issue of the AFL–CIO's monthly magazine, the Federationist.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CANAL: FACTS, NOT EMOTION

In recent weeks, the great national debate surrounding the new Panama Canal Treaties has begun. The AFL–CIO joined that debate on Aug. 30 when the Executive Council voted unanimously to urge the Senate to ratify these important treaties.

To date, much heat, and little light, has been shed on the issue. Myths, rather than facts, have served as the basis for many publicly expressed opinions on this important subject. Thus, emotion-laden code words like "giveaway" have distorted the central issues.

When the AFL–CIO Executive Council considered its statement on the Treaties, three items dominated our concerns:

The effect of the treaties on the job security of workers—both American citizens and Panamanians—in the Canal Zone.

The future security of the Canal as an international waterway open to all nations.

The impact of the treaties on U.S. relations with its neighbors in the Western Hemisphere.

On each of these counts we are satisfied that the Treaties are in the best interests of the United States, the workers, and peace and harmony in the world.

Nearly 30 years, the American labor movement has called for justice for workers in the Canal Zone on the basis of equal pay for equal work. We were concerned then and are concerned today that Panamanian nationals not be exploited through a double standard of remuneration. The treaties guarantee the rights of workers, both American and Panamanian, in the Canal Zone. One of the fears, during negotiation of the treaty language, was that workers in the Canal Zone would be forced to relinquish their superior wage and working standards to satisfy the xenophobic yearnings of vocal Panamanian nationalists. Thus, in our opinion, by guaranteeing the rights of U.S. and Panamanian workers, the treaties lay this fear to rest.

The specifics of the labor guarantees will be worked out in enabling legislation which will be undertaken by Congress upon ratification. While we will be watching this legislation closely, we believe the negotiators for both sides, having clearly recognized the need to protect the workers involved, will satisfactorily meet this first test.

According to the President of the United States and the Joint Chiefs of Staff, the treaties of 1977 provide for continuing freedom of action by the United States to maintain the neutrality of the Canal and further guarantee U.S. access and rights to use all land and water areas and installations necessary for the defense of the Canal.

At least for those vessels which can still fit through the now-narrow confines of the locks, the treaties guarantee future passage. The purpose and function of the Canal is, after all, to offer transit to the vessels of all nations from the Atlantic to the Pacific. And that, precisely, is what the treaties would guarantee.

While the AFL–CIO does not buy those arguments that the treaties are necessary salve for "historical wrongs," we are convinced that the treaties serve as the basis for the rational conduct of Hemispheric relations. Neither does the United States lose sovereignty by negotiating a treaty which transfers this narrow strip of land to the nation-state which it has for so long divided.

Demagogues, in an effort to reap personal and political gain from opposition to the treaties, seek to make this issue one of national "pride." We believe the American people would have much to be proud of in the fact that their country does not want to become a colonial power, clutching a cloudy semi-sovereignty over a narrow strip of land like some faded banner of past glory.

The negotiation of the treaties—a painstaking, 13-year process through Republican as well as Democratic Administrations—is a solid piece of statesmanship on the part of the United States. The treaties meet the concerns we have long expressed as representatives of the workers, as Americans interested in their nation's security, and as internationalists who seek to strengthen this country's relations with the rest of the world

The AFL–CIO urges the Senate to promptly ratify the treaties and the entire Congress to enact the necessary enabling legislation. We urge our members to participate fully in this national debate on the basis of facts, not emotion, and to communicate with their senators on this issue.

As reason replaces emotion in this debate, we are confident the treaties proposed by President Carter will receive the support of the American people.

GEORGE MEANY.

ALCOHOL FUELS FROM RENEWABLE RESOURCES: A RESPONSE TO THE DOUBTERS

Mr. ABOUREZK. Mr. President, there is little doubt that one of the most hard fought and important of all the pieces of legislation that will have been acted on in this session of the 95th Congress is the President's energy bill. Whether or not this bill will be enacted into law—and, if it is, what its final form will be—has yet to be decided, but a few conclusions can be drawn from the action that has been taken on it so far. First, there is not even the closest thing to a consensus on just how close we are to the depletion of traditional fossil fuels. Second, there is general agreement that we will someday run out of oil and natural gas, the fuels which we are most dependent on at present. Third, there has been a great deal of rhetoric about the need to develop alternative energy technologies from renewable resources, but, in the final analysis, very little substantive action has been taken.

As you know, I have, in the past, questioned the tendency of Federal agencies charged with the development of dependable energy forms to consistently pursue "total-fix," centralized, capital- and technology-intensive energy forms—like nuclear energy—while almost virtually ignoring some of the more promising forms of energy production from renewable resources which require far less massive infusions of capital and technology.

I have been heartened, therefore, by the recent evidence of congressional support for and interest in alcohol fuels. These fuels, of course, can be derived from all sorts of organic renewable materials, ranging all the way from grain to lumber to urban and animal wastes. While it would be wrong to represent alcohol fuels as a panacea, the technology is here today and, with a little farsighted management, alcohol fuels production could go a long way in solving our energy problem. Not only could security of supply be enhanced and our trade deficit reduced, but the use of grains, crop residues, and urban wastes as feedstocks could provide some outlets for these materials whose accumulation imposes costly burdens on our society in the way of disposal and storage. What is more, alcohol fuels can be produced in a more decentralized manner, and are safer and more environmentally sound than the alternatives.

The benefits are numerous and the performance has been widely demonstrated, yet we in the United States are really no nearer to the widespread commercial use of alcohol fuels today than we were 50 years ago. There has been little or no stimulus provided or direction given to the development of an alcohol fuels program by those who could have—and should have—done so. Even today, officials in the Department of Energy and elsewhere in the energy bureaucracy contend that the technology is still decades away and then turn around and do nothing more than commission another repetitive study. Powerful groups, especially the oil companies, have a vested interest in seeing that alcohol fuels production does not become too widespread and they have done much to retard their development. Whatever the reason for the slow pace of alcohol fuels development, there is no question but that those who claim that a significant contribution cannot be made by this energy option are either deluding themselves or are purposefully trying to delude others.

A good example of what can be done in this area is going on right now in Brazil, where the Government has set in motion a concerted alcohol fuels production program. By 1980, the Brazilians predict that they will produce $300 million worth of anhydrous alcohol from manioc and sugarcane. Anyone who believes that alcohol fuels production from renewable resources is a technology that only belongs in the future should take a long look at the strides that Brazil has made in the last 5 years. There is no doubt in my mind that, if Brazil can do it, we can do it.

Mr. President, I ask unanimous consent that the following article detailing Brazil's alcohol fuels program be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Foreign Agriculture, May 2, 1977]

Brazilian Agriculture To Help Meet Fuel Needs

(By Edmond Missiaen)

Brazil, in an attempt to cut its petroleum import bill, has set up a long-range program to mix anhydrous alcohol from sugarcane or manioc (casava) with gasoline.

The program, begun in 1975, foresees production by the early 1980's of 4 billion liters of alcohol per year, which would supply 20 percent of Brazil's estimated gasoline needs.

Brazil's decision to develop alcohol for fuel means that a significant part of the country's agricultural development efforts are to be directed toward production of farm products for fuel, rather than for food or fiber. Land used to grow sugarcane and manioc for alcohol will not be available for food and export crops such as soybeans, corn, and rice.

Close to 900,000 hectares of Brazil's total cropland area of about 45 million hectares will be needed to produce by the early 1980's the volume of alcohol needed for a 1:5 alcohol/gasoline mixture.

Such a ratio of alcohol to gasoline would require no adjustments to motor vehicle engines and would permit Brazil to reduce its petroleum imports by about 10 percent, resulting in a saving of about $400 million annually in foreign exchange.

Brazil also is considering the possibility of using a 1:1 ratio of alcohol to gasoline in diesel trucks and buses, and all-alcohol fuel in passenger cars. Although such changes would require major modifications to existing vehicle engines, new alcohol-powered cars reportedly could be built for about the same cost as gasoline-powered vehicles.

To demonstrate the feasibility of vehicles powered entirely by alcohol, Brazil's Aerospace Technical Center recently converted three cars to run solely on alcohol and sent them on an 8,000-kilometer trip from São Paulo State to Manaus (on the Amazon) and back.

Alcohol also is being considered as fuel for electric power plants.

The main instrument for achieving the goals of the alcohol-as-fuel program is special financing. Industrial financing (for establishment, expansion, or modernization of distilleries) is available for 80 percent of the total investment (90 percent in the north and northeast) for a maximum period of 12 years, with 3 years of grace, at interest rates of 17 percent (15 percent in the north and northeast).

For farm projects, 100 percent of the investment cost can be financed for up to 5 years, with 2 years of grace, at 7 percent per year. These interest rates are highly negative (less than the rate of inflation) in an economy that has a high rate of inflation (46 percent in 1976).

Project proposals are presented for approval to the National Alcohol Commission. After this approval has been obtained, entrepreneurs have up to 180 days to apply for bank loans.

As of December 22, 1976, 83 projects for construction of alcohol distilleries had been approved by the National Alcohol Commission, and 15 of these had obtained financing by December 24. Another 95 agricultural projects, for the planting of sugarcane, also had been approved by that date.

The 83 distillery projects are expected to have an annual productive capacity of 1.9 billion liters of alcohol, or 48 percent of the Government's goal of 4 billion liters by 1980.

Five of the planned facilities will distill alcohol from manioc, one will use babassu nuts as raw materials, and the remainder will use sugarcane. Some of the sugarcane projects envision the establishment of distilleries annexed to established sugar mills, while others will be independent.

Of the 83 approved projects, 27 are in the northeast, one is in the north (Amazon) area, and the remaining 55 are in the more developed center south part of the country.

Thirty-three of the projects are to be in São Paulo State, which produces about half of Brazil's sugar. Another 22 projects are to be located in the traditional sugar-producing States of Pernambuco, Alagoas, and Rio de Janeiro.

There are two basic types of alcohol—anhydrous and hydrous. Only the former is used for mixing with gasoline, and both are inputs for various chemical manufacturing processes. Both are produced in Brazil, and are manufactured almost entirely from residual molasses resulting from sugar refining.

The residual molasses resulting from production of 1 metric ton of crystal sugar is sufficient to produce, on average, 117 liters of alcohol. Stated another way, 1 ton of sugarcane will produce 92 kilograms of sugar plus 10.7 liters of alcohol.

Alcohol also can be extracted directly from sugar—i.e., the cane can be used to make only alcohol and no sugar. In this process, 67 liters of alcohol can be extracted from 1 metric ton of sugarcane.

Most of the hoped-for expansion in alcohol production will come from direct conversion of sugarcane to alcohol. In the past, the direct conversion of sugarcane to alcohol was used only when there was surplus sugarcane production. The manufacture of alcohol served as an escape valve.

Alcohol also can be extracted from other plants. The most apt for Brazil are manioc, sorghum, sweet potato, and babassu. Apart from sugarcane, the most important future source of alcohol in Brazil is expected to be manioc.

The costs of producing alcohol from manioc and sugarcane are about the same. The manufacturing process for manioc is more complicated, however, and there is no pool of experienced entrepreneurs in manioc processing, as there is for sugarcane.

Many of the hopes for reducing regional disparities and reducing income inequalities—as outlined in the Government goals for the expansion program—are based on the expectation that production of manioc for alcohol will be expanded in the poorer northeast, north, and center-west regions.

Brazil produces 700–750 million liters of alcohol per year, of which 200–300 million liters are anhydrous alcohol, used for mixing with gasoline.

Exports of alcohol have risen from 7 million liters in 1970 to 64 million liters, earning $17 million, in 1975.

About three-quarters of Brazil's alcohol is produced in the center-south area. Sugar mills in the northeast distill less of their residual molasses into alcohol. Molasses exports, mostly from the northeast, have been growing in recent years, jumping in value from 3.5 million in 1970 to $41 million in 1976.

Most of the alcohol for mixing with gasoline is produced and consumed in Sao Paulo State, which accounts for 40 percent of Brazil's total gasoline consumption. The proportion of alcohol in gasoline (average for all Brazil) has ranged from 2 to 3.5 percent in recent years.

If Brazil reaches its goal of 4 billion liters of alcohol per year for mixing with gasoline by the early 1980's, it is likely that 500 million liters will be distilled from residual molasses processed in existing capacity; 3 billion liters will be distilled directly from sugarcane; and 500 million liters will be distilled from manioc.

The additional agricultural capacity required to produce this alcohol can be calculated as follows: For sugar, an alcohol extraction rate of 67 liters per ton would require 44.8 million tons of cane from 747,000 hectares. For manioc, an alcohol extraction rate of 180 liters per ton would require 2.78 million tons of the commodity from 139,000 hectares.

Total sugarcane area (for sugar) is now about 1.7 million hectares, and area in manioc is 2.1 million hectares.

If Brazil were to attempt to substitute alcohol completely for gasoline, the demand for alcohol would approach 25 billion liters per year by the mid 1980's. Members of the National Alcohol Commission believe that as alcohol production approaches that level, a much higher proportion will come from manioc than is the case with currently approved projects.

Thus a production level of 25 billion liters of alcohol per year (half from sugarcane and half from manioc—would require about 187 million tons of sugarcane grown on 3.1 million hectares plus about 69 million tons of manioc grown in 3.5 million hectares—6.6 million hectares out of Brazil's total current cropped area of about 45 million hectares.

REMARKS OF CONGRESSMAN JOHN BRADEMAS BEFORE THE BUSINESS COUNCIL

Mr. PERCY. Mr. President, at the fall meeting of the Business Council, Congressman John Brademas of Indiana spoke about increasing congressional assertion, in recent years, of its proper and equal constitutional role in the Federal Government. Using such examples as the Congressional Budget Act and the developing part played by the House in foreign policy, Congressman Brademas expands upon the theme that "Congress has taken a series of initiatives that have buttressed its role." By these actions, he says:

> Congress has not diminished the Presidency but has simply insisted on its own place in the sun of our constitutional constellation.

Because his statement will be of interest to all of us who have worked together to improve Congress' ability to function according to its constitutional mandate, I ask unanimous consent that Congressman BRADEMAS' remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS OF CONGRESSMAN JOHN BRADEMAS

Before beginning, I want to answer that unspoken question that, if not already in your minds, is sure to be there before I finish.

No, I have never met a payroll.

I am a politician, not a businessman. But just as I have never had to meet a payroll, so I doubt whether many of you have ever had to convince a few hundred thousand people every two years to vote for you and not some other guy.

Although I am a politician, I used to be a professor of political science. So I hope you will forgive the recidivism if I start these remarks with what sounds like a civics lesson.

In order to understand what happens in Washington, it is essential to recognize what our separation of powers system means and how it affects the actual functioning of our government.

I find that newcomers to Washington do not really understand our system, and I include visitors from our own country as well as those from other nations. I also include some Presidents.

People know the phrase, "separation of powers," but for some reason the words often lack meaning for them. The idea is somehow prevalent that Congress exists to do whatever a President wants it to do. According to this view, Presidents ask and Congress gives. This attitude is based loosely on the idea of what the structure of a corporation is thought to be. The President is perceived as the corporation's chief executive officer and Congress as a complaint board of directors.

Although some corporations may work that way, the government of the United States does not—nor was it ever intended to.

The President and Congress are elected separately. Each President, each Senator and each Member of the House of Representatives has his own mandate and his own responsibility to the people. This curious system of shared power has no real parallel in the world today, a fact that sometimes I think is recognized only by politicians and political scientists—and not all of them.

In order to get anything of consequence accomplished under this system of what Richard Neustadt called "separated institutions sharing power," the President and Congress must work together. Although it is a system that no engineer or management expert ever would recommend, it also is a system that, by and large, works.

In the American government, when the executive and legislative branches are controlled by members of the same political party, the two branches are likely to have common goals—although rarely do they agree on how just those goals are to be reached.

There is a famous story about Speaker Sam Rayburn. Once asked how many Presidents he had served under, he responded: "None. But I have had the privilege of serving with eight Presidents."

That kind of attitude is more pronounced today in Washington than at any time since President Roosevelt took office in 1933.

In the 1970s, Congress has taken a series of initiatives that have buttressed its role. By these actions, Congress has not diminished the Presidency but has simply insisted on its own place in the sun of our constitutional constellation.

Congress, increasingly, thinks for itself. It does not tolerate the idea that all wisdom originates at the other end of Pennsylvania Avenue. It seeks to make its constitutional share of the national policy making function an affirmative—even an assertive—one. We in Congress work in harness with the President, but we do not work in tandem. The Founding Fathers did not intend that we should.

It has been said that the Constitution assures that Congress and the President will fight fiercely, fight fairly and fight forever. To a certain extent that is true—and it is an important safeguard of the freedom that has distinguished our nation. It is also true, however—contrary to many news reports—that Congress and President Carter share a common commitment and, with all the fits and starts that are built into the process, have developed a fine working relationship that already has produced many solid accomplishments and will produce many more.

NEW LEADERS IN CONGRESS

This is an unusual year, for not only do we have strong new leadership in the White House, but there are strong, new leaders in Congress as well. The record of this year will show that Speaker Tip O'Neill in the House and Majority Leader Robert Byrd in the Senate are as strong, effective and outstanding as is President Carter in the White House. I am privileged to serve with Speaker O'Neill and our new Majority Leader, Jim Wright of Texas, on the House Leadership team. Way back last December, before either the new Congress or the new President had taken office, we of the congressional leadership already were meeting with President-elect Carter and his new counselors in Plains and laying out priorities for this year.

Since then, the congressional leadership, and particularly Speaker O'Neill, have made it plain that Congress wants coordination and cooperation with the White House—not conflict and confrontation.

President-elect Carter agreed that Pennsylvania Avenue, which joins the Capitol and the White House, is a two-way street. The President showed then, and he shows now, that he is a President who is willing to work with Congress and he is a man who does not fear sharing responsibility—and the credit and blame. He is a good listener, a quality that is not all that common in Presidents—whether of a nation or of a corporation.

President Carter, for example, went to the unusual length of holding a round table last January with 45 Members of Congress, including myself, on international affairs. This is an area where Presidents usually tolerate little advice from Congress. But for seven hours President Carter sat and listened while we of Congress told him what we felt about various foreign policy issues.

In the domestic area, our early priorities dealt overwhelmingly with economic and energy matters. Much of that priority program already is enacted, including a tax cut designed to encourage business expansion.

Energy is a new, urgent and immensely difficult issue. Congress, as you are seeing, is thoroughly exercising its prerogative of reviewing the President's proposals. In that regard, I want to say I do not think things are as irreconcilable as they appear to be right now. I think that all of us, in fact, will be better off for the independent and tough scrutiny by Congress of a major national issue.

The world we live in today, with its domestic and international tensions, its technological explosion and its dizzying change, has presented us with increasingly complex questions of national policy. Our well-being—in many cases, our ultimate survival—depends on our finding answers to questions that either were ignored or did not exist a short time ago. It is essential that we in Congress examine carefully every new proposal, test every thesis, question every premise, debate every solution before we help launch the nation on some new course of action.

The country needs the benefit of all the ideas and debate it can muster on such complex and controversial matters as energy policy, the neutron bomb, genetic research and international arms control. It also needs ideas and dialogue to help solve such less cosmic but equally difficult problems as health, schools, transportation, housing and jobs.

Seeking solutions—or even palliatives—to these problems is not always a net process, as anyone who has followed the fortunes of the President's energy package in the Senate knows. But fashioning an effective and acceptable energy program is an unusually difficult problem, and I hope that our troubles with energy will not blind you to the real record of achievement that the new President and new Congress have put together.

INTERNATIONAL POLICY

On the international scene, the revitalization of Congressional authority has given the House as well as the Senate an increasingly important role in foreign policy. In fact, Kenneth Bradshaw, the Clerk of the House of Commons in Great Britain, wrote in his book, Parliament and Congress: "It can be said of Congress, to an extent that it could never be said of Parliament, that there are times when it initiates foreign policy."

Mr. Bradshaw cited as examples the Senate Foreign Relations Committee hearings on Vietnam in 1967 that gave voice to the misgivings about the war within the United States, the post World War II proposals that paved the way to the North Atlantic Treaty, and the insistence that controls be placed on the use of the atomic bomb. That last effort continues today; the House recently passed a Nuclear Non-Proliferation Act that provides guidelines to the executive in its dealings with other nations.

The Senate's role in foreign policy, including the constitutional power to ratify treaties and to advise and consent to the appointment of the Secretary of State and U.S. ambassadors, is well known. What may not be so well realized are the ways that the House of Representatives increasingly is making itself felt in the international arena.

First, through the legislative process, we authorize the President to make "executive agreements" with certain countries concerning specific matters; these agreements do not require Senate ratification, and, as Mr. Bradshaw pointed out, one of them was important enough to set up American bases in Spain and to commit the United States to keep troops there.

Second, the House plays a foreign policy role through laws authorizing American participation in international organizations. For example, we recently sent to the President a bill providing for U.S. contributions to international lending institutions, such as the World Bank, the Asian Development Bank and the African Development Fund.

Third, the House acts on much legislation needed to implement foreign policy. For example, the proposed Panama Canal Treaties, after Senate ratification, will require new laws passed by both House and Senate enabling the United States to meet the terms of agreement.

I do not say that congressional contributions to foreign policy always represent improvements. For example, like President Carter, I had severe reservations about the restrictions the House attached to the Foreign Assistance Appropriations bill. Many of them would have prohibited assistance to countries that did not measure up to our standards on human rights. Laudable as these objectives were, the restrictions would have hampered the President unduly in the difficult task of helping other nations and furthering American interests abroad. House leaders worked with the White House on this matter to arrive at a compromise that gives the President more flexibility in this vital area. We shall vote on this legislation next week.

CONGRESSIONAL BUDGET ACT

One of the major and little understood reasons for the resurgence of Capitol Hill in recent years is that Congress has moved to re-establish control of its most important constitutional function—the power of the purse—through the fiscal framework provided by the Congressional Budget Act of 1974. As you know, the Budget Act mandates that Congress approve a pair of budget resolutions—spring and fall—not subject to presidential review. These two resolutions set target levels for spending and taxes and then—after we have passed the actual tax and spending legislation in the summer—fix binding totals.

In this way, we know what we are shooting for when we start out the yearly cycle of budget-making and, if economic or other conditions necessitate adjustments along the way, we can make them.

Still more to the point, however, the Congressional Budget process provides us a mechanism through which we can impose fiscal discipline on ourselves. We now can make broad policy decisions about how much shall be spent for various purposes—national defense, commerce, transportation, health, education and welfare and other areas. And we are now able to view the budget—projected expenditures and projected revenues—as a whole. At the same time we can see the budget within the context of the economy at large.

The Congressional Budget Act, in effect, has retooled the mechanisms for making fiscal decisions in the United States government. The Act created the Congressional Budget Office, which gave Congress a professional staff, including its own economists, and computer capability for the performance of in-depth budget analyses and projections.

THE NEW HOUSE

Congress, itself, meanwhile, has been undergoing a substantial and significant change of personnel. In the House of Representatives in particular, we have a young, active, increasingly well educated group of new Members. Some 156 Members—more than one-third of the House—have served one term or less. And 242 Members—well over a majority—have been elected since 1970.

These newer, younger Members joined a cadre of seasoned, longer-term Members who are both knowledgeable on national issues and schooled in legislative skills. So what we have in the 95th Congress is a fortuitous balance of new blood and experience.

It is a combination that, in my view is well serving the best interests of the American people.

With this House, in this post-Vietnam, post-Watergate world, it is difficult for either Presidents or Speakers easily to have their way. Neither a President nor a Speaker can fire, demote or transfer Members of Congress. To convince Members today, it is necessary to rely on reason and persuasion rather than mandate and command.

As its membership has changed, so has the House as an institution. It has become more open and more democratic—both small "d" and large "D."

I shall not here take time to recite the litany of reforms that have made the House of Representatives a more responsive and accountable body, but they are many.

I note, only by way of example, that some 30 to 40 subcommittees—where the bulk of the legislative work is done—have been opened to junior Members. Committee chairmen, once all powerful, now must pay heed both to the members of their committees and to their colleagues in the House for their ascension to committee leadership no longer is assured by seniority.

To be effective today, a full committee chairman must operate like a politician, not an autocrat.

The cumulative effect of all these institutional changes has made the House much more effective in dealing with the needs of the nation.

STEERING AND POLICY COMMITTEE

Among the barely noted changes in the House has been the emergence of the Democratic Steering and Policy Committee as a major policy making instrument.

The Committee, chaired by Speaker O'Neill, is composed of the Democratic Leadership, including myself, and elected Members reflecting the different shades of political philosophy within the Democratic Party, from conservative to liberal; a representative sampling of all geographical areas of the country; and a range of service from first-termer to senior House Members.

The Steering and Policy Committee is a true sounding board of the Democratic constituency of the House. The Speaker convenes it regularly; it serves as a means of planning strategy, testing legislative proposals and rallying support for party policy. Although its decisions are not binding, it is fair to say that the Steering Committee is the closest thing we have to a board of directors in the House of Representatives.

The Speaker also invites outside groups to meet with the Steering and Policy Committee to give their views to House Democrats. On consecutive weeks, for instance, the Speaker asked George Meany and his colleagues in the AFL–CIO to discuss labor's goals and Irving Shapiro and his colleagues in the Business Roundtable to outline theirs.

SPEAKER O'NEILL

Although the Steering and Policy Committee helps to coordinate the majority party's policy in the House, the Speaker remains the chief custodian of leadership. I cannot praise too highly the effective leadership of Tip O'Neill. He understands the House and its Members deeply and thoroughly. His instincts and acumen are legendary. It is my job as Majority Whip to count votes for him on major legislation. But often he will know, even before he looks at the count, how much chance a given bill has in the House. And he'll tell you. You always know where you stand on an issue with Tip O'Neill.

Beyond that, Tip O'Neill is as sensitive and compassionate as he is strong. He believes deeply that our nation's strength and prosperity depend on the extent each of us has to participate politically, socially and economically in the growth of our country.

He deservedly is receiving major credit for the accomplishments of the new Congress and the new Administration. President Carter has been very much a beneficiary of the Speaker's frank advice. I can bear personal witness to this since I participate in the meeetings between President Carter and the House and Senate Leaders.

Every other week the Democratic leaders of the House and Senate have breakfast with the President at the White House. The President tells us what's on his mind and the Speaker and Senator Byrd then tell him what's on ours, with others chiming in whenever they wish.

The conversation is candid and pointed, but warm and friendly. We all want the President to succeed, not just because we are of the same party but because he is the President of our country.

LEGISLATIVE ACHIEVEMENTS IN 1977

This continuing communication and shared responsibility between the two branches of government has helped establish the best legislative record since Franklin Roosevelt's first term. Not since then has any new President seen so many major new laws enacted so soon after he took office.

Let me run over them briefly.

We made a strong start toward economic recovery with a major $34 billion, three-year tax cut, including a new jobs tax credit for employers and a $2.3 billion corporate tax saving in 1978. We have enacted public works, public service and youth jobs laws that are creating more than a million jobs and expanding your consumer markets.

We have established a Cabinet-level Department of Energy, and, as everyone in this room knows, we are in the throes of writing what we hope will be a bill creating a comprehensive energy policy.

Although the Senate is having its problems with energy, this most complex piece of legislation went through the House precisely on the timetable set by Speaker O'Neill early this year. The Senate is completing its deliberations and House and Senate conferees are going to work to develop a final bill that, hopefully, will give the nation a sound, far-sighted policy on a matter vital to the lives of every American, to the strength of our economy and to the security of our country.

Among other accomplishments this year, many of which would stand on their own in any other year, are a $13.7 billion, three-year housing and community development act; a $12 billion, three-year food, agriculture and food stamp reform act; a strip mining control and reclamation act; clean air act amendments that prevented a possible shutdown in the auto industry; and a $3-billion, two-year small business act. Next week we expect to pass amendments to the Social Security Act to assure its solvency.

END TO 8 YEARS OF DIVIDED COUNSEL

Beyond these substantive accomplishments—and perhaps even more important—we have shown the people of this nation that Congress and the President can work together in their behalf.

As contention is replaced by cooperation, so will there be a return of consumer confidence, a corresponding increase in business activity and an upturn in the economy.

STILL MUCH TO DO

I do not wish to leave the impression that all is done and utopia is near. The stock market is just as disappointing to me as it is to investors and to those of you who seek to raise capital in it.

Inflation and unemployment rates remain too high. Unemployment among teenagers and minorities is particularly troublesome—and dangerous—although it is heartening to note that unemployment again dropped last month and is more than a full point below the 1976 high of 8 percent.

Without question, we will continue to be preoccupied by the energy issue.

We must have tax reform that is fair to the taxpayers while providing incentives to economic growth.

We cannot ignore the problems that continue to afflict our great cities.

Nor can urban America turn its back on the fact that falling farm prices threaten the strength of rural America.

High on the agenda of President Carter and Congress in the year upcoming must be welfare reform and an overhaul of the Social Security system.

Poll after poll shows that Americans are deeply worried about the skyrocketing cost of health care.

And even as our citizens want decent jobs and decent wages, they are insisting that the environment in which they live and work be safe and healthy.

In the international arena, our relationships with the Soviet Union continue to be of central concern and involve such questions as nuclear proliferation and arms control as well as trade.

Even now President Carter is seeking some viable basis for moving toward a stable peace in the Middle East.

We must look anew at our policy toward the increasingly vocal nations of the developing world, and we must attempt to fashion a policy toward the People's Republic of China that is at once realistic and responsible.

And, of course, we must maintain and strengthen our links, both political and economic, with our most valued allies, the countries of Western Europe and Japan.

In all these areas, our government must act in the best interests of the citizens of the United States including your own interests as businessmen.

BUSINESS AND CONGRESS

In conclusion, let me turn to the relationship between business and Congress. Rest assured that Congress is no more anti-business than business is anti-Congress. As Americans, we are all in the same boat, a boat whose passengers include working men and women, farmers and consumers as well.

We will strive to see that business—big and small—can be conducted in the kind of an atmosphere that is conducive to its health.

There is not one Member of Congress who does not want business to prosper. We know, just as you do, that only a prosperous, thriving private economy can provide the jobs our nation needs, not to speak of the revenues required to operate the public sector. If any of you think that we enjoy voting money for welfare or for unemployment compensation or for public service jobs, he is wrong.

You and I know that programs like these are necessary evils that would not exist if your own businesses were expanding and were more profitable.

But just as you want us to foster an economic climate for your success, so we want you to understand and support programs and policies that will enable the less fortunate members of our society to sustain themselves. Just as you seek opportunity for yourselves, so must you recognize that others who may not be as smart as you, as hard-working as you or as lucky as you need your help.

Like President Carter, we want a balanced budget, too. The continued high deficits in the Federal budget are as obnoxious to us as they are to you. But we also know—as, indeed, I'm sure you know—that a balanced budget can only be the product of a balanced economy.

You in business may be able to balance your budget by reducing your work force, by cutting your expenses. But we cannot balance the Federal budget by throwing people out of work, by reducing the assistance given to people who either cannot work or who want to work but cannot find work. The budget cannot be balanced by a recession. As we have learned to our sorrow, we all now know that a recession does not even reduce inflation.

So we need to continue policies that help our economy grow, help to create jobs and help expand business.

Such policies are the best kind of welfare reform because they get able-bodied men and women off public assistance and make them both consumers and taxpayers. It is a simple fact that every increase of one percent in the rate of national unemployment above four percent costs the Federal Treasury $16 billion in lost tax revenues and additional unemployment compensation and other recession-related payments.

I suggest that those of you who object to aid for welfare families and to other forms of public assistance do some quick calculating to determine the annual subsidy you get from the Federal government from deductions for interest and taxes and business expenses as well as from other tax advantages, and then compare that figure with what a family on welfare may receive each year.

In saying this, I don't want you to think for a moment that we do not recognize your problems or that we do not sympathize with your needs. We know, for instance, that capital formation is becoming increasingly difficult. We know that without action to stimulate new investment there cannot be the kind of economic expansion that will be lasting. We know that you need new plants and new equipment. We know that many of our laws designed to protect your employees from job safety hazards and to protect you and your families and your employees from environmental hazards are costly. We know that you need help.

But you must recognize that others also need help and that the kind of blind opposition that often comes from businessmen less enlightened than the membership of the Business Council brings on confrontation and ill-will rather than the kind of joint effort needed to solve problems that affect us all.

Just as we now have political leadership that is taking a new look at old problems and seeking solutions that will benefit all of us, so we need business leadership that looks beyond short-term problems and quick profits to the needs of our entire nation.

We need leadership from you as individuals and from the Business Council as an organization that recognizes that private enterprise cannot be successful unless the other parts of our society are successful, that the basis of stable, sustainable growth cannot come at the expense of one group over another.

The Business Council historically has been a major voice of business leadership in our country. I for one hope that you will continue in that role, not solely as champions of the interests of business, but as citizens of the greatest free nation in history.

For, as the great philosopher, Alfred North Whitehead, once said, ". . . a great society is a society in which its men of business think greatly of their functions."

May you think greatly of yours.

SECRETARY SCHLESINGER ADDRESSES THE NATIONAL CONVENTION OF THE AMERICAN LEGION

Mr. JACKSON. Mr. President, the Secretary of Energy, James R. Schlesinger, recently spoke to the National Convention of the American Legion. His concise and thoughtful analysis of our energy problems makes clear how little time we have to chart a new course on energy. His discussion of the President's program merits careful study as Congress nears final action on this legislation.

I ask unanimous consent that Secretary Schlesinger's eloquent remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY JAMES R. SCHLESINGER

Legionnaires, today our nation faces a troublesome passage—requiring dramatic changes in our sources of energy. It is a passage both difficult and potentially perilous. Nonetheless, it is one through which—with foresight and with dedication—we can triumphantly come. The President of the United States has sounded a clarion call—of warning and of challenge. To that summons Legionnaires, along with other Americans, will respond. It calls us to a different type of battlefield—one that requires less raw courage than it does persistence and patient effort.

If we, as a people, respond—as we have done before—then we shall, with relative ease, move through a difficult transition of prospective oil stringency into a new future in which our energy supplies will be provided by new sources and new technologies achieved through American imagination and ingenuity. If we fail to respond, we shall face a growing menace to our economy and to our political and social stability. Consequently, we cannot afford to fail.

President Carter has called for the moral equivalent of war. This does not—happily—mean that the Nation need go on a wartime footing or resort to wartime measures. But, it does mean that we must achieve the cohesion and that sense of national purpose normally achieved only in time of war.

In itself the energy crisis provides no clear, unequivocal signal of national danger such as that represented by Pearl Harbor. Instead, the danger is more subtle, more complex. It can be grasped only through analysis and countered only through vision. Yet the signs and the portents have continued to grow. Indeed, one might describe the brief embargo of 1973-1974 as an undiscerned Pearl Harbor.

Only lately have we begun to grasp the magnitude of the energy problem. And our awareness is yet imperfect. Recent polls have disclosed that some 50 percent of the American people do not know that the United States imports any oil at all. This is disturbing when our import dependency has already reached almost 50 percent. Thus, altogether too many Americans apparently believe that we are self-sustaining and possess energy invulnerability. They cannot, therefore, appreciate the constraints that continuing economic growth and growing dependency would impose on our foreign and defense policies—or anticipate the even greater vulnerability that we will face as oil production worldwide reaches the point that it can grow no further.

How did we get where we are today? Let us examine the background.

Time was that our energy problems, like our security problems to which they are intimately related, were easily borne. In the wake of World War II, and down into the Vietnam war, the preeminence of American power remained unquestioned. The expansion of the international economy and the maintenance of security took place under the protection of that American power. In that era, we also were totally secure in our energy supplies. Indeed, our capacity was so great, relative to demand, that we could not only satisfy our domestic requirements, but could also take care of our allies in a period of emergency. In the Suez crisis of 1956, for example, the shut-in production capacity of the United States was by itself sufficient that we could tide Europe through a period of cut-off.

In the subsequent twenty years vast changes have taken place. American oil consumption has grown to so great an extent that even with enlarged production, we accommodate little more than half of our domestic requirements. And, of course, there is preciously little spare capacity to tide other nations over in a time of trouble.

Just as political security has been affected by a world grown more fractious, just as our military position has been challenged by the steadily growing power of the Soviet Union, so has our overall position been further weakened by the new fact of substantial energy dependency. Energy supply and security have always gone hand in hand. But the United States has been blessed with abundant resources, so that the connection between energy and security could be accepted without being explicity recognized.

Yet, as the world has become more interdependent, and as our own dependency has grown, our ability to protect our vital interests has come under a new and different challenge.

Moreover, there is still a more fundamental and underlying issue that goes beyond the ordinary considerations of security policy. It is a problem that we share, with all other nations, of prospective worldwide shortage. It is the prospect that within a decade oil production worldwide will have reached a limit beyond which it will not be possible significantly to increase production. Sometime in the early 1990's oil production worldwide will peak out and begin its long slide downward. But even before then we shall approach a production ceiling such that output cannot accommodate further increases in demand. Consequently, expanding supplies of oil—the world's fuel of choice—will not supply the additional energy to sustain further economic growth and rising standards of living. This brief period, a century, in which oil has become the principal motive force of worldwide economic expansion will be at an end. We, along with all other nations, shall have to turn to alternative sources of supply and, in the period of grace allowed to us, seek out those alternative sources.

There are, of course, always Pollyannas who will believe that nothing that they wish not to occur, can possibly occur. They will suggest that, of course, there must be more oil out there to accommodate our ever-expanding appetite. Be not deceived! Our voracious demand for oil—doubling every decade, increasing thirty fold in half a century—is beginning to encroach not only on potential production limits but on potential long-term supply. In this decade alone the world will consume not only one-third of its proven reserves, but will also consume one-tenth of all the oil that the geologists in their wildest dreams ever expected might exist worldwide—and might be found and recovered.

Thus, we, along with other nations, face an altered and potentially distressing future. Let us gather our courage and determination and face up to it.

We must not imitate the grasshopper in Aesop's fable. We must avoid a policy of drift until the moment of acute crisis is upon us. If we have the appropriate vision and foresight, we shall take advantage of the time that is available to us and act now.

We should begin now—while we still have time and before the era of restricted oil and gas availability is upon us—to alter the capital equipment that sustains and will sustain the American standard of living—our factories, our homes, our automobiles. Our factories and power plants should increasingly burn coal or uranium, which these stationary facilities, unlike our transportation, can utilize at small penalty. We must, if we are prudent, take care to avoid increased dependence of our capital assets on oil and gas when we already know that the future supplies will be limited. And, we must achieve a higher degree of fuel efficiency. We must learn to conserve.

These are the things that we must do. And these are the things that President Carter's energy plan is intended to accomplish. The measures are numerous and intricate, but the underlying design is quite simple. Put briefly, the program is intended, first, to attain a higher degree of fuel efficiency to reduce waste and to conserve. Second, it is intended to wean us away from oil and gas and gradually to substitute further our more abundant fuel resources, solar energy, coal and uranium.

A major goal of the plan is to reduce the annual growth of energy consumption in the United States from approximately 4 percent to less than 2 percent per year. This can be achieved by making our homes better insulated, our automobiles more fuel-efficient, and by providing incentives for greater efficiency in our industrial processes. It can be achieved with no sacrifice in our prospective living standards.

The President has called for sacrifice, but the sacrifice for which he calls is less of a material nature than of a change in attitude and assumptions—of all sacrifices the hardest for men to make. We shall have to give up our careless, spendthrift, ways in energy use. We shall have to learn anew such homespun wisdom as "willful waste makes willful want."

Nonetheless, it is axiomatic in the President's plan that enough energy shall be available to permit the continued growth of the economy and the expansion of productivity, output and the number of jobs. The pace is gradual and the use of energy will continue to grow. We are not interested in self-punishment through conservation.

The major element is equally simple: To avoid a growing dependence on oil and gas and to make better use of our more abundant fuel resources.

It was only after World War II that we emerged from a period in which coal had been our principal fuel. Increasingly, we shall return to it. Facilities-in-place can, in most cases, readily utilize coal. In that way, we can reserve a larger share of the dwindling supply of fuel liquids for our transportation sector in which there is no such readily available substitute. Our new factories and power plants should use coal or uranium. In that way we can avoid having our new capital plant and equipment become dependent on a type of fuel which is likely to be unavailable during the last fifteen or twenty years service of that plant.

If we are prepared to act now, we can make this transition relatively smoothly and painlessly. If we fail to act now, the consequences will be far more dire: In the middle 1980's rising unemployment, much more rapid inflation, and severe balance of payments difficulties. Such developments would shake the political and social foundations of the United States in a way that they have not been shaken since the 1930's. Much has been said about the economic consequences, relatively light, of the National Energy Plan. It is far wiser if we take into account not the consequences of our decision to act, but the economic and political consequences of our failure to act, for those could prove devastating.

But what of the longer term? What happens when we run short, as we inevitably must, of fossil fuel? Will these short-term sacrifices, which we now contemplate, make things better for our children and grandchildren in the future, or, will they merely postpone a day of reckoning? Some people these days have become so disquieted by future shock that they have lost faith in our long-run ability to cope. Will there be a happy ending?

The answer is unequivocally, yes. We face the future, not merely with hope, but with confidence. We shall devote our technical resources to the development of new sources of supply, be they techniques for the more efficient use of available energy, biomass, solar energy more narrowly defined, or fusion or fission power. Our researchers and our scientists have not yet failed the United States. Once we recognize the problem and apply to it the time-honored inventiveness and resolution of the American people, we can have unbounded confidence in our ability to solve it.

Yet, the Nation does face a formidable challenge.

Let us resolve to master it.

The President has presented an ambitious plan. Its development has been guided by the precept: Make no small plans; they have no magic to stir the souls of men.

The challenge is sufficiently great that this is no time for politics as usual, looking no further than the next election. It is no time for business as usual, looking no further than the next profit and loss statement.

The President has called on all of us: In every State, municipality and hamlet; in business and in unions, and, in voluntary organizations. Let us all respond to that call. We shall need the help of every man and woman in America.

"The summer patriot and the sunshine soldier will in this crisis shrink from the service of his country."

CAB NAMES ILLINOIS ATTORNEY NEW GENERAL COUNSEL

Mr. PERCY. Mr. President, on December 5, 1977, one of my constituents, Philip J. Bakes, Jr., joined the Civil Aeronautics Board as its general counsel.

At 31 years of age, Mr. Bakes is one of the youngest persons ever named to the position of general counsel at any Federal regulatory agency. I applaud his selection by Civil Aeronautics Board Chairman Alfred E. Kahn. The Chairman has not only recognized the talents of a brilliant and personable attorney, but the skills of an individual who effectively fought for the passage of airline regulatory reform legislation in the Senate. The selection of Mr. Bakes, once again, underscores Mr. Kahn's commitment to reform.

During the past 3 years, as an attorney working for two Senate subcommittees, Mr. Bakes quietly built support for airline reform legislation, while effectively countering a major campaign to thwart change. It is no small tribute to him that this legislation passed the Senate Commerce Committee on October 27, 1977, by an overwhelming 11–2 vote.

Mr. Bakes has well served Senator EDWARD M. KENNEDY (Democrat of Massachusetts), who cointroduced airline reform legislation this session together with Senator HOWARD CANNON (Democrat of Nevada). As Special Counsel on the Subcommittee on Antitrust and Monopoly, Mr. Bakes worked to achieve a consensus among supporters of reform.

Previous to joining the Antitrust Subcommittee, Mr. Bakes was Assistant Chief Counsel for the Senate Subcommittee on Administrative Practice and Procedure where he directed a major set of oversight hearings on the CAB for Senator KENNEDY. Prior to joining the Senate staff, he was Assistant Special Prosecutor for the Watergate Special Posecution Force at the Department of Justice from May 1973 to October 1974.

Mr. Bakes is a native of the Chicago area. His parents, Philip J. Bakes, Sr., and Theresa Bakes, reside in Palos Hills, Ill., southwest of Chicago. They can justly be proud of their son's extraordinary achievements.

Mr. Bakes attended Brother Rice High School in Chicago and then graduated from Loyola University on the North Side of Chicago in 1968, where he received the President's Medallion as "Student of the Year." In 1971, he graduated from the Harvard University Law School, where he edited the Law Review.

His talents will be missed at the Senate, but I am confident he will continue to work for needed reform and less Government regulation in his new position.

DELIVERY OF ALASKAN OIL

Mr. MELCHER. Mr. President, I believe it is important to inform the Senate on an issue that House and Senate energy conferees have worked hard to try to resolve—that of speeding delivery of Alaskan oil to parts of the United States which badly need it. Unfortunately, in my judgment, that effort has been unsuccessful.

My State of Montana, and indeed, the entire Northern Tier of States and parts of the Midwest, are facing a desperate crude oil supply situation at the very time we have a glut of oil on the west coast. We have the means by which to begin promptly to correct this serious imbalance with legislation already approved twice by the Senate, and yet I believe tentative action by the conferees on the Public Utilities Regulatory Policy Act is a step away from this goal rather than toward it.

On October 6 as part of the bill I mentioned, the Senate approved legislation sponsored by 37 of us to speed decisions on Federal permits and authorizations necessary for U.S. pipelines to be constructed to carry oil from the west coast to Northern Tier and inland States. That amendment recognized that there are two such projects now proposed: the Sohio Long Beach, Calif.-to-Midland, Tex., pipeline designed to carry about 500,000 barrels of Alaskan crude oil daily to existing refinery centers and pipeline systems in the gulf coast and midcontinent areas; and the almost one-million-barrel-per-day Northern Tier Pipeline proposed from Port Angeles, Wash. (outside Puget Sound), through Northern Tier States to Clearbrook, Minn., where it would connect with existing pipelines to serve refineries as far east as Buffalo, N.Y.

The amendment was straightforward and direct. It said that since an environmental impact statement was completed on the Sohio proposal, a Federal permitting decision should be made by December 15, 1977. The Federal EIS on the Northern Tier project—which was triggered by permit applications last April—our proposal would require to be completed by March 1, 1978, with a decision on whether to approve the line by April 1. In both cases, any construction permits, rights-of-way or other Federal authorizations should have to be issued within 30 days of such approval. In addition, future pipeline applicants could receive expedited consideration, with any environmental impact statements required to be completed within 1 year. And in every case there would be expedited handling of court challenges which might arise from actions of Federal agencies.

On October 31, an almost identical amendment was approved by the Senate as part of the energy tax bill. It was modified to recognize concern from within the administration that the Northern Tier EIS preparation schedule was short—and the final decision date was moved back to June 15, 1978. It also included language recommended by the administration concerning the need to encourage cooperation between States and the Federal Government in pipeline permitting and to specifically authorize and direct use of competent non-Federal data in preparation of the EIS. Again, there was no objection to the amendment.

Although the House of Representatives has not acted on this matter, the House Interior Committee did report similar legislation and Chairman MORRIS UDALL urged conferees to recognize that action as they considered the Senate amendment.

When the nontax energy conferees met on this subject last week, they were faced with a letter signed jointly by Secretary of Interior Cecil Andrus and Secretary of Energy James Schlesinger setting forth the administration position on this legislation. The letter stated that the administration supported the intent of the Senate amendment to expedite pipeline construction, but took objection to the specific language. The letter stated: "We strongly believe that legislation of this type should be enacted as soon as possible," but it proposed provisions, circulated in a draft bill by House conferees which were approved by the conferees in large measure but which could actually delay the construction of the pipelines we need to move Alaskan oil inland.

This result has been brought about by the addition of criteria, considerations, consultations and decision-making deadline delays that are not only unnecessary, but which go beyond those in effect under existing laws which govern the issuance of Federal rights-of-way, permits and authorizations for pipelines. As one Senator from a State projected to have crude oil shortages within the next year, I would prefer to have no change in existing law than to pile on more Federal redtape which could further delay construction of the Northern Tier Pipeline. The possibility of a 2-year delay is clear: the entire 1979 construction season could be lost as a result of the conference action instead of this pipeline, if approved under the Senate provisions, being able to move forward in 1978 with one-half billion dollars in steel orders, acquisition of rights-of-way and early construction starts on pump stations and port facilities and completion in 1980. The conferees have tentatively agreed to provisions that would delay completion of the line until 1982.

My purpose today, is to bring this matter to the attention of the Senate and the conferees and to urge that they reconsider this matter. There is still time to return to a better, more direct approach to solving the West Coast crude oil surplus situation through equitable distribution of Alaskan crude oil as is required by law and by clearing the way for early decisions on the crude oil pipelines already proposed to accomplish this goal.

Mr. President I ask unanimous consent that the letter from the Secretaries of Interior and Energy and the detailed response I sent to the Secretary, which explains the delays likely under the conference agreement, be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

DEPARTMENT OF ENERGY,
Washington, D.C., November 30, 1977.

Hon. HENRY M. JACKSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR JACKSON: Thank you for this opportunity to state the Administration's position on Subtitle B of Title I of the bill H.R. 4018, the "Public Regulatory Policy Act of 1977", which was passed by the Senate on October 6, 1977.

The Administration strongly opposes Subtitle B as presently written and believes that it is a highly inappropriate mechanism for selection of a crude oil transportation system to supply northern tier and midwestern States in the 1980's. Essentially, Subtitle B is expediting legislation for construction of a west-to-east pipeline system which would be located by the terms of the bill entirely within the United States. The Administration recommends revised legislation that would create a neutral decision-making process to evaluate all the proposals for crude oil transportation systems, in Canada as well as in the United States, and to approve the system or systems that would best serve national energy and environmental concerns.

The Administration supports the intent of Subtitle B to expedite development of any transportation system or systems which may be necessary to deliver Alaskan and other crude oil to northern tier and midwestern States. We strongly believe that legislation of this type should be enacted as soon as possible.

The Administration therefore recommends that the Committee amend and substantially revise Subtitle B to include the following major changes:

1. Neutral Decision-Making Procedure. The Administration recommends language that would authorize the President to evaluate and approve any system or systems with respect to specific energy and environmental policy critieria. Any such legislation should provide for a neutral decision-making procedure that would permit consideration of all proposed pipeline systems, whether or not they would be located within the United States. In addition, the President should receive recommendations from the States and from Federal agencies before making his decision and should be required to explain the basis for his decision with respect to the energy and environmental policy criteria that would be specified in the bill.

2. Review Deadlines. The Administration recommends language which would extend the deadline for preparation of environmental impact statements from March 1, 1978, as provided in Subtitle B, to December 15, 1978. A Presidential decision should then be required 45 days after completion of the final environmental impact statement. The March 1 deadline in the Senate bill is simply unrealistic and would cause inadequate environmental impact statements to be filed which would open any approved pipeline to judicial challenge. A somewhat longer review process of approximately one year would reduce this risk and allow Federal coordination with State agencies. The Administration believes that an adequate review period is essential to avoid subsequent delay due to litigation.

3. Sohio Project. Subtitle B provides a one-year deadline for completion of a final environmental impact statement with respect to the Long Beach/Midland, Texas ("Sohio") pipeline. The Administration recommends that the Sohio project be excluded from the decision-making aspects of this legislation since this project is already in the final stages of the review process. To require another review procedure would risk further

delay of this project. The Administration, however, recommends that the Sohio project be included within those sections of Subtitle B which call for expedited permitting and limited judicial review.

4. Canadian Route. The Administration further recommends language that would expressly allow for construction of a pipeline system to be built through Canada to serve inland markets in the United States. Such language should specifically authorize the President to enter into negotiations with Canada to discuss terms for possible expansion of crude oil exchanges, as well as discuss other measures which could be taken to establish cooperative arrangements for transportation of crude oil.

We hope this brief statement of the Administration position on Subtitle B will assist you and your colleagues in your deliberations.

Sincerely,

CECIL D. ANDRUS,
Secretary, Department of the Interior.
JAMES R. SCHLESINGER,
Secretary, Department of Energy.

U.S. SENATE,
Washington, D.C., December 6, 1977.

Hon. JAMES R. SCHLESINGER,
Secretary, Department of Energy,
Washington, D.C.

DEAR MR. SECRETARY: Your joint letter with Secretary Andrus to Senator Jackson giving the Administration's viewpoint on legislation to expedite oil pipelines from the West Coast to inland states was neither specific nor complete.

Your letter is critical of provisions of Subtitle B of Title I of H.R. 4018, but provides only sketchy Administration recommendations dealing with federal permits for oil pipelines. Thirty-seven of us in the Senate cosponsored the above Subtitle to expedite as rapidly as possible federal permits for these oil pipelines. Your recommendation would unnecessarily delay start of construction of a northern tier-to-midwest oil pipeline for several years, in effect, virtually gutting our proposal. In fact, your timetable for the issuance of federal permits would likely be in the last half of 1979—probably later than it would be without any expediting legislation. Although almost everyone agrees that procedures for federal permits under existing law are too time-consuming and entangled with too much red tape, your proposals blossom out into more layers of bureaucratic evaluations, comparisons and data collection.

It is particularly disappointing and counter-productive that your recommendations adding further layers of criteria and requirements onto the present existing law dealing with the issuance of federal permits for oil pipelines occur after we have worked with you diligently for the past eleven months. During this time we have tried to explain to you and others in the new Administration that because of hearings held throughout 1976 and the passage of Section 18 of Public Law 94-586 we believe that expedited federal action is necessary to relieve the oil glut on the West Coast by transporting oil to refineries in inland states that are desperate to assure a stable supply of crude.

The Federal Energy Administration study on petroleum supply for northern tier states stresses that in 1978 Montana and Eastern Washington will have a shortfall of 35% and 12.5% respectively. The projected surplus on the West Coast of Alaskan crude will be 600,000 BPD when the Alaska Pipeline is operating at 1.2 million BPD. There will be a one million BPD West Coast surplus when the pipeline meets its designed level of 1.6 million BPD some time late next year. In addition, Elk Hills production is only averaging 121,000 BPD although the maximum efficient rate for the field is 300,000 BPD, production of which is mandated by Public Law 94-258. The hold-down of Elk Hills production adds to the dilemma to which this Administration has not constructively responded.

Your recommendations, rather than resolving and shortening the time frame for the issuance of permits, have added many new considerations, consultations and evaluations by federal agencies in addition to what is now required. Your proposal is more time-consuming than would be the case if our legislative proposal were passed and is probably more time-consuming than if no legislation at all were passed.

Our proposal, which was introduced as S. 1868 with more than one-third of the Senate cosponsoring, was passed twice without objection in the Senate. Its purpose is straightforward—to expedite the issuance of federal permits for oil pipelines from the West Coast to inland states. Further, the proposal limits judicial review of those federal permits.

Since your letter fails to note the urgency of solving the crude oil surplus on the West Coast, contains some misconceptions about the intent of this proposal, and makes some misstatements on the Sohio project, we believe it is essential that we respond to you on those points.

Our proposal establishes a time frame for issuing federal permits. This applies to oil pipelines built within the United States since neither Congress nor executive departments such as yours are involved in Canadian oil pipeline applications and permits. Our proposal does not address the permitting process that the Canadian Kitimat pipeline would undergo since that would be a Canadian government process. Yet, your letter stresses the need for "legislation that would create a neutral decision-making process to evaluate all the proposals for crude oil transportation systems, in Canada as well as the United States . . ." You or the President hardly need our permission to speak to the Canadians. but it is misleading to indicate you would hold up U.S. permits pending action by the government of Canada. The truth is there is no movement in Canada on this matter and you and other federal agenices must process the pending U.S. applications for permits.

There are two active proposals—and only two—dealing with the construction of pipelines to solve the surplus of crude oil on the West Coast. These are the Northern Tier and Sohio proposals. Northern Tier made applications for federal permits last April and Sohio (for the Long Beach-to-Midland project) made applications for federal permits in 1975.

Despite your letter's allegation. our proposal specifically permits consideration of any other proposal for an oil pipeline in the United States as cited in Sections 142(g) ad 143(a).

The above-named projects—Northern Tier and Sohio—or any other applicants which may be proposed under our legislation will be built by the private sector using their own capital. They seek federal permits only to allow them to start such construction. The Northern Tier Pipeline Company is a new entry into the major oil pipeline business. It is not owned, controlled or managed by a major oil company. In fact, it is refreshing and encouraging to find that a 40-inch oil pipeline with over 1,500 miles of new construction can be proposed in the free enterprise system without being involved with a major oil company and without asking for federal subsidies.

It is impossible for Congress to pass legislation to expedite the issuance of the necessary permits for an oil pipeline in Canada. While the Administration may want to consider and evaluate the effect a pipeline such as Kitimat might have on the United States, it is apparent that (a) such a line, if it were to be built, would be built by private industry; (b) all of the construction and environmental permits would be under Canadian authority; and (c) Congress does not need to pass any new legislation to allow such an evaluation by the Administration.

The once-proposed pipeline from Kitimat, British Columbia, to Edmonton, Alberta, where it would connect with an existing pipeline system to bring Alaskan oil to the United States, is no longer active.

Kitimat proponents several months ago asked that their application before the Canadian National Energy Board be held in abeyance pending a decision on the Trans Mountain proposal which would reverse an existing pipeline to pump oil from Puget Sound, Washington, to Edmonton and back into the United States. That project, however, was blocked by recent legislation banning expanded tanker facilities in Puget Sound.

In the meantime, the largest equity owner in the Kitimat project, Koch Industries, announced its withdrawal. The group will not seek reactivation of its project application without additional participants.

The West Coast Oil Ports Inquiry, set up by the Canadian government, was studying the issue but has been indefinitely recessed citing lack of any projects to consider. Recent testimony before a House Interior Investigations Subcommittee by a representative of the Canadian panel (also called the Thompson Commission) indicated that the earliest it could be reconvened under any circumstances would be late spring 1978 and no permits could be issued prior to September 1979.

As a result of these events, the only remaining active proposal to serve the Northern Tier and Midwest states already feeling effects of the Canadian crude oil phase-out is the Northern Tier Pipeline project. It is designed to carry nearly one million barrels of Alaskan and other crude oil from Port Angeles, Washington (outside Puget Sound) through Northern Tier states to Clearbrook, Minnesota, where it would connect with existing pipeline systems to the Midwest and eastward to New York. With expedited permit approvals, it would be in operation by mid-to-late 1980. Without expedited permit approvals, operation could not begin until 1981 or 1982.

Congress does not envision that your and other Executive Departments should perform a special function of designating which oil pipelines should be built within the United States. However, Congress has set many standards and requirements for federal agencies requiring specific permits from various federal agencies for the construction and operation of oil pipelines within the United States, particularly when an oil pipeline crosses federal lands. As the floor manager in the House and chairman of the conference committee during the passage of the Trans-Alaskan Pipeline Act in 1973, and as the chairman of the House subcommittee having oversight responsibility during the construction of that pipeline, I am well aware of the need to expedite and coordinate the various federal permits that are required for a major oil pipeline. Our proposal provides such an expedited framework.

Your letter is in error in stating that our proposal provides a "one year deadline for completion of a final environmental impact statement with respect to the Long Beach/Midland, Texas ('Sohio') pipeline." Section 142(f) noted that Sohio's environmental impact statement (EIS) had been completed on June 1st of this year.

Section 143(a) in part states an exception for Sohio because of its completed EIS. Furthermore, to make certain that the decision on Sohio's application would be timely, our proposal sets a deadline of December 15 of this year—only a few days away from now. Despite this explicitness on Sohio, your letter mistakenly states our proposal would "require another review procedure (and) would risk further delay of this project."

Compounding the confusion and misleading statements in your letter is the fact that no draft bill from the Administration is referred to or identified. However, the House conferees proposed a draft which was represented as being the detailed recommendations of the Administration. Your letter recommended December 15, 1978, as the deadline for completion of an EIS for Northern Tier which varied slightly with the draft. Further, your letter proposed a presidential decision 45 days after completion of the final EIS, yet the draft bill would have provided 120 more days from that time to delay making the decision. Obviously you propose that a decision on whether or not Northern Tier will be granted federal permits need not be made until May or June of 1979. While action of the conferees last week shortened that time frame somewhat (March 15, 1979), your recommendations on when the permits should actually be issued following that time frame is left very much indefinite since "federal officers and agencies" will issue the necessary permits "as soon as practical." It is obvious to me that that could stretch well past the middle of 1979, not only missing all of the 1978 construction season but all of the 1979 construction season. Construction then could only be completed in late '82 or '83.

The urgency of the problem is much greater than has been recognized by the Administration. Our proposal to expedite has been burdened by so many added tests and processes contained in your draft (accepted by the conferees) to delay Northern Tier or other applicants than would be the case under existing law. You have added further red tape burdens to an already tortuous task.

We encourage you and others in the Administration to again review your proposal and to communicate to the conferees your willingness to accept a more simple and direct approach similar to that passed by the Senate. Without such an approach, no final decision can be made on applications such as Northern Tier's until 1979 instead of next year and, therefore, no construction or rights-of-way acquisitions could start and no steel orders placed until 1979 instead of next year. Our refineries are running out of crude oil supplies and they need to know where a stable crude supply can be obtained. Construction time for Northern Tier is two years and a start-up, even if late in 1978, would allow for placing of a half-billion dollars worth of steel orders at that time and completion of the pipeline in 1980.

Sincerely,

——— ———.

NEW OIL DISCOVERIES ON THE ALASKAN NORTH SLOPE

Mr. STEVENS. Mr. President, there is a thread running through the current debate on the national energy policy legislation which I find to be disturbing. The basis of this theme is in the notion that we are so low on oil and gas resources that there is not much chance of finding any significant new supplies in the future.

This notion is applied not just to the traditional producing regions in the South 48—to Texas, Louisiana, California, and so on—but to a State which is truly on the frontier in this respect—Alaska. The theme appeared and reappeared throughout the Senate's consideration of the Alcan pipeline resolution and I have noticed it in other contexts. The theme is this: The Prudhoe Bay reserves that have been discovered and are now producing are all that we will get from Alaska's North Slope.

There are two corollaries which follow from this untrue proposition:

First, the trans-Alaska pipeline system will be running half empty in a few years after Prudhoe Bay production peaks and begins to decline.

Second, there is no need to take seriously the potential for new discoveries and the incentives needed to explore and develop them.

These corollaries are as false as the proposition on which they are based.

The North Slope of Alaska is a vast, almost virgin region, even after decades of exploration. Prudhoe Bay and the areas of the national petroleum reserve which have been explored are relatively small. All of the remaining area has oil and gas potential and only further exploration can tell us just what that potential is.

Let me add, at this point, that the North Slope is only the second of Alaska's 15 sedimentary basins to be the subject of significant oil and gas exploration. Each of these other basins has the potential for a substantial contribution to the Nation's energy supply.

The fact that there are oil and gas reservoirs up on the North Slope just waiting to be found is underscored by some recent discoveries. Exxon has drilled two wells which have encountered large quantities of oil and gas in a region about 55 miles east of Prudhoe Bay.

One was on Flaxman Island, in the Beaufort Sea, the other was about 5 miles away on the mainland in what is known as the Point Thompson Unit. The Flaxman Island well produced oil at a rate of 2.500 barrels per day (2.500 BPD) and gas at 2 million cubic feet per day (2 MMcfd). The Point Thompson well produced oil at 2,300 BPD and gas at 13.3 MMcfd.

The geologic formations involved here are distinct from those at Prudhoe Bay. It is now known yet what the relation is between the producing zones of these two new wells, nor is it known how large these formations might be. So no estimate is available yet of the quantities of oil and gas which may be present. But Exxon plans further exploration in the area. The next well will be drilled about 4 miles from Point Thompson, in the opposite direction from Flaxman Island.

I have copies of a few news releases and press clippings on these new discoveries which I ask unanimous consent to be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Anchorage Times, Oct. 25, 1977]

EXXON REVEALS OIL DISCOVERY AT ISLAND EAST OF PRUDHOE

(By Susan Andrews)

Exxon has discovered oil at Flaxman Island, 50 miles east of Prudhoe Bay.

The discovery was made as the result of an exploratory well drilled in 1975, but it was a closely-held secret until the state's two-year confidential period expired Friday.

Exxon said additional drilling will be needed to determine the extent of the discovery.

The well flowed at a rate of 2,500 barrels a day during testing, which state officials point out is not an exceptional rate for the North Slope, although it would be a good well in the Lower 48.

Some Prudhoe Bay field wells flow from 10,000 to 24,000 barrels a day.

Exxon is still testing an exploratory well at Point Thomson, seven miles west of Flaxman Island, which was started last March.

And Exxon has applied to the state for a permit to drill another wildcat well four miles west of Point Thomson.

But a decision to drill won't be made until after the company has finished testing the Point Thomson well in another week or so and has evaluated the results, said Exxon spokesman Bleu Beathard.

The Flaxman Island well is a single well, not an old field, emphasized Tom Marshall, the state's chief petroleum geologist.

"It's a very interesting teaser," he said, "that you can't walk away from. It may be on the edge of something big."

Because the well is isolated from the Prudhoe Bay field, it will require much more production than if it were in the field to justify the cost of separate processing facilities and a pipeline, Marshall said.

Exxon's Flaxman Island well was drilled from a lease held solely by Exxon.

The Point Thomson well is located on a 40,768-acre unit on which 20 companies hold leases. A group headed by Tipperary Corp. owns the lease on which the actual well was drilled. Other leaseholders in the unit include Chevron USA, Mobil, Phillips, Atlantic Richfield, Continental, Cities Service, and a group headed by Pennzoil, in addition to Exxon.

The rig drilling the Point Thomson well is Loffland Brothers No. 162, the same rig that drilled the Prudhoe Bay discovery well in 1968 on a state lease held 50–50 by Exxon and Arco.

Exxon's exploration efforts are not limited to the Flaxman Island area. The company has applied for an Army Corps of Engineers permit for an exploratory well to be drilled from a gravel island in the Sagavanirktok River delta at Prudhoe Bay.

The island is to be located in three feet of water, and will be the site for drilling the well from a state lease which extends into the Beaufort Sea.

Exxon intends to construct the drill site next spring, prior to breakup, but would not start drilling until the fall of 1978.

[From the Oil and Gas Journal, Nov. 14, 1977]

NEW FIELD MAY BE SHAPING UP EAST OF PRUDHOE

(By Howard M. Wilson)

The North Slope's biggest field outside Prudhoe Bay may be developing 55 miles east of Pump Station 1 on the trans-Alaska line.

Exxon Co. U.S.A. has drilled two successful oil and gas wells on an east-west trend at the edge of the Beaufort Sea and is preparing to drill a third well which could extend the potential producing area farther west.

Although remote location of the wells means high-cost drilling, development, and pipelining, prospects appear bright a major new source of oil and gas may be tapped for delivery—some years hence—into Prudhoe Bay field's trans-Alaska oil line and the proposed Alcan gas line.

Exxon isn't saying yet whether this will happen. But the company has spent $30 million drilling just two wells and will spend another $17 million for a third.

This kind of money means Exxon is dead serious about the outlook for developing production. But the reservoir still must be big enough to justify additional spending for development, running into hundreds of millions of dollars.

Exxon, by spending its own money to date, is increasing its acreage position in the 40,768-acre Point Thomson Unit to 42% from 9%. The unit has 26 participants. Exxon is the sole owner of the tract on which the first strike was made just outside the unit at 1 Alaska State.

The wells. Exxon has just released some of the test data on the Point Thomson Unit, 32-10n-23e (OGJ, Nov. 7, p. 30). Last month similar data on the earlier discovery, 1 Alaska State, 27-10n-24e, on Flaxman Island, became public information under Alaska law.

The two wells, 5 miles apart, have similar characteristics—but important differences. Both are oil and gas producers. Both have low-gravity oil.

The 1 Alaska State, drilled in 1975, flowed about 2,500 b/d of 23.1°-gravity oi and more than 2 MMcfd of gas from 12,565-610 and 12,620-635 ft.

The 1 Point Thomson Unit flowed at rate of about 2,300 b/d of 18.5°-gravity oil and 13.3 MMcfd of gas from 12,963 to 13,050 ft.

The second well, therefore, has a much higher gas-oil ratio, and the producing horizon is deeper.

Whether the two wells are tapping the same reservoir or the same sands separated by faulting is not publicly known. Exxon geologists aren't saying what they think.

They say it is too early to conclude they have found "a major accumulation." By major they mean reserves large enough for North Slope development. If found in West Texas the wells would be considered, without question, big commercial discoveries.

"We are seeing so far just the tip of the iceberg," one Exxon executive said. "But we must continue to probe to see just how big it is. Potentially, it is a good-sized field. That's what you must have to build a 50-mile pipeline on the North Slope."

The tests show the reservoir sands are producible and they are younger than the Triassic Sadlerochit at Prudhoe Bay. They probably are Cretaceous or Tertiary.

The next well. Exxon is still testing the 1 Point Thomson Unit.

When testing is finished, Exxon will move the rig 4 miles west-southwest to drill the 2 Point Thomson Unit.

When the second unit well is completed, Exxon will then consult with participants in the unit to decide whether to proceed with delineation on drilling and how the costs will be shared.

Exxon will, by then, have earned its 42% interest in the unit acreage, and the other companies will begin to share drilling costs.

How acquired. Exxon put together the rectangular Point Thomson Unit a year ago—after it drilled the Flaxman Island discovery.

Exxon's Flaxman Island tract, on which the 1 Alaska State was drilled, isn't in the unit.

All of the tracts, including Flaxman Island, were acquired in the $862-million state lease sale of 1969. At the time, acreage far to the east of Prudhoe Bay attracted little attention, and the tracts went for prices much less than those nearer the 9.6-billion-barrel Prudhoe Bay bonanza.

Sixteen tracts which make up the unit were acquired for a little more than $18 million. Twelve of them cost less than $1 million each.

Standard Oil Co. of California paid about $12 million for five of the 16 tracts, while the remaining 11 tracts cost only $6 million.

The 1 Point Thomson Unit was drilled on a tract which Tipperary Corp. acquired for $660,000.

The Flaxman Island tract was acquired in the sale by Exxon for $2.2 million.

The tracts are all 2,560 acres or slightly less in size. The smallest is 2,523 acres.

The owners. Exxon's arrangement to acquire a 42% ownership of acreage is complex. Its deals vary from tract to tract.

When the unit was formed, Mobil Oil Corp. and Phillips Petroleum Co. jointly owned six of the 16 tracts.

Socal had five tracts. The Pennzoil Co. group had two. Atlantic Richfield Co. and Exxon had one. Exxon had one by itself. The original Tipperary tract had been divided three ways—one-fourth to Tipperary, one-fourth to Cities Service Co. and Continental Oil Co. jointly, and one-half to Mobil-Phillips-Socal. The Tipperary group retained certain royalty interests in the portions sold.

Members of the Tipperary group are Tipperary, Edward H. Leede, Leede & Pine, Richard Donnelly, Jack L. Russell, G. H. Doeling, Jr., Robert Searls, Jr., the estate of John W. Peery, and Kingdon R. Hughes.

Members of the Pennzoil group are Pennzoil, Al Aquitaine Exploration Ltd., Forest Oil Corp., Colorado Oil Co., Newmont Oil Co., Carling Brewing Co., Coastal States Gas Producing Co., Kodiak Oil & Gas Co., Oil Resources Inc., Sunlite International Inc.

The next sale. Companies involved in the unit are close-mouthed about the geology of the area.

Alaska and the U.S. Interior Department are planning a joint lease sale of Beaufort Sea acreage in 1979, but the state could decide to hold one in the Point Thomson area on its own.

The joint sale is needed only because of a dispute over ownership of certain acreage just north of Prudhoe Bay. Ownership of Beaufort Sea tracts to the east is not disputed, and the state can move when it pleases.

Prime interest in such a sale will lie in the offshore tracts immediately to the north, where the state's ownership extends 3 miles beyond the barrier islands. There also is one unleased tract immediately west of the unit.

Onshore acreage to the south of the unit has been leased. Some of this acreage already has been tested without success. Two dry holes were drilled on the Mobil-Phillips-Shell tracts after the 1969 sale.

[News, Exxon Co., U.S.A., Nov. 11, 1977]

Exxon USA To Drill Second Test Well for Point Thomson Unit In Alaska

Houston.—Exxon USA today announced its intention to drill a second test well in the Point Thomson Unit on Alaska's North Slope.

Crandall Jones, manager of Exxon's Offshore/Alaska Division, said the proposed 13,-500-foot test well will be four miles west-southwest of the discovery well, Point Thomson Unit No. 1, which flowed oil at a rate of 2,300 barrels per day on an initial test.

The second wildcat will be located on a farm-in, Jones said, from a group of companies including Pennzoil, Al-Aquitane, Carling National Breweries, Coastal State Gas Corporation, Forest Oil, Trans World Oil & Gas Limited, Newmont Oil, Oil Resources, and Sunlite International. Other operators with interests in the 40,000-acre State of Alaska unit, located some 50 miles east of Prudhoe Bay, are chevron USA, Mobil, Phillips, Cities Service, Atlantic Richfield, Continental and a group headed by Tipperary Corporation.

Location of the Point Thomson Unit No. 2 well is 2,615 feet north of the south line and 1,801 feet west of the east line of Section 3, Township 9 North, Range 22 East, Umiat Meridian, North Slope, Alaska. Drilling is expected to begin in early 1978 pending timely acquisition of permits.

NEIGHBORHOOD ENERGY TECHNOLOGY

Mr. PERCY. Mr. President, energy planners commonly refer to technologies as either "conventional" or "alternate." These labels imply that alternate energy technologies—which include solar and wind systems—are untested, uneconomical, and unlikely to contribute significantly to our energy needs.

But small innovators are producing economical alternate systems today. So-called neighborhood technology groups and individuals are actively making solar collectors, anaerobic digestors, greenhouses, and other energy and non-energy devices at low cost on a local scale.

Many are active in the greater Chicago area, as described in a November 17 Chicago Tribune article. I wish to commend these groups for their dedication and creativity. They are acting in the best American tradition of self-reliance and innovation.

Mr. President, I ask unanimous consent that reporter John McCarron's Tribune article, entitled "They Want To Disconnect From Technology Systems," be printed in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Chicago Tribune, Nov. 17, 1977]

They Want To Disconnect From Technology Systems

(By John McCarron)

Are you willing to live next door to a house with a windmill on the roof and to keep your trees trimmed so as not to cast a shadow on your neighbor's solar collector?

Give it some thought, because something called the neighborhood technology (NT) movement is gathering steam in the Chicago area.

New recruits are won every day—some angered at sky-high utility bills, others fearful of a nuclear "accident," oil spills, or the effect of chemical fertilizers and pesticides in their food.

They communicate with each other through newsletters and at little-publicized conferences and workshops.

They don't have a motto or slogan, but a theme runs through what they say, write, and do: It's time to disconnect.

Americans must disconnect, they say from the high-technology systems that pipe energy into homes and food into supermarkets.

We should replace those systems, or rely on them as little as possible, by using simple, or, as some call it, "appropriate," technology—do-it-yourself systems that don't cost much, they argue.

NT magazines and workshops are full of "how-to" information on affordable solar heating, backyard windmills that generate electricity, greenhouse agriculture, and homemade gadgets such as the anaerobic digestor—a tank that turns organic waste into usable fertilizer and methane gas.

"We want to make our own food, our own energy," said Scott Bernstein, a research assistant at Northwestern University's Center for Urban Affairs.

He is director of the recently organized Center for Neighborhood Techonology—a joint project of the university, and the Community Renewal Society.

This week more than 40 workers from Chicago neighborhood organizations are at the center's first Neighborhood Engineering Training Workshop.

A team of domestic technology experts from Colorado is showing them how to build solar greenhouses, collectors, and crop dryers.

The students plan to go home and start urban agriculture projects—producing food and jobs for the inner city.

"If you don't see yourself at the end of a long pipe that begins in Saudi Arabia, you won't see the need for neighborhood technology," Bernstein said.

He likes to explain how the high-tech economy makes a bowl of cornflakes: Potash mined in Canada and oil from the Middle East are shipped to a synthetic fertilizer plant. The fertilizer is shipped to the Midwest, where it helps grow corn, which, after being dried by natural gas burners, is shipped to Battle Creek, Mich., for processing into flakes.

Bernstein has three objections to this approach: It wastes energy; it pollutes the environment; and it prospers without the participation of 5 to 7 percent of the population, mostly blacks in cities, who are "being written off by Washington as structurally unemployed."

Bernstein contends that the inner city, with its large number of unemployed, is the logical place for an initial NT revolution.

"Anyone who can afford to pay $50,000 for a home isn't that worried about his electric or food bill—yet."

But the need for neighborhood self-sufficiency, city and suburban, is being acknowledged not only by activists such as Bernstein, but also by government officials such as Marvin Nodiff, the state's top energy officer.

"The trend toward centralized energy supplies is not healthy for communities," Nodiff told a gathering of energy experts last week at a Chicago conference.

He likened the burning of fossil fuels to raise the temperature of homes a few degrees "to cutting butter with a chain saw."

Nodiff, who heads the Division of Energy of the Illinois Department of Business and Economic Development, said the common man feels depersonalized and "very distant from energy production decisions."

He said the state should seek a community-based energy future." His department is studying the "social and legal hinderances to solar power" and has a $5-million program to study alternative energy resources.

Nodiff and other speakers at the conference, sponsored by Battelle Memorial Institute, concluded that lower demand, not more production, is the nation's best hope for avoiding an energy catastrophe in the face of dwindling oil and gas supplies.

NT enthusiasts agree, but go a step farther: Conservation of fossil fuels (by insulating one's house or driving less) is fine but to maximize well-being and minimize consumption, neighborhoods must begin producing their own heat, electricity, and food.

In the process, NTers say, residents will feel better about themselves and their neighborhoods.

"There's a lot of the old barn-raising spirit," said Bill Becker, a solar design expert who holds workshops on solar heating and wind power.

Becker says do-it-yourself solar heating is here at affordable prices—about $7,000 for a medium-size house. He uses solar air collectors rather than methods that use copper tubing or photovoltaic cells. He said utility companies are suffering from a "nuclear-power fixation" and probably won't use low-tech energy devices soon—so it would be foolish to wait for them.

Becker is helping to "disconnect" the Evanston Ecology Center, 2024 McCormack Blvd., in the suburb.

A NT group there has equipped the center with solar panels and a windmill that provide part of the building's heat and electricity.

The system was designed by Rodney Wright, of Hawkweed Group, Ltd., who is considered by some to be the Chicago area's leading low-tech solar architect.

Becker predicted that "one more hard winter will push people over the brink" and into the NT movement.

Another NT leader in the Chicago area is Bethe Hagens, an anthropologist who teaches urban planning at Governors State University in Park Forest South. She is also co-editor of "Acorn," an appropriate technology newsletter circulated throughout the Midwest.

She said the key to NT projects is swapping expertise.

"We're trying to build a community barter system," she said. "A lot of people who can deal with paper can't deal with plumbing. So I'll do your taxes if you'll help me with my wind generator."

Hagens is working on a community solar greenhouse for Park Forest South and hopes to start other low-tech projects in the area.

She said getting involved in NT doesn't make one a drop-out. "You can still shop at the Jewel," she said. "But you may not be able to power a steam iron or an air-conditioner with a wind generator."

Hagens was one of several sponsors of the visit to Chicago last spring of the late E. F. Schumacher, the British economist whose book, "Small Is Beautiful," established him as the guru of down-sized technology.

Schumacher, who died in September, complained that economists have set up material growth as the most important measure of social progress. They assume that a person who consumes more, or a country that has a higher gross national product, is automatically better off than a person or country that consumes less.

He said mankind is reaching a point in its relation with nature beyond which this "quantity" standard cannot continue.

"Because consumption is merely a means to human well-being," he wrote, "the aim should be to obtain the maximum of well-being with the minimum of consumption."

EULOGY TO SENATOR JOHN L. McCLELLAN

Mr. MATSUNAGA. Mr. President, I join my colleagues in extending heartfelt sympathy to the family of the late Senator John L. McClellan. His passing leaves an emptiness in this body which can never be filled.

As a freshman Senator, I had occasion to seek Senator McClellan's advice, and I was profoundly impressed by his devotion to public service and the welfare of our Nation. During his nearly 40 years in elective office, he earned a well-deserved reputation for courage, conviction, and integrity. Although he served in one of the most important and influential posts in the Senate, he retained his high regard for the individual citizen and his concern for the needs of the individual. On numerous occasions, I introduced visiting constituents from Hawaii to the distinguished senior Senator from Arkansas, in the Dirksen Senators' Dining Room where he customarily lunched, and invariably by his unfeigned courtesy and a few choice expressions, he left a lasting, favorable impression on them.

The people of Arkansas can be truly proud of their great public servant, the late John L. McClellan. By his passing, the people of the United States have suffered an immeasurable loss.

WATERWAY USER CHARGES: WHAT THE ECONOMISTS SAY

Mr. DOMENICI. Mr. President, while there may be no unanimity in the Senate over the need for a system of reasonable waterway user charges, there is one group of experts that appears unanimous in its view that user charges are essential for effective transportation balance.

These experts are the economists. It is virtually impossible to find an economist who does not support—and support strongly—the immediate imposition of waterway user charges in the interest of a better allocation of national resources and expansion of national wealth.

Several independent economists came to Washington to support user charges in oral testimony before the Committee on Environment and Public Works. A number of economists have taken the time to write to me, expressing their views on waterway user charges.

In addition, a letter has come to my attention, signed by more than 100 economists. My proposal, which the Senate adopted in June, does not meet fully the demands of this letter: There is no full recoupment of construction costs, even after the 11-year phasein; there is no undiluted segment charge system, for my proposal protects against any economic hardship on any waterway by limiting charges under the worst case to 1 percent of a commodity's value. Nevertheless, I believe that my amendment goes far toward the principles and intent of this letter.

In an effort to share these views with my colleagues, I ask unanimous consent that excerpts from these various letters be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EXCERPTS

1. George W. Hilton, Professor, Department of Economics, Univ. of Calif., Los Angeles:

The desirabiilty of user charges on the inland rivers has achieved something as close to unanimity among academic economists as is to be expected in a free society. The absence of user charges has precisely the consequences one would expect. Notably, nothing provides the usual function of a price in encouraging economization of the existing supply of the resource. Operators make their calculations between towboats, barges, labor and various variable inputs, but treat the river, dams and locks as if they were a free good, something which may be used to absolute satiation. The consequence is an endless escalation of the power of towboats and the expanse of barge tows, coupled with an equally endless political effort to expand the size of locks, depth of channel, and navigational facilities more generally. Nothing provides the function of a price in indicating the demand for additional investment. . . .

Apart from the waste of capital involved the secondary consequences are thoroughly undesirable. The subsidy misallocates industry geographically, causing industries which ship or receive large amounts of bulk cargo to congregate along the rivers. . . . Similarly, the subsidy misallocates freight among the major codes of transport. The excessive use of the rivers accelerates their biological degradation.

II. Otto Eckstein, Professor of Economics, Harvard Univ.:

The economics of this question is clear and unambiguous. In th eabsence of pricing, there is no mechanism which provides any assurance that investments in inland waterways yield a return that approaches the returns available elsewhere. The Federal budget faces many needs and is limited in its resources. Where a routine commercial value is delivered by a public service, there is no reason why the revenues to defray the costs of that service should not be collected from the beneficiaries, leaving the money raised from the taxpayer for purposes that cannot be financed out of their own benefits, including defense and the social programs. . . .

The lack of charges on the inland waterways also leads to an irrational allocation of traffic among the competing transportation media. The "freebie" inland waterway system is one of the coffin nails on our railroads, which the Federal Government is now forced to rescue through subsidies and nationalization. There are bulk commodities that should move by water, and these can stand user charges. But other traffic moves by barge only because the taxpayer picks up so much of the total cost.

. . . The groups that benefit from these subsidies of the nation's taxpayers have no interest in sound economic analysis, and there is no way to force them to use it. User charges are a much superior approach to assure economic rationality because they mean that the beneficiaries do have to be willing to pay. . . .

. . . User charges that also include operation and maintenance would further improve resource allocation in the transportation industry.

III. Lester P. Lave, Professor and Head, Dept. of Economics, Carnegie-Mellon University:

Your bill S. 790 is excellent in conception and, if enacted, would do much to restore a balance in the nation's transportation system. You have made a crucial step forward in going from a fuel tax to a lockage fee; this system is much more viable.

IV. Leon N. Moses, Director, Transportation Center, Prof. of Economics, Northwestern Univ.:

What I believe might follow from user charges is benefit to the waterways carriers themselves. At the present time the Locks are used on the principle of First In, First Out (FIFO). If a system of user charges were instituted and those charges were made to reflect the peak load demands, the most valuable uses might well be willing to pay more than other users. Overall, the scarce resource they represent would be more effectively allocated to the alternative users. One possible result of such an allocation would be that the commercial carriers themselves were made the better off by the imposition of a user charge. I am sure that any one of the carriers who is giving testimony would view this as heresy but there are very good lessons for believing that the user charge would improve the social welfare as well as the individual welfare of those involved in commercial carriage.

V. Allen V. Kneese, Professor of Economics, Univ. of New Mexico:

The most important argument in favor of user fees is, in my opinion, that they would reduce the enormous income redistribution to the regions in which waterway projects are constructed and to the shipping industry. This should reduce the political pressure for such projects regardless of their real economic merit and on the Corps to use incorrect evaluation procedures which exaggerate benefits.

VI. Robert W. Harbeson, Prof. of Economics Emeritus, Univ. of Illinois at Urbana-Champaign:

In my opinion, we should move ultimately to the gradual recovery of all navigation-connected waterway operation and maintenance costs as well as the capital costs of newly constructed or rehabilitated navigation facilities. S. 790 moves a substantial distance toward this goal and has the important merit of incorporating a gradual approach to cost recovery which will facilitate adjustment by the transportation and shipper interests concerned as well as permitting; continuing assessments of the results of the program.

VII. Leonard A. Shabman, Asst. Prof., Agricultural Economics, Virginia Polytechnic Inst.:

A frequently heard argument is that beneficiaries of low-cost water transportation are consumers of final goods. Federal waterway improvement programs resulting in lower transport costs, it is claimed, will be passed along as lower prices for fossil fuels, foodstuffs, construction materials, and any other product that moves by water. . . . The symmetrical argument would state that trucks and airlines should pay no charge for using the roads and airports; that the government should build and maintain the track-bed of the railroads free of charge. This argument has superficial appeal, but note that, while all consumers benefit, they do not all benefit equally. Consumers located in areas served by waterways and users of products shipped by water reap a substantially larger benefit. A more reasonable equity argument is that the consumers of products shipped by water do receive benefits and, as such, they should be willing to pay the cost of achieving these benefits. . . .

For example, a computer model of wheat transportation we have just completed shows that recovery of $145 million annually through a tax of fuel would result in only a minimal diversion of the wheat traffic from the inland waterway system. In short it seems likely that a user fee policy could be designed which would recover a large part of public costs, and not have a discernable impact on the barge industry's share of intercity freight traffic. . . .

Thus, it appears that a user fee plan could achieve three desirable goals: (1) Recovery by the public treasury of the costs of operating the waterways: (2) promote an equitable distribution of the burden of payment, such that beneficiaries pay for the use of services consumed; and (3) promote economic efficiency in the use of water resources and the production of transportation services. Of particular importance, these goals can be achieved without significant dislocations caused in the nation's transportation system. In this context, adoption of a user fee policy would be in the best interests of the nation.

VIII. Dudley F. Pegrum, Prof. of Economics Emeritus, University of Calif., Los Angeles:

The return on net investment by railroads in 1975 was .08 per cent, by motor carriers 13.27 per cent, by water carriers 15.79 per cent, and by pipelines 7.66 per cent.

. . . The pipelines carry their share completely. In 1975 the railroads had an outlay of $2.4 billion or 14.6 percent, on a freight bill of $16.4 billion for maintenance way and structures alone. This was 17 per cent of their operating expenses. . . . At the other extreme were the water carriers which made no contribution to the provision of the infrastructure facilities nor to the maintenance or operation of them.

. . . If transport is to be cheap (and that means economical) the allocation of economic resources to it must be in keeping with the efficiency principle. Cheap transport for the individual may actually be very expensive for the country. Cheap transport to the country and cheap transport to individual shippers are too frequently regarded as being the same thing.

The most effective device that has yet been developed for rationing is the pricing system. If no price is charged to the user of resources, and he is permitted to use any amount he wishes, he does not have to economize on them. This means that to him they are free goods. There is no incentive to him to economize on the use of them nor to avoid waste. It is not surprising to learn that a prominent waterway operator has said that tonnage will soon exceed capacity on Locks 26. What is surprising is that this has not been the situation before now in view of the absence of charges for use. . . .

If goods or services are provided to the user free of charge, they are free goods to him and he does not have to economize on their use. Failure to economize on the utilization of economic goods is waste. The contention that water transport is cheaper than the other modes is fallacious unless all of the costs entailed in providing the facilities for it are included in the comparisons that are made with the other modes. . . .

The levying of charges on the commercial users of our national waterway facilities will not increase the freight costs of the country, will not increase freight costs to the consumer, and will not add to inflationary pressures. On the contrary, the result will be precisely the reverse. Total freight bills will be less because of: a more efficient allocation of economic resources to transportation; a more efficient allocation of freight traffic among the modes; a reduction in the total costs of the infrastructure of freight transport facilities; a reduction in the federal tax burden on taxpayers; and a reduction in total federal spending with a consequent reduction in the pressure on inflation.

LETTER TO MEMBERS OF CONGRESS:

Financing inland waterways imposes large and growing costs on taxpayers, but requires no cost sharing from private interests. Consequently both transportation and water policy are distorted. A well designed user charge imposed on commercial navigation on the inland waterways would correct this situation.

The problem is substantial and is increasing. In FY 1974 construction operation and maintenance for shallow draft navigation cost $386 million, up 29 percent from FY 1970. If interest and depreciation were included FY 1974 costs very conservatively estimated would have been $411 million, a 47 percent increase from the comparable FY 1970 figure. The Corps of Engineers' propensity to understate multi-purpose projects costs attributed to navigation suggests that both of these figures may be too low. With $7 billion in new waterway development projects under active consideration, the navigation subsidy will remain an expensive item for the foreseeable future.

The high cost of the subsidy is not producing commensurate social benefits. On the contrary, the "free" waterway policy is incompatible with an economically efficient transportation system. Because water carriers receive "free" infrastructure, they enjoy a competitive advantage vis a vis railroads and pipelines. Hence barge operators can win traffic and force down freight rates to a degree that would be impossible were the taxpayers' contribution repaid. The illusion of inexpensive barge transportation induces shippers to select that mode even when, if the cost of federal facilities were included, alternative means of transportation would be preferred. The railroads estimate that this traffic loss, plus depressed freight rates attributable to waterway subsidies, result in substantial losses of net revenue. Inevitably investment patterns are also affected. Subsidy induced waterway shipments are used to justify further construction while depressed earnings foster disinvestment from the railroad industry.

The federal navigation subsidy is also counter-productive from the viewpoint of water policy. Subsidizing barge traffic exacerbates problems of eutrophication, local ecosystem disruption, and toxic spills. Though a user fee system cannot, in itself, establish an optimum balance between conservation and transportation, it would terminate the existing federal subsidy to evironmental degradation.

The degree to which a navigation charge systems potential benefits are realized depends on its design. There are three basic principles for structuring the collection system:

It should be based on the relevant costs.

It should be a segment charge.

It should test private sector willingness to invest in proposed new construction.

Only a system based on these concepts can capture all the potential benefits.

Charges must recover the relevant costs. All traffic should be assessed federal operation and maintenance expenses. Also barge operations should be required to defray the capital costs of new construction. Finally, at congested points fees reflecting the delay costs to other traffic should be collected.

Because conditions differ in regard to new construction or congestion, the costs to be repaid vary among the inland waterways segments. Moreover, even operation and maintenance expenditures are, on a per ton-mile basis, extremely diverse, ranging from .01 mill on the Lower Mississippi to 114 mills on the Willamette. Imposing identical rates across such disparate segments would be inequitable, and it would provide only slightly improved rationing of existing capacity and new investment. Hence, charge rates should be set segment by segment.

Even a segment charge will not, however, effectively discourage unnecessary construction. A private contribution should be obtained before making new waterway investments. Collection from users after project completion is insufficient. As the St. Lawrence Seaway experience indicates, it is impossible to recover public investments on unsuccessful waterways. Hence the threat of such collection will not deter prospective users from advocating unjustified construction. Mandating private cost and risk sharing would not only redistribute part of the burden to private interests. It would also require that waterway development compete with alternative private sector investments; thus discouraging ill-advised new construction. Several mechanisms including congestion tolls and user surcharges, capital bond issues, pre-paid licenses, and repayment contracts could be used to obtain the desired level of private participation.

The need for a well structured user charge system is well established. Four Presidents have called for the end of waterway subsidies. The concept has been studied and endorsed by the National Water Commission, the U.S. Department of Transportation, and many independent economists. Congressional action to implement a comprehensive user charge system is long overdue. We strongly urge that segment user charge legislation be enacted at the earliest possible time.

ENDORSEMENTS OF FINANCING INLAND WATERWAYS

B. J. Abrahamsson, Denver Research.

GASOHOL FIELD HEARING

Mr. LUGAR. Mr. President, on Monday, December 12, 1977, the Agricultural Research and General Legislation Subcommittee will hold a field hearing on "gasohol," a fuel blend of gasoline and alcohol. This full day of hearings will start at 8:30 in Indianapolis, Ind., in room 204 of the Old Federal Building located on 46 East Ohio Street.

Senator LEAHY and I, as chairman and ranking minority member of this subcommittee, look forward to this hearing. We anticipate that about 15 experts will testify, including farmers, an automobile manufacturer, an oil industry spokesman, scientists, industrial alcohol producers, and government officials. The hearing record will be held open for 1 week after the hearing so others not testifying may submit written statements.

For several months, I have been studying this issue with great interest. My staff has been in contact with many people associated with alcohol production and research across the Nation. After reviewing their findings, I have concluded that alcohol has the long-run potential, when mixed with gasoline, to reduce our Nation's dependence on foreign oil.

Moreover, it could help our Nation's farmers by converting surplus grain and other products into energy and will provide an economic stimulus to the economy through increased employment and capital investment. Given the potential benefits, it seems to me that our Nation must carefully develop this idea to the fullest. We will not make great strides in reducing our dependence on the OPEC countries for our energy needs by failing to take bold action in new directions.

Many Americans have recently awakened to the possibilities of gasohol, and I share their enthusiasm. It is imperative, however, that we avoid ill-conceived measures which give the appearance of stimulating gasohol production but which would prove costly and ineffective in the final analysis.

There are several questions which must be answered before we establish any type of a national gasohol program. With current technology, is the cost of a gallon of gasohol greater than a gallon of gasoline? Is the total energy needed to grow the grain, make the alcohol, and blend it with gasoline greater than the energy derived from burning it? Is new technology within reach which would make gasohol more feasible from an economic and net energy standpoint? What crops or materials are best suited for making alcohol, given possible new technologies?

In sum, Mr. President, I believe this hearing will lay a very solid foundation for the responsible development and use of this promising energy source. Gasohol has tremendous long-range potential if we identify the best approaches among many alternatives. Prudence must guide the development of the policy used to bring gasohol into fuel tanks, or this important idea might be set back for years.

THE INSULATION SHORTAGE

Mr. PERCY. Mr. President, the insulation industry is booming. The people of this country are at last getting serious about conservation. Memories of last winter's fuel bills have motivated more people to buy and install insulation than ever before. So many more people are in the market, in fact, that it appears insulation suppliers cannot keep up with demand.

The rush to purchase insulation opens the door to consumer deception. In this seller's market, homeowners can be victimized by shoddy workmanship, unsafe products and materials, and unfair and deceptive enrgy saving claims.

I was very pleased to learn that the Federal Trade Commission is addressing itself to these issues. In a letter to Senator FORD, reprinted in the November 3 RECORD, Michael Pertschuk, Chairman of the FTC, reports on three related actions of his Agency. The first involves a rule to assure that consumers receive adequate information about the performance of insulating materials. The second involves notifying affected manufacturers and retailers that the Commission will seek civil penalties if firms exaggerate the likely energy savings from insulation or make any energy related claims without adequate substantiation. The third involves careful FTC scrutiny of insulation advertising. I commend Mr. Pertschuk for these initiatives.

Consumer victimization may not be a problem now, but supplies of insulation fall short of the increasing demand. On October 10, Jack Houston, in an article in the Chicago Tribune, discussed the shortage of insulation in the Chicago area. Because of Mr. Houston's article, I wrote a letter to Secretary Schlesinger requesting information on the Department of Energy's views and plans. Maxine Savitz of DOE responded to my letter. Not surprisingly, she attributes the shortages to heavy increases in demand. However, she says "supplies can be increased to meet demand in approximately 18 months."

I have no doubt the insulation industry will rise to the challenge of meeting increased demand in Illinois as soon as is physically possible. I hope to see demand for insulation continue to rise. I hope to see more and more builders and homeowners working to conserve energy.

Mr. President, I ask unanimous consent that Jack Houston's article in the Chicago Tribune, my letter to Secretary Schlesinger, and Maxine Savitz' reply, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

HOME INSULATION SHORTAGE IS BLAMED ON HEAVY DEMAND

(By Jack Houston)

Last week a Chicago homeowner phoned an insulation contractor she had hired to reinsulate her house and asked why, after so many weeks, the job hadn't been done.

The contractor replied he was out of materials and had been for the last 3 to 8 weeks. The entire Midwest is out of it, he said, and for some reason all shipments of insulating materials are going to the East Coast.

That story turned out to be untrue. According to the contractor's insulation manufacturer and supplier, shipments of the material are being delivered to regular dealers and contractors of a rate of about one truckload a week the same as last year.

True, shipments are behind consumer demand, the supplier said. Because of that heavy demand, long-time contractors and dealers are having their orders filled first. The others have to wait.

Most of the major manufacturers and suppliers of home insulation—Owens-Corning, Johns-Manville, CertainTeed, and Thermtron—have been allocating shipments of their materials at the same rate or higher than last year. However, consumer demand for the products continues to rise as cold weather approaches.

Demand is up because of the energy crunch and soaring fuel bills. Owens-Corning, maker of Fiberglas insulation and the nation's largest manufacturer and supplier of insulating materials, said that in the last 3½ years more than 11 million homeowners have added insulation to their homes.

As the cost of heating fuel continues to rise, budget-minded homeowners are beginning to realize that the cost of properly insulating their homes probably will be offset by savings on their fuel bills.

Adding to this demand is a nationwide increase in homebuilding this year. The National Association of Home Builders estimates 2,750,000 new homes will be built in 1977.

In the Chicago area alone, permits for new construction of single-family homes and multifamily housing for the first eight months of this year reached 35,000 units, according to a survey by Bell Federal Savings and Loan Association. While all these homes have not been started, most will go under construction eventually. The heavy demand for insulating materials has caused many delays in delivery dates for new homes.

Manufacturers of fiberglas and rockwool insulations plan to expand production to overcome shortages, an industry spokesman said last week.

Sheldon H. Cady, executive vice president of the National Mineral Wood Insulation Association, said production will be nearly doubled by the mid-1990s.

Improvement of existing processing equipment already is showing results and is expected to add about 20 per cent to output soon, he said. Facilities under construction are to begin production in about a year.

Johns-Manville Corp. is spending $200 million to double production within five years, Cady said. CertainTeed Corp., building a new plant in California, will enlarge the facility to twice its planned capacity. Production is to begin there by early 1979.

Owens-Corning Fiberglas Corp. plans to increase structural insulation production capacity from 1.3 billion pounds this year to about 2.3 billion pounds by 1984. Rockwool Industries, Inc., has expanded 20 per cent this year and is considering further expansion of 60 per cent, Cady said.

He said the doubling of production capacity under way comes on top of a previous doubling since 1972.

"Although most plants operated at or near capacity during 1972 and 1973, only 50 to 60 per cent of capacity was used during 1974 and 1975," he said. "As recently as last year, plants were running at only 10 to 23 per cent."

Noting that energy supply is a controlling factor in insulation supply, Cady said natural gas curtailments last winter led to the loss of 40 per cent of fiberglass production. He said any future energy curtailment inevitably would have a similar effect.

However, insulation is available for those willing to wait. Wilkin Insulation Co. in Mount Prospect, for example, has been receiving regular shipments of insulation materials from its suppliers. But customers must be willing to wait four or five weeks to have it installed.

Randall Wilkin, president of the insulation contracting company, said his firm does not sell to the public. People who want to install insulation themselves must go to a lumber company.

Edward Hines Lumber Co.'s wholesale department is supplying its 27 retail outlets in Chicago and suburbs with about a half truckload a month.

A check of Hines Lumber stores found the Lombard outlet out of all insulating materials until the end of November. In Evanston, the next shipment is expected at the end of October.

Hines' wholesale department sent shipments to its outlets on Archer Avenue, in Glenview, River Forest, Palatine, and St. Charles last week.

However, the load received at the Archer Avenue store was sold the day it arrived.

WASHINGTON, D.C., *October 25, 1977.*

Hon. JAMES R. SCHLESINGER,
Secretary of Energy,
Department of Energy,
Washington, D.C.

DEAR JIM: I have just read an article by Jack Houston in the October 10 edition of the Chicago Tribune which indicates that the Chicago area is suffering from a shortage of home insulation material. With winter approaching, I am very concerned that Illinois citizens may not be able to buy insulation for their homes.

As you know, it is likely that this situation will be exacerbated if tax credits for insulation become available. According to the Council on Wage and Price Stability, the demand for fiberglass insulation may increase by as much as 50% if the energy tax bill now pending before the Senate becomes law.

I would be very interested to hear your own views of this problem, and whether your Department has any plans for mitigating the shortage.

I look forward to your reply.

Warmest personal regards,

CHARLES H. PERCY,
U.S. Senator.

DEPARTMENT OF ENERGY,
Washington, D.C., November 29, 1977.

Hon. CHARLES PERCY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR PERCY: Thank you for your letter of October 25, 1977, on behalf of your constituency, regarding the shortage of home insulation.

The Department of Energy (DOE) is most sympathetic to this problem and we are aware of a growing number of consumers who are finding themselves caught in this frustrating situation. Regretfully, as I am sure you realize, this is a basic problem of supply and demand which, in this case, has been intensified far beyond anticipated proportions due to the severity of last winter. In the past, insulation manufacturers have been able to expect and accommodate a normal seasonal increase in demand, as well as some overall increase, and production capacities have been expanded in accordance with carefully analyzed marketing projections. The market, however, has now been overstimulated within a very short period of time, and the industry is simply unprepared to satisfy the demand in full.

Although we, of course, are unable to provide any immediate relief from the current situation, you may be assured that every effort is being made to resolve the problem as quickly as possible. On August 5, 1977, the Federal Energy Administration met with representatives of the insulation industry, including manufacturers and distributors, to discuss this matter and it was determined that with acceleration of production expansion efforts already underway, supplies can be increased to meet demand in approximately 18 months. In the meantime, it was recommended that consumers postpone plans to insulate and concentrate on other energy conservation measures such as weatherstripping, caulking, storm windows and doors and automatic thermostats. In addition to that meeting, the Senate Subcommittee on Intergovernmental Relations held hearings on this issue on November 2, 1977, and legislation has been introduced (S. 2219) which would give the Secretary of Energy the authority to establish a program to monitor the supply and demand of home insulation materials.

With regard to the particular concern you expressed for the availability of fiber glass insulation, I think that you would be interested to know that in a recent discussion of this situation with Mr. Sheldon Cady of the National Mineral Wool Manufacturers Association, we were assured that all plants within the mineral wool category (fiber glass and rock wool) are operating at full capacity. Mr. Cady also advised us that most manufacturers have doubled production capacity over the last five years and are now initiating the work necessary to double that capacity again over the next five years. You might be interested to know that according to Mr. Cady, one of the primary factors considered by manufacturers undertaking expansion efforts was the anticipated impact of energy conservation legislation.

I hope that this information will be helpful in responding to your constituents, and thank you for your interest in efficient energy conservation.

Sincerely,

MAXINE SAVITZ,
Director,
Division of Buildings and Community Systems, Office of the Assistant Secretary for Conservation and Solar Applications.

PANAMA CANAL TREATY

Mr. BAKER. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from Arizona (Mr. GOLDWATER), and the material attached thereto.

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR GOLDWATER

It was my distinct pleasure on Friday of last week to have been able to discuss the Panama Treaty with Ambassador Sol Linowitz with former Secretary of State Dean Rusk as the moderator, before the State Bar of Georgia in Atlanta. It was a very revealing discussion, particularly because once again in a large American city I gathered the distinct impression that the American people are not going to buy the present Panama treaties. I disagree wholeheartedly with the majority leader of the Senate, Senator Robert Byrd, when he feels or says that a treaty can be ratified next year. I think a treaty could be acted on, but it is going to take some changes and the changes are incorporated in the joint statement of understanding agreed to by both President Carter and Dictator Omar Torrijos indicating that the United States would have the ability to interfere at any time in Panama should the future and safety of the canal be threatened. The word "intervention" does not appear anywhere in either treaty and it was deleted in capitulation to Panama's demands. The statement was made by the Ambassador, and I believe it is true, that if we change the wording of the present treaty in any way it would require a plebiscite to be held in Panama, and because of the seeming powerful objection to the word "intervention," it would never pass. Now I hold that this is not important to the United States. If the canal is to remain a viable means of access between the two oceans and if it is to remain—as the treaty implies but does not clearly spell out—our responsibility, along with that of other hemispheric countries, to provide protection, then we must have the right of intervention. I am going to propose language to be added to the present treaty indicating that it is the consensus of the Senate that these words are part of the treaty whether in it or not, but I believe that even that would require a vote by the people of Panama. But, again, that is not important. The main thrust of my remarks I would like to have made a matter of record.

The national security aspects of the Panama Canal issue, not in relation to the defense of the Canal as such, but as regards the continuation of a U.S. military presence in Panama, is the very essence of the national security interest that requires the modification of the proposed new treaties.

One can quibble endlessly over the defensibility of the Canal as a waterway—just as one can quibble endlessly, in this day and age, over the defensibility of almost any defense facility, anywhere. But U.S. operational control of the Canal and the attendant U.S. military presence in Panama to assure the continuation of that control have become the foundation of the security of both the United States and the Western Hemisphere against a Communist takeover of Latin America.

This is true from a military as well as a political and psychological standpoint.

Panama, because of its geographical location at the crossroads of Atlantic-Pacific transportation, because of its dominant position in relation to the Caribbean, and because of the existence of the Canal, is at once, both symbolically and practically, the key to hemispheric defense. It is also the Achilles heel of that defense. If we were, as proposed in the new treaties, to create a power vacuum by giving up our right to maintain a military presence in Panama after 1999, it seems inevitable that the Soviets, not directly but through the Cuban surrogacy, would move in quickly to fill it.

The continuation of the U.S. military presence in Panama is, therefore, the all-important factor. As long as we have an adequate force in Panama to "hold the fort" until reinforcements, if needed, can be sent in, there seems to be little likelihood that "defense" of the Canal will ever become necessary. It is almost inconceivable that, in the face of that military presence, any nation, unless it were bent on precipitating World War III, would launch a significant effort to wrest control of the Canal from the United States.

Defense from within is a far different thing from defense from without. It is the latter that the new treaties would require the United States, and the Western Hemisphere, to rely on.

From a military standpoint, in the absence of a preliminary holding capability, any attacking or infiltrating forces would become speedily entrenched in all strategic locations and the task of dislodging them from without would be a major, costly and highly destructive one, as compared with that of repelling such forces at the outset.

And from a political standpoint there is also a vast difference between, on the one hand, augmenting military forces already legitimately positioned within a country, and, on the other, introducing forces into a country where there are none, no matter how firm the legal right to do so may be. The latter would be the case after 1999 under the proposed new treaties. Even if it were quite clear that the United States had the right to send force into Panama to "defend" the Canal—and the proposed new treaties are wholly unclear on this point—the cries of "imperialist aggression" and "imperialist intervention" would be so orchestrated internationally as to effectively deter any such action on the part of the United States, woefully sensitive as we Americans seem to be to "world opinion," even when rightful defense of lives and property are involved.

Not much less important than the military considerations regarding a continuing U.S. military presence in Panama are the psychological ones.

Southcom has become to most Latin American military leaders, and therefore to most Latin American governments, the energizing center of their Latin American defense system. They feel possessive about it, proud of it. This has come about by virtue of Southcom's military assistance and representative functions throughout Latin America, all headquartered in Latin America. The very fact that the United States deems Latin America of such strategic importance as to maintain the hub of its operations in defense of the area in Panama is a matter of considerable significance to Latin American leaders. That significance is appreciably enhanced by the additional fact that the commander of Southcom has consistently been a U.S. general officer of a rank substantially higher than the size of the forces under his command would ordinarily call for.

If the functions and responsibilities of Southcom were to be transferred to a command headquartered within the continental United States, as the proposed new treaties would, in effect, require, U.S. military rapport with Latin America, and hence U.S. diplomatic rapport with Latin American governments, would diminish greatly. A tendency would inevitably be generated for the Latin American nations to look elsewhere for military assistance and cooperation. The basic nexus of current U.S.-Latin American relations would be destroyed. The recognition of this fact is, of course, anathema to those who view foreign relations only in terms of universal sweetness and light. Nevertheless, it is a reality—and a transcendent one.

One of the major contributing factors to the development of this situation—the close military bonds between the U.S. and the Latin American nations—has been the various military schools operated by Southcom in Panama for the benefit of all Latin American military establishments. Many of these schools are staffed to a substantial degree by their own Latin American honor graduates. The "alumni" body of these institutions, spread throughout Latin America, now numbers close to 50,000.

To cite just one example of the effectiveness of these military education facilities, the counter-insurgency curriculum conducted over the years in one of the schools, the prestigious School of the Americas, has played a leading role in thwarting the Latin American Communist insurgency program instituted by Fidel Castro as far back as the sixties.

To give all this up—to place ourselves in a position of being unable to resist a takeover of the Panama Canal by the Soviets, to place Panama in the position of a sitting duck, and to destroy our close military, and hence governmental, ties with Latin America—to me would be the height of national folly. The proposed new treaties are a blueprint for just such a course of action.

Mr. GOLDWATER. I brought up these questions during the course of the discussion. Where does the trilateral commission fit into this treaty? How much money is owed by Panama to the large banking institutions whose officers in most cases are members of this commission? How much money is owed by Third World countries to these same banks? In other words, the question I put and tried to put in a way that would not step on the toes of friends of mine in the banking business, was: Is it going to become the job of the Congress of the United States to bail out the banking business of this country when they have made poor loans to foreign countries? This question has not been answered, but I have asked the chairman of the Foreign Relations Committee to conduct an investigation into it, and I hope he will.

TRIBUTE TO SENATOR JOHN L. McCLELLAN

Mr. PERCY. Mr. President, I have been greatly saddened by the death of Senator John McClellan. His loss is a personal loss to me. I extend my deepest sympathies to his wife, Norma, and other members of his family.

John McClellan had more than his share of personal sorrows. There is no loss quite as heartrending as the death of a child, particularly when that child is taken away from a father suddenly, unexpectedly, and violently. Yet, this happened to John McClellan not once, but three times during his life. There is no deeper anguish in the heart of a father. Yet he remained compassionate, loving and always looking toward the betterment of his fellow Americans with a heart free of bitterness and remorse. I pay tribute particularly to these personal qualities which made John McClellan such a wonderful human being.

Senator McClellan was also one of the most respected and vigorous Members of the Senate. I got to know him best through my service on the Senate Government Operations Committee and the Permanent Subcommittee on Investigations of the Committee. For many years, I served under his chairmanship.

I remember him best for his vigorous pursuit of a number of the investigations in the Permanent Subcommittee on Investigations. Among those hearings in which we participated together were investigations into illegal gun running, an investigation into military service club scandals, and organized crime's involvement with stolen securities. He always pursued investigations with vigor and the goal to attain the truth. I learned much from his investigative work and feel that his service as chairman of the Permanent Subcommittee on Investigations more than justifies his reputation as a great Senator.

For both his professional and personal qualities, I pay tribute to John McClellan—a good man and a good Senator.

ADDITIONAL FUNDING FOR AMTRAK

Mr. SASSER. Mr. President, I commend the action of the House of Representatives for increasing the appropriation for Amtrak by $10 million.

As my colleagues will recall, the Senate approved the supplemental with funding totaling $18 million for Amtrak operating expenses. However, the House-Senate conference reduced this amount to only $8 million.

I particularly want to commend my colleague from Tennessee, Representative Albert Gore, Jr., for his leadership and vision in urging the House to insist on the original Senate allocation of $18 million.

As the Members of the Senate are aware, last month the members of the Amtrak Board of Directors voted to cancel the Floridian route which links Chicago, Ill., with Tennessee and Florida. The Board also voted to review many other routes—a review which could also lead to cancellation of a great portion of passenger train service in this country.

Earlier, I had joined with Congressman Gore and dozens of other Members of the House and Senate in urging that Amtrak management take positive action to put the Floridian on sound financial footing rather than outright cancelling the train. We urged that this train be rerouted through a more populous and better market area. We urged that Amtrak provide improved schedules and equipment. In summary, we urged the Board to make the train more economical under Amtrak's own standards and criteria.

Since the action of the House, I have consulted with Amtrak to indicate that it is the intent of the Congress that the Floridian not be canceled, but instead be continued. When the Senate Appropriations Committee, of which I am a member, first recommended a total appropriation of $18 million, we were told by Amtrak that this funding would forestall any route cancellations.

I am pleased that Amtrak now indicates that since the House has agreed to $18 million, the Board will probably direct the present Floridian route to continue indefinitely while arrangements are being made for a transition to the new route. If the Board takes this action, and I encourage them to do so, then train service for many thousands of rail passengers can continue.

Mr. President, I believe that the action of the Congress makes clear that we should continue the national policy of assisting rail passenger service in this country. However, we must continue to urge Amtrak management to make needed efficiencies and improve ridership so that these subsidies do not continue to increase in the future.

SENATOR GLENN RECEIVES AWARD FOR CIVIL RIGHTS RECORD

Mr. BROOKE. Mr. President, on Friday, December 2, my distinguished colleague and friend, Senator John Glenn, was the featured speaker at the Ohio State convention of the American Civil Liberties Union in Columbus, Ohio. The Ohio ACLU presented him with a well-deserved award in recognition of his outstanding legislative record on civil rights issues.

I have worked with Senator Glenn on many of these issues since he was elected in 1974 and have been greatly impressed with his understanding of and commitment to the cause of civil rights and racial equality. The speech that he delivered in Columbus is an excellent example of both his knowledge of, and activity in behalf of, the difficult and complex issues that we face today in the continuing struggle for equality and justice.

I strongly urge my colleagues to read Senator Glenn's speech and I ask unanimous consent that his remarks be printed in the Record.

There being no objection, the remarks were order to be printed in the Record, as follows:

Racial Equality and Civil Rights Issues in the 1970's: New Language for an Old Struggle

I am very happy to be here this evening joining such a distinguished assemblage of citizens. You have been in the forefront of the struggle to secure for all of our citizens the basic and fundamental opportunities and protections that the Constitution promises. As you certainly know, that struggle is not an easy one nor is it always a popular one. The fact remains however, that there are injustices and inequities in our society that are morally and legally wrong. The struggle to correct them must be waged no matter how difficult or unpopular the battle may be. I shudder to think of the condition this nation would be in today had the epic civil rights struggles of the 1950's and 1960's not been fought. As few as 14 years ago, a short period, we carried an unforgiveable national blemish of separate and unequal public accommodations, tacitly sanctioned employment discrimination, thoroughly segregated schools and faculties, massive voter disenfranchisement and much more. Only 14 years ago, well within all of our lifetimes, black citizens marched on Washington seeking basic remedies that even at present, have not been thoroughly implemented. That 1963 march and the movement it represented set the stage for the landmark civil and voting rights legislation of 1964 and 1965.

Surely, you all know the history of this Nation's racial problems. This evening it is my intention to bring you some current perspectives on today's civil rights issues as I see them as your Senator in Washington. First, I want to state that I am proud to have a 100% record of having voted the "civil rights position" on every civil rights rollcall vote in the 94th and 95th Congress. I have been active legislatively on this issue and I am proud of what we have achieved. I am proud not because legislation is a solve-all, it is not, but because every step that we take, large and small, helps set a national tone that commits our society irrevocably toward a goal of totally eradicating the blemishes of racism and discrimination from our society, and, ladies and gentlemen, the United States Senate itself is perhaps the best evidence that we are winning this struggle.

The Voting Rights Act was first passed in 1965, over tremendous opposition. It was extended in 1970 over vigorous, but lesser opposition. Most recently in 1975, it was extended again through 1980, with only 11 votes against it. What was once outright, race-baiting opposition argument, in 1965 turned into a subtle-but-still dangerous attempt by amendment to "gut" the act in 1975. That amendment was defeated 48–44 and the Voting Rights Act passed easily. My point, ladies and gentlemen, is this, in Washington today, in the U.S. Senate today, the mantle of respectability has been removed from the segregationist, the force of cumulative events, the courts, the black vote, the powerful legislation that has provided better opportunities have succeeded in driving out and making untenable the blatant racism and demagogery that was a tragic characteristic of Congress only 14 years ago, what a refreshing change in our national policy-making process. But, how much has changed? Have the issues been resolved or are they now more subtle, more complex and perhaps more intractable? I feel that many of the elements of the old coalitions that supported civil rights have been lulled by the new, soft language and the early tangible progress, so that they are no longer as aware or as vigilant in the more subtle issues that we face today. Once rights have been secured they must be implemented and carried out. There certainly is more work to be done. To illustrate my point, let me highlight several major issues among many others, that face us today.

MUNICIPAL SERVICES

I spoke of legislation of the 1960's that banned discrimination in public accommodations and facilities. Yet in 1972 we enacted the Revenue Sharing Act since extended into the 1980's, which distributes over $7 billion annually to 39,000 units of State, county and local governments. The feature of this bill was wide discretion in the use of funds. Soon after the money started flowing, complaints poured in alleging employment discrimination and discriminatory provision of services such as garbage pickup, street paving, lighting, electric power, water, sewage, and so on, all supported by Federal funds. Yet to monitor this program of 39,000 jurisdictions, the Office Revenue Sharing had, at one point only 4 civil rights officers!!! I was successful in adding an amendment to the Treasury Department appropriations bill that would add 21 more compliance officers. At present, there are 15 civil rights specialists actually working, I hope that we have a full complement on the job very soon. I was also successful in strengthening the civil rights protections of the Revenue Sharing Act. My amendment made it clear that individuals or communities who were the victims of discrimination made possible by revenue sharing money could seek restitution, that is, seek to be "made whole" by the Treasury for past discrimination. These were small but important legislative steps that faced substantial opposition. It was not easy winning these small, quiet battles. The Kleig light of network news were certainly not on when these miniature unglamourous civil rights battles were fought. Understandable, but not a reason for not fighting them.

HOUSING DISCRIMINATION

In 1968, Congress passed legislation banning housing discrimination in the bulk of the Nation's housing. This is a critically important area since it bears so heavily on other problem areas such as employment and school discrimination. Amazingly, under the original legislation, HUD does not have the power to sue on behalf of victims of discrimination in housing cases. Senator Mathias and I have introduced legislation in this session of Congress to give HUD this vitally important power. We look forward to early passage of this bill, it is badly needed. Additionally, I've introduced legislation designed to improve the Federal effort in combatting arson-for-profit, a particularly vicious crime whereby absentee owners "torch" their non-profitable, aging properties to collect insurance. No one calls this a "civil rights problem" but arson-for-profit certainly discriminates as the residents of the torched neighborhoods are almost exclusively low-income blacks or Hispanic-Americans, the very same groups that are locked out of so many other neighborhoods.

MINORITY BUSINESS DEVELOPMENT

Unbelievably, U.S. blacks gross only 0.65% (16.6 billion) of the estimated 2.54 trillion (1976) in gross U.S. business receipts. This statistic speaks volumes about the need to take aggressive steps to help the victims of past discrimination move into the mainstream of American economic life. I've been active with my own legislation in this area as well as attempting to open up the area of Federal contracting as a logical building-base for entrepreneurs attempting to overcome the devastating effects of past discrimination. This, again, is not a highly visible "civil rights issue" but its importance and complexity is obvious. As we move into an advanced technological age with sophisticated development in energy, telecommunication and more, we must include all segments of our society in that age. Twenty of us have joined in an effort to upgrade the minority business development effort in the Department of Commerce. We ran out of time in the last session of Congress on this bill. I'm very hopeful that we can pass it next year.

EQUAL EMPLOYMENT/SCHOOL DESEGREGATION

I mention these issues together because I think that they are the most visible, most emotional and most illustrative of the dilemma facing civil rights advocates today. Too often, we in public life allow ourselves to be painted into a shallow demagogic game of code words that is an insult to intelligence. Thus, you are "pro-Bakke" or "anti-Bakke", you are "pro-busing" or "anti-busing, "pro-affirmative action" or "anti-affirmative action." Many opponents of civil rights use these types of shallow, inflammatory, code-words to attempt to put civil rights supporters on the defensive and as devices to precipitate large, wider attacks on much of the progress made through civil rights laws and judicial holdings. This is a particularly reprehensible tactic that attempts to play on lack of knowledge and fear and pits race against race. Middle and low-income whites are led to believe that progress and rights for others means loss of their employment, their homes, neighborhoods and so on. I believe that national and local leaders must begin to speak honestly to their citizens and put the passions of the moment aside. Only in that way can we work for practical, responsible solutions that allow every citizen to enjoy his fullest rights of equality of opportunity under the constitution.

With the help of Senator Brooke and Congressmen Seiberling and Whalen I have succeeded in having enacted into law and funded the only measure to pass Congress that deals constructively and positively with school desegregation. Magnet schools takes no ones constitutional rights away and encourages school integration. It is working in Dayton, in Boston (where ¼ of the school population is now enrolled in magnets) and across the nation. While busing remains with the courts, magnets and integration are possible as a practical, every day, workable means in the hands of local people. It is not "pro-busing" or "anti-busing" it is pro-student, pro-sound, substantive, constitutional, integrated education.

Employment remains a national disgrace in minority communities. Perhaps in no other area are the effects of the Nation's past discrimination so tragically evidenced. The Wall Street Journal on Monday reported black employment at 14.5%, whites at 7.1%, black youth at over 40%, black representation in virtually all skilled professions is simply atrocious with progress only gradual as the long process of entry and training is only beginning. To dismiss the enormity of the job that needs doing with simplistic rhetoric like "pro-Bakke" is again, both unintelligent and reprehensible. Where there is or has been discrimination, it must be corrected. Where there has not been, as in California, then enough flexibility must be allowed so that institutions may attempt to broaden their population. If real opportunity exists and if there is a will to provide it, then there will be far fewer "Bakke" cases occupying our national attention and consuming so much of our attention.

CONCLUSION

Those are, ladies and gentlemen, some of today's key issues as I see them. I think that the essence of what I've said tonight is that the debate and the style has changed but that the underlying issues remain with us, less dramatic, less clear-cut, but perhaps more difficult and more complex. I will continue to be active in the Senate. In fact, in January our Government Affairs Committee will begin dealing with the issue of race and sex discrimination in the Congress, which as you might know, specifically exempted itself from the Civil Rights Act of 1964. In committee also we will be facing the terribly complex question of Government reorganization which, again, doesn't sound terribly dramatic, but contains the vital question of how our Federal civil rights enforcement apparatus should be organized, or reorganized to maximize its effectiveness. Beyond our national borders, there are the troublesome questions about South Africa and Rhodesia. Can the United States, in some way, help achieve peaceful majority rule and basic human rights in these areas? As a member of the Foreign Relations Committee I hope to join in searching for the answers.

I appreciate knowing your views on these vital issues. Now is not the time to relax, to lower the guard. In a lot of ways, after 201 years, our struggle is still just beginning to tackle one of the core issues of American society. To live up to the American dream, to make it a reality not at some far future date, but in our time, in our day. That is your challenge, that is my challenge. Working together, it can be done.

Thank you very much.

TEN YEARS OF PROGRESS: NEWARK'S EMPLOYMENT AND TRAINING PROGRAM

Mr. WILLIAMS. Mr. President, this year the city of Newark celebrated the 10th anniversary of its highly successful program to provide jobs and job training for its unemployed and underemployed citizens.

The acronyms by which the program has been known—TEAM, CMDS, and CETDS—have been symbols of dedication, sensitivity, and professionalism in the delivery of employment services to jobless and disadvantaged Newark residents.

Approximately 20,000 persons have been placed in jobs of many kinds with more than 500 firms, large and small, in Newark and throughout the metropolitan area. Their earnings, in the aggregate over the 10 years, total tens of millions of dollars. Their personal rewards and the benefits for their families have had an added incalculable value.

The history of Newark's employment and training program began in 1967 with TEAM—Total Employment and Manpower, Inc. In that year, President Lyndon B. Johnson's administration realized that the explosive problems of urban ghettos could not be solved by traditional means. New and innovative manpower programs were developed to ease unemployment, the major cause of urban unrest.

One of these programs was the concentrated employment program (CEP), a revision of the original slum employment program (SEP). Officials of the Office of Economic Opportunity and the Labor Department were sent by the Federal Government to establish Newark's CEP with a grant of $4.5 million. After long negotiations among the city of Newark, the United Community Corp. (Newark's antipoverty agency), and other major social agencies, Newark's CEP was finally established under the joint sponsorship of the United Community Corp. by the city of Newark. It assumed the name of "TEAM."

TEAM was funded to last 1 year as a demonstrtion project. The demonstration has been going on for 10 years and is still going forward.

TEAM opened its doors on July 15, 1967, at 988 Broad Street with an idea, a skeleton staff, cramped quarters, and an enormous goal to achieve. After a shaky start, the operation gradually took shape and expanded. It provided Newark's first full service manpower program, with recruitment, intake, counseling, medical, and other supportive services all available within the same agency.

In succeeding years, TEAM reached out to industry with one hand and to the ghetto residents with the other, bringing them together. Working hand-in-hand with the Greater Newark Chamber of Commerce and the leading firms of the area, new and innovative methods were devised through trial-and-error experimentation to create more productive lives for Newark residents through meaningful jobs.

A typical experiment took place in 1968 with the cooperation of Western Electric. A study of that program was reported in the Newark Sunday News of June 8, 1969:

> This study was conducted by Total Employment and Manpower (TEAM), a Newark agency, among 143 persons it placed last year in the Western Electric Co. inner-city training shop at 200 Central Avenue.
>
> The Western Electric facility, which provides technical and clerical training, was opened in March 1966 as part of the Bell System's "Job Now" project for city-residents. Nearly 600 have been enrolled so far, and 226 have already moved into permanent jobs with the company. Another 135 are currently in training.
>
> The TEAM researchers interviewed 109 present and former trainees and found that the vast majority—even those who had been dismissed, spoke favorably of the program, its instructors, company supervisors, pay scales and promotion procedures.
>
> A Western Electric spokesman said the company is generally satisfied with results. He said the turnover rate has been only 20 percent, about twice that for regular workers, and "this is not out of line".

A new era began in 1970 after the election of Kenneth A. Gibson as mayor of the city of Newark. Mayor Gibson, making an early mark as an effective public official, worked tirelessly to utilize effectively the millions of new dollars that flowed into the city of Newark, greatly benefitting all areas of need and giving a new impetus to the TEAM program.

A major new dimension was added with the establishment of the mayor's office of Manpower (now mayor's office of Employment and Training) to do planning and assume fiscal accountability and evaluation for those manpower enterprises sponsored by the mayor's office. Harry L. Wheeler, director, has administered this office with skill and energy, while helping to shape the Federal programs and legislation that provided many of the resources for Newark's efforts.

In August 1974, following passage of the Comprehensive Employment and Training Act of 1973 (CETA), TEAM, Inc., was phased out and its corporate entity liquidated.

The manpower structure built under the TEAM name was designated by the mayor to be the operating arm of the new CETA program. The new name was comprehensive manpower delivery system (CMDS). Under its new name, the agency expanded its operations into each of the five wards of the city where it established intake centers. Additional funding permitted increased services, and the job placement output of the agency was increased from an average of 1,000 per year to 2,400 per year.

In 1975, the name was changed to comprehensive employment and training delivery system.

Time does not permit a complete chronicling of the contributions made by the agency or of its impact on the city of Newark. A few significant highlights will suffice:

It brought together as joint sponsors of a major manpower program the city administration and a community action program. This legal entity under the name of TEAM, with a board consisting in equal parts of representatives from the municipal administration, the antipoverty agency (UCC) and the Chamber of Commerce, was unique among manpower programs in the United States.

It developed through the Newark Day Care Council the first "educational continuum" program in the Nation linking a federally funded day care program to the existing public school system.

TEAM's new careers program was designated as the model program of the Nation in the year 1970.

A licensed practical nurses school, fully accredited by the New Jersey Board of Nursing, was established.

It became the first federally funded agency to develop and put into operation special programs for the Spanish community in which the teaching of the English language was linked to a vocational skill.

In partnership with the Greater Newark Chamber of Commerce, TEAM conducted a "Job-A-Thon" in 1968, which resulted in a crash program of 500 jobs in 2½ months for ghetto residents.

In October, it reached an agreement with Newark's compre health program for the provision of health services for its clients.

Now operating the city of Newark's title I and title III programs at a total budgetary figure of approximately $12 million annually, CETDS has its central operations on four floors at 32 Green Street, Newark. Intake centers are located in each of the five wards of the city, and the drug rehabilitation program is at 15 Roseville Avenue. The program offers recruitment, counseling, testing, preemployment orientation, work sampling, job training in 28 skills, supportive services, including compre health, work experience, on the job training, drug rehabilitation services, and job placement to over 5,000 persons during the current fiscal year. Two thousand unemployed persons will be placed into jobs, 584 of them after skill training.

After 10 years of progress, CETDS continues to grow and progress, and thousands of Newark residents are grateful for it.

HATCH ACT REFORM

Mr. GARN. Mr. President, the Hatch Act is a piece of protective legislation designed to limit abuses of the personal freedom of Federal workers but not to hinder that freedom itself.

I believe we must be wary of attempts to amend the Hatch Act, in deliberations on this subject during the coming months.

I noted with pleasure a statement by my esteemed colleague from North Carolina, Senator MORGAN, on the proposed Hatch Act reform. He has grasped what I believe is the essence of the problem of reform.

I ask unanimous consent that the Senator's memorandum be printed in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

THE HATCH ACT REFORM PROPOSAL

(By ROBERT MORGAN)

(This memorandum is designed to put forth my best analysis at the present time. However, it must be understood that there is much debate ahead, and legislation undergoes amendment from the time hearings are held on it until the moment of final passage by the Senate. Substantial changes in a bill may well change my attitude toward it. And just as importantly, I want to have all the information I can, and the advice of my constituents is welcome.)

One law that has received substantial public attention of late is the Hatch Act. Many proposals have been made to amend this act because of the need to lift the restrictions from the government employees' right to participate in political activities. A bill doing this has passed the House of Representatives.

The Hatch Act consists of two main parts. It bans attempts to coerce government workers into engaging in political activities, and more controversially, it limits the types of political activities those workers may engage in. This second section has come under increasing attack, with critics saying federal workers suffer an unreasonable limitation of their freedom. What we should not forget is that those restrictions are not meant simply to restrict, but rather to protect—to protect those employees from political pressures and coercion.

It must be remembered that there are political activities a federal worker can engage in. He can vote, contribute to a campaign fund, attend political meetings, wear campaign buttons and place stickers on his car, and even belong to partisan clubs as long as he doesn't hold office or make partisan speeches. He may also run for local office, though only as an Independent candidate.

The basic restriction is that federal employees may not actively participate in partisan political activity. This is a limitation, to be sure, but it is one which preserves the right not to be pressured to engage in partisan activity.

As the law reads now, if an employee is pressured, he can say, "I'm under the Hatch Act. You cannot ask me to break the law." If the law is changed to allow partisan political activities, an entirely different situation exists. Under the proposed Hatch Act reform bill, the employee would have to come forward and complain that he is being pressured, and since he would be making a criminal charge he would have the difficult task of supplying proof. If he made this charge, especially if the complaint failed, reprisals might well follow. In short, to just prohibit coercive actions would be difficult to enforce.

Because of current Civil Service regulations, it is difficult to threaten a government worker with loss of his job, but more subtle pressures could easily be used. Promotions could be held up, or the recalcitrant worker could be assigned the most undesirable jobs or time schedules.

Pressures can be subtle. An efficiency report could be graded down slightly—not enough to be an obvious attack, but enough to ruin a promotion.

The Hatch Act protects the public as much as the government employee, for it prevents the misuse of public power. Those government employees who would use their positions to pressure others would be using power and authority entrusted them by the public for their own or some other candidate's benefit.

Public power should be used for the public benefit, and nothing else. An unenforceable version of the Hatch Act could have serious consequences. It is easy to imagine a government agency mobilizing its employees, and using government time and equipment, against a political candidate who has threatened that agency with cutbacks.

Public confidence, which is important to the proper operation of our government, might also be threatened. Allegations are frequently made concerning political bias on the part of federal employees. To weaken the Hatch Act, at a time when the faith of many people in their government is so low, would be a mistake. It would understandably be difficult for many people to accept that the same person who campaigns so vigorously for a candidate at night is being unbiased in the performance of his job during the day.

Though not a perfect piece of legislation, the Hatch Act is an example of the government regulating itself. It was passed 38 years ago because of many proven cases of government employees being coerced into performing partisan political activities, and it would be a mistake to weaken it today.

TRIBUTE TO SENATOR McCLELLAN

Mr. HARRY F. BYRD, JR. Mr. President, when the long history of the U.S. Senate is written, few Senators are likely to be considered as possessing to a greater degree the combined qualities of courage, ability, and devotion to duty than Senator John L. McClellan of Arkansas.

To the Senator from Virginia, John McClellan was a dear friend and I shall miss him very much.

All who journeyed to Little Rock for the funeral services were enabled to see firsthand the affection and esteem in which Senator McClellan was held in his own State. Indeed, the people of Arkansas eight times evidenced their faith in him; he was elected to two terms in the House of Representatives and six in the Senate.

The Nation is the richer for these decisions by the voters of Arkansas. John McClellan gave to his country 39 years of distinguished service in the Congress.

Senator McClellan was perhaps best known as a dogged but fair investigator, a role which he assumed even before coming to Washington, when he served as a prosecuting attorney in his own State. As chairman of the Permanent Subcommittee on Investigations of the Senate Government Operations Committee, John McClellan brought to congressional inquiry a balance and fairness sorely needed after the excesses of the McCarthy period.

Yet Senator McClellan was never soft or easy in his probes. Indeed, his relentless pursuit of the nefarious activities of organized crime earned him the enmity of professional criminals—and the gratitude of every decent citizen.

It was not alone as an investigator that John McClellan distinguished himself in the Senate. He also chaired the Government Operations Committee, presiding over many important changes in the structure of our Government. Later he took the helm of the Appropriations Committee, a post in which he was serving at the time of his death, holding the enormous responsibility of controlling the flow of the hard-earned tax dollars of the American people.

On the Committee on the Judiciary, Senator McClellan left what surely will be a lasting mark with his 10-year effort to revise our criminal code, a task which has culminated in monumental legislation which the Senate will in all likelihood be considering in 1978.

To every job which he undertook, John McClellan brought conviction, fortitude, and high idealism. His strong character extended to his family life and enabled him to endure with typical courage the loss of three children.

Arkansas and the Nation mourn a distinguished public servant.

I join in this feeling, and I add to it the sadness of the loss of a great colleague and a true friend. My deepest sympathies go to Mrs. McClellan and the other members of the Senator's family.

By all of us, he will be missed.

FINLAND'S 60TH ANNIVERSARY OF INDEPENDENCE

Mr. BAKER. Mr. President, I ask unanimous consent to have printed in the RECORD a statement by the distinguished Senator from Vermont (Mr. STAFFORD).

The PRESIDING OFFICER. Without objection, it is so ordered.

STATEMENT BY SENATOR STAFFORD

This week Finland is celebrating the 60th anniversary of its independence. I think it is fair to say that no other European country has shown greater courage and resilience in maintaining its independence and democratic institutions. This is a proud moment for the people of Finland and for our American citizens of Finnish descent. It merits the salute of free men everywhere.

This is a special occasion for saluting not only Finland's independence, but also the excellent relations between Finland and the United States.

One aspect of this relationship demonstrates the continuity of good will on both sides. Soon after Finland became independent, it suffered terrible food shortages because of civil war. The American Relief Administration headed by Herbert Hoover helped by sending ships of food. The food was supplied on credit, and Finland has paid on that loan into the 1970's. Thus, it has been the one country which has been paying off its World War I debt to the United States.

Finland's act was more than symbolic, because the educational exchange which those payments financed became of great practical importance. President Urho Kekkonen explained why at the National Press Club last year. He pointed out that Finland had experienced great difficulty in finding highly trained personnel after World War II and that it had been possible to get help from the United States in the form of scholarships. He said that there had been more than 2,100 of them and that they had made a very important contribution to Finnish society.

Shortly before President Kekkonen's visit, we had agreed to Finland's proposal to pay off the remaining debt by establishing a permanent binational trust fund to ensure that there will be educational and cultural exchange between our two countries in perpetuity. Thus we and Finland will enjoy a people-to-people arrangement which is unique in international relations.

The benefits have flowed both ways, as do the nearly half a billion dollars of annual trade between the United States and Finland. Finns have contributed a great deal to America throughout our history, beginning with settlements along the Delaware River in 1638. Pioneering Finns built some of the first log cabins in our country, following Finnish models.

Many of us have seen the more recent contributions of Finnish architects. Eero Saarinen designed the great arch of St. Louis which symbolically links the two sides of the Mississippi River. Surely all of my Congressional colleagues have walked through his greatest work here in Washington, the magnificent main building at Dulles International Airport.

Finns have been as characteristically industrious in our country as in Finland. They have tended to settle in those states which offer scenery, occupations and outdoor life similar to Finland's. Vermont is one of those states, and I am pleased to note that the Finnish American Cultural Institute is located in Vermont.

Finland is important to the United States in a way which frequently has put dateline Helsinki before the world press: as the site for negotiations between East and West. It has provided the site for our SALT negotiations with the Soviet Union. Many will recall that President Ford attended another meeting there, the 35-nation Conference on Security and Cooperation in Europe.

Neutral Finland is the only democracy which has a long border with the Soviet Union in Europe. While sensitive to avoid offending its powerful neighbor, it has pursued a very constructive neutrality, even assigning troops to UN peacekeeping efforts in Cyprus and the Middle East. By serving as host for the most important international conferences, Finland contributes to world peace. By conducting our negotiations in Helsinki, we in turn have contributed to the world's awareness of Finnish independence.

May we all honor, this week, the sixtieth anniversary of the independence of Finland, a courageous country which long has been among our friends.

SOUTH AFRICA

Mr. EAGLETON. Mr. President, for weeks we have watched the unfolding of events in South Africa with the hope against hope that somehow the outrage expressed by the international community after the disclosure of Steve Biko's death in mid-September would persuade Prime Minister John Vorster to improve his government's record in human rights and race relations.

Last week we learned that the formal inquest into Mr. Biko's death had concluded and that the magistrate had absolved the police of any wrongdoing. This, despite evidence that Steve Biko was removed from his cell, naked and handcuffed, and driven over 700 miles to Pretoria in his already deteriorating physical condition. In addition, at the conclusion of the inquest, we learned that two of Steve Biko's brothers had been detained on the charge of distributing subversive literature.

Steve Biko was a threat to the Vorster Government because he undertook to awaken his people to their rightful place in South African society. Steve Biko attempted to promote black consciousness in a nation where the white minority rules by force. In his own words, Steve Biko saw black consciousness as "the cultural and political revival of an oppressed people."

I recently read an interview with Steve Biko which was printed in the Christian Science Monitor in November. Although the interview occurred in July, the author, Dr. Bernard Zylstra, did not publish it at that time for fear of repercussions against Mr. Biko. In this interview, Mr. Biko discusses his hopes for dignity and self-determination for black South Africans:

> Whites must be made to realize that they are simply human, not superior. The same with blacks. They must be made to realize that they too are human and—in their case—not inferior.

These words should remind us that our own record in civil rights has not always been unblemished.

Mr. President, another excellent article on South Africa by Anthony Lewis appeared in the December 5 New York Times. On condemning South Africa's repressive measures, Mr. Lewis makes the following observation:

> For South Africa's friends in the world, the terrible message of the Biko case is that we have placed too much hope in reason. A government of reason would have respected Steve Biko in life, and it would have sought the cause of his death in honest pursuit of the legal process. Instead, by its unwillingness to face the truth, it showed how desperately it is caught up in the paranoia of racism.

It is appropriate that we express our abhorrence as we observe Mr. Vorster's government proceeding on the path toward further repression.

Mr. President, I ask unanimous consent that the following articles be printed in the Record at this point:

1. "South Africa: Steven Biko's Scenario", Dr. Bernard Zylstra, the Christian Science Monitor, November 10, 1977.

2. "State of Violence", Anthony Lewis, New York Times, December 5, 1977.

There being no objection, the material was ordered to be printed in the Record, as follows:

[From the Christian Science Monitor, Nov. 19, 1977]

SOUTH AFRICA: STEVE BIKO'S SCENARIO

(Note.—Steve Biko, who died in police custody in South Africa barely two months ago, is recognized as the key figure behind the five-year-old black consciousnes movement in his troubled country. Three weeks ago, the Black People's Convention—of which Mr. Biko had been honorary president—and all other movements under the black consciousness umbrella were banned by the South African Government. Simultaneously the other known leaders of the movement were arrested.

Last July, Bernard Zylstra, who teaches political theory at the Institute for Christian Studies in Toronto, interviewed Mr. Biko just outside King William's Town where he was living under a banning order—virtual house arrest. Dr. Zylstra made a record of the interview at the time but has refrained from publishing it until now lest by so doing he might have harmed Mr. Biko. This is part of Dr. Zylstra's record in which, he says, 'I have tried to follow Steve Biko's words as faithfully as I could.' It is given herewith in question-and-answer form.)

WHAT IS BLACK CONSCIOUSNESS?

By black consciousness I mean the cultural and political revival of an oppressed people. This must be related to the emancipation of the entire continent of Africa since the second world war. Africa has experienced the end of white invincibility. Before that we were conscious mainly of two classes of people: the white conquerors and the black conquered. The blacks in Africa now know that the whites will not be conquerors forever.

I must emphasize the cultural depth of black consciousness. The recognition of the end of white invincibility forces blacks to ask the question: "Who am I?" "Who are we?" And the fundamental answer we give is this: "People are people!" So black consciousness says: "Forget about color!" But the reality we faced 10 to 15 years ago did not allow us to articulate this. After all, the continent was in a period of rapid decolonization, which implied a challenge to black inferiority all over Africa.

This challenge was shared by white liberals. So for quite some time the white liberals acted as the spokesmen for the blacks. But then some of us began to ask ourselves: "Can our liberal trustees put themselves in our place?" Our answer was twofold: "No! They cannot." And: "As long as the white liberals are our spokesmen, there will be no black spokesmen." It is not possible to have black spokesmen in a white context.

This was realized quite quickly in many black countries outside of South Africa. But what did we have here? Society as a whole was divided into white and black groups. This forced division had to disappear; and many nonracial groups worked toward that end. But almost every nonracial group was still largely white, notably so in the student world. Thus here we were confronted with the same shortcomings: the context to getting rid of white-black tensions was still a white context. So we began to realize that blacks themselves had to speak out about the black predicament. We could no longer depend upon whites answering the question: "Who are we?" There had to be a singleness of purpose in that answer. The white trustees would always be mixed in purpose.

At this time we were also influenced by the development of a black consciousness movement in the United States. There were differences, of course, because the political context simply was not the same. The conflicts in South Africa were—and are—much sharper. I'll come back to that later but I do want to acknowledge the indebtedness of the black consciousness movement in South Africa to the development of black thought in the U.S.A. in the 1960s.

What about black consciousness and Christianity?

I grew up in the Anglican Church, this this matter is an important one for me. But it is a troublesome question. For in South Africa, Christianity for most people is purely a formal matter. We as blacks cannot forget the fact that Christianity in Africa is tied up with the entire colonial process. This meant that Christians came here with a form of culture which they called Christian but which in effect was Western, and which expressed itself as an imperial culture as far as Africa was concerned.

Here the missionaries did not make the proper distinctions. This very important matter can easily be illustrated by relatively small things. Take the question of dress, for example. When an African became a Christion, as a rule he or she was expected to drop traditional garb and dress like a Westerner. The same with many customs dear to blacks which they were expected to drop for supposed "Christian" reasons while in effect they were only in conflict with certain Western mores.

Moreover, the responsibility for church affairs was exclusively white. This meant that the nature especially of the main-line churches was hardly influenced by the black fact.

It cannot be denied that in this situation many blacks, especially the young blacks, have begun to question Christianity. The question they ask is whether the necessary decolonization of Africa also requires the deChristianization of Africa. The most positive facet of this questioning is the development of "black" theology in the context of black consciousness. For black theology does not challenge Christianity itself but its Western package in order to discover what the Christian faith means for our continent.

What is the Black People's Convention?

Let's return to the main line of development. In the 1960s, the African National Congress (ANC) and the Pan-Africanist Congress (PAC) had been banned. So the main realities we were confronted with were the power of the police and the leftist noises of the white liberals. Faced with these realities, we had to solve the question how a new consciousness could take hold of the people. The government controlled the schools. There was a low output from the schools as far as black consciousness was concerned. We knew that we had to seek for participation among the intelligentsia. But we also knew that the intelligentsia quite quickly looks upon the masses as tools to be manipulated by them.

So the change of consciousness among graduates of the black universities that we sought focused on an identification of intellectuals with the needs of the black community. Here lies the origin of SASO—the South Africa Student Organization. It challenged the injustice of the existing structures, but it did that in a new way. As a matter of fact, since we stressed black consciousness and the relation of the intellectuals with the real needs of the black community, we were at first regarded as supporters of the system. The liberals criticized us and the conservatives supported us. But this did not last very long. It took the government four years before taking measures against us.

Even today we are still accused of racism. This is a mistake. We know that all interracial groups in South Africa are relationships in which whites are superior, blacks inferior. So, as a prelude, whites must be made to realize that they are simply human, not superior. The same with blacks. They must be made to realize that they too are human and—in their case—not inferior. For all of us this means that South Africa is not European, but African.

Gradually this began to make sense. Black consciousness gained momentum. But we were still faced with the practical issue that the people who were speaking were mainly students and graduates. There was no broad debate. For this reason we had to move from SASO to the organization of the Black People's Convention (BPC) so that the masses could get involved in the development of a new consciousness. The BPC was established in 1972. It was then that the government began to get into action. It banned individual leaders of the BPC. But today the BPC is getting wide support. The people are willing to sacrifice for it, with their money and with their time—as you can see from the packed courtrooms at trials of black leaders and inquests into their "mysterious" deaths in backrooms of police stations.

In a sense the Black People's Convention is the most powerful organization among blacks.

Yet this is hard to tell since the ANC and the PAC are banned as organizations, which means that they have a kind of generation-gap problem. There is a whole generation now that has not been influenced by the ANC and the PAC.

In any case, the actual identification of people with the BPC is strong. When I put it this way, I do not want to give the impression that the relations between these organizations is one of competition. There will be one movement of revolt against the system of injustice. To be sure, there are the usual divisions due to geography, background, etc. But in terms of the revolution there is unity.

What about the government's policy of separate black homelands? And are you faced with a generation gap?

Some blacks support the government policy of separate development in the homelands for the sake of peace but not as a movement. Here we will have to look carefully into the kind of support that [Zulu leader] Gatsha Buthelezi gets. He has a tribal following among the Zulus. He has managed to combine many elements as a traditional chief in a nonurban setting. For a long time he opposed apartheid, but today he is the government-paid leader of the Zulus. In this way he managed to gain a following.

We oppose Gatsha. He dilutes the cause by operating on a government platform. Because of this I see the danger of division among blacks. But we hope to avoid a real split on the basis of the BPC's great appeal to the younger generation. Gatsha is supported by "oldies," for good reason, since Gatsha protects the stability that the older persons need. But we are young. We do not look upon the solution to injustice as an expectation but as a duty. Here lies the dilemma of the old: between duty and bread.

Where is the evidence of support for BPC among the young?

In one word: Soweto! the boldness, dedication, sense of purpose, and clarity of analysis of the situation—all of these things are definitely a result of black consciousness ideas among the young generation in Soweto and elsewhere. Indeed, this is not quantitatively analyzable. For the power of a movement lies in the fact that it can indeed change the habits of people. This change is not the result of force but of dedication, of moral persuasion. This is what has gotten through to the young people. They realize that we are not dealing with mere bread-and-butter issues. In view of this the real momentum is on their side.

What lies ahead?

This again is a difficult issue. I am now getting to the position where I expect an overall escalation of the conflict. Just consider the various angles. To begin with, the Afrikaners. They have maneuvered themselves into an extremely vulnerable position. They have made up their minds that sharing of political power with the blacks is out of the question. Since a sharing of power is imperative if we are to have a just society, this position of the Afrikaners makes conflict inevitable.

Can the Afrikaners change?

In part, yes. But they need 50 years, and that simply is too long.

In the light of these factors what can one expect of the government?

I expect an escalation of conflict, also on the part of the police. And if the Afrikaner regime will become even more intransigent, then we as blacks will have to reassess our strategy. It is true that the government is very powerful and that it can last a long time. But precisely because it, too, is aware of the escalation of conflict on all sides, the sobering effect of force (at the borders and in the urban townships), the pressure from international public opinion, and a change of attitude among whites—all of these factors combined may well make the Afrikaner regime change its mind.

What about pressure for a one-man, one-vote political system of representation, especially from abroad?

Today the one-man, one-vote "solution" would spell disaster, economically, for the black masses. For the white man it would be the greatest solution. For it would encourage competition among blacks. And it would eliminate the most important ground for critique from abroad of the present regime. But it would not change the position of economic oppression of the blacks. That would remain the same.

Why cannot the blacks do today as the Afrikaners did in the '40s and '50s and dramatically improve their economic position?

Because the Afrikaners had an organized vanguard. The blacks need this before a transition is possible. Hence restraint among blacks today is necessary. The frustrating difficulty lies herein, that the situation does not allow blacks to develop an organized vanguard. This is not only a result of the fact that many of our leaders are imprisoned or banned but also because of the fact that blacks are excluded from many of the essential disciplines needed for the formation of a vanguard: the natural sciences, engineering, and many other areas. This must change. Without a competent, organized vanguard the black population cannot properly assume the responsibilities which by right they ought to exercise.

But if the future transition is not to end in chaos, the white population must also be prepared for radical change within their midst. The whites will have to accept a political constellation in this country in which the blacks have full participation.

What about communism?

We within the BPC have made up our mind that we must operate within the confines of the law or we will not operate at all. This means that the BPC is not a communist organization. We feel that we must always operate. To some extent this can be done underground, but for our kind of organization it is much more effective to work above ground. Moreover, an above-ground movement must have an element of compromise about it. We look upon that as an advantage. Moreover, a Communist in South Africa today will be an instrument of Moscow, not of the black people.

Furthermore, the BPC is nonviolent. If it were anything else, we couldn't exist.

What about the Soviet Union?

While critical of the economic self-interest of American capitalism, I have no illusions about the Soviet Union. It is as imperialistic as America. This is evident in its internal history as well as in the role it plays in countries like Angola. But the Russians have a less dirty name; in the eyes of the third world, they have a clean slate. Because of this, they have had a better start in the power game. Their policy seems to be acceptable to revolutionary groups. They are not a "taboo." Here we are probably faced with the greatest problem in the third world today. We are divided because some of us think that Soviet imperialism can be accepted as purely an interim phase, while others—like myself—doubt whether the Soviet Union is really interested in the liberation of the black peoples.

What can the United States and other nations do to contribute meaningfully toward the necessary transition?

Here are a few suggestions.

In the first place, if our struggle is to be forthright, well-directed, and consistent, the blacks need proper literature and freedom of mobility. If the Carter administration means business in its human-rights policy, it should put pressure on South Africa to guarantee freedom of the press for blacks and freedom of movement for blacks.

In the second place, Washington can exert such economic pressures on South Africa that it will become considerably less profitable to invest in South African industries. The argument is often made that loss of foreign investment would hurt blacks the most. It would undoubtedly hurt blacks in the short run, because many of them would stand to lose their jobs. But it should be understood in Europe and North America that foreign investment supports the present economic system and thus indirectly the present system of political injustice. We blacks are therefore not interested in foreign investment.

Moreover, the United States Government should exert pressure on American-owned firms in South Africa to do justice to blacks employed by them by eliminating job reservation and wage disparities between blacks and whites, by encouraging on-the-job training, and by negotiating with black labor unions. A final suggestion in the economic sphere: foreigners should quit purchasing South African products.

In the diplomatic arena it would be a tremendous psychological boost for the blacks in this country if the U.S.A. would downgrade its diplomatic presence in South Africa from the ambassadorial level to the consular level. That would have to be done in piecemeal fashion. Moreover, the U.S. should never use its veto power in the UN Security Council in favor of the present regime in Pretoria. South Africa must learn that it is losing friends in the West.

What can individual foreigners outside South Africa do?

They can provide analytical information about South Africa to their own constituencies and possibly to their governments.

Within South Africa, foreigners should gently share their thoughts, inclinations, and diagnoses with both blacks and whites, especially with the Afrikaner intellectuals who are perhaps the only persons willing to consider change in the community that constitutes the political base for the present regime. Whether they will listen? That is for you to find out.

Foreigners can of course also help the blacks. In the first place, there are several community programs that are in need of financial assistance. Since these programs are not welfare agencies but institutions that emphasize self-reliance among blacks, a relatively small amount of financial aid goes a very long way. But because of the income inequities which the blacks suffer, we do need outside help.

Foreign intellectuals can help us with materials, with simply maintaining ties with us, and by supplying us with political and economic models for the restructuring of an unjust society.

Is not the contribution of the foreigner inevitably one of white imperialism?

That all depends. When we receive financial aid from abroad, we must be able to do with it what we think is best for the community, what contributes most to its self-reliance. When we receive intellectual assistance with respect to alternative models, we must be able to maintain our independence in working with them. We do not want any more paternalism. But we do need help.

State of Violence

(By Anthony Lewis)

Boston, Dec. 4.—The death of Stephen Biko was disclosed on Sept. 13 by South Africa's Minister of Justice, James T. Kruger. He issued an unusually detailed statement, saying in part:

"Since Sept. 5 Mr. Biko refused his meals and threatened a hunger strike, but he was however regularly supplied with meals and water which he refused to partake of. The district surgeon was called in Sept. 7 after Mr. Biko appeared to be unwell. The doctor certified he could not find anything wrong with Mr. Biko. . . . [The statement listed further medical examination without diagnosis.]

"By Sunday [Sept. 11], Mr. Biko had still not eaten and appeared to be unwell. After consultation with the district surgeon it was decided to transfer Mr. Biko to Pretoria. He was taken to Pretoria the same night. On Sept. 12, Mr. Biko was again examined and medically treated by a district surgeon in Pretoria. Mr. Biko died the same night."

The statement was a farrago of rubbish. There was no hunger strike. Stephen Biko died of brain damage suffered while he was a prisoner of the security police. He died after the police ignored the findings of one set of doctors and concealed his condition from another.

The world knows all that from uncontested evidence at the inquest into his death. The colonel in charge of questioning him said in a police telex message that injuries had been "inflicted" on Mr. Biko at 7 A.M. on Sept. 7. He was driven 700 miles to Pretoria, naked, despite doctors' advice that he had symptoms of brain damage. The police did not tell the doctor in Pretoria of those symptoms; they said the prisoner was weak from not eating.

Before the inquest, Andrew Young cautioned against Western self-righteousness in the Biko case. "Every country has its neurotics and sadists in its prison service," he said. True enough. But what the inquest has shown is that, in South Africa, police sadism is officially condoned. Indeed it is the inevitable result of the racial policy of the state.

In the teeth of the evidence, the magistrate who conducted the inquest found no unlawful "act or omission" by the police in connection with Stephen Biko's death. If there was no "omission" in this case—no neglect of the most basic human duty—then the police in South Africa can do anything to a black prisoner without fear of legal consequences.

The politician responsible for police conduct also remains untouched by the lies and cruelties exposed at the inquest. That is Mr. Kruger. In a government of minimal sensitivity to truth and decency, a minister caught in a statement as grossly deceitful or misinformed as his of Sept. 13 would have been dropped from the Cabinet. Mr. Kruger has not even bothered to explain.

In a sense nothing about the Biko case should have come as a surprise. Other black South Africans have died in detention, twenty others in the last 18 months. There have been other crude cover-ups. In one case two doctors who examined the body of a prison "suicide" and doubted the police version were then themselves detained.

But sometimes it takes a particular event to dramatize tyranny and awaken us to its meaning. Even Americans who knew a good deal about South Africa were revolted at the evidence in the Biko inquest. Their general understanding of the human cost of racism—the toll on the oppressor as much as the oppressed—had not prepared them for the concrete fact that a man charged with no crime was kept shackled hand and foot for four days on a urine-soaked mat, smashed, allowed to die without mercy.

In death, Stephen Biko tells us the fundamental truth about South Africa. A minority holds power there by violence. It has no consent and can only rule by force. Its violence is as logical and as inevitable as the terror that Lenin bequeathed to the Communists of the Soviet Union—and as hard to forsake, once begun.

For South Africa's friends in the world, the terrible message of the Biko case is that we have placed too much hope in reason. A government of reason would have respected Stephen Biko in life, and it would have sought the cause of his death in honest pursuit of the legal process. Instead, by its unwillingness to face the truth, it showed how desperately it is caught up in the paranoia of racism.

By dimming the hope of reason, the Biko case is likely to have profound effects on Western relations with South Africa. Not just governments alone but businesses and banks and foundations and individuals will want to re-examine their associations with a society that has decided to sow the wind.

"There is a particular horror about the kind of violence perpetrated on Biko." So said Richard Moose. Assistant Secretary of State for African Affairs, in condemning the verdict of the inquest. The particular cruelties were appalling, but the real horror lies in their racial basis. We learned the cost of national racism once before, and said: Never again.

THE ENERGY CONTROVERSY

Mr. GARN. Mr. President, the conferees are still wrestling with the energy bill, and while few concrete details are available, and all decisions taken to date are, I understand, tentative, enough is known to cause some real worries on the part of those looking for real, as opposed to cosmetic, solutions. At the same time, we see a great deal of publicity given to certain House Members who are delivering ultimatums to the President about what is acceptable and what is not. It seems to me that it takes a great deal of courage for anyone who swallowed the House bill to lecture anyone on what is or is not acceptable. Even some of the supporters of the House bill are now questioning the crude oil equalization tax, and how they could have been snookered into voting for it, but that is another story.

I thought it might be worthwhile, Mr. President, to take a moment to set forth some of the provisions of an energy bill which will be acceptable, or unacceptable, to this Senator. In doing so, I emphasize that I speak for myself, and for the vast majority of my constituents. I lead no faction, no coalition, no group.

As I see things right now, Mr. President, there are three primary areas of contention: The energy tax, natural gas, and utility regulation. Let me take them in reverse order.

The House-passed utility rate regulation bill was nothing more than a massive takeover of the utility regulatory functions traditionally exercised by the States. Specific pricing policies would have been mandated by the Federal Energy Regulatory Commission; interconnections, wheeling, and pooling would have been mandatory. Any semblance of independence of the electric utility industry would have been destroyed.

By contrast, the Senate passed a much more restrained bill. The power of the Federal Government was limited to advisory recommendations to State regulatory commissions, and FERC was prohibited from ordering the interconnections and wheeling by utilities.

As I understand the present compromise, the power to do what the House wanted is retained, but for the moment, FERC is restricted to approximately what the Senate ordered. Nonetheless, in my view, this section of the energy package is unacceptable, for what it does is federalize the electric utility industry, although full Federal control is not yet exercised. It is clear, for example, that anytime Congress wants to it can order the specific pricing policies that were in the House-passed bill. That is a principle that has not yet been accepted by the Senate, and one I hope the Senate will not accept. There are simply too many variables, too many differences among States, to many local conditions to be taken into account for us to accept this federalization of the industry. It is unnecessary and unwise.

As to natural gas, the basic shape of a possible compromise can be seen taking shape. Under it, the House would permit producers to get somewhat higher prices for their gas, probably up to around $2 or $2.25 per thousand cubic feet. In exchange, the Senate would agree to the Federal regulation of the intrastate market.

Such a compromise has two things wrong with it: It does not contain the deregulation the Senate insisted on, after a long and bitter battle, and it destroys the one productive sector of the natural gas market. Why anyone thinks that extending the benefits of Federal regulation will solve our problems is beyond me. It is the regulated, interstate market that is in trouble, not the intrastate market. Why should we afflict the healthy patient with the disease that has almost killed the sick one? When will we understand that government decrees will not call gas out of the ground? When will we stop bad-mouthing a highly productive industry for trying to make a living?

There are some other questions that occur, Mr. President. Apparently there are those among us who object to paying American oil and gas companies more than $1.75 per thousand. Why do these same individuals insist on paying the Algerians $4.50 per thousand for their gas? It is the same gas. We can get it here in the United States. If we were to deregulate gas totally, most independent estimates are that the price of new gas, remember I said new gas, would rise to around $2.50 per thousand. That is $2 cheaper than the gas we are having to import from Algeria. Why is it all right to pay Algerians $4.50, but wrong to pay Americans $2.50? We are importing gas from Canada and Mexico, and paying as much as $3.50 per thousand for it. We are even lending the Mexicans money to build a pipeline so they can sell us gas at $3.50. Do the opponents of deregulation know these things? Can they explain their position?

The opponents of deregulation try to have it both ways. On the one hand, they tell us that higher prices will not produce more gas. They tell us that all is being produced now that could be produced, and that higher prices would not call more out. At the same time, they tell us that deregulation of new gas would cost the consumers billions of dollars.

Now Mr. President, that is just nonsense. If no new gas is going to be produced, the consumer is not going to have to pay more. Gas is produced under contracts, mostly under very long-term contracts. Even deregulation of old gas would have only a minor effect on prices now. That is why I would like to see all gas deregulated. But no one is presently proposing that. The Senate-passed bill deregulated new gas. Only new wells drilled, new production started would get the deregulated price, which, as I say, would still be $2 per thousand lower than what we are willing to pay Algeria. In short, if the consumer has to pay, it is in return for new supplies. If no new supplies are forthcoming, he will not have to pay a thing. It appears to me, Mr. President, the height of commonsense to go ahead and dergulate, and see what happens.

Incidentally, President Carter spoke the other day in his press conference about the balance-of-payments deficit. He was worried by it, and he attributed a good share of it to our imports of oil and gas. Yet his energy proposal does absolutely nothing to decrease those imports. I have already talked about the gas we are importing from Algeria, Canada, and Mexico. Is President Carter under the impression that these imports do not contribute to our balance-of-payments problem? Is he under the impression that these imports will increase if we deregulate natural gas prices? Can he explain why deregulating natural gas in this country would not decrease imports? It appears elementary to me that if we were to deregulate, and deregulation were to call forth additional supplies, as the industry claims it would, that we would reduce our need to import $4.50 gas grom Algeria. Would that not help our balance-of-payments problem? Of course it would.

Which brings us to oil. We are now importing very close to 50 percent of our oil needs. At the same time, the Middle East situation is explosive. I am very encouraged by the peace initiatives between Egypt and Israel, and hope that they will grow into the lasting peace and stability that troubled corner of the world has so long been denied. At the same time, I must recognize that they may not. Not only may the new friendship between Egypt and Israel prove less than permanent, a new split in the Arab world has been created. It is conceivable that Egypt will be ostracized from the Arab League. It is even conceivable that there will be war between Egypt and one or more of the other Arab States. And while the United States is right now on the side of Egypt and Israel, neither of them produce oil for export. Another oil embargo must always be counted a real possibility, one that is even more serious than Exxon making another million dollars, hard as that may be for some to believe.

As President Carter noted in his press conference, we simply must reduce our dependence on foreign oil. And yet, Mr. President, the Carter proposals do not do it. The President relies on a higher price of oil to discourage consumption, and thus produce the conservation that is going to reduce the gap between production and consumption. Never mind that the already high price of oil is already producing conservation, and that very little more can be done. Never mind that President Carter could already raise the price of domestic production if he had the political courage to do it, rather than waiting for the Congress to take the heat. The question is, how would the COET reduce imports? That is what I have never been able to understand.

Under the COET, what is the incentive for a domestic producer to get out there and find more oil? He gets a higher price for it? He can charge the world price of around $14 per barrel? But the difference between what he can charge now and what he will be able to charge will be taxed away. He will not get it. He will not get any more for his barrel than he gets now. It is the government that gets the difference, and as far as I know, the government does not produce oil.

Besides, even if, somehow, the producer should get some marginal amount more for his barrel of oil, the price he can charge for his old barrel must go down, so that the "composite price" of all oil remains the same. Now will someone explain to me where the incentive is for Exxon to produce more? At a minimum, the "composite price" concept has to go.

And if there is no additional incentive, there will be no additional production, and if there is no additional production, there will be no reduction in imports, except for the marginal reduction in consumption due to conservation, and the marketplace is already encouraging that conservation.

So where does that leave us, Mr. President? Of the three pieces of the energy program I have discussed, not one of the three is proceeding in an acceptable way. Regulation of the intrastate gas market is unacceptable; the destruction of the independence of the electric utility industry and the usurpation of the States' role are unacceptable; and the refusal to do away with the "composite price," with extremely burdensome crude oil tax of doubtful utility, is unacceptable.

As I said earlier, I am only one Senator. I represent a producing State, and I understand a little bit about the economics of energy production. At the same time, my constituents are consumers, and they do not want higher energy prices. I do not know anyone who does, not even Exxon. The plain fact of the matter is that prices are going to be higher before they get lower, and we should get ourselves out of the market so that those higher prices call forth additional supplies. This bill does not do it, and I see very little likelihood that it can be made to do so. Shoud the conferees care to see them my suggestions are: phased deregulation of natural gas, the elimination of the "composite price," and the phaseout of the "old oil" category.

On the other hand, should the conferees report back a bill containing intrastate regulation of gas, the federalization of utilities, and a tremendous oil tax with no possibility of relief, then I predict that there will be no bill at all this year. I cannot believe that the Senate will accept such legislation, and I will do what I can to see that they do not. It is time for us to level with people, to explain the facts of life. We may get lucky and have a mild winter this year. I hope we do. But if we do not, all the laws in the world will not produce the energy we need. Nothing ever has but the marketplace.

RETIREMENT OF CLARENCE M. KELLEY

Mr. EASTLAND. Mr. President, I would like to call to the attention and the notice of the Senate the fact that Director Clarence M. Kelley of the Federal Bureau of Investigation has agreed, at the request of the Attorney General, to defer his retirement and to remain in his position as FBI Director until February 15, 1978. This extension was necessitated when the Honorable Frank M. Johnson felt impelled to withdraw as nominee as FBI Director for health reasons. I believe Mr. Kelley's action, another personal sacrifice in a long career in the public service, is worthy of the notice of this body.

Mr. Kelley has devoted a lifetime to the service of our country and our citizens. That public service began in 1940 with his appointment as an FBI agent, was interrupted for duty with the Navy during World War II, and was resumed in 1946. With increasing competence and growing responsibility, Mr. Kelley served with the FBI until his retirement in 1961 as the special agent in charge of the FBI Memphis Office. For 12 years following, he was chief of police at Kansas City, Mo., his native city, until called to assume his present office as Director of the FBI in 1973. He has devoted 37 years to law enforcement, as an investigator, instructor, supervisor and, for the last 20 years, as an administrator with recognized accomplishments.

On December 15, a testimonial dinner will be held for Director Kelley at the Washington Hilton Hotel, by friends and associates from all parts of our Nation, in and out of law enforcement, in recognition of his long service and valuable contributions. In an era when flamboyance has often been equated with ability, I believe that the unassuming competence, unswerving dedication, and unstinted efforts of Director Kelley during a troubled period, and the recognition being accorded him, merit the official notice of this body.

ONE OF A RARE BREED

Mr. HANSEN. Mr. President, one of Wyoming's best editorial writers, James Flinchum of the Wyoming State Tribune in Cheyenne, Wyo., has published a fine salute to U.S. Senator John L. McClellan.

Because the editorial tribute is so excellent, in that it tells so much about the man and the statesman that he became through a lifetime of public service, I am sure it is one that my colleagues and other interested persons would like to read.

Mr. President, I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Wyoming State Tribune, Nov. 29, 1977]

ONE OF A RARE BREED

John L. McClellan was of a character mold that seems to have largely passed from our scene. This son of an Arkansas poor dirt farmer rose to occupy a moral plateau in this nation's government that few can claim any territorial rights to, and to which fewer still may be granted tenancy.

One does not achieve such eminence by being a mere successful politician able to survive assaults on one's tenure at the polls. The clever, the cunning and the lucky as well as the simply persevering, can carry this off. But John McClellan was not just another politician even of the survivable southern kind.

His stern visage and his unyielding determination gave him the aspect of an Old Testament prophet, a terror to evil doers which he actually became in the days of the Senate rackets committee he served as chairman over 20 years ago.

But Senator McClellan was more than a mere pursuer of miscreants. His rocklike character provided this country through his established leadership in the Senate a medium of stability in a time of turmoil and chaos. In a period when the established value system of our society was under attack from all sides the mere fact that he was where he was at the time he served provided the uncertain with encouragement and guidance, the weak with strength and the errant with deterrence. At a time when we are confronted on all sides with the inept, the venal, the avaricious, the greedy and the murderous; with men of small or no vision, bereft of spirit and principle, and above all the shallow and dishonest with morally and intellectually, it is some solace to know that our society has been graced by an individual of his rectitude and probity. Thus it gives us hope that others of his kind may pass our way again. But not too often is it likely; not too often.

TRIBUTE TO SENATOR McCLELLAN

Mr. HAYAKAWA. Mr. President, I join my colleagues and the entire Nation in mourning the death of John McClellan.

He was a man of remarkable inner strength, able to meet great personal sorrow with the same courage he used to face life.

His life was a living testimony of what can be when we want it to be. At 3 weeks, he was a motherless farmchild; at 17 years, the youngest lawyer in the history of his State; at 46, a U.S. Senator. He was given a good mind and a strong spirit, and he used them to carve a special place for himself in the history of a great nation.

His strengths were virtues so often looked for, and so rarely found: He was honest, just, and noble of spirit.

He read as he announced his retirement shortly before he died:

> To everything there is a season and a time to every purpose under the heaven.

We will be poorer for the loss, but the heaven he spoke of will be richer.

IN SUPPORT OF THE PANAMA CANAL TREATIES

Mr. KENNEDY. Mr. President, on November 11 Deputy Secretary of State Warren Christopher delivered an excellent speech in support of the Panama Canal treaties, before the Florida Council of 100 in Palm Beach. In his speech, Mr. Christopher reviews the important history of these treaties, and details the reasons why they are in our strong national interest. Those Members who remain skeptical about the treaties should carefully consider the strong security, economic, and political arguments so ably presented by Mr. Christopher. It is my hope that the future Panama Canal debate in this country will proceed along these rational lines, rather than descending to the emotional jingoism which has characterized some of the early attacks on the treaties.

I ask unanimous consent, Mr. President, that Mr. Christopher's speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

SPEECH BY THE HONORABLE WARREN CHRISTOPHER

I am delighted to be here today to meet with such a distinguished group of business leaders.

I would like to talk with you this morning about an issue that is being debated, not only in the halls of Congress, but across America—the Panama Canal Treaties.

The new treaties have aroused strong emotional feelings among many Americans. Since it was built, the canal has been more so to us than simply another waterway for our ships. It was built at a time when America was just emerging on the world scene. We were able to conquer this monumental engineering problem where others had failed. Even today, it is impressive to see how ingenious the canal system really is. Indeed, the canal came to symbolize the resourcefulness and ingenuity of the American people—qualities that we all believe to be among our greatest assets as a nation.

This sentiment, this symbolism, is the first reaction of many Americans when they think about the prospect of these new treaties. In fact, as you probably recall, President Carter has said that his first reaction was to be against the idea of a new treaty.

At the same time, we all recognize that the Panama Canal is important to our national defense and commerce. It is not a monument that sits there simply to be visited and to remind us of the past. It is an important navigational link. As such, our first concern must be to assure that it will always remain open, secure, and efficiently operated.

It is that concern which led President Johnson—after consulting with former Presidents Truman and Eisenhower—to open negotiations for a new treaty in 1964. It is that concern which has convinced every succeeding President of the necessity of a new treaty. And, it was that concern for the future which convinced President Carter that his initial reaction against changing the current arrangement had to be weighed against our national interest in assuring that the canal remains open and secure to both our commercial and naval vessels.

As the Senate vote approaches and the debate over the treaties accelerates, I think most Americans are going to ask themselves several basic questions:

Which course is best from a military standpoint?

From an economic standpoint?

Are these treaties "right," both in terms of what we, as a nation, stand for and, in terms of our self-interest?

I would like to spend a few moments this morning addressing those questions. I want to tell you what these treaties do and I want to answer some of the questions that come to mind as we consider the treaties.

The treaties that were signed by President Carter in September are the product of fourteen years of negotiations. They would replace a treaty that was arranged seventy-four years ago. The first of the two new treaties provides for the operation and defense of the canal through December 31, 1999. The second treaty provides for the permanent neutrality of the canal and has no termination date.

Under the terms of the first treaty, the United States will continue to operate the canal until the year 2000. That operation will be conducted through a U.S. Government agency, to be known as the Panama Canal Commission. The Commission will operate in accordance with U.S. law, which will govern such matters as the setting of tolls and the regulation of employment policies. Five members of the Commission's nine-member board will be Americans. During this period, American troops will remain in Panama and the United States will have primary responsibility for defending the canal.

Starting with the year 2000, operation of the canal will be the responsibility of the Panamanians. At present, nearly seventy-five percent of the canal work-force is Panamanians and, by the year 2000, Panamanians will have moved into all levels of management and will be in charge of running the canal. But, after the year 2000, the second treaty—the neutrality treaty—will remain in effect.

The neutrality treaty commits both the United States and Panama to protect the openness, security, and neutrality of the canal for the indefinite future. Under that treaty, as it has been interpreted, both by the United States and Panama, each country will have the right to act against any threat directed against the canal or against the peaceful transit of ships through the canal. The treaty does not give us the right to intervene or meddle in the internal affairs of Panama. That is not a right we sought. It does, however, give us the right to take action directed at ensuring that the canal remains open, secure, and accessible.

Moreover, the neutrality treaty assures us that United States warships will be able to go through the canal as quickly as possible, without any impediment, and in case of need or emergency that they will be able to go to the head of the line—ahead of other ships waiting to transit the canal.

It should be noted that both the United States and Panama are agreed on the interpretation of these rights. This was recently confirmed by the statement of understanding that was issued in Washington on October 14 following a meeting between President Carter and General Torrijos.

The treaties also contain additional significant provisions. For example, the basic treaty contains a provision relating to the construction of a sea-level canal. Under this provision, both the United States and Panama agree to study the feasibility of building a new canal in Panama which could accommodate some of the new and larger tankers. Based on our studies, which show that Panama is the most feasible place to build such a canal, we agreed, until the end of this century, not to construct such a canal, outside of Panama. In exchange, Panama agreed that, during this same period, it would not allow any other nation to build an inter-oceanic canal in Panama without our approval. Finally, the treaties also provide privileges and protections for the Americans who will be working in Panama in connection with the canal during this 23-year transition period.

This is the basic arrangement. But what about the questions that have been raised? Are there good answers to the many questions which have been raised regarding the treaties? I think there are.

Can we defend the canal under these treaties? Do they protect our military interests? In my judgment, the first place to look for an answer to that question is to our Joint Chiefs of Staff. These are the men who have the initial responsibility for our defense. The fact is that the Joint Chiefs are active proponents of these treaties. They worked closely with our negotiators on a regular basis and the treaties reflect their judgment on what we need to defend the canal.

According to the Joint Chiefs, these treaties are not only as good as the existing arrangement in terms of our national security interests, they are far better. They afford us all the rights we need to step in against any military threat to the canal. In the judgment of the Joint Chiefs, they also decrease the problems that would be presented if we continued to operate the canal under the existing arrangement in the face of growing opposition from the Panamanian people.
